W. W. Campbell, director of the Lick Observatory, communicated together two papers, "On the Motions of the Brighter Helium Stars" and a "Report of Progress in Spectrographic Determinations of Stellar Motions." The great problem in astronomy at present is that of the construction of the universe, and of the motions of the so-called fixed stars through space. This is being attacked in a large way by Kapteyn of Groningen, by Boss of Albany, and by Campbell; but whereas Boss confines himself to the *proper* motions of the stars, that is, those not toward or away from us, Campbell confines himself to the latter motions, that is, those in the line of sight. Such motions can be detected only by the displacement of the lines in the spectra of the stars, as measured on photographs. Stars are classified by their spectra according to their age, in the Harvard system the newest being denoted by A, the oldest by N. Among these our sun occupies an intermediate position, in class G. The present investigation is based on the spectra of some 1,200 stars, out of which 1,047 have been selected, all observed at the Lick Observatory or its southern extension at Santiago de Chile. These are all of class B, or rather new stars, characterized by the prominence of the lines of helium and having a total velocity in space of about twelve kilometers per second, whereas the old or red stars have about thirty-five kilometers per second, while the velocity in the line of sight is about one-half these. The effect of pressure in the star atmospheres on absorption of the light increases the wave-length in the newest and oldest stars, and consequently the velocities determined from them are different from those determined from the middle classes, the result being that the velocity of the solar system through space appears greater when determined by means of the old and new stars than when determined by means of stars similar to the sun. There is thus a sort of community of interest between our sun and stars of similar age and spectra, in the matter of motion. Another important result is that the dimensions of the universe must be enlarged above previous estimates.

F. R. Moulton of the University of Chicago presented a paper entitled "The Evolution of Periodic Solutions of the Problem of Three Bodies." The most celebrated problem of celestial mechanics, that of the general motion of three bodies drawn together by the law of gravitation, has never been completely solved from the time of Laplace until now. Particular solutions have to be sought by introducing simplifying assumptions. If the mass of one body is negligible in comparison with that of the two others, we know that these two will revolve around their common centre of gravity. Such motions of the third infinitesimal body are sought by Mr. Moulton, as shall make its orbit closed, or reëntrant after a revolution. Such solutions have been obtained by Hill, in which the third body moves around the smaller of the other two; Moulton finds under what conditions it can move around either; Sir George Darwin, by a laborious process of approximation, finds orbits of similar type, and Moulton, by an analytical process different from those of Hill and Darwin, finds several new types of orbit surrounding either body, and three more outside both bodies. The results of these investigations should lead to a method for exact confirmation of the law of gravitation.

W. M. Davis of Harvard gave a paper entitled "Corollaries of the Theory of Isostasy." This word, invented by the American geologist Dutton, indicates the state of the earth's crust which would obtain if, in spite of elevations and depressions of the surface, the whole mass above a certain depth were the same at one point as at another, the extra volume in mountainous regions being compensated by a defect of mass underneath, and vice versa. This condition has been shown to hold generally in the United States by J. F. Hayford, in what has been characterized as one of the greatest contributions to geodesy since Gauss. Professor Davis points out that if isostasy obtains now, it has probably been prevalent through long geologic periods, so that if a lowland rises its density must be lessened; also, if a mountain range is worn down to a pene-plain, nearly at sea-level, it is difficult to see how the mass has been gained below for compensation. Moreover, in the Himalayas, one of the newest mountain regions, the compensation is very complete, while in the Harz and in the Tonga, deep in the Pacific, it is imperfect. If the corollary is true, the geologist still has these matters to explain.

C. D. Walcott, secretary of the Smithsonian Institution, gave an account of "A Geological Reconnaissance in the Rocky Mountains of British Columbia," which brought to light many astonishingly perfect fossils. In the neighborhood of Mt. Stephen, which forms a block 12,000 feet thick, many fossils were found representing very highly developed forms of life, nearly at the base of the oldest fossil-bearing Cambrian rocks. The simpler forms which preceded these were not found. As the trilobites have hitherto been regarded as the highest form of life in the Cambrian, these discoveries are of great interest.

In a paper on "Biological Conclusions Drawn from the Evolution of the Titanotheres," H. F. Osborn, president of the American Museum of Natural History, attacked the fundamental question of the laws of formation of new characters, remarking upon the advantage possessed by the palæontologist in being able to examine the records of three to eight hundred thousand years of development, while the zoölogist sees only those of his own lifetime. The question is whether, as was formerly supposed, evolution is gradual, or, as is suggested by Bateson and De Vries, proceeds by sudden saltations or mutations. Most experimental evolutionists now believe in changes by jumps. Mr. Osborn considered three forms of change, namely, increase in size, loss of parts, and variation in proportion of different parts. In the matter of proportion he finds no ancestral control, but a change once started keeps on. The structure of the teeth, on the other hand, shows a progressive development of new characteristics, always in an orderly and definite manner, and under ancestral control.

In the absence of the author, an interesting paper by Dr. Simon Flexner, director of the Rockefeller Institute for Medical Research, on "Infantile Paralysis and its Mode of Transmission," was

read. This mysterious disease, in from 5 to 10 per cent. of cases, is followed by permanent paralysis, and in 75 per cent. by crippling. In the first epidemic in 1907 there were 2,500 cases in and about New York city. No State has escaped its ravages, and the number of cases is estimated at 20,000, the number of cripples at from 10,000 to 15,000. The disease has been found to be due to a specific micro-organism which attacks the spinal chord or the brain. This germ has been known for a year and a half, and experiments on its transmission to monkeys have shown the great value of animal experimentation. The germ is very minute and passes through the finest filters. It is spread by contact with an infected person, and can also be carried by healthy persons. It is generally communicated through the nasal passages. The disease must be combated by isolation of the patient and the disinfection or destruction of his nasal discharges. No cure is known, so that prevention only is possible. The summer months are those of greatest prevalence, and there is great danger of communication in schools, country fairs, or Fourth of July celebrations.

Last year Franz Boas of Columbia University gave an interesting report on "Changes in Bodily Form of Descendants of Immigrants," and this year he brought further information on the subject. In order to investigate the hereditary stability or plasticity of human types as affected by environment, it is necessary to consider that the growth of various organs goes on for different periods. For instance, measurements of the skeleton made after the nineteenth year in males and the sixteenth in females do not greatly change, but environment may affect the weight until later. This may affect the stature in males until fifteen years, and in females until thirteen. The American environment does not affect the growth of the head after the age of two years. As a matter of fact, taking the proper characteristics for measurement, it is found that the American environment produces a marked effect, even changing the shape of the face. This effect is probably in part due to better nutrition and in part to the smaller prevalence of children's diseases.

At the annual dinner, the Henry Draper medal was presented to C. G. Abbot, director of the Smithsonian Astrophysical Observatory, for his work on the exact determination of the solar constant, that is, the amount of heat reaching us from the sun. A graceful speech showing the reasons for the presentation was made by W. W. Campbell, to whom the medal was awarded last year. Whitman Cross was elected treasurer, A. A. Noyes and E. G. Conklin members of the council, and the following nine new members: Edwin Emerson Barnard, astronomer, Yerkes Observatory; Edward Burr Van Vleck, mathematician, University of Wisconsin; John Fillmore Hayford, engineer and geodesist, Northwestern University; Julius Oscar Stieglitz, chemist, University of Chicago; Bertram Borden Boltwood, radio-chemist, Yale University; James Furman Kemp, geologist, Columbia University; Arthur Louis Day, geophysicist, Carnegie Institution, Washington; and Robert Almer Harper, botanist, University of Chicago. As foreign associates were elected Prof. Ernest Rutherford, the authority on radioactivity, of the University of Manchester, England, and Vito Volterra, professor of mathematical physics at the University of Rome.

ARTHUR GORDON WEBSTER.

NEWS FOR BIBLIOPHILES.

Ninety-nine years ago, on June 24, 1812, at a dinner held to celebrate the sale at auction for £2,260 of the Duke of Roxburghe's copy of the first edition of Boccaccio (Venice, Valdarfer, 1471), the Roxburghe Club was formed. If phenomenally high prices are a warrant for the formation of a book club, American Bibliophiles ought to get together at the close of the Hoe sale and form a Robert Hoe Club.

The Duke of Roxburghe's library, 9,353 lots, which cost him about £5,000, brought £23,341. And, while no accurate estimate of the cost to Mr. Hoe of any large portion of his library can be made, it is certain that remarkable advances upon costs were paid upon many lots sold during the first week of the sale, which began at the new rooms of the Anderson Auction Company on the afternoon of April 24.

Every one has now heard of the great sum, $50,000, paid for the Gutenberg Bible, the Perkins-Ashburnham copy on vellum, with two leaves in facsimile, which brought £4,000 at the Ashburnham sale in 1897, and of the $21,000 paid for the "Helyas, Knight of the swanne," printed on vellum by Wynken de Worde in 1512, which had sold for £410 at auction at Christie's in 1899. While these sums are tremendous and heretofore unheard of in the annals of book-collecting, they cannot, after due consideration, be regarded as unwarranted.

The Gutenberg Bible on vellum is the world's masterpiece of typography, the invention of which was coincident with the fall of Constantinople in 1453, a date often considered as the end of the Middle Ages. The revival of learning could have come but slowly except for the invention of printing. It is an easy matter for the wealthy American to find fifty thousand dollars, but where can he find such another monument, such a mile-stone in the world's progress?

The Hoe catalogue stated that the "Helyas" was the only book printed on vellum by Wynken de Worde, but the National Library in Paris has another specimen, also unique, Watson's translation of the "Ship of Fools," printed by Wynken de Worde in 1509. As a specimen of typography, the "Helyas" is poor and unattractive when compared with books on vellum issuing from Continental presses, but it is one of the two known books on vellum from any English press of so early date, and $21,000 could not buy another.

There is less warrant for many other high prices paid at the Hoe sale. Mr. Hoe's copy of the first edition of Gray's "Elegy" (1751) at $4,500 is certainly a dearly bought book. The book is like the first editions of other classics, such as the "Vicar of Wakefield" and "The Deserted Village," always in demand, but always procurable without much difficulty. Probably twenty copies could be traced in America. The highest previous auction record in this country is $740, paid at the McKee sale in 1902, though this same copy when sold at Sotheby's in the Van Antwerp sale in 1907 brought £205.

"The Embargo" (Boston, 1808), William Cullen Bryant's first publication, a little pamphlet of twelve pages, is a rare book, but $3,350 is a high price to pay for it. Mr. Hoe's copy sold in the Hoffman sale in 1877 for $17, and again in the Hawkins sale in 1887 for $11.50. Mr. Hoe acquired the book with the N. Q. Pope library. Mr. Sturges's copy (formerly Charles Eliot Norton's) cost him $200 about 1896. Less than ten years ago the Boston Athenæum found a duplicate among some pamphlets and sold it for $550. This copy, in the original paper cover, untrimmed, the only one known in this condition, is now in the Wakeman collection. The Boston Athenæum still has a copy bound up with other pamphlets, and there is a copy in the Harvard Library. The latter, a cut copy, bound up with the second edition, has the following autograph inscription on the title-page: "At the time I wrote this poem I was attending the district school in Cummington, County of Hampshire, Cambridge, Sept. 29th, 1860. Wm. Cullen Bryant."

Boethius's "De Consolatione Philosophiæ" in Latin and Flemish (Ghent, 1485) the copy which brought £52 at the Syston-Park sale in 1884 and $145 at the Ives sales in 1891, sold for $4,900, and was bought by a Paris bookseller. This is perhaps the most spectacular advance in price on any book in the sale.

Hakluyt's "Voyages" (1599-1600), with the exceedingly rare map by Edward Wright, engraved by Molyneaux, in its first state, the copy which sold for $225 in the Ives sale, but which had previously brougbt £131 in 1881, now sold for $3,400. Only three other copies with the map are known in America.

Boccaccio's "De la Ruyne des nobles hommes et femmes" (Bruges, Colard Mansion 1476), the copy which sold in the Ashburnham sale in 1897 for £695, brought $7,000.

The first edition of "The Book of St. Albans" (1486), the copy which sold for £385 in the Ashburnham sale in 1897, brought $12,000. Blake's "Milton," the Hamilton Palace copy, which sold for £230 in 1882, brought $9,000. The uncut Kilmarnock Burns, which Mr Hoe bought privately for (it is said) $500, brought $5,600. Cowley's "Poetical Blossoms" (1633), the copy which sold for $220 in the Foote sale in 1895, brought $510. Chapman's "Seven Books of the Iliades," with "Achilles Shield" (both 1598), the fine copy in the original vellum covers, which sold for £291 in 1904, brought $3,000.

Many other instances of extraordinary advances in price might be noted. Whether there has been a corresponding advance in the market value of all rare books, or

whether it is Mr. Hoe's books which collectors are particularly eager for, time must tell.

Correspondence

GERMANY AND INTERNATIONAL PEACE

To the Editor of The Nation:

Sir: The splendid sarcasm of your leading article on "Arbitration and 'Realities'" (April 20) is as convincing as it is delightful. It is recognized by all but the jingoes in every land that the delusion of militarism must ultimately throw the credit of nations into the melting-pot, but unfortunately these jingoes are frequently intrenched in such citadels that they will continue to wield power, unless they are overthrown by internal revolutions which Sir Edward Grey has had the courage to foresee. Herr von Bethmann-Hollweg's effusion on the absurdity of arbitration, which furnished the text for the *Nation's* article, illustrates the difficulty to which I refer. The German Chancellor has relied largely on the Agrarian party for the maintenance of his power, and these men are notoriously reactionary to the core. *They* are the real rulers of Germany. Not only do they exercise undue influence in the Reichstag by virtue of an antiquated distribution of seats, which militates strongly against the industrial districts of the Rhineland, but they furnish the bulk of the high officials of the German government. Such men are born and reared in the traditions of militarism and diplomacy of the old school, they thrive on the habit of dictating to other nations their line of action, and they have no desire to lose their occupation.

It is not too much to say that the incalculable ambitions of Germany constitute the greatest obstacle to the future peace of the world. The Germany of the early nineteenth century was romantic, cosmopolitan, highly idealistic; since the brutal days of 1862-1870, it has been transformed utterly, and imbued with the imperious and unscrupulous spirit of Bismarck. Whether conquests by the sword in Europe itself are desired or even contemplated, may well be doubted; but no one familiar with the history of the last fifteen years can deny that the various incidents which have more than once brought Europe to the verge of war have been inspired by Berlin, and to a lesser extent by Vienna. The Kruger telegram drew the first bad blood with England. Franco's colonial adventures, which ended so ingloriously at Fashoda, were encouraged by Bismarck. Then came the fanfare over Morocco which led to the Algeciras Conference, when Germany was repressed by measures in which the United States played a notable part. Lastly, there was the annexation of Bosnia and Herzegovina in October, 1908, which was finally consummated only when the Kaiser donned his "shining armor" and gave Russia twenty-four hours to yield. No other nation has shown a similar determination to interfere on all occasions and to wield the mailed fist so persistently.

Here is the primary cause of bloated armaments—fear of Germany. The other nations cannot forget the conduct of Bismarck, and they are determined not to be victims as were Denmark and Austria and France. Fortunately for us, we are not concerned in the immediate squabble of European Powers, but official Germany is decidedly hostile to us. The Berlin press delights to heap abuse on our institutions, our people, and our policy. Nothing would give it greater pleasure than to see us involved in complications with Mexico; the dislike undoubtedly felt for us in many parts of South America is hailed as evincing the decline of our diplomacy, and as portending future trouble; in the Far East German influence is consistently used against us. The taming of Germany is the first task to be accomplished before the reign of peace is in sight.

There are undoubtedly many other obstacles to the "great design": the historical rivalries of centuries must be composed; Europe and Asia must settle their political frontiers on principles which recognize completely nationality and race and language—an obstacle all too frequently overlooked; international law must be codified; most important of all, perhaps, nations must be brought to a better mutual comprehension and appreciation. Progress may be slow, but it will be sure; is indeed being made every day. But before a large success can attend the efforts to restrain the appeal to the sword, the world at large must proclaim that no one nation shall disturb the peace to protect supposed interests or to satisfy the whim of a privileged class, and a self-confident monarch. Far be it from me to deny to Germany a legitimate place in the councils and trade of the world—that is a *sine qua non* of international dynamics, but it is absurd that any nation should carry its self-assertion to a point where it is intolerable to its peace-loving neighbors.

Bernadotte E. Schmitt.

Western Reserve University, April 24.

THE KING JAMES BIBLE.

To the Editor of The Nation:

Sir: The tercentenary of the King James version of the Bible has naturally called forth many exhibitions of Biblical texts, as well as magazine and newspaper articles, upon our English versions. Without any especial effort to collect them, I have noted some twenty recent articles—many of them illustrated with reproductions—dealing more or less with the King James version, and in many cases with its bibliographical characteristics. Although the identification of the text of the first issue is still a vexed question, despite the efforts in years past of Fry, Lenox, and many others, and the comparatively recent and more detailed examinations of Plomer and Smith, the identification of the title pages has been more nearly settled. It has been interesting to note, however, the frequency with which, in reproducing title pages, the recent periodical articles have chosen that of the New Testament. While the 1611 Bible is not a great rarity, the choice of the New Testament title has probably been for one of two reasons: either the first title has been lacking or defective, or doubt has been felt whether the title in possession really was that of the first issue of the first edition, sometimes called 1611 A. On the front cover of the issue of March 30 of the *Continent*, a religious paper published in this city and Chicago, appears a reproduction of the well-known woodcut *first* title, labelled, "The First King James Bible." An article in the body of the paper leaves it to be plainly inferred that the reproduction is made from the copy in the Lenox Library. But the details of this reproduction do not agree with the characteristics of the first issue, 1611 A, as given by Mr. Lenox himself in his privately printed pamphlet, "Early Editions of the King James Bible," nor with those given by Francis Fry, nor with the full-size reproduction given in Lovett's "English Bible in the Rylands Library."

Did the Lenox Library authorities, by an oversight, allow the reproduction to be made from the second issue of the 1611 edition, or have they new facts to present proving the title page under discussion to be that of the first issue? The latter alternative seems exceedingly improbable and at present it is, of course, impossible to visit the Lenox collection for purposes of verification. I believe that Mr. Lenox had four copies of the 1611 and 1613 editions, among them one of the first issue, and it seems at least very regrettable that the right one was not reproduced. Such mistakes throw discredit on our claims to possess treasures, and in this case certainly reflect on the memory of one of our greatest book collectors and eminent benefactors

It may be worth mentioning in passing that the copper plate title executed by Boel—which rarely occurs, but when found is usually in the first issue of 1611 A—is, I believe, to be reproduced by the American Bible Society upon the programme for their tercentenary meeting. The reproduction is made from a beautiful copy of the first issue, containing a certification by Francis Fry, now in the possession of the General Theological Seminary Library of this city.

Edward Harmon Virgin.

General Theological Seminary, New York, April 28.

"TELL ME WHERE IS FANCY BRED."

To the Editor of The Nation:

Sir: In the *Nation* of March 30, Mr. Hanford comments on the similarity of Shakespeare's "Tell me where is fancy bred" and Raleigh's "A Poesy to Prove that Affection is Not Love." The idea is not peculiar to the English writers, but occurs in the Greek of Achilles Tatius:

Κάλλος γὰρ ὀξύτερον τιτρώσκει βέλους, καὶ διὰ τῶν ὀφθαλμῶν εἰς τὴν ψυχὴν καταῤῥεῖ. Ὀφθαλμὸς γὰρ ὁδὸς ἐρωτικῷ τραύματι. (Achilis Tatii de Leucippes et Clitophontis amoribus liber primus.)

The nearest approach to the verses quoted is found, however, in a Spanish anonymous novel, "Question de amor," which appeared in Valencia in 1513, and was translated into French in 1541. Love is defined there as follows:

Es cosa que nace de la fantasia,
y ponese enmedio dela voluntad,
su causa primera produze beldad,
la vista la engendra el corazon la cria,
sostienela viua penosa porfia,
dale salud dudosa esperanza,
si tal es qual deue no haze mudanza,
ni alli donde está nunca entra alegria.

In the same novel we find a stag shedding tears and a melancholy gentleman watching him with commiseration.

Joseph de Perott.

Worcester, Mass., April 20.

SPENSER AND ROMANTICISM.

To the Editor of The Nation:

Sir: Interesting as a sign that a wholesome reaction is setting in against the all too prevalent tendency nowadays to regard the literature of the eighteenth century merely as a sort of preserve for the romanticism-hunter is the paper by Dr. Herbert E. Cory on "Spenser, Thomson, and Romanticism" in the recently issued number of the Publications of the Modern Language Association of America (xix, 1). It may be questioned, however, whether Dr. Cory does not go too far in minimizing the influence of Spenser on the romantic movement.

That Spenser should have come to be a factor in the romantic reaction against neo-classicism will, I think, seem inevitable, if we keep in mind the fundamental doctrines of neo-classicism, on the one hand, and of romanticism, on the other. The basic principle of neo-classic doctrine was that the ultimate end of poetry was to teach. The immediate end, of course, was to please. It pleased, however, not because the giving of pleasure was in itself an end worthy to be striven for, but because it was only by giving pleasure that poetry could be most effective in teaching. It followed as a corollary to this, that the reason or judgment had always to keep a pretty tight rein over the fancy or imagination. Fancy "leaps and frisks," and is not always mindful of the reader's edification. Hence it had to be controlled, and hence the rules, which were simply the means of securing this control. Not only was the observance of the rules thought necessary to procure proper and effective instruction; it was thought necessary, also, to procure the depiction of the truly beautiful. "The only certain way to please," says Rapin ("Reflections on Aristotle," section xi, Rymer's translation), "is by the rules." "But let the imagination be never so strong, and fertile of ideas," says Gildon ("The Complete Art of Poetry"), "without the assistance of judgment (which can only be informed and directed by the stated rules), there can be nothing produced entirely beautiful." The observance of the rules made it certain, in the eyes of the neo-classicists, that the fictions of poetry would be kept well within the bounds of the credible; and that for them was an important matter, for whatever could not possibly be believed in must, in their opinion, necessarily be unpleasing.

Romanticism, now—whatever else it may stand for—stands primarily for the exaltation of the imagination over the reason. As for the ultimate end of art, the romanticists took for granted that it was to give pleasure; at any rate, they felt no compelling necessity to be instructive.

Romanticism is thus sharply opposed to neo-classicism on fundamentals. The early romanticists were more or less conscious of this, and as soon as they felt themselves drifting away from the orthodox position, naturally looked about them for support. That they should have turned to Spenser was inevitable. Spenser was the poet who most nearly typified the romantic ideal, and the only English epic poet besides Milton whom Englishmen could venture to place in the same category with Homer and Virgil. The neo-classicists themselves, to be sure, regarded Spenser as, in a way, a classic, but a classic who could not safely be followed in all respects. His exuberant imagination and his fondness for the marvellous offended them. Dryden had said of him that "no man was ever born with a greater genius," but that he should have had a course of reading in "the rules of Bossu" (Dedication of the "Aeneis"); and Rymer had remarked (Preface to Rapin's "Reflections") that "he suffered himself to be misled by Ariosto, with whom blindly rambling on marvellous adventures, he makes no conscience of probability." These judgments were echoed by the smaller fry of critics, and may be accepted as expressing substantially the opinion of the Augustans. Spenser was a poet of the school of Ariosto, and, as Rapin had pointed out ("Reflections on Aristotle," section xi), it was characteristic of those who were "prepossessed by the romantic poetry" of this school that they "regarded no other rules than what the heat of their own genius inspired." But the very qualities in Spenser that displeased the orthodox neo-classicists pleased those who were romantically inclined, as the attitude toward him of the early romantic critics pretty clearly shows.

Of the little group of romantic, or romantically inclined, critics which included the Wartons and Hurd, Hurd is by far the most outspoken in favor of the romantic ideal of art. In his "Dissertation on the Idea of Universal Poetry" he points out that pleasure, not instruction, is the ultimate and appropriate end of poetry, and that poetry, therefore, aims "not to represent the fairest objects only, but to represent them in the fairest lights, and to heighten all their beauties up to the possibility of their nature; nay, to outstrip nature, and to address itself to our wildest fancy, rather than to our judgment and cooler sense." It is not strange, therefore, he further observes, that "of all the forms in which poetry has appeared, that of pagan fable, and Gothic romance should, in their turns, be found the most alluring to the true poet." In the "Letters on Chivalry and Romance," he enlarges on this point, and declares Gothic manners and fictions better adapted to the ends of poetry than classic. Both Spenser and Milton, he points out, are thoroughly imbued with the romantic spirit, though Milton has preferred—after some hesitation, however—to cast his great poem in the classic mould. The fact that the "two greatest of our poets, at least the two which an English reader is most fond to compare with Homer"—Spenser and Milton—are thoroughly romantic in their sympathies and in most of their work, may very well, he observes, "incline us to think with more respect than is commonly done of the Gothic manners . . . as adapted to the uses of the greater poetry." The "Faerie Queene," in particular, he defends against the charges usually brought against it by the classicists, by declaring that it is an epic constructed on Gothic ideas, and, therefore, must be judged according to Gothic rather than classic principles. In so far as the plan of the "Faerie Queene" is bad, it is bad, he says, mainly because Spenser, apparently as an afterthought, endeavored to make it conform to the classic idea of unity by introducing the character of Prince Arthur as the supreme hero. As for the classic objections to the marvellous, he remarks that, though we may properly insist upon a pretty close following of nature in the case of poetry which professes to depict men and manners or which addresses itself directly to the heart, with "the more sublime and creative poetry" the case is different. "This species, addressing itself solely or principally to the imagination, . . . has no need to observe those cautious rules of credibility so necessary to be followed by him who would touch the affections and interest the heart." And he concludes his last letter with the significant remark that, "in spite of philosophy and fashion, Fairy Spenser still ranks highest among the poets; I mean with all those who are either come of that house, or have any kindness for it."

Here, it seems to me, we have the issue between classicism and romanticism pretty sharply defined, and defined, too, in such a way as to indicate that the influence of Spenser counted as a not inconsiderable factor on the side of romanticism.

Edward Fulton.

Urbana, Ill., April 24.

UNCUT LEAVES.

To the Editor of The Nation:

Sir: *De gustibus non disputandum*—but it may be permitted to an audacious man to express them. So, after reading the complaint of "An Old Student" in this week's *Nation*, I want to proclaim with boldness and strenuousness equal to his and seeking the same wide publicity, that I like the looks of uncut edges; that I like to cut the leaves of a book; that I do not find it a tax on either my time, my muscles, or my nerves to cut my periodicals. Really, Sir, I used to like the *Nation* better when it came uncut.

And, again, I decidedly do not approve of "today," "tonight," and "tomorrow"—vagaries of a "simplified" spelling, which is anything and everything rather than simplified. Even granting the strange assumption of the simplifiers that the chief function of a spelled word is to be spoken, does not the hyphen in "to-day" and its fellows serve a useful purpose? To my ear there is a catch in these words, when pronounced, after the first syllable which approximates the Semitic alif as nearly as anything I know in English. Why not keep the hyphen to indicate it?

This from one who, to forestall the reply of all old students, cheerfully signs himself An Old Fogey.

New York, April 28.

ENGLISH EXTRAORDINARY.

To the Editor of The Nation:

Sir: In a recent issue of an educational magazine there is an interesting article on high school work in English. Written by a university professor of English, it naturally contains pertinent and valuable suggestions. At the same time, it contains some remarkable English sentences. Here is one that is taken from a set of examination questions prepared by the author of the article:

> State very briefly the substance of either one of the "Idylls of the King," or one of Milton's shorter poems, or of a long poem of any other poet except Shakespeare.

The defects in this sentence are too obvious to call for comment, yet they hardly prepare us for the following astonishing exhibition of periodic structure which is to

be found on the same page of the article in question:

In the first place, I speak for my department as a whole though of course not for every individual member of the department, as far as I know, but I think I speak for many more than my own department here at the University as a whole—I think I speak for a good many people who are teaching college English, when I say, that so far as literature is concerned, if when a man or woman comes up here he has learned to read intelligently, and has some general idea of the substance of a certain very few important things, such as for example some general idea of the form of a play as it differs from that of a novel, some general idea of how the reading of poetry differentiates itself emotionally from the reading of prose, and some general idea of the substance of certain two or three or more—it makes no special difference—poems and pieces of prose which he can use as landmarks, more or less as nuclei around which his general knowledge of a period can cluster—if he has that, and if he has in addition to that as clear a knowledge, say, of the history of English literature in its relation to its own time as, let us say by way of illustration, he has of ancient history in general, if he has taken a course in that—if he has these three things, we do not care at all what he has or has not read.

What would a student say of the professor himself as a master of style? Would he readily take as a model the long sentence quoted above, which contains two hundred and fifty-six words? And if his own language should be criticised as inelegant, might he not justly say he had not strained our vernacular as badly as the professor, one of whose sentences reads, "We do not fail a student for his use of hanging participles or split infinitives?" EDMUND H. SEARS.

PROFESSOR FRAZER'S TREATISE ON TOTEMISM.

Totemism and Exogamy. A Treatise on Certain Early Forms of Superstition and Society. By J. G. Frazer, professor of social anthropology in the University of Liverpool. In four volumes. New York: Macmillan & Co. $16 net.

It is a singular and a rather melancholy fact that the rise of an interest in the habits and beliefs of primitive or savage man should have coincided with the opening of a period destined to see their disappearance. Though travellers from Herodotus down to Captain Cook and Catlin and Charles Darwin and Sven Hedin have, from time to time, inquired into and recorded the customs of the aboriginal tribes whom they visited, the systematic study of those customs is a very recent affair, scarcely older than the middle of the nineteenth century, by which time it began to be evident that with the new facilities which steam transportation was providing for the spreading out of the civilized nations, the aboriginal peoples must soon either disappear or be subjugated and transformed. Within the last thirty years, the process of subjugation and transformation has gone on apace. Fifty years hence, it will probably be only in the central forests of Africa and of South America and among Polar snows that there will remain any tribes preserving ancient ways and superstitions, such as those which three thousand years ago prevailed almost everywhere, and five hundred years ago still prevailed over six-sevenths of the globe. Much has been irretrievably lost, because competent observers were not at hand to gather and record the usages of expiring tribes. Much, however, has also been rescued and preserved by travellers who, during the last half-century, have noted and recorded the phenomena on the spot, and by scientific students who have compared and sifted and classified the phenomena so recorded. Among this latter class of collectors and classifiers, no name stands higher than that of Professor Frazer. His famous work on nature superstitions, called "The Golden Bough," published more than twenty years ago, established his reputation for acuteness and penetration, as well as for diligence and accuracy; and his later writings have sustained that reputation.

The present book consists of four parts. It begins with three articles, written, the first in 1887, for the ninth edition of the Encyclopædia Britannica; the second and third long afterwards, for the English *Fortnightly Review.* These three are entitled respectively "Totemism," "The Origin of Totemism," and "Beginnings of Religion and Totemism among the Australian Aborigines." These articles fill 172 pages of Volume I. Next follows the main part of the book, called "An Ethnographical Survey of Totemism." It occupies two-thirds of Volume I and the whole of Volumes II and III. Thirdly, we have, in the fourth and concluding volume, the part called "Summary and Conclusion," and the fourth part, called "Notes and Corrections," to which, respectively, 169 and 148 pages are allotted. This singular arrangement gives us three considerable articles which represent an earlier stage of the author's researches and thoughts, followed by a vast accumulation of data, gathered at various times, and by a large number of illustrations, amplifications, and corrections, both of the three articles and of the ethnographic data. One cannot but think that it would have been more satisfactory if the three articles and the summary had been remoulded and expanded so as to include the illustrations and corrections and to represent the author's latest conclusions in a complete and systematized form. We must, however, assume that there were good reasons for this deviation from what might have seemed the obvious scheme of such a book. As indolence is the last charge any one would bring against a scholar so careful and industrious as Mr. Frazer long ago proved himself to be, there must evidently have been other grounds prescribing the scheme we find.

The most novel, and so far the most important, part of the work is the vast collection of facts regarding these institutions—totemism and exogamy—which fill about two-thirds of these four bulky volumes. Totemism, let it be said in passing, is defined by Mr. Frazer as "the intimate relation which is supposed to exist between a group of kindred people on the one side and a species of natural or artificial objects on the other side, which objects are called the totems of the human group." Exogamy, of course, is the rule which forbids a man belonging to a particular clan or other kindred group to marry a woman belonging to the same group. The facts make reading which is curious, and indeed even fascinating in the light they throw on primitive or savage man, and in the many obscure problems which they raise, some of which our author does not claim to have solved. Some, indeed, may appear to be, in the present state of our knowledge, insoluble. The data have been gathered from the observations of many travellers in many parts of the world. Till we had perused the elaborate table of contents we had not, and we suspect that few people have, realized the very wide diffusion of both institutions and their existence in very similar forms in tribes so different not only in physical and linguistic character, but also in the scale of civilization they have reached, as are the Iroquois of North America, compared with the aborigines of Central Australia, who are among the most backward of all savages. The most abundant data for the study of totemistic customs are furnished by the Australian tribes and by those Red Indians of North America who dwelt east of the Rocky Mountains, for among both of these it seems to be virtually universal. But there is also plenty of evidence of the presence of the institution in New Guinea and other islands of the Eastern Archipelago (traces have been noted in the Philippines), in the island groups of the Pacific, in South Africa, and East Africa among the Bantu races, as well as in West Africa among some of the various negro groups. It is found in India and among the Indo-Chinese of the Siamese peninsula; as also in parts of Northern Asia. One may indeed say, surveying the savage and barbarous peoples generally, that it is only in America among some of the Pacific slope tribes as well as among the Eskimos and other tribes of the farthest north, in Eastern Asia, and perhaps also in North Africa that totemism does not exist, or has not at some time existed. There are, indeed, far fewer evidences of it among the Indians of Central and South America than there are in North America,

where it is widespread; but it must be remembered that the customs of the South American races have been less fully studied. Whether it formerly existed among the Semitic peoples and among the ancestors of the Celts and the Teutons and the Italo-Hellenic races is deemed by Mr. Frazer to be very doubtful. Traces may be noted here and there of animal worship and peculiar customs connected with animals and plants which point that way. An inquirer so able and acute as Salomon Reinach discovers it among the Celts and Greeks; and the late Prof. William Robertson Smith, one of the most powerful and well-stored minds of his generation, gave strong grounds in his "Kinship and Marriage in Early Arabia" for recognizing it as formerly fully developed among at least one great branch of the Semitic race. Mr. Gomme points out relics of it in Britain; N. W. Thomas detects it in Wales (see references to these writers in Vol. IV, 13). Mr. Frazer is, however, deterred from accepting these suggestions by the absence among the peoples referred to of any evidence of a classificatory system of relationship. About ancient Egypt, however, there can be no doubt. Herodotus described totemism without knowing what it was, and the Romans were disgusted by something of the kind among their Egyptian subjects as late as the days of Juvenal.

This remarkably wide diffusion of a singular institution, the singularity of which can be duly appreciated only by examining it in those details so copiously supplied in these volumes, suggests the question whether it has been spread from one race to another by way of imitation, or has been a natural growth, springing up independently in divers parts of the world. Our author holds the latter view, moved thereto by a consideration of the difficulty of supposing that races so far removed from one another and so divided by vast oceans as the Australian aborigines are from those of Africa and North America, could have formed such customs by means of any borrowing. This conclusion, which seems to be a just one, points to a significant observation and suggests an important question. The observation is that we must beware of assuming that the various linguistic or ethnical groups of mankind have each of them a special and distinctive set of superstitions, or beliefs, or institutions. Just as similar folk-lore tales are found among peoples very dissimilar and remote in place from one another, just as similar games are found played by men of races which must have become separated from any common stock at points of time immeasurably distant, so similar institutions also are found among very diverse races. Thirty years ago, there was a school of historians who, pointing to the Homeric agora, and the Roman comitia, and the Teutonic folk-mot, treated the institution of a popular assembly of the tribe meeting under its chief as being characteristic of the so-called "Aryan" peoples. But we now know that the Kaffirs of South Africa have such meetings, just as the early Teutons and the early Greeks had; and it is quite likely that similar meetings exist or have existed among other uncivilized races also. There are, indeed, traces of them among the aborigines of America. We may safely conclude that they are human, not Aryan, institutions. The time has come when it must be recognized among mankind everywhere that a tendency exists for similar conditions of life and similar mental qualities or habits to give birth to similar beliefs, usages, institutions, even where the races and the stages of civilization are unlike.

The question which naturally follows is: What have been the tendencies or causes which produced in so many different tribes the peculiar and, to a civilized modern eye, absurd and fantastic notions and customs in which totemism and exogamy are rooted? To this question, our author addresses himself in the Summary and Conclusion of the fourth volume, giving an interesting explanation and criticism of the many hypotheses advanced and finally propounding one of his own. It is too elaborate and involves too much knowledge of the facts belonging to the totem system, to be adequately summarized here, but the kernel of it is this: To the eye of savage man every object, be it an animal or a plant or perhaps even an inanimate thing, is the dwelling place of a spirit. The mother connects with her child the spirit of the object with which she happens to have been in close proximity at the moment when she first knows that she is likely to become a mother. Such an association of child with the spirit of an object has been noted in the case of some Australian tribes: Mr. Frazer thinks it may have been a very general phenomenon. His hypothesis, although far preferable to the trivial explanations suggested by H. Spencer and Sir John Lubbock, explanations which may safely be rejected, seems to rest at present on a basis of observation too narrow, too much confined to one Australian tribe group, to be convincing. Mr. Frazer justly observes that it is a mistake to speak of totemism as a religion, and to assume that it "normally and necessarily develops into a worship of anthropomorphic deities, with sacred plants and animals for their attributes." The totem, animal or plant, is not a higher power, but rather a brother or comrade of the members of the totem class. Accordingly, he observes, indulging in what may seem a somewhat fanciful vein of reflection, totemism is essentially democratic. It is with magic, not with the worship, of a higher power, that we find it associated in savage communities. When kingship grows up, reverence for superior spiritual beings is its natural companion, and that awe grows into religion.

Of exogamy and its relations to totemism, to which Mr. Frazer thinks it later in time, we have left ourselves no space to speak. In handling it, Mr. Frazer pays a deserved tribute to that most distinguished of American ethnologists, L. H. Morgan, whose discovery of the classificatory systems of relationship among the Indians of the Pacific Slope opened up a theretofore unexplored field of inquiry, and cast a flood of new light upon many parts of the life of primitive man. The other scholar to whom like praise is due is the Scotch lawyer, John F. McLennan, of whom Mr. Frazer counts himself a disciple. Though he declines to adopt several of McLennan's views, he recognizes that remarkable man as the first person who saw and pointed out the importance both of totemic customs and of exogamy. How much the investigation started by these men has accomplished in enabling us to understand what sort of creatures our remote ancestors were, may be collected from the curious illustrations of savage usages heaped together in these volumes. Yet Mr. Frazer remarks, and probably with truth, that totemism itself need not have belonged to the earliest period in which our ancestors could be described as men. It may very well have grown up in a comparatively advanced period, when society, emerging from a semi-brutish state, had begun to give itself a sort of organization.

CURRENT FICTION.

Demeter's Daughter. By Eden Phillpotts. New York: John Lane Co.

We now know so well what we are to expect of this writer, that there should seem to be little room left for curious anticipation. To take up a new book by Mr. Phillpotts is not to experience the pleasant thrill with which more versatile performers are greeted. On the other hand, qualms are unnecessary. We know that nothing trivial or perfunctory is about to be offered to us, but a serious interpretation of human experience in a setting which permits the freest action of the interpreter's fancy. Why the imagination of Mr. Phillpotts is most at home among the plain folk at Dartmoor, so that they come to stand, for him, in the place of all humanity, nobody can say. But it is certain that his rare excursions from that field have resulted in inferior work.

"Demeter's Daughter" is a story most closely comparable to "The Whirlwind" and "The Thief of Virtue." It is not,

that is to say, what would be called a pretty story. So far as events can make her so, Alison Cleave is a sorry victim. In her natural fruitfulness, wholesomeness, industry, and patience she is the worthy daughter of the earth-mother. Yet there is little joy or even comfort for her in human experience. As a girl she has made a runaway match with a handsome but worthless young thatcher. He is by nature as idle and irresponsible as a faun, and in middle age takes advantage of a trifling accident to become the drone of the family. Alison has borne him several children, several of whom are now grown up. The story begins at a moment when a series of petty chances bring the family beyond the edge of poverty, to sheer pennilessness. The mother, whose courage has never failed, exerts herself to find work for them all, and to save the home. Success promises at first, but it is really the beginning of the end. The eldest son, who inherits his father's nature, turns out to be a knave. The second son, who resembles Alison, enters the army, and is shot in South Africa. Finally, the worthless husband strips her of the one cherished possession which remains to her—belief in his love and fidelity. A fitting end to the piteous tale is the virtual murder of poor Alison by her drunken husband. Nothing, you say, could be more dispiriting than this: why read of such things? It is Mr. Phillpotts's remarkable virtue to be able to make of such material not a mere sordid record of horrors, but an infinitely touching commentary on human nature and experience. The volume is fitly dedicated to Mr. Howells.

Bawbee Jock. By Amy McLaren. New York: G. P. Putnam's Sons.

The sweet-pretty story of the Victorian school is becoming a rare thing in the current market. Most of our lady romancers have become enlightened, let us not say to the point of cynicism, but in the direction of naturalism, at least. The popularity of a writer like Mrs. De la Pasture, however, proves that there is still an audience for the spinsters and the knitters in the sun, whenever they are sufficiently courageous to utter their tales of silly sooth. "Love in a cottage if necessary, but thank heaven it seldom is," might be taken as the motto of this classic type of fiction. "Bawbee Jock" plays up to the requirements in every way. Bawbee Jock is the hero, a highland chieftain of reduced means; and the heroine is Angela, a lovely English lass destined to become Mrs. Jock from the beginning of the world. Angela is the pretty and sweet and feminine and coquettish and rather silly young person who figured in the Annuals of the sixties with a dove on one finger. Her hope all her life (extending to her twenty-first year) has been to meet the knight of her dreams, but though she has had many, many suitors, her heart has never, etc. Jock is the fine, big, manly fellow who is sacrificing himself for an unworthy younger brother, and is on the verge of breaking the entail (what would British fiction be without the entail?) to satisfy that rapacious person's demands. But Angela comes upon the scene, and Jock (who has never noticed a woman before) succumbs at first sight. It only remains for them to go through the necessary pleasant manœuvres of an old-fashioned courtship; for the happy day to arrive at last, attended with a highland wedding and all the rustic honors; for a son and heir to be born—almost at the cost of frail Angela's life—making the removal of the entail impossible; and, finally, for Angela to turn out to be an heiress, capable of restoring the ancestral domain to its proper glories. What more can one ask?

The Canon in Residence. By Victor L. Whitechurch. New York: Baker & Taylor Co.

The plight of a prim, middle-aged clergyman travelling in Switzerland, whose clerical wardrobe is abstracted overnight from his hotel room and replaced by a sporting man's garish outfit, might have provided a light-minded fictionist with enough comic interest to furnish forth a good short story. Taken seriously, and at length, the far-reaching consequences of the practical joke amount to the dullest possible novel. Strong stress is laid on the moral benefit which Canon-elect Smith derived from wearing a "loud checked suit" during a four days' stay at St. Moritz—his wonderful gain in insight into the lay mind, his emancipation from the shackles of ecclesiastical convention, all dating from the Alpine holiday when he wore "mufti" and tobogganed hilariously with the "Cheshire cats." This growth in grace enables him, returned to England and entering upon his new duties at Frattenbury Cathedral, to combat the "deadening influence of the close, and its narrow-visioned clique"—personified in a hypocritical dean and three prying spinsters—together with Frattenbury's corrupt municipal policy—embodied in the fat person of its chief magistrate, a knighted brewer. His ensuing unpopularity with the powers of church and state is aggravated, and his reputation darkened by rumors of the attention attracted on the Riviera by a faultlessly attired, but ill-conducted "Rev. John Smith," until the charitable use of a banknote found in the pocket of the loud checked suit comfortably clears up the embroglio. The perpetrator of the trick, a shameless bank-robber who borrowed the canon's clothes in order to elude the police, is brought to justice—the canon seeing him off to prison like a man and brother—and tardy peace descends upon the scandal-racked community of the cathedral close.

Wells Brothers, the Young Cattle Kings. By Andy Adams. Boston: Houghton Mifflin Co.

The writer of this story began his writing a few years ago with "The Log of a Cowboy," a book which, since he himself had been a cowboy for a long time, had a certain stamp of freshness and force. His later books, as his consciousness of "literary" activity has steadily increased, have declined in naturalness. The case is something like that of A. H. Bullen, whose "Cruise of the Cachalot" gave him a public which has not been increased by his subsequent books. We suppose even Othello might have turned out a bore in print after he had exhausted the record of his personal adventures. It is to be feared that Mr. Adams has abandoned the range for authorship. From the internal evidence of this book it may be supposed that he deliberately set out to write a "boy's story." His style closely resembles that of Messrs. Castlemon, Alger & Co. His cowmen and boys speak a lingo compounded of plains slang and stilted bookish speech.

> "What is the reason," inquired Joel, "that so many cattle are leaving your State for the upper country?"
>
> "The reasons are numerous and valid," replied the elder cowman. "It's the natural outgrowth or expansion of the pastoral interests of our State."
>
> "There is also an economic reason for the present exodus of cattle," added the young man. . . .

Perhaps we ought to go back to the Rollo books, and the conversation of the inspired Jonas, for our sources here. The Wells Brothers are left alone, at sixteen and fourteen, on a poor farm in good cattle country; and in three years become wealthy cattlemen.

A STUDY OF INCOMES.

The Industrial System. An Inquiry into Earned and Unearned Income. By J. A. Hobson. Imported by Charles Scribner's Sons, New York. New and revised edition. $2 net.

Under this title, Mr. Hobson virtually reprints a number of chapters whose essential contents have appeared in his "Evolution of Modern Capitalism," his "Distribution of Wealth," and in his other economic writings. Thus chapters i, ii, viii, ix, xi, xii, xv, and xix may be eliminated from special consideration in this review, and attention may be concentrated on the eleven remaining chapters which have to do with earned and unearned income.

The first criticism in order is grammatical in character. Mr. Hobson apparently does not appreciate that "earn-

ed" and "unearned" are *past participles*. The hod-carrier who sings:

> Oi've worked eight hours this day,
> An' oi think oi've earned me pay,

had an appreciation of the connotation of "earned" of which the British economist is quite innocent. It may, of course, be proper to distinguish incomes whose use will be socially beneficial from those incomes whose use will be socially detrimental. But the contrast should be pointed by employing terms whose connotation and reference are future, not past.

Mr. Hobson has founded his conception of the socially desirable character of certain forms of industrial remuneration upon an admittedly biological parallel, that is to say, upon the laws of maintenance and growth of a "biological organism which provides itself with food to repair its waste of tissue and of energy, and to provide for its growth" (p. 76). This biological prepossession furnishes the key to his novel economic terminology. "Costs are that part of the product . . . necessary . . . to maintain the current output of productive energy in a factor of production." The residue of the product is surplus. But the surplus is subdivisible (on much the same principle as the Rooseveltian division of trusts into the "good" and the "bad") into "productive surplus" and "unproductive surplus." The productive surplus goes to create an "increase of industrial structure or power." Thus, savings that augment necessary plant and appliances of production, or profit that stimulates the entrepreneur to renewed putting forth of ability, or wage which releases latent labor power—all these are parts of the productive surplus. The "unproductive surplus" covers payments in the "form of rent, excessive interest, profit, or salary" in excess of what is needed to procure "an increase of industrial structure or power." The unproductive surplus is identified with unearned income, and constitutes the "direful spring" of the "woes unnumbered" of industrial society. "If there were no surplus there would be industrial peace, for necessary payments would absorb the product" (p. 79). One is entitled to ask, *en passant*, why the biological oracles should furnish so admirable an analogy for classifying laudable incomes ("costs" and "productive surpluses"), and should be wholly dumb when asked to furnish a congener to the malevolent "unproductive surplus." Possibly parasitism is the analogy; but, if so, the relative size of parasite and host seems quite different in biology and economics.

The "unproductive surplus," *alias* unearned income, is the target of Mr. Hobson's shafts. It accounts for unemployment and industrial crises (p. 294); its existence justifies the labor movement (p. 211); it is the one indispensable source from which to obtain taxrevenue, and so "of supreme significance in public finance" (p. 227). The substantiation of these awkward propositions leaves much to be desired.

The unproductive surplus, or unearned income, is indicted as responsible for cyclical unemployment and crises, because such income is either spent for goods whimsically and temporarily demanded, or because unearned income is "saved" to excess. The old argument is revamped that excessive saving leads to the creation of more productive appliances than are requisite; that when the productive appliances create consumption goods, the lack of demand for the consumption goods leaves "the machinery of industry . . . congested and clogged" (p. 52). It is not explained why the excessive appliances for production that result from the excessive saving of unearned income must create consumption goods exclusively. The excessive saving that takes the form of a machine shop will turn out machinery; and if the excessive saving issues in an augmented demand for productive appliances rather than for consumption goods, it is difficult to see why the machinery of industry must become "congested and clogged." It is doubtless perfectly possible for a community to make a mistaken distribution of its productive power; and to devote a disproportionate amount of this power for the time being either to the creation of commodities for immediate consumption or to the creation of appliances for future production. But that "unearned incomes" (in Mr. Hobson's view) are exclusively or mainly culpable in promoting one extreme or the other does not seem to follow. If the recipient of unearned income spends it now on champagne and now on motor cars, Mr. Hobson charges him with "irregular spending" (p. 307), and impairing "the regularity of employment" (p. 307). If the culprit does not spend but saves, he is charged with congesting and clogging the machinery of industry.

As regards the labor movement, Mr. Hobson finds its justification, not in collective bargaining which goes only a short way apparently, inasmuch as "the modern organization of capital . . . is able to offer successful resistance in most industrial fields to the more important demands of labor" (p. 215); but in its ability to *raid* the surplus (unearned income) concealed in profits:

> If . . . no surplus exists which labor can secure by organization, trade unionism inflicts a two-fold damage on the unorganized workers, keeping down their wages and raising the prices they must pay for goods produced under trade union conditions (p. 207).

If this be true, it is incumbent on Mr. Hobson to prove that, monopoly apart, profit conceals such surpluses. The view commonly entertained by those who obtain profits is that their remuneration is a closely-clipped competitive wage.

As regards taxation, Mr. Hobson seems to us grossly to exaggerate the magnitude of what he calls surplus or unearned income. The practical expedients he urges, such as the abandonment of "collection at the source" and the substitution of a "personal collection enforced by compulsory declaration of all incomes" (p. 241), under adequate penalties for failure to comply, quite remove him from the category of practical financiers.

The merits of the volume—and they are not few nor hard to find—are his incisive criticism of the theory of distribution, through the specific productivity of separate productive agents (p. 106 sq), and his analysis of markets, of price-movements and of industrial morphology generally; upon his main contention, the discrimination of earned from unearned incomes, and upon his financial projects based thereupon, the verdict must be emphatically adverse.

The Patient Observer. By Simeon Strunsky. New York: Dodd, Mead & Co. $1.20 net.

Humor and satire seeking their prey in the American jungle are wont to stalk in the skin of a caustic Irishman, an eccentric German, or a naïve Oriental—as if we could learn to see ourselves as others see us only through alien eyes. The ruse is hardly complimentary to American insight and candor. The most salutary, civilized, and humane ridicule is the direct self-ridicule that rises spontaneously from self-knowledge—the internal dawning and tolerant acknowledgment of the fact that one has been, like the queen of faëry, "enamoured of an ass." For this reason we welcome Mr. Strunsky's Patient Observer—a plain, average man of the city with a centre of good sense, who, exploiting neither an eccentric dialect nor personality, seeks the comic "thing-in-itself," and makes his satirical inductions with the touches of nature collected between his front door and his desk. The Patient Observer is a newspaper man, which means that he is the mouthpiece of Everyman and the medium for the eternal follies in their latest and most piquant disguises. Through him the newest quackery of the physician speaks, the fanaticism of the athlete, the unspirituality of the clergyman, the sensationalism of the journalist, the logic of the suffragette, the philosophy of the interpretative dancer, the cheerful mendacity of the commuter, and the prestidigitation of the politician. But he, disillusioned purveyor of illusions and passionless vehicle of passions, looks on from his centre of common sense with quiet, satirical, slightly cynical eye,

marking for his own the mirth-provoking absurdities of the pageant.

He is perhaps at his best when in the spirit of the old-fashioned "character" writers he portrays with a touch of both irony and pathos one of the types created by the pressure of city life and the exigencies of modern civilization. Such is Wallabout Smith—a respectable but not affluent New York business man who performs with a kind of humdrum fortitude, a wearied but unflagging patience, his duties to his employer and to his large family. Smith supports in his suburban home a wife who aspires to culture; and he is the father of four sons and two daughters—for which cause a former President of the United States has declared that he has "done more for his country than all the laws enacted by the Legislatures of all the New England and Middle Atlantic States since the Spanish-American war."

The ex-Presidential limelight has made Wallabout Smith an "eminent American." "How well-known men do their work," says the ironical Observer, "has always interested the public." Here is a sample of the stuff of Smith's life:

It was his habit to spend a good part of his day in New York city. He would rise about six o'clock every week day in the year, and, snatching a hasty breakfast, would make his way to the railroad station, pausing now and then in perplexity as he tried to recall what it was his wife had asked him to bring home from town. Sometimes he would catch his train and sometimes he would not. Arrived at his office he would remove his coat, and, putting on a black alpaca jacket, to which he was greatly attached, he would proceed to glance over, check, and transcribe the contents of a large number of bills and vouchers representing the daily transactions of a very prosperous commercial enterprise in which he had no proprietary interest. The day's work would be pleasantly broken up by frequent inquiries from the general manager's office. Every now and then a fellow-worker would take a moment from his duties to ask Wallabout Smith how his lawn was getting on. Sometimes he would be summoned to the telephone, only to learn that Central had called the wrong number. Lunch was a matter of a few minutes. At 5:30 every afternoon Wallabout Smith exchanged his alpaca jacket for his street coat, with a fine sense of weariness, and the secure conviction that the next morning would find the same task waiting for him on his table. "I have no hesitation in stating," Smith would frequently say, "that some of the busiest hours of my life have been spent at my office desk."

The merit of Mr. Strunsky's sketches is somewhat unequal, occasionally the brush is roughly applied, the humor deciduous. But a considerable body of work remains which is of more than passing interest—work informed with the fresh observation of the journalist and subtilized by the finer sympathy and humor of the elder essayists. We commend to the gentle reader "On Living in Brooklyn," "The Cadence of the Crowd," "When a Man Marries," "An Eminent American," and "Behind the Times."

Notes

A restatement by the late William James of his position in philosophy, being uncompleted documents, will be issued this spring by Longmans, Green & Co.

Hougbton Mifflin will issue May 6: "Harriet Beecher Stowe: The Story of Her Life," by Charles E. and Lyman Beecher Stowe; "Orphans," by Helen Dawes Brown; "Religion and Immortality," by G. Lowes Dickinson; "Complete Poetical Works of Edgar Allan Poe," an entirely new text, edited by J. H. Whitty; "A Study of Versification" by Brander Matthews, and "Teaching Poetry in the Grades," by Agnes G. Smith and Margaret W. Haliburton.

Mrs. Carter Harrison is publishing through McClurg a new book of fairy tales. The same firm hopes to have ready in the autumn "Briefs for High-School Debates," by E. C. Robbins.

Paul Elder & Co. have nearly ready "Comfort Found in Good Old Books," by George Hamlin Fitch.

The Robert Clarke Co. of Cincinnati promises for early May "The New Avatar and the Destiny of the Soul, the Findings of Natural Science Reduced to Practical Studies in Psychology," by Dr. J. D. Buck.

Selections from the works of H. G. Wells have been made by Mrs. Marriott Watson for the purpose of a calendar, after the manner of the G. B. S. Calendar. The publisher will be Frank Palmer.

Two unfinished manuscripts by Thackeray bave been discovered by his daughter, Lady Ritchie. One, "The Knights of Borsellen," is part of a mediæval romance, having the author's own drawings; the other, "Cockney Travels," is an account of tours by coach and rail in the west of England about 1842. The new material will appear in *Harper's Magazine* and in the *Cornhill Magazine* before it is included in the Centenary Biographical edition of Thackeray's works.

Publications of the Selden Society for 1910, which are about to be issued, will bear the title, "Select Cases in the Star Chamber: Vol. II. A. D. 1509-'44," edited by J. S. Leadam, with Introduction.

The Home University Library of Modern Knowledge, a series of new books, by eminent authorities, at a moderate price (75 cents a volume), and specially written for the layman and student, will be inaugurated in May, by the publication, over the imprint of Henry Holt & Co., of the first ten volumes. The editors are Prof. Gilbert Murray of Oxford University, Herbert Fisher of Oxford University, Prof. J. Arthur Thomson of the University of Aberdeen, and Prof. William T. Brewster of Columbia University.

Among the first ten volumes are found: "The French Revolution," by Hilaire Belloc; "The Irish Nationality," by Mrs. J. R. Green; "A History of War and Peace," by G. H. Perris; "The Socialist Movement," by J. Ramsay MacDonald, chairman of the British Labor party; "The Stock Exchange," by F. W. Hirst; "Modern Geography," by Dr. Marion Newbegin; "Polar Exploration," by Dr. W. S. Bruce, and "Parliament," by Sir Courtenay P. Ilbert.

Charles Malcolm Flandrau's volume of essays entitled "Prejudices," will be brought out in May by the Appletons.

The "Jeune Roman" prize of 3,000 francs was won this year by Jean Balde, autbor of "Les Ebauches."

The Dickens Committee of England, including Lord Alverstone, Andrew Lang, and other well-known names, has sent out an appeal to lovers of Dickens in America to contribute to the support of his descendants, many of whom are in straitened circumstances. The committee adds:

It is proposed to collect this fund tbrough the sale of a centenary book-plate known as the Dickens stamp, which is to be obtained at the price of two cents, from all booksellers and stationers who are interested in this scheme. These stamps are to be affixed to every copy of Dickens. This movement has already received the support, in this country, of all classes from his Majesty the King to those in lowly walks of life.

"Nowhere do nature and tbe savage combine to make exploration work so difficult and so risky as in the remote corners of the South American continent," says Major P. H. Fawcett in an account (in the *Geographical Journal* for April), of his last year's experiences while delimiting the new frontier between Bolivia and Peru. He prophesies a boom on the rich gold belts of southern Peru and all Bolivia east of tbe Andes when the Panama Canal is opened, adding that "in southern Bolivia exists also what is probably the richest tin region in the world, the vast bulk of it unworked yet for the want of capital and difficulty of transport." Dr. Wilfred T. Grenfell describes the natural features of Labrador, where he has been the superintendent of the medical mission since 1892. He dwells upon the "vegetation of our enormous wild garden," the berry crops of which he believes cannot be excelled. He also hopes that through the reindeer, 3,000,000 of which could easily be supported there, it will be a "meat-supply to the world." In a fully illustrated report of tbe "Michael Sars" north Atlantic deep-sea expedition, 1910, Dr. Johan Hjort, its leader, says that by far the greatest animal life was found at a depth of 300 metres and virtually nothing at the lowest depths.

As a check against various errors and "corrections" that had crept into the text of the King James Bible, the University of Oxford, in 1833, published an accurate line for line reprint of the *editio princeps* of 1611. This reprint has now been reproduced by a mechanical process and published in a convenient volume at the University Press. The type in this reproduction is small and has a little of that blurred look which commonly goes with the mechanical process, but for reference and comparison, not for continuous reading, the book was intended, and for this purpose its absolute accuracy is all sufficient. In a Bibliographical Introduction of some length Alfred W. Pollard gives a remarkably clear history of the various translations from the Wyclif (or more properly Wycliffite, for the work was only done under Wyclif's direction) to the authorized version of King James.

In another volume, "Records of the English Bible," Mr. Pollard prints this same introduction and then gives a literal reprint of the documents relating to the translation and publication of the various English Bibles between 1525 and 1611. When an old translation of a Latin document exists, as in the case of those preserved by Fox, he gives this together with the Latin; when no such translation exists, he adds his own version. On the whole, the perusal of these letters, promulgations, prefaces, reports, etc., in this consecutive and convenient form will add surprisingly to the vividness of a drama even for those who thought themselves already well versed in Biblical history. Some of the documents, moreover, were by no means easy of access until printed in this collection. Mr. Pollard observes that the record as a whole brings out the strong element of politics that influenced those who were trying to introduce and those who were trying to suppress the English versions. This appears to us true in a way; but it was politics of a peculiar sort. Those in high authority seem to us to have been in general much perplexed by the whole movement. The radical party were undoubtedly led on by their dislike of self-continuing institutions, and to this end were ready to do a certain violence to the language; Tyndal, for instance, dropped the word *priest* commonly and etymologically used for *presbyter*, and substituted the word *elder*, dropping *church* also and substituting *congregation*. One of the amusing documents in the present collection is a letter (Brit. Mus. Cotton MS.) from Robert Ridley, chaplain to the Bishop of London, to Henry Gold, chaplain to the Archbishop of Canterbury, in which the pious horror of the writer vents itself in incoherent English and Latin. He begins:

Maister gold I hartly commaunde me vnto you, as concernyng this common & vulgare translation of the new testament in to englishe, doon by M. William hichyns, other wais called M. W. tyndale & frear William roy, manifest lutheranes heretikes & apostates.

Chaplain Ridley informs Chaplain Gold that Tyndale's notes and introduction are "al to gither most posoned & abhominahle hereses that can be thowt." He continues:

By this translation shal we losse al thies christian wordes, penance, charite, confession, grace, prest, chirche, which he alway calleth a congregation, quasi turcharum et brutorum nulla esset congregatio nisi velit illorum etiam esse ecclesiam.

The drama closes with the statement of the translators of the authorized version:

Lastly, we haue on the one side auoided the scrupulositie of the Puritanes, who leaue the olde Ecclesiasticall words, and betake them to other, as when they put *washing* for *Baptisme*, and *Congregation* in stead of *Church:* as also on the other side we haue shunned the obscuritie of the Papists, in their *Azimes Tunike*. . . .

A valid objection against several of the modern parallel Bibles and compilations of the Old Testament literature, that they extend over several bulky and expensive volumes, does not obtain in the case of "The Old Testament Narrative," by Alfred Dwight Sheffield (Houghton Mifflin). By omitting all duplicate passages, as well as the propbecies, laws, and Psalms which contain no historical narratives, Mr. Sheffield has brought the Old Testament history within the compass of a single convenient volume. The material is separated into chapters and sections, with appropriate headings, and arranged in the order of events, without regard to the position of the various passages in the Bible as usually printed. Glosses are cut out, and where several narratives of the same event occur, the passage most important for the understanding of the history is chosen. The result is that one follows easily the Hebrew historical narratives from the early stories to the restoration of the temple services under the Maccabees. The King James version is employed, with necessary corrections. The notes are brief and are confined to explanations essential to the understanding of the text. In these explanations and in the arrangement of the material the results of historical criticism are assumed. The attempts to popularize knowledge of the Bible by novel ways of printing it are numerous, and Mr. Sheffield's is one of the most convenient, but none of these devices will compensate for a parent who takes down the old King James version for a chapter every morning.

"The Ideal Italian Tour" (Houghton Mifflin), by Henry James Forman, is an illustrated pocket volume bound in red leather, and is intended as a supplementary guide to persons doing their Italy with dispatch. Mr. Forman has brought together about the amount of history and criticism that a hasty, yet not careless, tourist, can absorb *en route*. The idea of a pocket manual of Italian history, legend, and art is an excellent one, and in the main the attempt is successful, though the traveller who prefers Orvieto or Perugia to Siena as halting places, is left without counsel. The proofreading of Italian names is bad, and there are many inadvertences, not to mention a disposition to credit the tales of local ciceroni. No visitor, unless the situation has recently changed, can see the Cavallinis in Sta. Cecilia in Trastevere without a ministerial permit, nor is Cavallini "Giotto's pupil." It would be hard to discover anything of Giotto in the Pisan Campo Santo. Correggio's Danae should certainly be seen even by the hurried visitor to the Casino Borgbese. In general, the book needs considerable revision in the direction of sobriety and accuracy.

The fifth volume of the collected works of Ambrose Bierce ("Black Beetles in Amber," Neale), contains three hundred and eighty pages of criticism in more or less successful verse of persons, chiefly unknown to fame, who seem to have diversified the history of the Pacific Coast. Mr. Bierce argues soundly in the preface that dead beetles may be as obscure as they will, it is the amber that insures their immortality, and rests his defence of the existence of this book on the practice of Aristophanes, Horace, Dryden, and others. While granting Mr. Bierce's law, the impartial reader will be obliged to decide that an unfortunate fundamental difference between the present case and those cited makes them irrelevant here.

The first impression made by Count Fritz Hochberg's journal, "An Eastern Voyage" (Dutton), is one of amazement that it should have been published. The daily incidents recounted and the comments on them are often excessively trivial and sometimes vulgar. Nor has it the excuse of being a description of little-known regions, for he rarely leaves the well-beaten track of the globe-trotter. But the persevering reader will find so much that is really entertaining in the outspoken record that he will simply regret that it had not been carefully edited before publication. The personality of the count is strongly brought out, and is generally agreeable and amusing. The journal begins with his departure from Southampton in October, 1907, and ends at Japan a year later, the other countries visited being Australia, New Zealand, Burmah, and India. A day was spent at Manila, during which he reached the conviction, from the "brooding, defiant, dissatisfied, yet half-melancholy atmosphere," that the people, "should the occasion present itself," will "shake themselves free of the unwanted, thoroughly-hated American government." It is evident that he is in sympathy with them, for, in another place, he gives it as his opinion that America is not "a country for civilized Christians to travel in" (Vol. I, p. 175). And, again, "No American can ever be a lady, even if she gives herself the airs of one" (Vol. II, p. 275). The most enjoyable parts of the journal are those in which he describes his wanderings amid the mountains of Kashmir and his experiences in Japan. He is most enthusiastic in his admiration of the Japanese, predicting a great future for them. The illustrations consist of reproductions in color of twenty-five of his sketches and forty-eight photographs, some of which are beautiful.

The Bostonian Society has just issued Volume VII of its publications, in which subjects of more than mere local concern are treated. An interesting episode in the history of Maine, for instance, is narrated, in the "Dutch Pirates in Boston," by the Rev. G. M. Bodge. In 1674, a Dutch frigate captured Castine and the forts and trading posts as far as the St. John's River, and the captain "proclaimed the dominion of the Prince of Orange" over this part of Acadie. On learning of this some Boston men sailed in two vessels, flying the Dutch flag, for New Holland, as it was now called, and captured four English vessels which, it was contended, were engaged in unlawful trade. Complaint was made and an expedition was sent from Boston which took the offenders prisoners, several of whom were found guilty of piracy and condemned to death. In telling the "Story of Boston Light," which is "one of the oldest of the famous lighthouses of the modern world," Fitz-Henry Smith, jr., says that an attempt to erect lightning conductors about 1785 "was opposed by several of the godly men of those days, who thought it vanity and irreligion for the arm of flesh to presume to avert the stroke of heaven." The opposition was overcome by the lightning itself, according to an article in the *Massachusetts Magazine* for February, 1789, for "necessity prevailed over the consciences of our faithful fathers, and the invention of Franklin was employed."

The recently established Mohammedanisches Seminar in Potsdam, far from being an institution exclusively devoted to the preparation of young men for mission work in Moslem countries, has higher aims and intends to apply scientific methods to the study of modern Mohammedan life and thought. Among the courses announced for the coming summer semester are some on the interpretation of the Koran; on Sufistic philosophy; on the organization and

the practices of the order of the Dervishes; on the life of Mohammed and the history of Arabic poetry, to which is added practical instruction in the Persian, the Turkish, and the Armenian languages.

The special committee appointed by the Russian Academy of Sciences in St. Petersburg to investigate the advisability of introducing the Gregorian calendar in Russia has reported that the adoption of the new style would be out of the question for that country, but that a simplified calendar is a desideratum. The Russian government will propose to the other Powers an international convention for the attainment of this latter purpose.

Recent statistics report at the sixteen universities of France a total enrolment of 40,001 matriculated students. The law faculties have 16,915, the medical 9,721, the philological 6,363, and the natural science departments 6,287. During the same semester, Germany had 54,845 regular university students; but in this case philosophy, philology, and history headed the list, with 15,475 students. Germany had about the same number of medical students as France, namely, 9,462; but, as compared with the 16,915 law students in France, Germany had only 11,323, and the attendance in this department is rapidly decreasing at German universities.

The Rev. Dr. Peter Henry Streenstra, for forty years professor of Old Testament literature and interpretation at the Episcopal Theological School, Cambridge, Mass., died suddenly at his country home in Robbinston, Me., just a week ago. He was born in Holland in 1833, but came to this country as a boy. He was well-known for his book, "The Being of God as Unity and Trinity."

Science

Dry Farming. By John A. Widtsoe. New York: The Macmillan Co. $1.50 net.

It is a far cry from Jethro Tull's "Horse-Hoing Husbandry" to the latest volume in the Rural Science Series. The reviewer's copy of the former is of 1733, and yet modern dry-farmers trace the beginning of their science to Tull and his machines. So much of the Englishman's science as was taken to our West, to Australia, and to South Africa caused the development in different localities of very similar systems, which have a common basis in theory and fact. Recent practice, which is becoming more and more uniform all over the world, is now summarized at considerable length in "Dry Farming."

We are so accustomed to age-long conditions that we do not realize that man maintains himself on less than half of the earth's surface. Statistics show that 65 per cent. of the globe receives so little rain that it will not bear crops by ordinary methods of tillage, and that but 10 per cent. can be reclaimed by irrigation. Nevertheless, modern dry-farming is able to reclaim 30 per cent. of the whole, with every chance that newer methods will constantly widen the area of its effectiveness. Many of these arid areas are far from civilized influences; but when we consider that in the United States six hundred million acres, and in Australia a billion and a quarter acres, have the possibility of producing thirty bushels of wheat per acre every other year, we may realize that the race is as yet far from the end of its resources. This production would result from a rainfall of between ten and thirty inches yearly (our Eastern States average from forty to fifty inches), and would give certain success from a rainfall of above fifteen inches, provided soil and methods were right.

As to soil, arid regions present peculiar conditions. Whereas in humid districts we are used to a distinct difference between loam and subsoil, the latter coarse, infertile, and communicating at a slight depth with standing water, the soil of arid regions seldom shows a difference in texture or fertility to a depth of ten feet, and often much more. Where hard-pans appear they can usually be broken up by tillage, and the only soil to be avoided is one in which streaks or beds of gravel break the capillary system of soil particles by which water for the use of plants may be drawn from the lower depths. The customary arid soil presents the advantage that its water cannot drain away, nor can it leach out the elements of fertility in the soil; by proper tillage these can be conserved for plant use. Modern experiments, both theoretical and practical, have proved that the system of sub-soil packing, of which we heard so much a few years ago, is not necessary; a good arid soil takes care of its own water, mechanically storing it, to yield it again as the surface dries.

It is the task of the cultivator to prevent surface drying, after the water has been properly stored. A year of fallow after the land is broken—clean fallow, for no weeds must grow—is helped by fall ploughing to catch the winter snow or rain. The cultivator then keeps the surface loose. A ten-inch mulch, or covering of loose dry earth, will virtually stop evaporation; a four-inch mulch will save nearly three-quarters of the rainfall. On all exposed soil surfaces this mulch must be constantly maintained. Tull would stand amazed at the modern tools that have supplanted his first crude apparatus for this purpose. Besides the mulch, the shade of growing plants will help to stop evaporation. Strangely enough, the one inevitable cause of moisture loss, transpiration through the leaves of plants, may also be in part regulated. The possibility of this is shown by the fact that certain plants and plant varieties transpire less than others. Eventually, therefore, we may expect to see plants bred with this advantage in mind. A second means of checking transpiration is indicated in the discovery that plants transpire least from soils that are richest in plant food.

This discovery may encourage the Easterner in his use of chemical fertilizers, but it has no such effect on the dry-farmer. He points to the facts that his depth of soil gives him at least three farms in one, that arid soils are rich in nitrogen and are able to replenish their supply largely by bacterial means, and that in a series of years (above half a century), dry-farms have actually increased in fertility, as shown by surface tests. No; at most the dry-farmer ploughs under his stubble, and uses his small quantity of manure. His real dependence is on cultivation, not only to conserve water, but also to set free the fertility of the soil. His fallow year, which he has proved to be necessary at least once in four, often once in two years, is also a large factor in his attaining both these objects. Against the "year of drought" (a spectre in which Mr. Widtsoe does not believe), and against failure in fertility, fallowing and cultivation are the main reliances.

All this is set forth in Mr. Widtsoe's book with admirable clearness, and with abundant detail. The book is well made, well illustrated, well indexed; it makes no pretence to finality, but plainly looks to the future to settle many problems. Mr. Widtsoe writes of his subject with an enthusiasm which helps him greatly. Indeed, his chapter on dry-farming soil is almost enough to make the Easterner pull up stakes and move West. But there are other sides to the matter. Does not the increase of fertility in the topsoil mean a robbing of the lower layers? Mr. Widtsoe virtually admits as much, and indicates that the time will come when the question of fertilizing must be met. Again, and, perhaps, most important of all, there is the problem of life on the dry-farm. Conditions in the drier districts, where water must be hauled for miles, "preclude the existence of the house and barn on or even near the farm." No wonder, then, that it has come to be recognized that only certain men—the pioneers—are fitted to be dry-farmers. Those men who, we are told, prefer the irrigated farm—or the East—are they who must, for happiness, have near them trees, grass, a garden, which mean the happiness also of wife and children. It seems unlikely that the centre of population will move to the arid lands until the apparently small, but really vital question of comfort on the dry-farm is satisfactorily solved.

The Home University Library of Modern Knowledge (Holt) will include "The Evolution of Plants," by Dr. D. H. Scott.

Twenty years ago Dr. T. Mitchell Prudden wrote two excellent little books for the enlightenment of the public concerning the part played by microörganisms in the causation of disease. He has now prepared a second edition of both books, which G. P. Putnam's Sons publish. It may be

doubted if better books of this kind exist in English, or, indeed, in any language; they deserve to be widely known and read. The smaller one, treating of "Dust and Its Dangers," deals with a somewhat limited field, but has many generalizations concerning the larger aspects of bacteriology. This book is little changed in size, but is thoroughly modernized and illustrated without any loss of the crispness which was a charm of the first edition. Dr. Prudden's remarks on the "American Expectoratory Prerogative," or what he perhaps might equally well call the palladium of American liberty, are unfortunately scarcely less just to-day than they were in the first edition twenty years ago. The other book, which tells the "Story of the Bacteria and Their Relation to Health and Disease," has grown considerably, although it is still quite moderate in size and cheap in price. The earlier edition had but one illustration, which, however, glowed with color; the new edition has thirteen plates and fifteen figures in the text. Briefly, the book may be said to be a condensed treatise on general bacteriology, touching on many things, but it is a condensation made by a master hand, and such as only the masters make. Everywhere the reader meets evidence of thorough revision. Dr. Prudden brings out clearly and strongly the dangers of sewage and the risk in the using of ice, and urges vigorous measures against flies, for he points out that the fly may well declare that it thrives on the carelessness of man. He was formerly rather non-committal in the matter of bovine tuberculosis, but is now much more positive as to the danger of cow's milk, and also as to the latency of tuberculosis in man. The book is full of indications of Dr. Prudden's carefulness in generalization. His admirable discretion and level-headedness are perhaps nowhere more manifest than in his discussion of the part played by the leucocytes. This may be shown in a brief extract (p. 152), in which the modernization of the new edition is also apparent:

> We please our fancy sometimes, by making heroes of the leucocytes, dashing at the intruders in their hereditary bailiwicks, regardless of the risks which they so hardily incur. Let us not indulge in too much of this, lest haply we, too, be found among the nature fakers. For, in fact, they are impotent pieces of the game played by physical and chemical forces, and they have to set about the battle willy-nilly, just as much as the magnetized needle has to swing to the north, quite without concern whether the ship does or does not go upon the rocks.

The death is reported from London of Catherine Cooper Hopley, an authority on ophidians. While in this country, at the time of the civil war, collecting materials for a book on American birds, she was arrested on suspicion of being a British spy and was imprisoned for a few months.

Dr. Herman Knapp, who had an international reputation as an eye and ear surgeon, died on Sunday, in his eightieth year, at Mamaroneck, N. Y. He was born at Dauborn, Prussia, in 1832, and graduated from Giessen University in 1854; he was professor of ophthalmology at the University of Heidelberg from 1864 to 1868, and since 1888 had held the same position at the College of Physicians and Surgeons in this city, of which he became emeritus professor in 1902. He founded, in 1869, a special journal called the *Archives of Ophthalmology and Otology*, which is published in both English and German. He was the author of "Intra-Ocular Tumors" and of many papers on eye and ear surgery.

Drama

The Home University Library of Modern Knowledge (Holt) will include "Shakespeare," by John Masefield.

The various papers in the "Dramatic Values" of C. E. Montague (Macmillan) consist mainly of theatrical reviews—duly revised and polished—which were printed originally in the Manchester *Guardian* or elsewhere, and are well worthy of the more durable and convenient form in which they now appear. It is seldom that journalistic essays reveal so much ripe and varied scholarship, such keen perception, and such facility of vivacious and pertinent expression. Mr. Montague is an ardent champion of the newer drama, and not every reader will agree with all his opinions; but he writes with so firm a grasp of his subject and such sincerity of conviction that he holds attention and commands respect. All his chapters furnish attractive reading, and no lover of the theatre can afford to neglect them, but three or four of them are especially notable. Among these is an eloquent and discerning appreciation of the Irish plays of J. M. Synge, in which their uncommon literary charm and constructive skill are most sympathetically treated. His criticism is delicate and just, although his enthusiasm for the new Irish drama occasionally leads him to confuse the fancy of the poet with the realism of the dramatist. There are passages in Synge which never fell from uncultivated lips, Irish or other. Excellent, too, is the paper on Constant Coquelin, in which the secret of that actor's power is rightly ascribed to his zeal for his art, his minute study of detail, and his perfect control of his extraordinary facial and vocal resources. He was, in a word, the finished artist, not an inspired actor. Elsewhere Mr. Montague analyzes acutely the genius of Molière, and points out the value of cherished tradition as illustrated in the best classical performances of the French stage. If he were equally familiar with the contemporary American theatre, he might have written an instructive supplementary essay upon the destruction of all histrionic tradition by the methods of modern commercial management. Especially interesting and shrewdly observant is the account of the work of Mr. Poel in his Elizabethan revivals, in which antiquarian research was reinforced by artistic intelligence. He has high praise, also, for the work done at Stratford-upon-Avon by F. R. Benson. In dealing with the works of Ibsen, Bernard Shaw, and Oscar Wilde, his admiration is tempered by more critical acumen than is commonly displayed by the champions of the modern school. He lays about him very vigorously in assailing the supporters of the wholesome drama, but is more entertaining than ingenuous. The windmills which he demolishes are flimsy structures of his own creation. But the volume, as a whole, is an exceedingly good one of its kind.

M. Gémier, the popular French actor-manager, will soon give two novel dramatic performances in Paris. In a large transportable theatre, to be erected in front of the Hôtel des Invalides, he will give a performance of one of the plays of the Théâtre Antoine before President Fallières, members of the diplomatic corps, and the leading critics. On the next day he will give a similar performance for members of the two chambers. M. Gémier will then dismantle his theatre and move to Compiègne, to give performances there, this being the first in a chain of towns in northern France which he intends to visit for varying periods in the course of the summer. M. Gémier will employ no fewer than one hundred persons and two distinct specially constructed and spacious theatre-halls. The building is to be duplicated in order that one may be fitted up in the next town while performances are being given elsewhere. The whole company is to live in caravans and to travel by road in motor-drawn wagons. The performances will, in most respects, be faithful replicas, with most of the best-known actors, of the latest successful plays at the Théâtre Antoine.

From Canada comes the report of the brilliant success made by Edward Terry throughout his recent tour, now almost at an end. Besides winning fresh laurels as an actor, Mr. Terry has addressed large meetings in the principal towns of the Dominion, his object being to establish there branches of the Actors' Church Union. He has also lectured on Charles Dickens. Mr. Terry hopes to be back in England in good time to take part both in the command performance of "Money" at Drury Lane and in the gala performance at His Majesty's.

"The Little Dream," which has just been produced by Miss Horniman's company in Manchester, exhibits John Galsworthy in a new light. It is a symbolical, fairy-like piece in six scenes, showing the visions of Seelchen, an Alpine maiden, as she sleeps in a mountain hut, after having been kissed by the great London climber, Lamond—who has scaled the Cowhorn and the Winehorn, and is setting out for the Great Horn—and by her rustic lover, Felsman. As she dreams the three mountains take on a human aspect. The Cowhorn calls to her to stay among her mountains and valleys. The Winehorn, which reflects Lamond as the Cowhorn had Felsman, tells her of variety and new loves and riches and pleasure. It is with the Winehorn she will go. Then the Great Horn speaks, telling her she will come to him, to the unknown and mystery at last. The dream changes to an inn in Italy. The Winehorn comes down as a woman robed in red with wine leaves in her hair, and before Seelchen children, youths, and girls, rich and poor, dance. Out of the inn comes Lamond and tempts Seelchen to love him. Together they go in and the scene darkens. When light comes again Seelchen is standing upon the doorway with the cry, "My heart is old," on her lips. She hears the goatherd's pipe and the Cowhorn calling to her, and she goes. On the edge of the world the flowers dance and the goatherd plays his pipe. The goats leap and dance with joy. Felsman comes and presses her to go with him, but she finds the sun scorching and the air cold and his embraces rough. So, forsaking

both, she turns to the Great Horn, to mystery at last. The final scene is the hut The climbers go out to their adventures, and the girl wakes to the dawn. "The allegory," says a prominent critic, "is not difficult, and is with the ethical realities. Its content is to be filled by every man as he can, and the writing, with some exceptions, is singularly sustained and beautiful with a simple dignity."

The Shakespeare Festival at Stratford-upon-Avon opened with an afternoon performance of "Much Ado About Nothing." F. R. Benson was the Benedick, and Violet Vanbrugh the Beatrice. In the evening the Benson company gave a spirited performance of "The Merry Wives," but the Falstaff of H. O. Nicholson seems to have been somewhat lacking in the element of joviality.

Apparently, "A Butterfly on the Wheel," recently produced in the Globe Theatre, London, suffers from the defect of its virtues. It is written by E. G. Hemmerde, a well-known king's counsel, and Francis Neilson, and is exceedingly veracious in all its legal details, but undramatic. The story of a silly wife who compromises herself is feeble in itself, and is told diffusely, with endless reiterations. As for the great scene—the trial in the divorce court—that is described as much too tediously true to be interesting.

Mrs. George W. Stoddart, who died at her home in New York city last Sunday, aged seventy-nine, was once a member of the old Boston Theatre stock company, and appeared in support of Edwin Booth, Forrest, Charlotte Cushman, Kean, and other stars of that day.

Music

Dr. Henry Coward, the Pioneer Chorus Master. By J. A Rodgers. New York: John Lane Co. $1.

Very timely, so far as this country is concerned, is the appearance of this volume, for Dr. Coward is at present on an American tour with the Sheffield Choir, which, thanks to his training, has done more than any other organization to make English choral singing famous outside of England. His biographer briefly tells the story of his career and then explains by what methods he was enabled to "open a new chapter in the history of chorus singing" and become the leader of the choral revival which England has seen during the past fifteen years. Inasmuch as chorus singing is, on the whole, the least developed branch of music in the United States, the one in which we can learn a good deal from England, it is to be hoped that trainers everywhere will take to heart the lessons taught in this little book. It has only 101 pages, but these contain valuable hints not found elsewhere.

As a youth Dr. Coward was a cutler—one of the best in Sheffield; his work won many prizes, and for the last knives he made he received the high price of £3 per dozen. But he had higher aims than that; music had always interested him, and as the problem of surmounting the practical difficulties of piano or organ playing did not appeal to him, he decided to become a theorist, teacher, and conductor of choirs. In twenty months he won a scholastic qualification which usually occupied six or seven years. For ten years he held what was virtually a sinecure at £250 a year. Then, fortunately for the cause of choral music, he lost that post and, at the age of forty, began the real work of his life—work the value of which was characterized after a Sheffield festival by Sir Henry J. Wood in these words:

> I should like to say what a deep debt of gratitude we conductors and trainers and the whole musical world owe to Dr. Coward for the inspiration of his splendid enthusiasm, hard work, and talent displayed in the management and control of expression and diction as applied to large choral bodies.

An English specialty in choral performances is the marshaling of thousands of singers by one leader. In this branch Dr. Coward is preëminent. In 1897, on the occasion of the visit of Queen Victoria to Sheffield in her Diamond Jubilee year, the singing force under him numbered nearly 60,000 scholars and teachers. Nine bands were distributed at various points, and thus the army of musicians, nearly a quarter of a mile in length, was controlled with surprising precision. Her Majesty was "deeply impressed by the wondrously beautiful effect of so many thousands of sweet young voices."

Probably the main reason why choral music has fallen into neglect in our day is that performances of it have lagged so far behind orchestral concerts in the matter of expression. Dr. Coward also was, at first, a mere time-beater; fortunately, a candid friend informed him that while his choir sang flawlessly, so far as mere execution was concerned, the things that alone make music worth while—expression, color, interpretation, real musicianship—were wanting. He thought the matter over, and started in on his new course with such zeal that at first he perhaps overshot the mark; at any rate, at a competition the judge censured him and his choir for attempting to sing oratorio music "with expression"—"painting the lily and gilding refined gold." To the present day some critics accuse him of occasional exaggeration, of excessive restlessness; but that he had set a new standard was soon generally admitted. Only one London critic attended his first Sheffield Festival, but he wrote such a glowing account of it that at the second every important newspaper in the country was represented, as well as several foreign journals; and the fame of Sheffield choralism became world-wide.

There are not many books on expression in music, and in none of those in existence would it be possible to find a chapter containing a greater number of useful hints than are to be found in the thirty-four pages Mr. Rodgers devotes to Dr. Coward and the means by which he has achieved such distinction for himself and his singers. He might have had less success had he made his experiments in a country where there is less enthusiasm for this branch of music. The Sheffield Choir contains a number of members from other cities, including some from London. Attendance at the weekly rehearsal costs some of the members $10 in railway fare and hotel expenses; yet they are eager to come. In our own cities it is almost impossible to get amateur tenors, baritones, and basses to attend rehearsals; but probably they would be more willing to come were Dr. Coward's method followed, by which no composition, however difficult, needs more than three rehearsals. Not a second is wasted. Every bar of the music is numbered, so that, in case of repetition, all can find the place desired at once. The words have to be memorized in advance, at odd moments, and on distinct enunciation great stress is placed by this trainer. He makes the singers read (not sing) the words aloud. Something is wrong, he maintains, if the audience have to refer to their book of words.

The women are not allowed to wear their hats, for all must be able to see this conductor's every beat. Two of his specialties are peculiarities of accenting and shading. In some places he does not allow the singers to accent the whole value of a note, but only the initial attack, which greatly enhances the effect of the accent; the other specialty is a "floating tone," a pianissimo, concerning which the author says that "if a clock cannot be heard ticking through a chord of this tone, sung by three hundred voices, the conductor fines them down until the test is passed." As for the other dynamic extreme, "he never shoots his bolt too soon," but builds up his climaxes in such a way that the apex is held in reserve until the moment when it can be superimposed with overwhelming effect. From the orator Dr. Coward has learned how to enhance the effect of vocal utterance by a hundred little devices of stress, lingering, a fractional silence before a salient word, a change of timbre reflecting the emotional meaning of a word or phrase; and from the actor he has caught the secret of characterization. Not only, when the words are derisive, does he make the choir sing derisively, but, in Berlioz's "Faust," for example, he makes the choristers enter into the real spirit, successively, of the peasants, drunken soldiers, rollicking students, devout villagers, and, finally, the lost souls in Pandemonium, snarling out their un-

holy gibberish. Such are some of the secrets of Dr. Coward's success. It would be well for our own choral conductors if conscience and study of this book made Cowards of them all.

One of the most interesting of next season's concerts will occur in New York on the 18th of December by way of celebrating MacDowell's birthday. It will be given by the Volpe Orchestra, and the soloist will be Augusta Cottlow, who will also play MacDowell's Norse sonata at her recitals.

Lillian Nordica has been again engaged by the directors of the Grand Opera to impersonate Brünnhilde in "Götterdämmerung" at the first complete performance of Wagner's Nibelung trilogy in Paris.

On Good Friday, Sir Charles Santley made what was announced as his last appearance at the Crystal Palace, in London. His first appearance there was fifty-four years ago.

Maurice Ravel, whom some regard as the most promising of the younger French composers, has had the honor of being chosen to compose the first French ballet that the Russian Imperial Corps de Ballet will have ever danced. The old Greek story of Daphnis and Chloe is the subject of it.

Art

AN EXAMPLE FROM CHICAGO.

CHICAGO, April 26.

To the visitor from the East who is interested in matters of art two things are especially noticeable in the manner of dealing with such matters here. One is the multifarious functions of a single institution and the concentration of all artistic interests in one place; the other is the friendly and familiar cooperation of artist and layman, of the millionaire and the man of modest or less than modest income, in all efforts for the betterment of artistic conditions.

The Art Institute does the work that, in New York, is done by half a dozen bodies. It is a museum with permanent collections which are rapidly assuming considerable proportions; it is an art school which is the largest in the country, measured by the number of students who attend its classes, and one of the best, judged by the standard of work attained; it is a lecture bureau which provides lectures on artistic subjects for almost every day during the winter; it is a library of books on art and of photographs of works of art; and it is an exhibiting body which holds several important annual exhibitions besides a constant succession of special exhibitions of one sort or another. At the moment of this writing its galleries contain no less than five separate exhibitions, and even a single work of any general interest is likely to be seen there before it goes to its final destination. It is little wonder that plans are under immediate consideration for extending the building of the Institute out over the railway tracks to the Lake Front, at the same time that the completion of the present building by the erection of a central dome is in contemplation. No one seems to have much doubt that the money for both additions can be obtained.

The various forms of the Institute's activity may have to be separated at some future time, and the combination of a permanent museum with galleries for temporary exhibitions may have to be broken up, but at present it has great advantages. The permanent collections attract visitors to the exhibitions and the exhibitions call attention to the permanent collections. All exhibitions are in the same centrally placed and easily accessible building, and there are always exhibitions to see, so that the attendance is large and, on the three free days of each week, runs up to four or five thousand.

The hearty coöperation of all those in any way interested in art is greatly facilitated by the existence of another institution, the Cliff Dwellers. Perched upon the top of the Orchestra Building, overlooking the lake and almost opposite the Institute, is this artistic and literary club—a luncheon and dining club merely, without bedrooms—where, apparently, almost every one who is any one in Chicago may be met, on any day but Sunday, between twelve and two o'clock. There come the painters, the sculptors, and the architects, the writers and the musicians, and there come also the bankers and the officials of the Institute; there, over the coffee-cups, many a scheme is discussed, and those schemes which survive such discussion are finally launched. If such a club existed in New York it would not be such weary work trying to procure adequate exhibition facilities for the National Academy of Design and the other artistic societies centred in that city. Because such a club exists in Chicago, they have the Friends of American Art.

The idea of such a society had been in the mind of Mr. Hutchinson, the president of the Institute, for more than ten years, the model of the organization being the Société des Amis du Louvre, founded in 1897. About two years ago the idea was taken up by others, and in November, 1909, a letter from Arthur T. Aldis brought about definite action, the society being incorporated in 1910, "to promote the development of American art by the purchase of works by American artists to be presented to the Art Institute of Chicago and by any other appropriate means." The society now contains one hundred and sixty-five members each of whom is pledged to contribute two hundred dollars annually for five years to a fund for the purchase for the Institute of works by American artists, thus providing, when interest is included, an annual income of more than $32,000 for that purpose. Purchases must be recommended by the purchasing committee and authorized by the executive committee, and the works must, of course, be approved and accepted by the art committee of the Institute. Eight pictures were thus bought from the Institute's annual exhibition, and nine others have since been acquired together with one piece of sculpture which is to be put into marble, Lorado Taft's Solitude of the Soul, the whole at a cost of nearly twenty-nine thousand dollars.

The limitation of the society's purchases to American works was not at first contemplated, and was adopted partly because such a limitation was thought to be of advantage in an appeal to the public; but it seems to me to have been judicious from a larger point of view. The functions of such a museum as that of the Institute are twofold; first, to collect such works of the past and of foreign countries as are exemplary and necessary to our education in art; secondly, to collect such contemporary works of our own artists as shall give future students a fair idea of our production to-day. The two functions must be performed in a somewhat different spirit, and there is no reason why they should not be performed by different people. In the collection of the art of the past a rigid selection is desirable. In the collection of contemporary American art, a more liberal acceptance of what seems good at the time may well be admitted. If errors are made, as they are likely to be, they can be rectified at some future time by eliminations; and a few works which stand the test of time will be worth all the money spent on the whole collection, while works not of the highest rank will still have their historical importance as showing what was done and admired at the time of their acquisition. By assuming this function, the Friends of American Art provide for the carrying on of a work which the Institute found difficult, and they set free the funds and the energies of that institution for its other tasks.

An incidental result of the work of the Friends, and of their policy of selecting a part of their purchases from the annual exhibitions of the Institute, will be the increased attractiveness of these exhibitions to artists, who like to sell and like even better to know that their work is to remain in an important public collection, and the consequent raising of the standard of these exhibitions and the enhancing of their usefulness to students and of their interest for the public.

Not all the works so far purchased by the Friends of American Art are at present hung in the museum. Some of them have been generously lent to ex-

hibitions in other cities, where their authors wished them to be seen before they settled into their permanent place. But there is enough here to make a brave show, and to give a foretaste of what a few years is likely to accomplish. John W. Alexander's Sunlight, which we remember in New York as one of his best contributions to recent Academy exhibitions, is among the absentees, and so are Daniel Garber's Hills of Byram, and Louis Bett's Apple Blossoms, a delightful portrait of a child by a Chicago artist whom we, in the East, should know better than we do. Among the purchases now shown in the galleries of the Institute are Dewing's Lady in Green and Gray, a thoroughly characteristic example of his delicate and personal art; Frank W. Benson's admirable Rainy Day, an interior somewhat in the vein of Mr. Tarbell and with much of Tarbell's beautiful management of light; and Childe Hassam's Contre Jour, one of that artist's figure subjects recently seen in New York in his exhibition at the Montross Gallery. Robert Henri's Young Woman in Black will be recalled by many as perhaps the very best canvas he has painted, pleasing in tone and in sentiment and without the exaggerations of his more recent style. The most discussed picture is probably Arthur B. Davies's Maya, Mirror of Illusions, in which a procession of slender, nude maidens posture before a great mirror which reflects a landscape of lake and mountains as well as their own attenuated forms. It has undeniable charm of color and interest of line, however fantastic and even incongruous its conception may seem to the conservative. Its real artistic motive one takes to be the presentation of each figure in two points of view, with the consequent conflict of identity and difference. The other purchases are Karl Anderson's brilliant Idlers; George Elmer Browne's The Port, Douarnenez, Brittany; John C. Johansen's Piazza San Marco; William Keith's dark and effective Coming Storm; Metcalf's Ice Bound, one of his best; J. Francis Murphy's Hill Top; Gardner Symons's Winter Sun; Harry Van der Weyden's Christmas Eve; and Lawrence Mazzanovich's little blue and gold canvas called April Twentieth.

Of course this is but the beginning of a collection of contemporary American art, but it is a very good beginning. There is not a picture of the seventeen but has real merit, and some have a very high degree of merit. It is a much smaller collection than the Hearn Collection at the Metropolitan Museum, and perhaps it contains no single work of the excellence of some of those in the Hearn gift, but, on the other hand, it attains perhaps a higher average of quality throughout. The Friends of American Art are well aware how much more remains to do than they have already done, and they are ceaselessly active in the effort to do it. What they have done in one year is in the highest degree encouraging.

Perhaps we do not need such a society in New York, though even there it might find work to do. In many another city this example from Chicago might be followed—will be followed, one hopes—with advantage. And even in New York, though the work which needs doing may be different, we might profit by the spirit in which the work most needed here has been undertaken and is being carried through.

KENYON COX.

"The Painters of Japan," by Arthur Morrison, illustrated in color and collotype, will be published immediately by Messrs. Jack.

After a careful study of all documents bearing upon the subject, Freiherr von Hadeln seems certain that the disputed date of Paolo Veronese's birth is 1528.

Monsieur Loys Delteil of 2 Rue des Beaux Arts, Paris, has just issued volume VI of his useful "Le Peintre-Graveur illustré (xixe et xxe siècles)"; it is devoted to sculptors who have etched or lithographed —Rude, Baryc, Carpeaux, Rodin. (The previous volumes of this series—which was begun in 1906—dealt with Millet, Rousseau, Dupré, Jongkind; Meryon; Ingres and Delacroix; Zorn; Corot.) The work represents actual and careful research, and is a scientific tool for the use of the collector and the amateur. Each print catalogued is reproduced in halftone, sometimes in two or more states, that being a characteristic and useful feature found notably also in the Rovinski catalogue of Rembrandt's etchings, the one by E. G. Kennedy of Whistler's work (issued by the Grolier Club), and Moreau-Nelaton's monograph on Manet. Furthermore, public and private collections in which early or rare states are to be found are carefully noted, the New York Public Library appearing very often, thanks to the S. P. Avery collection. Vol. VII, devoted to Paul Huet, is to appear in April.

"British Costume During XIX Centuries" (Stokes), by Mrs. Charles H. Ashdown, presents as its distinguishing feature a special classification and dating of women's costume according to headdress. There are some four hundred and fifty illustrations from original sources and nine color plates of costumes reconstructed by the author, ranging from Harold's time to Elizabeth's. The book is popular in plan, but evidently represents considerable first-hand study of the material. The reader should have been warned not to take too literally the testimony of miniatures of Norman date and earlier, which abound in Byzantine conventions. In general, this book will take high rank among popular treatments of the subject.

"How to Visit the Great Picture Galleries" (Dodd, Mead), by Esther Singleton, covers in a single volume the chief museums of Europe, including galleries as far off the beaten track as those of Stockholm and St. Petersburg. The author makes a rigorous selection of important pictures on a fairly catholic basis. Preferring the primitive, she can admire also the eclectics. Generally, the descriptions or appreciations of pictures chosen for inspection are drawn from well-known critics, French and English. The general arrangement is so sensible and the pocket volume so handy that we regret its defective execution. It shows signs of haste in compilation. Frequently it is difficult without reading forward in the text to associate a picture with its painter. The attributions are always uncritical. Leonardo da Vinci suffers particularly, through imputation of secondary works. The remarkable series of Biblical Rembrandts at Munich is omitted. Goya, in the Prado, is barely mentioned. Surely, manuals of this character should be revised by some one knowing the subject at first hand.

The death is reported from Cornwall, in his fifty-fifth year, of Arthur G. Langdon, an architect, and the author of "Old Cornish Crosses."

Mrs. Elizabeth St. John Matthews, a sculptor, and the wife of Robert Matthews, the artist, died last week of heart disease in the Hahnemann Hospital. Mrs. Matthews had received a commission for a bust of President Taft, and a plaster cast of her design was submitted to a committee recently.

Antoine Lumière, who died recently in Paris, aged seventy-two, began as a sign-painter, but later gained no small reputation as a painter of landscapes.

Eugène Napoléon Varin, who belonged to a family of medallists going back to the reign of Louis XIII, is dead at the age of eighty.

Berthold Riehl, the author of "Die Gemälde von Dürer und Wolgemüt," "Deutsche und italienische Kunstcharaktere," and other valuable works, died not long since at Munich, at the age of fifty-two.

Finance

INFERENCES FROM A QUARTERLY REPORT.

On several occasions in the past decade's industrial history, a quarterly report by the United States Steel Corporation has been of high importance for the light it threw on the general situation. This was true of the June quarter of 1902, which reported net receipts of $37,000,000 and a $15,700,000 surplus above charges and dividends, even with the disputed quarterly 1 per cent. paid on the common stock. That showed what even companies with heavily watered stock could do in boom times, and it encouraged Wall Street to talk of a future of unalloyed prosperity. The December quarter of 1903 was an equally accurate weather-sign, when the company's $15,037,000 net receipts left only three million dollars, after the quarter's fixed charges had been met, for dividends on the $360,000,000 7 per cent. preferred stock and the $508,000,000 common. That was an object-lesson in over-confidence, premature dividends, and neglect of working capital—evils which at the time were very general.

The report for the March quarter of 1908, the first full quarter after the panic, was equally instructive. In the face of that formidable blow to credit and prosperity—a much more serious affair than 1903—the Steel Corporation's $18,200,000 net earnings for the quarter were enough to earn and pay full dividends on the preferred and a dividend at the annual 2 per cent. rate on the common stock; and the reason why the company rode that storm as it had failed to do in 1903 was that a far-seeing policy of husbanding working capital, restraining dividends, and spending freely for improvements, had been consistently pursued, even during years, like 1905 and 1906, when the Corporation's monthly earnings were breaking all records in its history. To a large extent, the pursuance of a similar policy by other companies, which had learned the lesson of 1903, explained the unexpectedly strong condition in which corporate industry in general emerged from the panic of 1907.

But having thus emerged from it, corporation directories promptly proceeded to make a new mistake. Some of the most powerful assumed two things at once—one, that if 1907 could not shake their position, then nothing could; the other, that if dividends could be earned in the face of panic, they ought to be increased immediately when panic depression was over. This, then, is why last week's Steel Corporation statement for the March quarter of 1911 is another instructive bit of testimony. It showed net earnings smaller by 27 per cent. than a year ago, and far short of earnings from the very much smaller plant of 1901 and 1902. They were larger, it is true, than in the slack quarters of 1903 and 1908 already referred to; but as against nothing at all paid out in dividends on the common stock at the close of 1903, and the $2,500,000 similarly paid for the March quarter of 1908, the company paid out $6,300,000 in the quarter past.

After omitting all of the usual special appropriation for improvements—for which $5,000,000 was allotted in the March quarter of 1910—the company had just $31,155 surplus left from the three months' operations. It would be difficult not to accept this statement as the commentary of events upon the episode of 1909, when the dividend was increased in three successive quarters to the annual rate of 3, of 4, and of 5 per cent. (although quarterly earnings still remained far below 1906 and 1905), when the common stock rose from 41 to 94⅞, and when serious financiers declared that the rise in the stock, which began in June, 1909, would not stop short of 200.

January's net receipts were the smallest in the company's history save for January of 1908, December, 1907, January and February, 1904, and November and December, 1903. Had anything like this continued, the 5 per cent. common stock dividend could not possibly have been maintained. These, however, were only the January earnings. The increase from that month's $5,869,000 to the $10,468,000 of March was reassuring. But trade has since grown dull again; furnaces were once more blowing out in April; and the question is, what next?

If the steel trade is again to be taken as an index to industrial conditions, we are naturally forced back to the study of other periods like that in which we now live. The story of 1908 and 1909 is familiar. Throughout the first after-panic year, the standpat policy in prices was pursued. The result was such poor business that, even after discontinuing all improvement appropriations (which had been $57,000,000 annually in 1907 and 1906), barely 4 per cent. was earned on the common stock. With the "open market" of February, 1909, the various grades of steel at once dropped $4 to $10 per ton, and the trade predicted prolonged inactivity before business would be on its feet again. But consumers rushed at once into the market; the Steel Corporation's earnings rose from $23,000,000 in the first quarter to $29,000,000 in the second, $38,000,000 in the third, and $41,000,000 in the fourth, and the management which had looked on a cut in prices as disastrous had within ten months put up the annual dividend rate from 2 to 5 per cent.

The case of 1904 was different. At the end of 1903, when the Steel Corporation was not earning its dividends, steel prices were cut from $27 to $23 per ton. Earnings improved from January to April, but very slowly; then they relaxed again, and in September were lower than in April. In the late summer, the price was cut again to $19.50, and this brought larger orders. By the early months of 1905 steel was selling at the price of 1903; but the corporation's quarterly earnings remained until 1906 below the figure reached just before the "rich men's panic."

Still another story is told by the course of the steel trade during that older year 1897, which, in its earlier months, showed so many resemblances to 1911. This is the narrative, as told in the American Steel and Iron Association's report for 1897:

> During the first half of 1897, the prices of iron and steel, which had been very low all through 1896, steadily declined, until, on the 1st of June, 1897, we recorded the fact that prices were then lower than had ever been known. With the increased activity in all branches of productive industry which soon afterwards set in, there was no immediate improvement in iron and steel prices. In the latter part of August and September, however, prices improved and the improvement continued through October.

After that month, recovery was slow and irregular again, and for this the not uninteresting cause assigned was the country's "possession of a capacity of production, in all lines, far in excess of the home and foreign demand." Yet recovery became really violent in 1898 and 1899; consumption expanded suddenly, producing capacity was ready for it, and prices were on an absolute bargain basis. So that precedent of other periods of reaction and hesitation has three very different stories to tell of recovery from such conditions as now exist. None of the recoveries occurred without further lowering of prices—a fact which may or may not apply to the present day.

LITTLE CITIES OF ITALY

Florence—San Gimignano—Monte Oliveto—Pisa—Lucca—Prato—Pistoia—Arezzo—Lecco—Bergamo—Brescia—Verona—Vicenza—Padua—Mantua—Argua

By ANDRÉ MAUREL

With a Preface by Guglielmo Ferrero

8vo. 30 *Illustrations*. $2.50 *net*

Through the country of Tuscany and Venice, as the two main divisions of his work are entitled, M. Maurel has wandered from town to town, painting in vivid colors his impressions of their historical and artistic aspects, showing with keen insight how closely allied are these, what each owes to the other, and how indebted is the present to both.

RECENT AND FORTHCOMING BOOKS
HOUGHTON MIFFLIN COMPANY

Administration of the College Curriculum
By WILLIAM TRUFANT FOSTER

The chief movement in the history of the college curriculum in America is the breakdown of the prescribed programme through the evolution of the electric system. The studies in this volume aim to throw the light of history upon present problems, and to give suggestions based on the careful organization of facts.
$1.50 net. Postpaid.

A Study of Versification
By BRANDER MATTHEWS

An analysis of the methods of the masters of English verse, introduced by a logical statement of the reasons for the poets following certain rules. Each point discussed is illustrated by specimen verses with the result that the student is not only given a set of definitions, but is shown exactly what the various poetical forms are, and how, in the hands of the poet, words and phrases are made to serve the purposes of both sound and sense. $1.25 net. Postpaid.

The Chief Elizabethan Dramatists
Edited by WILLIAM ALLAN NEILSON

The aim in the selection of the plays in this volume has been, first, to present typical examples of the work of the most important of Shakespeare's contemporaries, so that, taken with Shakespeare's own works, they might afford a view of the development of the English drama through its most brilliant period; second, to present so far as possible in a single volume the most distinguished plays of that period, regarded merely from the point of view of their intrinsic value. $2.75 net. Postpaid.

California Under Spain and Mexico
By IRVING B. RICHMAN

A notable addition to American history which cannot be overlooked by historical scholars, and with a special interest for Californians. With maps. $4.00 net. Postage extra.

Elizabethan Drama 1558—1642
By FELIX E. SCHELLING

A connected and consecutive history of the Tudor and earlier Stuart drama. The history begins with the accession of Queen Elizabeth and ends with the closing of the theatres. Introductory chapters contain a résumé of the origins of the drama so far as they concern England, and a brief account of the development of the miracle play, the morality, and the interlude, out of which the true drama sprang. Students' Edition. 2 vols. $3.50 net. Postpaid. In Press.

Religion and Immortality
By G. LOWES DICKINSON

These essays on "Faith and Knowledge," "Optimism and Immortality," "Is Immortality Desirable?" and "Euthanasia" combine a deep philosophic insight with an unusual charm of style. 75 cents net. Postpaid, 79 cents.

A Study of the Drama
By BRANDER MATTHEWS

This book embodies the results of the latest thought and investigation. It discusses the drama's growth and development, and its fundamental laws and principles as revealed in the plays of the great dramatists, from Sophocles to Ibsen. Students' Edition. $1.25 net. Postpaid.

My First Summer in the Sierra
By JOHN MUIR

A remarkable record of adventure and observation, in which Mr. Muir tells his experiences while in charge of a flock of sheep in the Yosemite. Illustrated by H. W. Gleason. $2.50 net. Postpaid, $2.66.

The Tudor Drama
By C. F. TUCKER BROOKE

A scholarly account of the history and development of the drama, from the time of Henry VII through the reign of Elizabeth. The work is based upon a course of lectures delivered by the author at Oxford University. Some of the chapters:—Scriptural and Miracle Drama, The Early Moralities, The Interlude in Transition, The Classical Influence in Comedy, and in Tragedy, The Heroic Drama, The Dramatic Comedy. $1.25 net. Postpaid. In Press.

Martin Luther
By PRESERVED SMITH

This is the first biography of Luther to contain the new material regarding his life and career, which has recently come to light in Europe.
Illustrated. $3.50 net. Postpaid, $3.70.

A Beginner's History of Philosophy
By HERBERT E. CUSHMAN

This is a history of philosophy upon the background of geography and of literary and political history.
Volume I, Ancient and Mediæval Philosophy. $1.60 Postpaid.
Volume II, Modern Philosophy. $1.60 Postpaid.

TWELVE CENTURIES OF

ENGLISH POETRY AND PROSE

By ALPHONSO G. NEWCOMER, A.M., Leland Stanford, Jr., University, and ALICE E. ANDREWS, A.M., Cleveland High School, St. Paul. 8vo, cloth, 760 pages, $1.75.

A volume which covers most comprehensively the field of English literature from Bede to Swinburne, with the exception of the modern novel. A very high percentage of those selections, prose and poetry, including the drama, which are desired for a *survey course*, will be found in this book. Brief notes; fully indexed.

Well worth your consideration before deciding on material for fall classes. *Send for our English Catalogue.*

SCOTT, FORESMAN AND COMPANY

MUNICH

PENSION WALTENBERG, Hess Str. 30

near Galleries. Best train connection.

EXCELLENT FOOD

WANTED—For literary and scientific work, capable woman secretary, college education or equivalent. Some knowledge French and German, stenography, and scientific (biology-medicine) terms. Answer fully by letter, stating salary expected, etc.

Address, F. H. C., care of *Nation*.

Just Published.

A Latin Grammar

By H. E. BURTON, Ph.D. *Professor of Latin, Dartmouth College.* 90 cents.

A new grammar and the only one on the market to-day which is sufficiently clear and simple for the beginner, and also sufficiently complete and scholarly for the college student.

Special Merits:

Its live, vigorous quality—due to the fact that its author makes the pupil feel that Latin was once a living language.

Its clear arrangement and lack of confusing sub-divisions.

Its effective method of showing the relative importance of the facts stated.

SILVER, BURDETT & COMPANY

Boston, New York, Chicago.

*TO LET—For College Vacation, fur*nished house, eleven rooms; modern conveniences; pleasantly located near Bowdoin Campus. Address F. E. WOODRUFF, Brunswick, Me.

SOME NEW BAKER & TAYLOR CO. BOOKS

A NEW LAWRENCEVILLE STORY
By OWEN JOHNSON.

The Tennessee Shad

12mo, 300 pages, 8 illustrations, $1.20 net.

The Tennessee Shad is the story of the rise and fall of the firm of Doc Macnooder and the Tennessee Shad, whose crafty wiles and Machiavellian schemes made much history during their stay at the famous school.

The other Lawrenceville stories are established favorites. No better humor exists in recent American literature:

The Varmint 12mo. $1.50

The Prodigious Hickey 12mo. $1.50

The Humming Bird 12mo. 50 cents.

Guide to English History *By Henry W. Elson*

A narrative and anecdotal account of England's story by an eminent and popular historian.

12mo, 360 pages, fully illustrated, $1.25 net; postage, 12 cents.

Malory's King Arthur and his Knights *By Henry B. Lathrop*

Gives the true flavor of the famous old book.

12mo, 370 pages, illustrated by Reginald Birch, $1.50 net, postage, 14 cents.

Kindergarten at Home *By V. M. Hillyer*

Play lessons arranged for use by mothers, governesses and kindergartners.

8vo, 200 pages, illustrated with drawings and diagrams, $1.25 net; postage, 14 cents.

Gilead Balm *By Bernard Capes*

A series of Quixotic detective stories united by a central romance.

12mo, 350 pages, illustrated, $1.25 net.

The Canon in Residence *By Victor L. Whitechurch*

A novel of life in an English cathedral town. Recalls Trollope in subject and manner.

12mo, 350 pages, $1.20 net; postage, 10 cents.

Dan McLean's Adventures *By Frederick Walworth Brown*

Stirring exploits on the Mississippi among river pirates. An American "Treasure Island."

12mo, 300 pages, frontispiece, $1.25.

The Blue Goose Chase *By Herbert K. Job*

A camera hunt in the Southern swamps, in which two boys play an active part.

12mo, 350 pages, illustrated, $1.25.

The New Nationalism *By Theodore Roosevelt*

Mr. Roosevelt's political creed and his reasons for holding it.

12mo, 268 pages, $1.50 net; postage, 12 cents.

TRAVEL BOOKS

Seeing Europe by Automobile

By LEE MERIWETHER

Author of "A Tramp Trip Abroad," etc.

12mo, 432 pages, 32 illustrations, index, end paper, map, etc., $2.00 net; postage, 16 cents.

A business man's account of familiar and unfamiliar places seen on a 5,000-mile auto trip in his own car. The map, printed both at front and end of book, and the illustrations, from the author's own photographs, lend especial interest to this racy, vigorous record of an unusual journey. Full of information about handling a car in Europe.

A Guide to Great Cities—
Western Europe

By ESTHER SINGLETON

12mo, 360 pages, 16 illustrations, index, $1.25 net; postage, 12 cents.

Describes sixteen of the great and famous cities of France and the Spanish peninsula. A convenient handbook and a very delightful home travel book.

By the Same Author.

A Guide to Great Cities—
Northwestern Europe

12mo, 330 pages, 12 illustrations, index, $1.25 net.

Portrays the ten chief cities of Great Britain, Holland, Denmark, etc. Full of fascinating glimpses of history, biography, geography; crowded with information and written with charm.

The One Book on Its Subject.

Camp and Camino in Lower California

By ARTHUR WALBRIDGE NORTH

8vo, 350 pages, 32 illustrations, maps, bibliography, index, $3.00 net.

This border region, made doubly interesting by recent events, is described by one of the few living writers who really know it.

Two Sentimental Guides.

Browning's Italy
Browning's England

By HELEN A. CLARKE

Author of "Longfellow's Country," "Hawthorne's Country," etc., etc.

Each, 8vo, 400 pages, illustrated, $2.00 net.

Books which are guides to the poet's haunts and which reveal his debt to the charm of places.

A Tour and a Romance

By ALICE E. ROBBINS

12mo, 348 pages, 32 illustrations, $1.50 net; postage, 12 cents.

Will recall Kate Douglas Wiggin's "A Cathedral Courtship," in its mingling of sentiment and sight-seeing. Cordova, Granada, Madrid, Seville, and Algiers are charmingly pictured and described.

THE BAKER & TAYLOR CO., Publishers, 33 E. 17th St., New York

RECENT PUBLICATIONS OF NOTE

ENGLISH

GAYLEY — Classic Myths in English Literature (Revised Edition) . . $1.50

This new edition presents a standard mythology much improved in form and content. The illustrations are profuse and are all new. In technique and beauty they are the best of their kind that have ever been made.

GORDON—Vocal Expression in Speech $1.00

A fresh and stimulating treatise on the fundamentals of public speaking.

FOREIGN LANGUAGES

HARRINGTON—Live Issues in Classical Study . . . . . $ .75

A vigorous discussion of the real value and place of the classics in school and college curricula.

JOSSELYN—Flamini's Introduction to the Study of the Divine Comedy . $1.25

This illuminating and discerning interpretation of the great poem will be of value to every Dantist.

DANTE SOCIETY PUBLICATIONS—

Annual Reports and Accompanying Papers . . . . . $ .75

Concordance of the Divina Commedia $10.00

VREELAND AND MICHAUD—Anthology of French Prose and Poetry . $1.40

An attractive volume in convenient form covering the last three centuries of French literature, beginning with Malherbe and ending with Anatole France.

EDUCATION

READ—An Introductory Psychology . $1.00

A simple and direct presentation of the fundamental facts of psychology for the general student and particularly for those who intend to teach.

JONES—Education as Growth, or The Culture of Character . . . $1.25

A revealing study of the higher development of education by one of the foremost educators, President L. H. Jones of the Michigan State Normal College.

HISTORY AND POLITICAL SCIENCE

CANNON—Reading References in English History $2.50

Besides complete lists of all the usual sources this book includes references to a surprisingly large amount of unsuspected collateral material in English History that will be found a boon to teachers and students.

FESS—History of Political Theory and Party Organization in the United States $1.50

The study of this book by every voter would be a most important step toward better and more intelligent citizenship.

GETTELL — Introduction to Political Science $2.00

A general outline of the subject viewing the state from the standpoint of past development and present conditions.

GETTELL—Readings in Political Science (In Press.)

REINSCH—Readings on American Federal Government $2.75

Readings on American State Government $2.25

These source books contain much documentary material illustrative of almost every branch of our federal and state government to-day. The selections are mainly from the written and spoken words of men actually engaged in the business of government.

Just Published—An Important Educational Book

Annals of Educational Progress

DURING THE YEAR 1910

A Report Upon Current Educational Activities Throughout the World

By JOHN PALMER GARBER, Ph.D.

Associate Superintendent of the Public Schools, Philadelphia.

12*mo.* 396 *pages. Cloth,* $1.25.

"Dr. Garber's book, which is a compact and remarkably comprehensive volume, more than fulfils expectation. Not only topically, but also geographically, does it survey the spacious domain of twentieth-century education at the end of its first decade, making sufficiently clear what is the general trend of educational development, and devoting appropriate attention to the now engrossing subject of vocational training. Among miscellaneous items of interest with which the book closes are to be found paragraphs on such general topics as postal savings banks, old age pensions, irrigation, Professor Wallace's Shakespeare discoveries, forest fires, and 'the city beautiful,' . . . The book performs a highly useful function not undertaken, so far as we know, by any rival publication."—*The Dial.*

L. M. MONTGOMERY'S *new novel*

THE STORY GIRL

Of course you have read the "Anne" books and the popular romance, "Kilmeny of the Orchard"?

Then you will be ready with intense eagerness to secure a copy of Miss Montgomery's new novel as soon as it comes from the printer.

As dainty and as entertaining as ever, the witchery of the wonderful "Garden of the Gulf" is with us once more, and Sara Stanley, the "story girl," is a heroine to whom has come a rare gift—that of weaving the bright thread of romance out of what the world might call "commonplaces."

Cloth, 12*mo, illustrated, in full colour, decorative jacket,* $1.50 (*Ready May 25th.*)

Miss Billy

By **ELEANOR H. PORTER**

A sunny story of a bright young girl in whom life, love, and hope meet; a "really truly" girl whom it is good to know.

A delightfully "human" romance with an interesting plot. *Cloth,* 12*mo, illustrated. Net,* $1.25

A Soldier of Valley Forge

By **Robert Neilson Stephens,** author of "*An Enemy to the King,*" *etc.*, and **G. E. Theodore Roberts,** author of "*A Cavalier of Virginia,*" *etc.*

"An entertaining tale of war, love and bravery."—*Chicago Inter-Ocean.*

12*mo, cloth, decorative, illustrated,* $1.50

George Thorne

By **NORVAL RICHARDSON**

Another story from the pen of the author of "The Lead of Honour"—that big Southern novel—will be received by the public with open arms.

Mr. Richardson's new book is as strongly dramatic, forceful, and original as the last, and is bound to stir the literary world.

Frontispiece in full color, decorative jacket.

Cloth, 12*mo, net* $1.25 (*carriage* 12*c. extra.*)

A Captain of Raleigh's

By **G. E. THEODORE ROBERTS**

"A plethora of incident and dialogue that is both scintillating and forceful."—*Boston Herald.*

"Dashing and brisk."—*Boston Journal.*

Cloth, 12*mo, illustrated, decorative jacket, net* $1.25

Published by **L. C. PAGE & COMPANY** 53 BEACON ST. BOSTON, MASS.

The Nation

NEW YORK, THURSDAY, MAY 11, 1911.

The Week

President Taft faced the embattled farmers in the White House on Monday man-fashion, and told them some plain truths with refreshing directness. They had come to protest against Canadian reciprocity on the ground that it would compel them to "take less for our wheat." But they are already taking less for their wheat. The price is from 15 to 20 per cent. lower than a year ago. The good old protectionist argument would be that this is an anticipatory effect of reciprocity, just as the Wilson bill of 1894 caused the panic of 1893. The farmers did not allege this to the President, but they did tell him that, if the Canadian agreement went through, the farmers would in large numbers desert the Republican party. To this Mr. Taft made the reply that he was sorry to hear it, but that it had nothing to do with the argument for reciprocity, and that any threat affecting his "personal political fortunes" he should entirely disregard. This may not be politics, but it is magnificent. In President Taft this sort of plain speaking is not uncommon. It seems to go with his judicial habit. He turns away political threateners just as he would silence an irrelevant witness in court.

The "Farmers' Free List" bill was passed by the House of Representatives on Monday by a more than two-thirds vote, the Democrats lining up solidly behind it and twenty-four Republican insurgents standing with them, while the vote recorded against it was only 109 in a total of 345. Thus, after an interval of seventeen years, the Democratic party stands once again squarely committed to an aggressive policy of tariff reduction, and with a strong national sentiment supporting it in that policy; and once again, confronting this task, it finds itself under intelligent and resolute leadership. In nothing was the contrast between the positions of the opposing parties more sharply brought out than in the attempts to which the Republicans largely devoted themselves in the closing day of the debate to make the removal of import duties contingent upon corresponding concessions on the part of the nations from which the importations were made. This, like other incidents in the history of the bill, will be used as campaign material, of course; but unlike such transparent dodges as that relating to convict-made goods, it touches a fundamental difference of attitude and opinion. If letting down the bars is doing something for the foreigner "without return" to ourselves, the whole Democratic position is foolishness. The "return" we get comes from the freedom to buy without paying tribute; and the speeches on the Democratic side showed a firm grip on this simple and central fact.

The Third National Peace Congress has closed in Baltimore under brighter skies than any similar gathering in our history. No advocate of international peace has the slightest reason for discouragement or pessimism. The progress of this great cause in the last few years is nothing less than extraordinary. Militarism was never more clearly on the defensive, however great the burdens it is now imposing upon the great nations. Advocates of huge armaments who are opposed to peace have fallen back for their arguments upon the worst traits of human nature, such as the tendency of certain individuals to kill when carried away by passion, and upon the assertion that no arbitration treaty can be made which cannot be broken. In the United States there is especial cause for rejoicing because of three notable actions of the Government —the signing of the new Japanese treaty, the Canadian Reciprocity bill—itself a peace measure, as is anything that breaks down tariff walls—and the proposed general arbitration treaty with Great Britain. Finally, since the last congress Mr. Carnegie has donated his $10,000,000 fund to this best of causes.

Gov. Harmon seems to have pressed the right key at last. On Thursday of last week the House of Representatives at Columbus passed unanimously a bill making the penalty for bribery of a public officer or member of the Legislature one to ten years in the penitentiary, without the alternative of a fine. For the people of Ohio in general the feeling of shame over the revelations will be submerged in a sense of relief at the prospect of the punishment of those who have misrepresented them, not only by judicial process, but even more by deep and lasting disgrace. The affair may also have its lesson for those who are puzzled by the looking to Governors for legislative as well as executive leadership.

The abolition by New Jersey's new Public Utilities law of reduced railway fares for clergymen ought to prove a disguised blessing. The time when ministers of the gospel received reductions in everything they purchased has pretty well gone by, and there is no reason why it should not end completely. It has all the viciousness of the tipping system, with the additional evil of compromising the dignity of what is inherently the most dignified of the professions. That many ministers have not so regarded it is the severest condemnation of the practice, which insensibly impairs one of the finest traits of a human being. One result of the new law should be a practical reconsideration on the part of congregations, not only in New Jersey, of their financial duty toward those whom they invite to serve them in a peculiarly intimate relationship. The ministry may not be, in personnel or in power, all that we wish it might be, but it will not be helped in that direction by concessions made to it in the spirit of charity. The circumstance that the New Jersey legislators carefully exempted themselves from the operation of the provision in question only strengthens the force of these considerations.

New Jersey and New Hampshire must give a share of the honors for the enactment of progressive legislation to the State of California. Of the acts of the Legislature which recently adjourned, the most important was the Eshelman-Stetson Railroad law, granting to the Railroad Commission sweeping powers of rate-making and regulation, and virtually putting an end to the Southern Pacific domination of the commonwealth. No less than twenty-three amendments to the State Constitution

were submitted to the people, providing among other things for the initiative and referendum, the recall for all elective officers, including judges, and for woman suffrage. Important enactments provided for the direct election of United States Senators, reform of election and ballot laws, employers' liability, an eight-hour day for women workers, and State conservation of natural resources. A great part of the credit for these accomplishments must go to Gov. Hiram Johnson, who led the sturdy fight for better government. California's record, as Gov. Johnson says, is one of which the progressive element and the whole State may well be proud —a judgment in which patriotic Americans may concur, even though opposed to some of the measures adopted.

Though Congressman Berger properly resents the more sweeping attacks upon the Socialist Administration of Milwaukee, he does not wholly break the force of such a review as that made by a special correspondent of the Chicago *Evening Post*. Dissatisfaction he finds general among even the working people, who looked to the Socialists to keep campaign pledges manifestly forbidden by charter or the State Constitution, and among those who were under no delusions, but voted for Seidel and his associates in the hope of a more efficient business rule. Comparing the forty-two definite campaign promises with the dozen or so of things done, the Socialists make, indeed, no praiseworthy showing. They have been guilty as well of several blunders in abolishing, in the pursuit of economy, several offices, only to fall into impaired efficiency in different branches of the municipal government, while the city pay-rolls have been increased instead of lowered. It is to be observed, however, that a number of the reforms instituted, notably the establishment of a municipal research bureau, are destined to give benefits which cannot be felt as yet. Popular opinion has made its mistake in expecting an impossible Utopia of the Socialists in Milwaukee. The election which put the Socialists into power could not be taken as an endorsement of their more radical proposals, but rather as the protest of the citizens against unbusinesslike city rule; and the administration will be judged in the end by the ordinary tests of economy and efficiency.

Mr. Guggenheim's interview, on his return from Europe, as to the sad condition of business in this country owing to the meddling of politicians, coinciding as it did with news of the Alaskan discontent with the coal situation, has naturally enough been made an occasion for renewing the old complaints over the policy of conservation. However frequently the correction may have been made, it seems impossible to get it into the heads of the anti-conservation spokesmen that failure to amend the laws relating to Alaskan coal lands has not been due to the conservationists, but quite the contrary. One of the first acts of President Roosevelt bearing on the conservation question was his urgent recommendation that the 160-acre law should be repealed, and that the taking up of large tracts of coal lands should be permitted, under proper conditions, so as to bring about the immediate utilization of the Alaskan fields. Why have years been allowed to go by with nothing done? Certainly not because of any obstacles put in the way by conservationists, from that day to this. The difficulty with the anti-conservationists is that when objection is made to throwing away the public lands, or giving them away, or letting them be stolen, they denounce the objectors as visionaries and obstructionists, instead of helping them to bring about a practical method for placing private exploitation on a footing consistent with the public interest.

Bishop McFaul's analysis last Sunday of the American daily newspaper was almost startling in its soberness. Unlike the usual critic of the press, he did not exhibit sensationalism in the act of denouncing it, but judged newspapers by the same standards which a reasonable man would apply to individuals, to corporations, and to human institutions in general. This does not mean that he found nothing to condemn. On the contrary, he used fitting language with reference to "some of our great dailies" which "pander to the morbid desire of reading the demoralizing details of divorce, impurity, suicide, murder, and theft; exaggerate the luxury and the extravagance of the rich, as well as the privations and the misery of the poor," and "are an incentive to crime." He also struck at the giving-the-people-what-they-want fallacy by pointing out, on the one hand, that the men engaged in the publication of newspapers are presumably above the average in intelligence, with a consequent duty of elevating rather than playing upon passions, and, on the other, that most men and women are not seeking the trivial and the vulgar. The remedy for the abuses of the press he sees, not in drastic libel laws, but in the development of a code of ethics among newspaper men. Such a development will be materially hastened by criticism which, like the Bishop's, is made "after an extensive study" of the subject, and displays a temper which the most ambitious of our newspapers might well emulate.

That the Indian should now have to be rescued from the showman is an amazing episode in the sad history of this people. Educated Indians have investigated the matter and have unanimously come to the opinion that the exhibiting of Indians with circuses and Wild West shows must come to an end, because the young men thus lured away from their homes are ruined morally and physically. Many of them, it has been discovered, die in consequence, and those that return have sad stories to tell of the white man's and woman's character and morals. Indeed, their experience recalls the saying of the Kansas chieftain who, when asked by the early settlers why his people did not build more schools and churches and have more white teachers and preachers, declared that they were bad enough then, without any more ambassadors from civilization. Protests against the exhibiting of Indians there have, of course, been before. The interesting thing about the present movement to end this abuse is that it did not originate with whites, but with red men. They feel so deeply about it that they are going to hold a convention next autumn in Columbus, Ohio, to voice their protests in the manner of the paleface.

Serious as the Mexican situation seems to be, this is not the hour to intensify it by sensational predictions. Never was there a greater necessity for keeping all concerned cool. The President is again quoted as saying that he will not act against Mexico save under instructions from Congress, and in this he again shows his wisdom. It is easy

for the irresponsible newspaper reader to say that the United States will have to interfere; but to those who are in responsible positions the very word can only have a most ominous sound, for it brings up possibilities of untold expense, of most dangerous entanglements, of the hatred of an entire nation, and perhaps a fearful price in American lives. It is a situation that calls for statesmanship of a high order, even though it may, and we sincerely hope will, be resolved finally by the conclusion of peace. For the present, despite lawless excesses, the plain duty of this nation and its rulers is to be patient and to avoid anything that would even seem to suggest a desire on our part to interfere in the affairs of our sorely tried neighbor.

One hundred and eighteen was the majority by which the Parliament bill passed in committee, out of a maximum Government majority of 125 or 126. Thus the most critical stage in the history of the Veto bill in the Commons has been surmounted, and the battle henceforth must centre in "another place." That is the official phrase by which speakers in the House of Commons describe the House of Lords; but if the Lords remain obstinate, the phrase may take on another meaning. "Another place" will be the residence of the Crown. There can be no doubt that if Mr. Asquith is driven to demand "guarantees" from the King—in other words, to demand the creation of several hundred Liberal peers—he will do so with authority strengthened by last week's vote in the Commons. The Laborites made their fight on the preamble, as they were bound to do, and even voted against it. But on the bill as a whole they came readily into camp. Mr. Asquith is evidently not the slave of Nationalist and Laborite masters that the Opposition has called him.

Lord Lansdowne's bill for the reform of the House of Lords is as high a bid for conciliation as the Conservatives could possibly have been expected to make. If they had made it two years ago, their position would be very strong. As it is, their action has the air of being both insincere and too late The plan of the Conservative leader would radically make over the House of Lords, cutting down the membership to 350, of whom the peers themselves would elect 100, while 120 would be chosen by a rather complicated electoral college, and 100 would be appointed by the Crown. Princes of the blood would retain their seats, as would the two archbishops, while but five bishops would be elected to sit. There would also be, including the Chancellor, 16 law lords. The scheme is elaborate, but if it could be made to work there is no doubt that the result would be a much better House of Lords than has been known for many years. It is doubtful, however, if the project will be at present pushed, and Viscount Morley made it plain that the Government will allow no measure of this kind to interfere with a vote on the bill to regulate the relations of the two houses. The Lords will have to say yes or no to the veto bill. They appealed to Cæsar, and to Cæsar they must go.

Scotland is again disturbed at the revelations of the census. The final figures have not yet appeared, but partial results show no diminution of the rural depopulation which was so marked a feature of the last enumeration. The towns and the mining districts are expected to turn the scale, and to give the country a net increase of half a million. Ten years ago the increase was 450,000, despite a decrease in the population of seventeen counties. But this does not satisfy the loyal Scotsman, nor his British brother either. "Will Scotsmen tamely acquiesce in the depopulation of their country?" asks the *British Weekly*. "Will they be satisfied to let it gradually become a playground for millionaires?" Those most interested in the question seem to pin their faith to an improvement and extension of the small holding commissioners, some to be resident in the districts under their charge. Striking contrasts are drawn between emigration from Scotland and immigration into the United States. These immigrants, however, do not prevent us from having our own growing problem of rural desertion.

The novel feature of the new agreement between Great Britain and China for the continued reduction and final extinction of the importation of opium from India and its production in China, is the change in the basis of the reduction. Under the ten years' arrangement, which the new one supersedes, the decrease was to be 10 per cent. annually. The Chinese Government, however, found it impossible to regulate the production of opium with such exactness, and adopted the more drastic policy of abolishing it by provinces, with the result that, after only three years, seven-tenths of the Empire, according to the anti-opium societies, is free of poppy cultivation. This restriction of the domestic product encouraged the maximum importation from India allowed by the agreement, so that China suffered for her vigor in exceeding the terms of the contract. The agreement just signed takes the old date, 1917, for the extinction of the trade, but compels an earlier date if either country stops its share in it before that time. This does not please the anti-opium societies, with their demand for immediate abolition, or the Indian Government, with its demand for indemnity against loss in revenue, and its suggestions of the insincerity and the inability of the Chinese Government to perform its part of the undertaking; but, viewed impartially, it looks like a reasonable solution of a complicated question. China now has the ending of the evil in her own hands.

How autocratic a monarchy can still be is shown by the order in Germany for the removal or the destruction of advertising along railway lines and on houses. True, the order was issued only after a general outcry in the press, and resolutions passed at crowded meetings in all parts of the empire. But we have gone almost as far ourselves, without any such result as the vigorous Germans have brought about. It is true also that the order is limited by the provision that it is to be applied at the discretion of the local authorities, who may, if they will, permit the continued marring of the landscape. But nobody places much hope in this local-option arrangement. It is taken for granted that the local authorities will imitate the arbitrariness of their superiors, and boldly carry out the popular desire for sightliness. Germany's commercial rivals will doubtless take heart at this evidence of weakness in her industrial tension, and press the advantage given them by her sentimental yielding to mere beauty. The historic fact that Germany competes most keenly in articles of the highest grade can have nothing to do with her strong liking for the artistic.

SCHOLARSHIP OF IDEAS.

My case is probably by no means unique. After graduating with honors at ——— I obtained a position as teacher of English in the school where I now am. My ambition is to enter on a college career, but to do this I should have to go back to the graduate school of my university, and I cannot bring myself to undergo the gruelling process which such a course means. As an undergraduate I was not alone in feeling that the work required for the doctor's degree seems to be specially designed to eliminate all who have any imagination or any ideas.

We print this complaint because it is typical of an opinion which comes to us from many sources and in many forms, and which sooner or later must be reckoned with. It is in accord with the avowal of at least one college president to the effect that the recommendation of a certain eminent and dominating scholar would be a detriment to a candidate for a place in his faculty; and it may have some bearing upon the conditions which have led a keen observer in a large Western university to declare, whether rightly or wrongly, that the grade of men now preparing themselves for college teaching is distinctly inferior to what it was ten or fifteen years ago. No one can converse widely with the younger students over the country without having this attitude of revolt thrust forcibly upon his attention. The question is whether this discontent will be able to organize itself and effect a wise reform or waste itself blindly and suffer the graduate instruction in the English and modern language departments to go the way of the classics.

As for the classical men, they have taken account of their house, and, in alarm for their very existence, are making desperate efforts to throw off the shackles of pedantry with which they were bound and to introduce something into their curriculum besides linguistics and archæology. It would be uncritical to attribute the present low state of the classics entirely, or perhaps even chiefly, to the narrow philological method of teaching which so long prevailed, but this method was undoubtedly a contributory cause, and the great difficulty now, when the error is acknowledged and larger views are cherished, is to find instructors who can put into practice what all, or almost all, so earnestly desire. Scholars breed their kind, and a bad system has an obstinate way of perpetuating itself. We are glad to print in this issue of the *Nation* the argument of one who has always stood for true scholarship, and who, certainly as much as any other one man in the country, has labored to save the classics from the sands of pedantry on the one side and the bog of dilettanteism on the other.

This, in fact, is the dilemma—pedantry on the one side and dilettanteism on the other—which always confronts a collegiate department, and which now faces English and the modern languages with peculiar acuteness. The problem is complicated by the observed psychological fact that these two extremes of scholarship tend to work together with a kind of tolerant contempt for each other, to the exclusion of the virile scholarship of ideas which is inimical to both and is opposed by both. Emerson was right in saying that an idea is a terrible thing to let loose upon the world—certainly upon the academic world. A department under the control of a philological tradition, if called to account for not teaching "literature," will by natural instinct look out for a mild and pleasant lecturer with whose taste it can sympathize in hours of languid relaxation and whom it can probably dominate without difficulty. Meanwhile,

Povera vai e nuda, filosofia.

The remedy is not to transfer the emphasis from philology, using that word in its narrower sense, to "literature," using this word in its flabbier sense. The graduate school does not exist primarily for training the sensibilities, and the right graduate teacher is not one who can titillate the æsthetic nerve of the nice young poet. It is questionable whether the graduate school is properly used in any way for direct training in literary production. Skill in constructing a drama or writing a marketable short story is better acquired elsewhere. The graduate school is first and last a place for scholars, and the scholars who are now in charge may justly resent any move to put the æsthete and the amateur and the "literary" man in their chairs. Nor are they wrong in asserting that the most minute form of research—the relentless pursuit of some Anglo-Saxon vowel or the wild chase of some folk-tale through five mediæval languages—has its own place and honor. These things should be done, but the other things—the larger study of life, what we call the scholarship of ideas—should not be left undone; they should rather lead and give the tone to the whole. It is a matter of emphasis, and unfortunately the present state of affairs would seem almost to justify the complaint of an old English divine, that "no sort of Men think so little for the most part as they that are ingaged in the Profest Study of Learning and Knowledge."

Scholarship of ideas may seem a vague programme to set before those who are in the brunt of actual teaching. Certainly not the least of the difficulties to be overcome is that laxity of training which begins in the kindergarten, and which follows the student all the way up in his career, compelling the teacher to whom he comes in the graduate school, as Professor Shorey points out so emphatically, to waste his time in elementary discipline. Nevertheless, there are steps which lie clearly before the departments of English and modern languages, and will lead to immediate and practical reform. In the first place, they must free themselves from the ruck of mediævalism, in which may be included much of the raking among the dregs of Elizabethan drama. Mediæval studies are well in their way, but their dominance in the modern language field has done more, perhaps, than any other one cause to lay an undue emphasis on philological research of the most desiccating type and to drive away men of large, humane ideas. In place of mediæval phonetics and theme-chasing, a close alliance should be formed with the classics. One of the most significant warnings pronounced in many a year was the strong plea of Mr. Edward M. Shepard, speaking at the last meeting of the Modern Language Association, as a scholar and man of the world, for just this affiliation. From Athens and Rome, not from the Middle Ages, come the vital ideas of modern literature, the high association of letters and life, which we have so nearly lost from view. Such an alliance would at once introduce something more of actuality into the study of the classics and lend to modern languages the larger historical background, the sense of great currents of thought which have moulded and are still moulding the fate of mankind. He who, like the late Master of Balliol, has in mind the creative ideas that have passed from that ancient time to these modern days is not likely to lose himself either in pedantic intricacies or in the *O Altitudo* of a precious æstheticism.

Beauty and the motives of conduct will be wedded with him for the making of the true scholarship.

Another practical step is the escape from the present tyranny of the German doctorate. It may be that for many men the preparation of a thesis is the best training, as it apparently is for the teacher the easiest method of testing a student's proficiency. But the system is subject at least to grave abuses. Even supposing that the student has advanced far enough to devote to the special research needed for a thesis a year or two years of time without heavy sacrifice in other directions, the emphasis laid on this kind of work tends to confuse the meaning of productive and creative scholarship and to establish wrong standards of excellence. It tends also to foster the peculiar sin of German scholarship which Professor Shorey brands as inaccuracy, but which we should prefer to call lack of mental integrity—the habit, that is, of erecting vast theories on a slender basis of fact, and so clogging the paths of truth. Only a huge illusion can hold that a student who by a satisfactory, even an admirable, thesis has added some small account to the sum of knowledge is in any true sense of the word a more creative mind than one who has thoroughly assimilated a wide range of ideas and prepared himself to hand on the judgments of time. At least along with the doctorate, we need to strengthen and raise the master's degree as a symbol of large assimilative study. Indeed, some of our universities have seen the value of this course, and are gradually lifting the M.A. into a sign of real distinction. One serious impediment now in the way of this reform is the belated ignorance of those presidents and trustees of colleges who insist on a Ph.D. after the name of a candidate to their faculties, and so attach to the degree a factitious commercial value. They have been educated into this error and must in turn be educated out of it.

Affiliation with the classics instead of mediævalism and the honoring of an assimilative degree beside the German doctorate are not impractical counsels of perfection; they are directly in the way of our modern language departments, they are comparatively easy to take, and they are already much talked of. In particular the choice lies before the department of English: it may suffer the tyranny of the pedant, and so go the path from which the classics are so wearily retracing their steps; or it may take warning and turn toward the scholarship of ideas. In this way it can preserve itself from the wiles of the dilettante and maintain its honorable position in the academic world; and in this way, too, it can be an indirect but incalculable aid to literature, for our literature to-day needs above everything else to add to its cleverness the discipline of ideas and the reverence for long tradition.

ENGLAND'S GREAT EXPERIMENT.

The introduction in Parliament of Mr. Lloyd George's bill for insuring workingmen against sickness and unemployment may do more to make this session historically memorable than even the bill abolishing the Lords' veto. It is a measure which has been long expected and long preparing. The Chancellor of the Exchequer has been giving his strength to it for months. To him it represents the goal which he set himself in his bitterly opposed taxation and land laws of two years ago. He made no secret of his purpose. The main reason why he sought to push up succession duties and stiffen the income-tax and take a part of the increment in land values, was that he aimed to bring into the Treasury new revenues that might be released for social legislation. He is, therefore, only performing what he promised. A state system of sickness-insurance for laboring men and also insurance against being out of work he had specifically pledged himself to establish; so that his bill of last week is no surprise. It cannot be denied that it follows logically the legislation that has gone before it, and embodies principles or, at any rate, methods of governmental action which both English parties have adopted. The only difference is that the Conservatives promised such bills, whereas the Liberals are making them into law.

From the telegraphed accounts we get an intelligible outline of Lloyd George's proposals. His plan of insurance against sickness is patterned after the German model. The scheme is to be compulsory upon all who earn less than $800 a year, with certain excepted classes, and will affect, it is estimated, some 14,700,000 workers. They are required to contribute to the cost of the system. Each man will pay eight cents a week out of his wages, his employer will add three cents and the government two cents. It is figured that, on this basis, an allowance of $2.50 a week for illness during three months can be made to the insured, while, in case of permanent disabling, he may count upon $1.25 a week as long as he lives. All this bears the familiar mark, "Made in Germany." In attempting to insure against unemployment, the English Chancellor of the Exchequer is striking out on untrodden paths. He offers, indeed, to go but a little way for the present. His bill applies only to those employed in the engineering and building trades, some 2,400,000 men being involved. They, too, are to pay a certain amount weekly, their employers as much, while the government will contribute one-quarter of the total fund. Out of it an allowance, for a fixed term, of $1.75 a week will be made to every insured man who loses his job through no fault of his own, though in strikes and lockouts no insurance will be paid.

The entire measure is so intricate in its machinery, at the same time that it is so large and bold in its scope, that a close study of its details and, in all probability, a test of its practical working will be necessary before one can pronounce anything like a confident judgment upon it. There are, however, some things that can be said at once. Mixed motives enter into this proposed legislation. Grant as much humane enthusiasm as you please, on the part of Lloyd George and his followers; concede that the House of Commons is full of men whose hearts ache as they think of the hazards and miseries to which those are exposed who drudge and sweat at the nation's work; still this great social bill has its immediate spring in politics. Its origin is only partly in sympathy and pity; as we see from the way in which both parties have been bidding against each other, and as is evidenced by the fact that the Conservatives do not dare attack this bill which is tantamount to a revolution in English legislation. The public men who are promoting insurance against sickness and unemployment are looking at the sufferers, to be sure, but they are also looking at the voters. It has been made perfectly clear that they

did so in the case of old-age pensions—of that they openly boasted—and it will be so with the other. Even with Bismarck the political motive entered in: his elaborate schemes of workingmen's insurance were intended to halt the march of German Socialism—with what success we know!

Now, the moment you admit anything like a party motive into a great piece of constructive legislation, you are very apt to vitiate its framing and are almost certain to pervert its functioning. Lloyd George begins well, it is true, with demanding a contribution by the workingmen themselves. It was a vice of his old-age pension scheme that it did not. But, with the matter thrown into politics, how long will it be before the workingmen insist that their employers and the state pay the whole insurance bill? Even in the first general acclaim with which the bill was received, one Labor member remarked that the premiums exacted from the working people were too high. Exactly; and as soon as they think they are politically strong enough to demand that these shall be cut down or abolished altogether, they will do it; and what party will be strong enough to resist them? Moreover, if it be found in practice, as it has been in Germany, that the state-insurance system leads to a great deal of malingering and sham-sickness among workingmen, will the necessary sharpness of inspection and examination be submitted to by men who know that their class has the votes to turn the Government out?

We can only suggest the dangers that start up all along the track of such a gigantic innovation. Excellent impulses often lead to dire consequences. Of the statesmen who brought England low in the eighteenth century, Burke said that they dealt only in bits and scraps, and had not the power to think a great matter entirely through. We gravely doubt if the vast experiment upon which Lloyd George is entering has been thought through. Confessedly, he touches but the fringe of the problem of unemployment. He hopes to aid a handful of skilled men temporarily out of work, but the sunk masses of the unemployable are beyond any remedy of his—and *they* are the real problem. The cheerful hope is, of course, that state-insurance will free its beneficiaries from the haunting dread that now hangs over too many of them, make them brighter and more energetic; but may it not make them increasingly limp and dependent? To give a new set to human motives is always perilous; they may go the way we desire, but they may take an unexpected and alarming direction. This we do know—from history and our own experience—that it is a vicious thing in a democracy to get it into the heads of the people that, as Grover Cleveland said, they are not to support the government, but the government is to support them.

SOME ASPECTS OF SCIENTIFIC MANAGEMENT.

There is one fear which must be acutely present to Mr. Frederick W. Taylor and his fellow-pioneers in the development of the new Science of Management. And that is lest their new science should be popularly accepted as a new magic. As a people we are peculiarly susceptible to the attraction of cure-alls and abracadabras. The fervor with which Scientific Management is being discussed, and applied, and misapplied is largely the result of such a belief in the magical properties of the new science. The common impression seems to be that Scientific Management not only gets four times as much work out of the same plants as our present system does, but that the magnificent result is obtained by some process akin to making a few Masonic passes in the air or burning a couple of joss sticks in front of a bloomin' idol made of mud. Against this peril Mr. Taylor sounds an emphatic warning in his last article in the *American Magazine*. He cites the case of an establishment employing between three and four thousand men, the managers of which tried to accomplish in a year or two what they were warned must take from three to five years. As a result, instead of educating and leading their workingmen, the managers succeeded only in driving them. The outcome was disaster.

To the careful reader of the series of three articles in which Mr. Taylor has attempted to popularize his doctrine, the one thing that stands out clearly is the absolutely unmagical character of the processes of Scientific Management. Infinite care, infinite persistence, and a great outlay of money were necessary to the development of the principles of the new science as applied to even so elementary an occupation as the loading of pig iron or the shovelling of coal. When it came to so complicated a business as metal-cutting the amount of pioneer work was enormous. Two questions required to be answered: At what cutting speed shall the mechanic run his machine, and, What feed shall he use? To find the answer, Mr. Taylor and his associates carried out more than thirty thousand experiments extending over a period of twenty-six years. The question of proper speed called for the solution of an intricate mathematical problem involving twelve independent variables. Mr. Taylor has enumerated them from (a) to (m); and we quote at random:

> (a) The quality of the metal to be cut, *i.e.*, its hardness or other qualities which affect the cutting speed.
>
> (d) The shape or contour of the cutting edge of the tool.
>
> (h) The lip and clearance angles of the tool.
>
> (m) The pulling power and the speed and feed changes of the tool.

To one untechnical reader, at least, this is not crystal clear. What he does gather is that a vastly laborious piece of research was necessary before Scientific Management could be applied to the art of metal-cutting. Also that a similar process would be necessary for every other industry in proportion to the complicated nature of its processes.

With these facts in mind the untechnical reader finds himself driven to the belief that Scientific Management is, in essence, a new name for two well-recognized features of modern industry—the elimination of waste and the perfection of labor-saving devices. It will be noted that before Mr. Taylor found the right scientific answer to his metal-cutting problem, he had made an extremely important invention in the form of a new highspeed cutting tool. But there were kings before Agamemnon and there have been inventions and economic principles of industrial methods before Scientific Management. The one aspect of Scientific Management that is new—and an important aspect, too—is the fact that the new science is purposive where the old methods have been accidental. Under the unscientific system James Watt had to be watching his mother's tea-kettle in order to hit upon the idea of the steam-engine, and the handiworker of the present day has to hit upon some new device in shoemaking or printing or metal-casting. Under the scientific system the inventor does not wait for ideas to occur to him; he goes out in search

of them. He does not wait to be struck by the awkwardness of a coal heaver at work, but sets out with the presumption that there must be a better way of heaving coal.

But even in this matter of purposiveness, reflection shows that the new science is not altogether new. The Germans have been ahead of us in equipping their factories with special research staffs, but the system is far from unknown in this country. Those progressive establishments which have been conducting research laboratories are now apparently in the position of M. Jourdain; they have gone on being scientific without knowing it. And if we turn to a phase which is more characteristic of Scientific Management than the phase of mechanical invention, and that is the psychological factor, as descriptive of the attitude of employer and employee toward their work and toward each other, we find that here also a great deal of work has been going on under the name of Social Engineering. What Mr. Taylor has really done is to make a synthesis of principles and methods which in isolated form have already been recognized and applied. Here an industrial manager has concentrated his attention on the discovery of new mechanical methods. There a manager has given his attention to the utilization of by-products. There again a manager has set out to improve the human relations between master and men. The Scientific Manager is the one who pursues his studies along every one of these three lines. And he does it not by waiting till a happy thought comes to him here or there, but by keeping up a ceaseless search for possibilities in every field.

These are some of the possible reasons for holding that Scientific Management is neither as revolutionary a thing nor as wonder-working a thing as popular fancy has made it. And that is not to decry Scientific Management. On the contrary, the more we show it to be grounded in well-established conditions, and the more it is shown to be a science involving hard work, patience, skill, and wisdom, the more it will recommend itself to reasonable men. It is not magic, because even if it may have revolutionized the metal-cutting art in twenty-six years, greater industrial revolutions have been effected in less time. It is not magic, because five years is not a short time even for revolutionizing an establishment employing four thousand men. It is even conceivable that after the principles of Scientific Management have been laboriously established in a particular industry, some old-fashioned, unscientific inventor may hit upon an invention that will make scrap-iron of the whole scientific structure. We need only imagine Mr. Taylor at work on the printing industry and Mergenthaler hitting upon his "happy idea."

Nor need we underestimate the difficulties that stand in the way of the ready acceptance of Scientific Management. For one thing, there is the hostility of the labor unions. But if Scientific Management means the encouragement of inventions as well as the economic utilization of human muscle, what shall be said of the Trusts that are in the habit of buying up new inventions for the sole purpose of suppressing them? Mr. Taylor's doctrine presupposes a labor force eager to let itself be manipulated for the best interests of society as a whole, and a managing force eager to change methods, and to improve and to perfect. But when the management shows no desire to hunt after new tools, lest they should throw open the way to competition, its mouth is stopped against labor-union selfishness.

BANKING REFORM AND OUTSIDE BANKS.

We stated our opinion, when Senator Aldrich's revised and amended plan for banking reform was published last January, that its new proposals removed perhaps the most serious obstacle to acceptance of the Monetary Commission's programme. Abandoning the theory of a central bank on the European plan, placed independently in the field to dominate existing banks, Mr. Aldrich outlined machinery for coöperation and organization on the part of the banks themselves, which was at least financially and politically practicable. To a large extent, his proposal extended to the banking system as a whole the principle already successfully applied in clearing houses.

Organized at the start merely to provide machinery for exchanging checks between banks without collection of every such check in cash, the clearing house, under the title of the Associated Banks of a given city, eventually became a supervising institution with broad powers, whose recognized duty was to guard against unsound banking in its membership, to decide for that membership questions of technical banking policy, and to converge all the resources of its members on protection of individual institutions in a panic. Mr. Hepburn, at the trust company banquet in New York last Friday, aptly quoted the governor of the Bank of England as saying that, whatever criticism financial Europe had to pass on American banking methods generally, it had nothing but admiration for our system of clearing houses.

The national banking plan now before the public follows this example of local organizations of existing banks, but extends it to a larger geographical district than the single city which a clearing house serves. These district organizations are to hold the $300,000,000 stock of the central organization, and to have a controlling vote in choosing its officers. The district officers are to be required to pass on certain grades of paper, presented by banks in the district for re-discount by the central organization. It would necessarily follow, though Mr. Aldrich did not develop that aspect of the matter in his sketch, that the district organizations would possess, like the clearing houses, large powers of investigation and supervision over banks in their membership. If there were no other reason for this, a conclusive reason would be found in the district committee's function of endorsing or guaranteeing notes of those member banks as preliminary to re-discount.

It was obvious from the start that the serious problem in the path of this expedient was the existence of other than national banks. Such State-chartered institutions as State banks and trust companies exceed in this country, both in number and in outstanding credits, the national institutions. The question, therefore, was whether any plan of organization could be completely effective which should not include them. Mr. Aldrich in January tried to meet this difficulty by providing that national banks might be organized, under proper stipulations, with trust company and savings bank machinery. This meant two things —that existing trust companies might take out national charters, and that existing national banks might add a trust-company department to their activities.

We have set forth, from the time when

the same recourse was proposed by Mr. Fowler, what seemed to us the insuperable objections to it. They were, first, that the plan would involve invasion by the national government of the field of trustee regulation, jealously guarded by the States; secondly, that it might easily, through encroachment upon one another's domain, cause needless and irritating friction among existing institutions, and thirdly, that it would extend to the whole banking system the still unsettled problems of trust company regulation. In his speech to the trust companies last Friday, Mr. Aldrich frankly announced his personal conclusion that the adoption of the plan was impracticable.

This by no means signifies, or ought to signify, that the idea of participation by these State institutions in a national plan of banking reform and supervision must be abandoned. There are very strong reasons to the contrary; not least, the well-known tendency, when one class of banking institutions is closely supervised and the other is not, for banking adventurers to direct redoubled activity toward obtaining a foothold in the second class. The participation of institutions of the sort in a national plan of coöperation must apparently be made possible on the lines which have made possible their membership or associate membership in clearing houses. Mr. Aldrich, while admitting his inability at the moment to prescribe the plan of operation, laid down as an indispensable preliminary the conformity by such outside institutions to the rules of the national organization regarding investigation, regarding public statements, and, in a reasonable degree, regarding maintenance of reserve.

All this opens up consideration of an important and intricate question. For ourselves, we shall merely say at present that its difficulties do not arise from a general principle, but from the problem of the complete and harmonious application of that principle. There is, so far as we know, nothing in the world to prevent a State bank or trust company from voluntarily assenting to any reasonable requirement, from thereby joining the national association, and from thereafter enjoying such advantages as may accrue through the connection. Compulsory membership or associate membership would be out of the question; but in that respect the case even of the national banks is precisely similar. Even under the present plan, national banks "may" subscribe to the central organization and join the district associations; but they also may refuse to join, and indeed "may, if they choose, maintain their present note issue." There is no compulsion here, and there would certainly be none in a plan for including other institutions. If a sound and equitable plan were once proposed to invite them in, the real question would probably be, whether they could afford to stay out.

AMERICAN SCHOLARSHIP.

I.

To the many general causes of educational unsettlement and confusion in this "age of transition," the United States adds one peculiar to itself. Normally, the higher educational system of a great country should send its roots deep down into the national tradition, and its organs should be nicely adjusted to one another and to the functions of the national life. But the American college is an accidental development of colonial copies of the English college, and the superposed American university, even when not a direct imitation of the German university, is manned chiefly by professors "made in Germany." For the disadvantages of these anomalies, there is some compensation in a certain breadth, flexibility, and open-mindedness that characterize the better type of American scholar. But the disadvantages are nevertheless very real, and not to be blinked. They may be summed up in the word maladjustment, manifesting itself externally in the imperfect coördination of secondary, collegiate, and university instruction, and spiritually in the divorce of our scholarship and our science from culture. There are, of course, many other causes for this—specialism, commercialism, democracy. But the chief cause, perhaps, is the fact that our professional scholarship has been in the past an importation, not an indigenous growth—an importation not from England, the home of our literature; not from France, whose qualities would best correct the excesses of professionalism and the heavy Teutonic strain in ourselves, but from Germany, whose culture, as Goethe, Heine, Schopenhauer, and Nietzsche have told their compatriots, is a sporadic, feebly-rooted flower, choked by a weedy growth of over-specialized erudition.

There is no remedy for this state of affairs in doctrinaire and revolutionary reform of our educational machinery, nor in those facile denunciations of pedantry with which lively writers can always win the applause of a gallery that has been habituated by professors of the new pedagogy to apply that purely relative term to every form of exact and minute scholarship. The fault is not with the seminar, the doctoral dissertation, or the final examination. These are convenient and flexible instrumentalities which the university professor is already free to use for the realization of any idea to which he can win his students. It is the ideals and aims themselves that need to be liberalized, not revolutionized. That is necessarily a slow process, the first step in which must be a clearer self-consciousness on the part of American scholars and a fuller appreciation of the problem which the development of the American university has created for them. Our task is to re-define and so far as may be harmonize the aims of culture and scholarship without undue concessions to the gushing dilettante, and to emancipate ourselves from slavish subservience to German influence without losing the lessons or forgetting the debt of gratitude that we owe to Germany.

II.

In practice, the beginning of such a reaction shows itself in the increasing proportion of American students who now pursue their graduate studies at home instead of going to Germany. Our pupils recognize that the much exaggerated and rapidly lessening scientific superiority of the German universities is more than outweighed by the possibilities of unity and continuity of culture, uninterrupted contact with the national life and education, and the more intelligent and sympathetic personal guidance which the better American universities provide. They see that our degrees are somewhat harder to win, and infer that they may be quite as well worth the winning. They are right, and we should henceforth reserve travelling fellowships for holders of the American doctorate who will visit the German universities as intelligent observers and critics, and not abandon themselves in helpless, open-mouthed plasticity to be moulded into patterns of second-rate Germans. Men who go directly from the inadequate preparation of the ordinary minor college to the great European universities not only waste a year or two in fumbling endeavors to adjust themselves to alien conditions, but convey and receive totally false impressions about American and European scholarship. The superiority of the foreign university rests almost wholly on the severer discipline of the German gymnasium and the great English public schools. The American university professor, if competent for his task, is aware of this difference, makes allowance for it, and in the end brings a fair proportion of his men up to the European standard even in the technique of scholarship. There is no provision for this work in the European universities.

The visiting American student, if exceptionally able and ambitious, may be stimulated to remedy his deficiencies unaided. In a large proportion of cases he copies out copiously and slavishly lecture notes not adapted to his needs, fancying that he is storing up treasures of erudition undreamt of in America, and leaving on the mind of his German or Oxford professor a conviction, which courtesy vainly endeavors to disguise, that Americans lack the very notion of sincere and serious scholarship. At the end of three or four years he returns, completely out of touch with American life and American education, to teach American boys. If a Rhodes scholar, he has gained an English intonation, some polish of manner it may be, and possibly an enlarged and more discriminating English vocabulary. But he is no nearer to an earned doctor's degree and professional mastery of his subject than one year at a first-class American university would have brought him. If Germany was his choice, he may have received the degree which Germany bestows somewhat lightly for the encouragement of the alien, and he has learned a foreign language. But he has paid a heavy price for his German in three years' discontinuance of the habit of reading English, and in the Teutonization of his English style. He has steeped himself, not so much in his subject, as in the German terminology and systematic *Wissenschaft* of his subject, with the result that either he will remain for life the prisoner of the system and the terminology, or, as sometimes happens, in a mood of revolt and reaction, he stops his subscription to the *Sclten Erscheinende Monatschrift* and takes in the *Bookman*, and replaces the philological hand apparatus on his revolving book-shelf by a set of the British poets and the "Library of the World's Best Literature."

It may be said that the outcome of an American course of graduate study is often equally futile and deplorable. It must be admitted that the machine-made doctor of philosophy often remains essentially a barbarian, unread outside of the technical literature of his specialty, unfurnished with those general ideas the possession of which was Taine's criterion of the educated man, and incapable of either writing or understanding English of the sound tradition. From this text our impatient critics proceed to a general onslaught on American scholarship and denunciation of the Germanized American university, its minutely specialized courses, its seminars, and the doctoral dissertations, the parody of whose titles is a gag that never fails with a popular audience. They would reform it altogether, and substitute for the idea of training investigators the endeavor to produce teachers, writers, intellectual leaders, of broad and liberal culture. With the demand for the humanization of our scholarship I heartily sympathize, though I would accompany it by a plea for the fortifying of our culture by a little more respect for exact knowledge. It is not the excess of either erudition or culture, but their assumed incompatibility and divorce, from which our higher education is suffering. But in their eagerness for the end, our literary censors investigate the disease superficially and prescribe impossible remedies. They ignore the complexity of the problem and do scant justice to the efforts of university instructors to solve it. They forget that in the graduate school, at any rate, culture really is and must be a by-product. A three years' graduate curriculum, devoted ostensibly and mainly to cultural courses, wide reading in general literature, and daily or monthly themes, is an impossible piece of educational machinery. The more serious students would revolt at its aimlessness, and the public would very properly want to know what the undergraduate course was for.

III.

And this brings us to the central difficulty with which the American university professor is struggling, not quite so unconsciously, or, if we take long views, so hopelessly as the genial onlooker assumes. The deficiency of the ordinary graduate student not only in respect of culture, but in the elementary technique of his specialty, is due to the comparative failure of collegiate education, that in turn to the lax training of the secondary schools, and that again to the low intellectual standards of a young, prosperous, commercialized nation, and the reaction of the indulgent American parent against what he deems puritanic or old-world ideas of discipline and restraint. This fatal sequence and the recriminations to which it gives rise are an old story which it is useless to repeat here. It may be freely conceded that the university, too, contributes its share of errors to our pedagogical muddle. But if these could be eliminated by the wisdom of its critics, the chief problem would still remain: the retrieval in three short years of the losses and waste of ten years of confused and misdirected effort. It cannot be done without sacrifice. So long as the American graduate student enters the university unable to write lucid English and ungrounded in the elements of the subject which he proposes to pursue, he must work a little longer and a little harder for his degree than he normally should. Even so, he will not achieve a perfect adjustment of the ideals of professional competency and breadth of culture. In the nature of things he will incline to one side with some sacrifice of the other. The scheme of the graduate curriculum is broad enough to include both. It is already so administered in many places as to do justice to the reasonable claims of both. The name seminar need frighten nobody, so long as it is recognized that a seminar may deal with the literary criticism of the Greek drama or the philosophy of Plato as well as with the text criticism of Pliny's letters or the syntax of the Greek verb. The acceptance of an occasional doctoral dissertation on a Greek particle or the manuscripts of Catullus should be no grievance to the student of broader interests, provided he himself is encouraged and helped to write, if he can, a readable monograph on some literary, historical, or philosophic theme. The graduate school can meet all the legitimate needs of more aspiring spirits without sacrificing its present ideal of exact, first-hand scholarship within a definite field for all and original research for some. It is not and should not be any considerable part of its function to provide either "inspiration" in the form of eloquent popular lectures or training courses for the journalist, the novelist, and the essayist. These things, so far as they can be taught at all, belong either in the second half of the collegiate course or in the extension department. The "mere" littérateur should not attempt to force his point of view upon the graduate school. But if he can afford the time he will greatly profit by accepting its point of view provisionally and for one or two years. From the narrowest curriculum he will acquire something which in America he could hardly get in any other way, the scholar's conscience and a clear conception of the difference between first-hand and second-hand knowledge.

These preliminary reserves and qualifications threaten to occupy more space than the main thesis. But *distinguo* is the first word of my philosophy as of Montaigne's. The undiscriminating attribution to German influence of all real and imaginary defects of the American graduate school and the systematic exaggeration of the supposed antithesis between scholarship and culture can do no possible good. Nietzsche's eloquent diatribes against the excesses of history and philology have no application to our conditions. The superior culture of Oxford or Paris is not due to the substitution of culture courses for detailed and precise work. It is due to the background of the national tradition in language and literature, and the controlling consciousness of this tradition in the minds of teachers and taught. Germany has never had such a tradition and our dependence on Germany has prevented us from renewing ours, interrupted by the conditions of colonial and pioneer life.

The mere habituation of American scholars to German prose, through their most impressionable years would keep them from attaining the certainty of linguistic instinct of a cultivated Englishman or Frenchman. *La prose alle-*

mande n'existe pas, says a distinguished French critic. Unfortunately, it does exist for American philologians as an *exemplar vitiis imitabile*. I refer not merely to the omnibus type of German sentence wittily described by De Quincy, Ruskin, and Mark Twain, to the "something splay" in the German language which Nietzsche quotes from Matthew Arnold, or to the all pervading mixed metaphor. Rhetoric is something larger than refinements of style or diction; it is psychology, tact, taste. Professor von Wilamowitz is not only one of the greatest of living scholars, but in his way a man of the broadest and finest culture. But all his genius could not save Goethe from the cabbage passage in "Werther," and all his Hellenism could not guard Wilamowitz against that sophomoric flight of rhetoric about the Athenian sewers at the close of his "Aus Kudathen," which would be as impossible to a Jebb or a Gaston Boissier as we trust it will some day seem to American scholars of equal standing.

Style is only a symptom of deeper things. A Germanized education makes our scholars strangers to their own national literature, and confuses all their literary, historical, and cultural perspectives. It may be doubted whether literary criticism can ever rise higher than its source in the critic's immediate perception of values in the language and literature to which he is born. From this must come the analogies, instincts, standards, that control and keep sane the philological criticism of other literatures. The criticism of German scholars lacks and always has lacked this balance-wheel. They do not know their own literature as Frenchmen and Englishmen know theirs, nor do they write with constant reference to it. And if they did it could supply them no equivalent of the poetry of England, the drama and the prose of France. The consequent crudity and amateurishness of their criticism of life and letters is their misfortune and not their fault. But it will surely be our fault if, dazzled by the prestige of their learning, we continue much longer to take seriously their Homeric theories, their interpretations of the Platonic philosophy, their estimates of Cicero and Virgil; if we accept as contributions to comparative literature articles on "Der Einfluss der Anakreontik auf Johann Peter Uz," or the triple sawdust of Stemplinger's "Fortleben der Horazischen Lyrik," and Billeter's "Die Anschauungen vom Wesen des Griechenthums;" if we study Mill's Platonism only at second hand in Gomperz, and treat the Homeric views of Andrew Lang respectfully only when they come back to us in Rothe; if we waste our students' attention on Robert's *tours de passe-passe* with Mycenæan and Ionian armor, or on Mülder's equations of eyes and oysters; if we assist the disciples of Blass in rearing the baby science of prose rhythm, conceived in the innocency of a scholar whose naïve surprise at the cadences of Plato and Demosthenes was untempered by any previous experience of DeQuincy or Ruskin; if we accept the estimates of reviewers blind to the crushing superiority of Jebb's Sophocles, Gaston Boissier's Cicero, or Croiset's history of Greek literature, and acquiesce in the judgment that dismisses Pater's "Plato and Platonism" as the trifling of an amateur, while treating the pseudo-science of Lutoslawski as an advancement of knowledge; if we remain to the end dependent on bibliographies that catalogue Jane Austen's "Sense and Sensibility" under *Sinneswahrnehmung* and list a reprint of FitzGerald's "Agamemnon" as a new text edition.

Something too much of these obvious and ungracious reflections. It is, I repeat, not the fault of the Germans that the false historical perspective and *Umwerthung aller Werthe* which accompany their gifts of learning are a hindrance and not a help to the heirs of Chaucer and Tennyson. The remedy, as we have seen, is not to substitute culture courses for scholarship, but to train our scholars at home as French and English scholars are trained in an environment and by methods that shall subject the form and relate the content of their knowledge to the high tradition of their own language, literature, and inherited culture. This cannot be done in a day or a generation. For it will take a generation to prepare the teachers. But we may make a beginning now—with ourselves, as well as with our pupils.

IV.

Thus far I have spoken of our own special problem of the adjustment of an imported professional scholarship to our national education and culture. But there is a brief final word to be said on the need of rescuing scholarship itself from the German yoke. The public will suppose me to mean from German pedantry and superfluous accuracy in insignificant research—but I mean in all seriousness from German inaccuracy. The disease of German scholarship, well indicated by Matthew Arnold in "God and the Bible," has now infected all the world. The game of investigation, as played by its most brilliant practitioners, threatens to become a systematic dissemination of error and perversion of the feeling for evidence. In a large proportion of philological and historical problems, the most that we can hope to attain is an accurate collection of the insufficient evidence and a clean-cut statement of the alternative probabilities. There still remains an enormous amount of this work to be done. Instead of doing it, the Germanized scholarship of the world insists on "sweat-boxing" the evidence and straining after "vigorous and rigorous" demonstration of things that do not admit of proof. The method is openly avowed and defended on principle. The scholar who lacks the courage to make mistakes, they say, will make no discoveries. They quote Bacon to the effect that truth emerges more readily from error than from confusion, and take this to mean that the systematic elaboration of absurdity is the true philological method. The practical results are deplorable. The chief objection to hunting for mares' nests is that you are sure to find them. But the quest itself impairs the reasoning powers. It obscures in our teaching and in the eyes of the public the true cultural aims of philological study by an excess not of precision, which can never do harm, but of that parody of scientific research which consists in the "pyramiding" of unverifiable hypotheses. It blinds us to the elementary logical truth that the resultant probability of such a process is not the summation but the fractional product of the probabilities of the separate steps. And what is more, the predetermined resolve to achieve results vitiates the separate steps. The public even of scholars has no conception of the quantity of misstatement now circulating in accredited books signed by reputable names; and it is impossible to tell them because the enumeration of errors is not only invidious in a writer, but intolerably wearisome to the reader. There are large fields of philology in which we shall be compelled to do the work all over again, in order to determine the simple facts of the tradition uncolored by the pleas of advocates with points to prove. The big ambitious books of the Nordens, the Heinzes, the Reitzensteins, the Joels, the Dümmlers, the Hirzels, the Wendlands, and even, alas! of the Wilamowitzes cannot be trusted. They cannot be safely used without laborious verification, and verification too often reveals that the texts cited are mistranslated, misinterpreted, or, at any rate, do not prove the point. American scholars have not wholly escaped this infection. But either some defect of ambition or a remnant of Yankee common sense makes the majority of them immune to the disease in its most virulent form. There are compensations in all things. It is sad that our scholarship, as our literary friends so often remind us, is hard, thin, dry, matter-of-fact, syntactical, statistical, archæological, and negative; that it never rises to the comprehensive survey and the generous *élan* of constructive hypothesis of Germany, and is lacking in the grace and charm of France, the restrained emotion and finished eloquence of England. But I console myself with the reflection that perhaps, while we are growing to our full stature, it is the temporary mission of our hardness and thinness to

correct some of the excesses associated with the admirable qualities that are beyond our reach. We are often reproached for not producing those charming, readable essays that flow so frequently from the facile pens of our French and English colleagues. Well, Professor Butcher's lecture on Greek literary criticism is pleasant reading, but I am not certain that the multiplication of such lectures would be a more desirable outcome of our scholarship than are Professor Carroll's dissertation on Aristotle's "Poetics," Dr. Baker's study of literary criticism in Greek comedy, or Professor Van Hook's dissertation on the terminology of Greek literary criticism. I open Professor Butcher's essays at random and read:

> Plato goes so far as to discover a moral danger in prose compositions which lack rhythm or harmony: to his mind they indicate some disorder within the soul.

Here is a testimony to rhythmical prose indeed. It is most interesting. Unfortunately, Plato says nothing remotely resembling what is here attributed to him. The passage of the "Laws" cited in support of the statement is completely misunderstood. I open Professor Mackail's delightful lectures on Greek poetry and find an eloquent page about an awesome lightning flash which illuminates an awful pause before the retreat of the Trojans. Nothing could be more impressive—if true. But there is no lightning flash, and the simile does not illuminate the terror-stricken pause of the Trojans, but the breathing space won by the Greeks seventeen lines after the pause. If we must choose, I prefer American thinness and dryness to this. We may pay too high a price not only for a German *geistreiche Combination*, but for French neatness of antithesis and English romantic sentiment. To adapt the phrases of Emerson, let us sit at home with might and make the best of ourselves.

PAUL SHOREY.

University of Chicago.

NEWS FOR BIBLIOPHILES.

It is probable that the immensity of the loss to American historical scholarship entailed in the destruction of the New York State Library by the recent fire is only imperfectly understood. Among the archives stored in the State Capitol the old Dutch colonial records come first, chronologically. These consisted of two important collections. The first comprised sixteen volumes of transcripts of documents in the Royal Archives at The Hague, and in the possession of the city of Amsterdam, Holland, procured by John R. Brodhead in 1841, and reprinted in part in translation in E. B. O'Callaghan's "Documents Relating to the Colonial History of New York." They covered the years 1603-78. The second collection comprised the original transcriptions of the records of the government of the Dutch West India Company in the years 1638-64 and 1673-74. Of these there were originally forty-eight volumes. Many of these documents exist now only in translation. Of those that have been reprinted, perhaps 10 per cent. can be said to be really well done; the other 90 per cent. ought to have been done over again and probably would have been in time had they not been destroyed. Of this entire Dutch collection, it is believed that about one-third has been saved in a more or less burned condition. A preliminary survey of the remainder has led the archivists to reach the conclusion that by mere chance a considerable portion of the material that had never been reprinted in any form, even in poor translations, has been saved.

Of the English Colonial Records in the library, the most interesting single document, the original charter of New York, granted by Charles II to the Duke of York, was not in the archives room, and was saved. But in other respects the loss of manuscript records for this period is irreparable. Among these were thirty-three volumes of the manuscript records of the Colonial Council, including the correspondence of the colonial Governors, passes, writs, orders, and permits. There were also twenty-eight volumes of the Minutes of the Provincial Council, in both its executive and legislative capacity, covering the years 1668 to 1776. Part of these, in the earlier period, had been reprinted, although in an unsatisfactory form, in the volumes of New York Colonial Documents.

Also included in the English collection were thirty-two volumes of miscellaneous records, comprising orders, licenses, warrants, election certificates, certificates of incorporation, and statements of colonial territorial claims affecting New Hampshire, Massachusetts, Connecticut, and New Jersey. These covered the period from 1665 to 1808. There were also four volumes of commissions, both civil and military, from 1684 on; the accounts of the provincial treasurers, the original reprints of Dongan's laws, and the journals of the New York Assembly from 1699 to 1767.

Under the general title of Land Papers were included a vast number of original land patents. There was the original charter of the city of New York, dated 1730, and an original copy of the Zenger reprint of the same. The Indian Papers included the original records of the Indian Agency for 1757-59, a file of Indian traders' bonds, and copies of the Indian treaties entered into from 1766 to 1811, largely with the Iroquois. Related to the general subject of the New York Indians were the Sir William Johnson Papers, comprising twenty-six volumes of manuscript reports, records, and letters covering the years 1738-1774. This collection was justly considered one of the chief treasures of the State library, and, as much of it existed nowhere else, and had never been printed, the loss is a heavy one. Of great value to the students of this period, too, were the original Diaries of the Rev. Samuel Kirkland, the missionary to the Iroquois Indians between 1769 and 1793, in four manuscript volumes. It was he who was responsible to a great extent for the fact that the Oneida tribe remained faithful to the American cause during the Revolution, and did not, like most of the rest of the Iroquois, cast in their lot with the British. A portion of these diaries have been reprinted in Ketchum's "History of Buffalo" and in the Proceedings of the Buffalo Historical Society.

One of the most valuable single collections in the burned library consisted of fifty-two volumes of manuscripts and papers of or relating to George Clinton, first Governor of the State and later Vice-President of the United States. They covered a period extending from 1763 to 1844, and were of varied interest and character. Among them originally were many letters from Washington, most of which had luckily been removed before the fire. One of the interesting items in this collection was a manuscript journal kept by Gov. Clinton in the years 1803-09. Of value, too, was the diary of his father, Col. Charles Clinton, of his ocean passage from Ireland to America in 1729, and another of his campaign in the French and Indian war in 1758. One of the volumes in the Clinton collection consisted of 366 separate documents and papers relating to New York city prior to and immediately following the Revolution. Most of them related to real estate transactions, land sales, building contracts, and so on.

A collection of forty-four volumes comprising the Papers and Minutes of the Provincial Congress of the New State of New York for the years 1775 to 1778, was of great value for students of the civil administration of the revolted colonies during the Revolution. The minutes and journals were printed many years ago, and are, therefore, available. This collection included the original credentials of the delegates to the Provincial Congress of 1755, the minutes of the military committees of the Congress, and many valuable manuscript maps.

A collection of manuscript records and minutes of the Proceedings of the Committee of Safety of Albany City and County during the Revolution, ten volumes in all, were partly saved by the fact that several of the volumes were in the possession of the State historian at the time of the fire. The Proceedings of the Albany Committee of Correspondence, in two volumes, and the Minutes of the Committee for Detecting and Defeating Conspiracies, both of them Revolutionary bodies, were destroyed. The latter, however, were published last year, under the editorship of the State historian, in several carefully compiled and edited reprints, and their loss will, therefore, not be so serious as that of the manuscripts that have never been printed.

Among the other State documents lost were several volumes of early State Treasury papers; a report of the American prisoners confined in British prisons and on the prison ships; the Gen. John De Lacey papers, the muster rolls of New York regiments in the Continental service, and manuscripts relating to land patents and bounty lands.

Two sets or collections of papers of very great value to the student of the early political and legislative history of the State were known as the Assembly Papers and the Legislative Papers. The Assembly Papers covered the period from 1777 to 1831, and consisted of forty-four volumes. In them were included a large number of miscellaneous papers submitted to the Assembly in those years, including two volumes of reports concerning the confiscation of the Tory estates, the original messages of the Governors, the original incorporation records of cities and villages, and the original reports of State officers. One important volume comprised the Vermont Papers

which related to the boundary controversy with Vermont in 1777-79. There was also a volume of letters of the Loyalist Governor, William Tryon, for the years 1777-80. Among the other items was the original manuscript Journal of the State Senate from 1777 to 1792, and the original Minutes of the Council of Appointment from 1777 to 1786. The latter exists in duplicate in the office of the secretary of state.

An important series, of which it is believed about one-third were saved, was that of the Papers of Governor Tompkins. These were in fifteen volumes, and the most valuable portions of them had been published by the State several years ago in an extremely poorly edited edition. Aaron Burr's receipt books for 1812-20 were among the articles lost. There was also the Westerloo collection of manuscripts in Dutch and Latin. Another item of considerable value was the minutes, reports, and accompanying documents of the Constitutional Convention of 1846. Union College has sustained a severe loss in the destruction of a great many of its earliest records, including the original ledgers and account books.

There were deposited in the library series of papers and manuscripts bearing on the history of other States. Most of them had not been printed, and it will never be possible to use them, as had been proposed, to fill in gaps that exist in the records of these States.

The collection known as the D'Iberville papers, including a large number of copies and transcripts of papers and documents in translation and the original French, relating to the voyages and discoveries of the French colonist and soldier D'Iberville, and of considerable importance to students of the early history of Florida and Louisiana, were among the most interesting of the many collections dealing with the history of the country outside of New York State.

It is estimated that the total salvage on these manuscript archives will not be more than 10 per cent. But it will be some time before it is possible to tell with any exactness what is saved and what irretrievably lost.

Correspondence

PRACTICAL IDEALS.

To the Editor of The Nation:

Sir: A great man who doth bestride this world like a colossus some months ago came up out of Africa to the more sophisticated civilizations on the north of the Mediterranean, and there, on the shores of that immortal bay where still, as in the days of Shelley,

> Blue isles and snowy mountains wear
> The purple noon's transparent light,

he gathered about him on the sands the ingenuous youth of the University of Naples, who flocked to hear his words. And this, we are told, was the substance of the message:

> Young Gentlemen: Be practical—avoid impractical ideals. You will never get forward unless your ideals are capable of being attained, and we are in this world for the purpose of getting forward.

If Virgil's shade had that day chanced to wander near his tomb, must it not have joined with the young countrymen of the Gracchi and of Dante in exile, of Savonarola on his pyre, and of Garibaldi and his thousand, in shuddering at this new sermon on the mount—or shall we not better call it a sermon from the depths?

There flashed across my mind when I read it the exultant cry of that great German who stood in Naples a century and a quarter before him: "Den lieb ich der unmögliches begehrt."

Mr. Roosevelt seems obsessed with the idea that the youth of the world are in danger of aspiring too high unless he restrains them. Only ten days ago the wires tell us that he came back to the familiar theme at the very antipodes of Naples, on the shores of that other bay, which rivals Naples in beauty, though not yet in associations. There, looking out through the Golden Gate, he told the students of the University of California, that they must beware of "unrealizable" ideals. "Examine your ideals," said he, "and see if they are realizable—if so, embrace them; but if you find them unrealizable, cast them from you and look about for those that are realizable."

Whether there be any distinction between "practical" ideals and "realizable" ideals, I leave to the casuists to determine. I presume none was intended and that they are but variations "for the sake of euphony," as the rhetoricians say, upon one theme. But some of us dissent *in toto* from this whole gospel of mediocre ideals. We used to be told as young men and maidens in homely phrase to hitch our wagon to a star. That was not very "practical," not at all "realizable"; but somehow it seemed to lift us. I wonder if Emerson, in view of this later eminent advice, would perhaps consent to an emendation, possibly like this, "Hitch your wagon to a star, provided it be a falling star, whose cindered skeleton you may some day overtake in a lava bed in the desert."

Surely, it is not asking too much, in a world which is being suffocated with practicabilities and realizabilities, with economies and extravagancies, with life-savers and life-destroyers, which is full of keen calculators and cunning inventors, of those who consume and those who conserve, of balance sheets and annual statements, of machines and counter-machines—that the pure white flame of a disinterested and utterly impractical idealism should be allowed to glow faintly on our academic altars, if nowhere else. I know nothing of "practical idealism." The calculating intellect that charts and computes the chances of success and failure has no more of idealism about it than a pendulum or a cash register.

Mr. Roosevelt says that he regards as the two greatest achievements of his Administration the Roosevelt Dam and the Panama Canal. No doubt he would scorn the suggestion that the name of John Brown of Ossawattomie (think of the impracticability of his ideal!) will, in the coming years, cause more hearts to beat faster, more eyes to fill with tears, more souls to leap with blade unsheathed to noble and unselfish deeds, than even the name of the builder of the Panama Canal—though it did take 5,236,421 bags, or barrels, or car-loads, or ship-loads, or whatever it was, of cement to build it.

Why take such infinite pains, anyhow, to water the deserts and rend twin continents asunder, and conserve our forests and our fuels and our bodies, and attend to the thousand other practical and realizable trifles that men fret over? Is it worth while if we be merely those little men of little soul who rise up to buy and sell again and be otherwise "practical"?

May there not be spots here and there, free from the domination of the homiletic calculators, where men not pretending to omniscience as to the outcome demand of their ideals only that they shall be fixed and lofty; and, once satisfied of that, feel that they can leave the issue with the Almighty? Howard L. Smith.

University of Wisconsin, May 1.

KEATS'S "MISSAL."

To the Editor of The Nation:

Sir: In seeking for the source of Keats's line in "The Eve of St. Agnes,"

> Clasp'd like a missal where swart Paynims pray,

it may be well to ask whether the poet was not referring to a particular book. If a certain missal was much written and talked about in literary circles at this time, and if further it was a missal that had been used by Christians dwelling among the swart paynims (all of whom, as good Mohammedans, are pretty regular in their praying), there is a chance that this was the book that touched the poet's imagination and supplied the simile.

As it happens, a copy of a missal which meets these conditions is now in the British Museum. It appears in the catalogue as "Missale mixtum secundum regulam beati Isidori dictum Mozarabes. . . . In regali civitate Toleti, 1500." The character of this missal, and its repute among book-fanciers of Keats's time, are indicated by the following notes upon Lord Spencer's copy at Althorp, in T. F. Didbin's "Bibliotheca Spenceriana" (four vols., London, 1814-15), Volume I, p. 135:

> When the reader is informed that this work was considered "the scarcest book in the whole Harleian Collection," he will naturally expect both a particular account of the volume itself, and of the circumstances which have contributed to its excessive rarity. As the latter involve in them some interesting historical details, it may be well to notice them in a succinct point of view.
>
> It is well known that the territories of modern Spain were, in the fifth and sixth centuries, completely subdued by the Goths; who instituted, according to their notions of the Christian religion, certain rites which, consolidated into one particular form, were called the Gothic Ritual—or, according to the modern term, Missale Gothicum. In the seventh century St. Isidore, Archbishop of Seville, corrected this ritual; and, under this amended form, it was ordained, by the Council of Toledo, to be used in all churches. The overthrow of the Goths, by the Moors and Arabs, succeeded in the four following centuries: but although many of the former preferred exile to the Moorish government, yet, a great number of them, having a few churches granted them for the free exercise of their worship, continued to be mingled and domesticated with their conquerors; still using, but in a form probably somewhat corrupted, their Gothic ritual of worship.

In the same volume, p. 136, appears an extract from the Life of Cardinal Ximénes by Alvaro Gomez, of which the following sentences (and in particular the phrase *sacris suis retentis* are in point:

> Cum per Mauros Arabesque universa pene regio caede incendijsque vastata, fusis, fugatisque Hispanorum copijs, in barbarorum ditionem venit. Cum autem in publica clade, urbs quoque ipsa regia in hostium potestatem, idque ea conditione venisset, ut op-

pidanis licet Christiano ritu moribusque in ea vivere: quanvis pleraque civium multitudo spontaneum exilium Arabicae praetulit servituti, nonnulli tamen quibus patrij domesticique lares cariores libertate fuerunt, conditione accepta, sub Arabum et Maurorum imperio sacris suis retentis, in urbe manserunt. Ergo ejusmodi homines quod Arabibus permisti viverent, Mistarabes appellati sunt, et illorum ecclesiasticus ritus, officium Mistarabum.

The Catalogue of the Harleian Collection, Vol. I, p. 4, refers to the missal as follows:

Amongst a great number of Roman Missals and Breviaries remarkable for the beauty of their Cuts and Illuminations, will be found the Mosarabic Missal and Breviary that raised such commotions in the Kingdom of Spain.

That Keats actually saw either Dibdin's work or the missal itself there is, as far as I know, no proof, although it is not greatly straining probability to suppose that he saw both. Keats was in 1818-19 often at the house of Charles Wentworth Dilke, and it may be that he saw Dibdin's work in Dilke's library. I put the question some time ago in a letter to the late Sir Charles Dilke and received from him the following reply:

Alas! I can't be sure, but I *think* I remember that this book was either at Belmont Castle (my great aunt's) or at Chichester. My great-grandfather's books, etc., were divided between my great uncle and his sister. I took from both libraries the books of my great-grandfather which had his book plate, but it is *not* among them.

I publish these inconclusive notes in the hope that some one may be able to supply the connecting links.

FRED NEWTON SCOTT.

University of Michigan, May 3.

OUR JACKIES AT THE GOLDEN HORN.

TO THE EDITOR OF THE NATION:

SIR: We thought you might be interested in the care those of us who happen to be doing various kinds of duty in foreign parts take of the men of our fleet when they come into port.

Previously, when an American gunboat rounded Seraglio Point and dropped anchor under the minarets and domes of Stambul, the usual process of disembarkation was something like this: All hands on deck, flags flying, and a general air about as if the Sultan had invited the crew for luncheon; then a speedy descent into the boats, and, with the oarsmen doing rag-time with the blades, a hard bump on the quay at Tophane; then the Turkish arsenal, and a wild scramble for the town. Bluejackets might be seen disappearing round the corners that lead into Galata, the most cosmopolitan, the dirtiest bedraggled seaport in the world; and in a very few minutes the noise and clatter and "fancy swearing" of a brawl would fill the air.

The various other jackies of the fleets of the world might be partly to blame, but, whoever started the affair, our own were always on hand to put the finishing touches just where they belonged. Then Step-street is reached; there is a swoop up the long stone steps, past the shops where the Greek priests sell ikons, past the tomb of the Turkish imam where a still light burns day and night, past the big coffee-house where the Moslems sit drawing at nargillehs, to the skating rink. The door, of course, is not big enough for the general crowd that wishes to get in at the same time, so the door comes down. "Lizzie" and "Aleena" skating past the doorway, get a knock in the face, and another brawl is well begun.

But "Bill" patches things up, collects the amount of the admissions, and the music starts again. This time a French sailor starts the trouble—he is having a dull time and thinks the first violin is too slow. He pulls the old man's beard, and gets bounced. Kind-hearted always, "our own" assist in the bouncing and hold the floor for themselves, until a reinforcement arrives from the French ship. Then a few words are exchanged, a Turkish gendarme rides impotently by, and things begin. Billy Magregor, pursuing a French sailor, shies a stone at him, misses the wretch, and draws down to the sidewalk a couple of hundred dollars' worth of plate glass.

The Turkish police can do nothing, certainly; so they let the thing go on. Considerable damage is done before daybreak, as may be imagined. A badly bruised bunch of men emerge from the narrow streets that border the Galata quay as the red sun comes flaming up over the myriad wooden houses of Scutari, on the Asia side. Quiet reigns aboard ship, quiet reigns in the city. But mischief is brewing in the newspaper offices. With the morning news, we learn that Mr. Bathian Demetrides Pizzousis and others have lost numerous plate-glass windows in the night, owing to a loud conversation between two American sailors. The usual explanations are in order, and the members of the other nationalities represented in the capital make a few remarks on our seamen.

It was with a desire to remedy this sort of thing, which as pleasing to the humorous portion of the earth ought to be allowed to go on, but as damaging to the reputation of the American seamen ought to be stopped, that the plan was proposed to give our sailors a decent habitat while they were in the city.

It occurred to some of the members of the diplomatic community to rent a house as a club, equip it with a dozen or so beds where a night's lodging might be had, and furnish a fair-sized dining-room where they might have a little impromptu feast now and then and start a series of concerts in which the sailors could give a one-act drama or a musical farce or a minstrel show.

No. 16 Rue Imam, in Pera, was selected in the European quarter of the city, and a minstrel show was given in which the consul-general acted as interlocutor, the officers of the station as minstrels, and the American colony as a delighted audience. The affair was a success, and the boys took a keen interest in it. Since then, there has been no public destruction of property. All of which seems to prove that the place to let off steam can be decent and orderly if the attempt is made to find it.

The question occurs to all of us, Why not take some such care to entertain the jackie and let him entertain himself, in the various ports to which we accredit diplomatic representatives? Certainly it does the sailor a world of good, and indirectly reacts on the opinions of the foreigners concerning American manners and customs.

THE STUDY OF NUMISMATICS.

TO THE EDITOR OF THE NATION:

SIR: I have just received a letter asking me to recommend a "History of Numismatics." Such an inquiry illustrates better than anything else the attitude of the public toward the science of numismatics, and a word of explanation may not be out of place.

The difficulty comes from not appreciating the fact that numismatic archæology is a very wide science with a large number of branches, all of which are so comprehensive as to be each the lifelong occupation of a specialist. (Of course, this does not refer to coins struck since the middle of the seventeenth century, which have no *scientific* value whatever). In consequence, each collector is interested only in the coins of one, or, at the most, a few fields, but in his specialty he needs every detail of information he can procure. A book to appeal to him must be voluminous. Such a thing as a "History of Numismatics" does not and could not exist, because, to be complete, it would have to consist of upwards (indefinitely) of a hundred folio volumes and contain tens of thousands of plates. Such a work would occupy all the living numismatists of the world the rest of their natural lives to compile, and, when completed, would not find a single purchaser, for no one would be interested in any other part of it save that which dealt with his own specialty and would, in consequence, be unwilling to pay for the rest of the monumental work. Attempts at such a tower of Babel structure have been made. Needless to say, they have emanated chiefly from the United States of America, which loves to do things on a "big" scale. The most conspicuous feature of these works was the information which the consulter could *not* find.

I should advise anyone who wishes to begin numismatic studies to choose some series of coins antedating the seventeenth century of our era and never to think of any others. The man who would conscientiously do this for a lifetime would probably leave the world forever indebted to his industry. If such a person will communicate with me, it will be a pleasure on my part to recommend the books necessary to guide him through the course of his studies.

A. H. COOPER-PRICHARD,
Librarian.

The American Numismatic Society, New York, May 6.

CHARLES ELIOT NORTON.

TO THE EDITOR OF THE NATION:

SIR: A recent announcement of the early publication of the letters and journals of Charles Eliot Norton recalls to mind how for some weeks I opened the *Nation* with the eager expectation of reading a letter from some appreciative guest about the genial hospitality dispensed at Shady Hill every Christmas Eve. Perhaps those who knew Professor Norton best thought this too slight an instance of his never remittent fine generosity. Perhaps those who especially enjoyed this hospitality shrank from the presumption, even by an appreciation, of associating their names with that of the great master. It is as one of those latter, many of whom were, no doubt, like me from

the Middle West, that I venture now to speak. The invitation, a very general one extended to those who found themselves away from home tarrying in Cambridge for the holidays, reached naturally very few of those who might count themselves at all by proximity or culture akin to the host at Shady Hill. These were the only occasions on which I congratulated myself that I was but a sojourner in Cambridge. It is needless to attempt any detail of those evenings. I used to wonder that others did not realize what it meant to us to mingle freely and socially with those to whom art and literature were a daily food, to look at rare engravings or beautiful pictures, to turn the leaves of precious folios, to place an almost sacrilegious hand upon the manuscript that had been the loving life-work of some old-time scholar—to do these things and to have the sense that these were not the property of some institution, public and therefore common, but of a private man who had gathered them, not to confer a public good, but because he loved them, and then had graciously invited us to share his joy in them. It was a rare experience, ever memorable, and the beginning of real culture I trust to many. I have called him the great master; for it was as inspirer and cultivator of all fine things of the spirit that we chiefly thought of Professor Norton, even when we met him in the classroom. But even those of us who had sat with him in the reading of the great Italian felt that it was on these occasions in his own house that we came nearest to appreciation of his beautiful manliness. Never, as the Christmas season returns, do I fail to recall the angel message of peace and good-will to the shepherds; for it was with this passage that he always bade us good-night. X.

Brookings, S. D., April 29.

CAPTURE OF ENEMY GOODS.

To the Editor of The Nation:

Sir: While agreeing with the general argument and the conclusions of your editorial entitled "Arbitration and 'Realities'" of April 20, there is one statement in it which is incorrect. It is not true that the Declaration of London "virtually exempts private property on the ocean from capture or destruction by belligerents." Enemy goods upon enemy ships are still subject to capture.

From the time of Benjamin Franklin to the Second Hague Conference the United States has favored the exemption from capture of all private property at sea during war. The ostensible reason given by our government for refusing to accede to the Declaration of Paris was that all private property was not exempt from capture. The instructions to the American delegates at the London Conference have, I believe, not been made public. It is understood, however, that they did not follow the traditional American view. As navy men generally favor the right of capture of enemy goods, it is possible that the change in policy was effected through their influence. This surmise is strengthened by the fact that a distinguished officer of our navy, who was already on record as opposed to such exemption, was a prominent member of the American delegation at the conference. It is a fair guess that while naval officers, whose interest is primarily in strategy rather than in law, have a hand in the formulation of the rules of international law, the exemption of private property from capture will not take place.

Jesse S. Reeves.

Ann Arbor, Mich., April 28.

A CORRECTION.

To the Editor of The Nation:

Sir: I have just read the interesting review of A. M. W. Stirling's "Annals of a Yorkshire House," which appeared in the *Nation* for April 27. Your reviewer speaks of the author's having "performed a similar service for another kinsman in *his* 'Coke of Norfolk and His Friends.'" The error is natural enough, for the name as printed has a wonderfully masculine air about it—A. M. W. Stirling. But, in fact, the author is a woman. Why do authors prepare these little pitfalls for unsuspecting readers? If Mrs. Stirling had printed her name in full, Anna Maria Wilhelmina, no one would have mistaken her for a mere man.

EDUCATION.

A glance at President William T. Foster's book on "The Administration of the College Curriculum" (Houghton Mifflin) shows that it is an important contribution to the educational library, and a careful reading of it deepens the impression. In content the book falls into three divisions. The first one hundred and fifty pages are historical, beginning with the early American college, contrasting the special contributory influence of William Smith in Pennsylvania, Thomas Jefferson in Virginia, and George Ticknor at Harvard, and tracing in some detail the evolution of the elective system in the university and college of to-day. The second part contains six critical studies of present-day requirements, and the results of the system as now administered. The last of these chapters, Our Democratic American College, is a vigorous arraignment of the situation in which the increasing criticism of the college to-day is accompanied by increasing registration, procured through a drop in standards and the competition for numbers. The third part, of great value to the real student of the subject, includes fifty pages of bibliography, appendices, and index. The distinct feature of the book is its effort to react against that species of criticism of the American college which "has yielded one hundred opinions to one fact," by presenting a scholarly historical survey and a most careful presentation of contemporary results, based on the observation of many thousand students in scores of institutions. Mr. Foster takes no pleasure in the mere iteration of popular philippics, but in a vigorous, though comparatively dispassionate, way he argues for the effectiveness of the elective system, provided (and this is his cardinal demand) the administration of the college be at once intelligent and honest.

A somewhat new undertaking in book-writing is represented by "Annals of Educational Progress in 1910" (Lippincott), by John P. Garber. It is apparently the first of a series of annual volumes. It aims to furnish a concise statement of the educational occurrences of the year, to give an accurate picture of conditions as they exist in the educational world to-day, to show in proper proportion the great movements and the trend of thought. The author has endeavored to act the part, not merely of the reporter, but of the interpreter. On the whole he has done his work well. Although a large part of the book is devoted to the United States, important educational movements in nineteen other countries are reviewed.

The central theme of John S. Welch's "Literature in the School" (Silver, Burdett & Co.) is the great possibilities for the training of character. The study of literature as an embodiment of the spiritual life of nations and peoples is the greatest safeguard against an over-emphasis upon mere efficiency. Along with efficiency there should go trustworthiness of purpose and stamina of character. The book recognizes the problems of the classroom in connection with this work; it considers the most effective methods of conducting the reading lesson and points out errors to be avoided. Six type stories are given with a detailed "thought analysis" of each; and through these the author both illustrates the method by which he would make literature serve a moral purpose, and suggests the teaching process by which simpler selections for younger children may be made to contribute to the general purpose.

An attempt, more than ordinarily successful, to contribute something of permanent value toward the solution of a difficult problem is John King Clark's "Systematic Moral Education" (A. S. Barnes Co.). The book consists of two parts. The first outlines the science and art of giving ethical instruction and moral training, with a description of practical work in ethical culture. The second part consists of a series of lessons on ethical topics that concern the life of the child. The lessons on each topic are written for children of different ages, are adapted to their comprehension, and are from their point of view. The author adopts two views as to moral education upon which most educational workers who have given the subject careful attention are agreed. The first is that the so-called indirect moral instruction is not sufficient; the second is that in this country, at least, moral instruction in the public schools, if given at all, must be without the sanction of a common religious basis. Lacking such basis, Mr. King would have the teacher appeal to two concepts—God and the soul.

ENGLISH.

Of books on literature, there are three worthy of mention: "A First Book in English Literature" (Holt), "An Introduction to Shakespeare" (Macmillan), and "An Introduction to the Study of Literature" (Heath). The last of these, by W. H. Hudson, is a readable survey of the principles of literature in general, of the principles of poetry, of prose fiction, of drama, and of literary criticism, and is particularly appropriate to "outline" courses in English literature or comparative literature in fourth-year secondary and freshman college classes. "An Introduction to Shakespeare" is by three Yale doctors of philosophy, MacCracken, Pierce, and Durham, who present in two hundred pages a series of inter-

esting chapters on Shakespeare's life, the earlier English drama, the Elizabethan theatre, Elizabethan London, and on Shakespeare's dramatic and non-dramatic work. The valuable results of recent Shakespearean scholarships are duly incorporated. The book is so clearly and agreeably written that it ought to supersede in many colleges the Dowden "Primer" that students find so indigestible. In particular, the chronological list of the plays, which Professor Dowden presents in a fumbling manner, is here set forth with commendable straightforwardness.

Finally, we are glad to have another lucid and orderly history of English literature, in the "First Book in English Literature" (Holt), by Pancoast and Shelly. The personalities of the great figures in English literature are in general vividly, if somewhat baldly, bodied forth. In their attitudes to tendencies and movements, the authors are as conventional as any one could wish; yet at times this very conventionality results in an obsolescent emphasis on specific men and certain causes of change in literary temper. Thus, the transition to the romantic movement is told in the old way—the old stress on Thomson's love of nature, on sympathy with man, on the Elizabethan revival, on the "graveyard school of poetry." Nothing is said of the fact that Thomson was essentially pseudo-classical; the sympathy with man is not disengaged from eighteenth century sentimentalism; the external character of the Elizabethan imitations is not even hinted at; the poets of melancholy are not connected with Milton. In these matters the authors are unfortunately conventional. In other matters they are unfortunately radical. Why so much Allan Ramsay and no mention at all of Percy's "Reliques" and Ossian? Or, again, why no Ossian where there is room for John Ball and J. H. Shorthouse? In detail, one detects also occasional looseness of phrase; Keats, for example, is treated on page 365, under "As a Master of Form," in heavy type. "Form" is then implicitly defined as "felicity of phrase" and Keats's "delight in the perfection of the phrase" dwelt on at some length. The fault here is, however, deeper than carelessness; it is an instance—and there are other instances in the book—of the romantic attitude that overrates expression and underrates form. If symmetry were properly lauded by writers of textbooks and by instructors, we should find more of it in student themes and in contemporary literature.

One of the most interesting of the new books is William Murison's "English Composition" (Cambridge University Press, Putnam). It is much too inclusive for practical use, and abounds in so many suggestions plausible only in England that it can scarcely be recommended in this country. But to the American teacher, either in secondary courses or in freshman college courses, it ought to be useful on account of its abundant and admirable brief selections and lists of essay subjects. Far more practical is the "English Composition, Book One" (American Book Company), prepared by S. D. Brooks, superintendent of schools in Boston. Intended for the pupil of the first two years at high school, it provides material for training in "how to think" at a time in the development of young people when such training is of great value. Wherever the "Composition-Rhetoric" of Brooks and Hubbard has been well received, this new book of Mr. Brooks's will surely be received as well. Pleasant in form and type is "Written English" (Century), a little book of rules, by Dr. Erskine and Miss Erskine; but inasmuch as Professor Woolley of the University of Wisconsin has done this sort of thing as ably and palatably as it can be done, we fail to see the need of a new and scantier treatment of rhetorical rules—unless the isolated and hopeless young journalist finds profit therein.

Extended comment on the new editions of standard literature is scarcely deserved. Many of them have apparently been pumped up out of love of editorial labor rather than created to supply a need. Ginn & Co. offer the following additions to their series of Standard English Classics: Lodge's "Rosalynde," edited by Professor Baldwin of the University of Illinois; "A Midsummer Night's Dream," edited by the Rev. H. N. Hudson (a misplaced essay on "English in Schools" is prefixed); "Selections from Byron," a well-made little collection by Dr. Tucker; Macaulay's "Essays on Clive and Hastings," edited by Dr. Gaston; "David Copperfield," an unsuccessful small type and thin paper edition, and Parkman's "Oregon Trail," edited with restraint by Professor Leonard of the University of Wisconsin. Ginn & Co. also present: "A Midsummer Night's Dream" in the New Hudson Shakespeare, with a wearisome sixty-five-page introduction, and Cooper's "Deerslayer," abridged with tolerable success.

GREEK AND LATIN.

An attractive edition of the first four books of Xenophon's "Anabasis" has just been prepared by M. W. Mather and J. W. Hewitt (American Book Co.). It differs from the leading editions now in common use rather in method of printing than in contents. Thus the commentary is arranged index fashion, according to the word discussed rather than in paragraphs, and the grammatical references are grouped at the bottom of the page to avoid the customary disfigurement of long lists of symbols. There seems to be less translation than in the other editions and certain matters of no importance are omitted. But in many cases this edition shows two distinct notes, one of which is found in one of the other editions, the other in another. The editors have evidently, therefore, endeavored to leave nothing untouched which has in the past seemed in need of treatment. In general the notes are concise and err, if at all, on the side of brevity. Occasional notes might better have been omitted as savoring of the pedantic, but these are surprisingly few. The introduction is devoted to the Ten Thousand Greeks, The Army of Cyrus, and the Life of Xenophon. There is no discussion of Persia, and but little of the art of war among the Greeks. These subjects have apparently been discarded as unnecessary. On the other hand, the numerous illustrations are admirably chosen, and this edition differs from others in supplying under the illustrations ample explanations, so that a great deal of information can thus be gained from the illustrations alone. The vocabulary covers only the first four books, and lays claim to much self-control in the matter of renderings, but these could well have been even more curtailed. The vicious practice of referring certain renderings to particular places in the text is usually avoided.

Tacitus is one of the most difficult of Latin authors to edit. If proper attention is paid to his style, the edition becomes too learned for college students. If this is not done, Tacitus's greatness as a stylist can hardly be appreciated by students. Prof. F. G. Moore has tried to steer a middle course in his edition of the "Histories of Tacitus, Books I and II" (Macmillan). A brief introduction is taken up almost entirely with a discussion of Tacitus's style. While this is well done, it lacks life, and there is no way by which the formative elements of Tacitus's style can be grouped together as distinct from individual examples. We seem to get no real picture of Tacitus. We have many poetical usages, but they are not interpreted so as to show the poetic spirit. The notes have to do in large measure with verbal peculiarities, characteristics of the Silver Age, and there are too many such statements as these: "Not before Livy"; "in no writer before Tacitus"; "regular with Sallust, frequent with Livy and Tacitus." But these are almost inevitable blemishes. We have long needed an edition of the "Histories" for college students. This edition fills the need in a very satisfactory way, and the evidences of scholarship and good taste abound throughout.

"Selection from the Latin Literature of the Early Empire," by A. C. B. Brown (Clarendon Press), is a timely contribution to the material for reading in our schools. The aim of the author is to give a picture of the life of the Romans during the period chosen, so far as it can be gathered from the literature. The first section is devoted to the inner life of politics, education, literature, and philosophy. Under politics the subjects are Domitian's Reign of Terror, from Tacitus and Juvenal; the Age of Tacitus, from Tacitus's "Histories"; the Deification of the Emperor, from Seneca's "Ludus"; The Treatment of the Christians, from Pliny's "Letters"; An Exile from Civilization, from Ovid's "Tristia." Under philosophy we have Horace's philosophy of life and his discussion of avarice and Juvenal's famous satire on "The Vanity of Human Wishes." The second part, on Outer Life, treats nine social types, six social incidents, and seven descriptions of town and country. After each selection there are short notes, which, as they contain but little translation, would have been better placed at the foot of the page. There is a short introduction to each part, but the selections are left to tell their own story, and taken together, give the most complete and interesting as well as the most instructive description of life in the Augustan and Silver Ages that has as yet appeared.

Prof. K. P. Harrington contributes to the discussion of classical aims and results four short essays in his "Live Issues in Classical Study" (Ginn). The essays are entitled, Dry Bones and Living Spirit, A Fair Chance for the Classics, The Latinity Fetish, and The Use of Translations. Professor Harrington emphasizes again the vitality of the classics and their enormous continued influence upon literature. He argues that criticisms so freely made upon the results of classical teaching may be met by improved methods, by greater attention

to the comparison of ancient and modern conditions, by broadening the scope of the literature that is handled, and by a determined effort to show the indispensable character of classical influence.

MODERN LANGUAGES.

Excerpts from Taine's "Les Origines de la Franco Contemporaine," with introduction, notes, and vocabulary, have been edited by J. F. L. Raschen (American Book Company). With the exception of the half-dozen pages of the chapter "Psychologie de la Révolution," and a paragraph here and there added or omitted, the selections are identical with those edited some years ago by the late Prof. Edgren. Nevertheless, as Edgren's notes are meagre and often faulty, the new edition, which is well annotated, should prove useful.

Victor Hugo's "Les Travailleurs de la mer," with introduction and notes by E. F. Langley, appears in Heath's Modern Language Series. From beneath the overgrowth of digression, under which Hugo seemed to delight in all but smothering his narrative, the editor, by skilful pruning, has succeeded in extracting the story, which is here compressed into 274 pages. The introduction is an admirable summing-up of Hugo's long career, and of his place in French literature. The notes are judicious, and occasionally enlivened by pertinent anecdote.

W. R. Jenkins & Co. have reprinted in their series of French texts Sardou's amusing three-act comedy, "La Perle noire." The addition of an excellent introduction, brief notes, and a vocabulary by Professor McKenzie of Yale has greatly improved the little volume.

Teachers who favor anthologies will be interested in Vreeland and Michaud's "Anthology of French Prose and Poetry" (Ginn), a handsome volume of 434 pages of representative extracts from fifty-three authors, extending from Malherbe to Anatole France. Notes are provided, and the selections from each author are preceded by brief biographical and critical introductions.

The following texts may be recommended for beginners in French: François's "Easy Standard French" (American Book Co.), consisting of thirty short pieces of prose, with notes, composition exercises, and vocabulary; Weill's "Historical French Reader" (American Book Co.), similar in plan to the preceding; Xavier de Maistre's "La Jeune Sibirienne," with notes, exercises, and vocabulary (Heath); episodes from Dumas's "Les Trois Mousquetaires," with notes and vocabulary by I. H. B. Spiers (Heath); "Pages choisies" from Dumas Père, edited by B. L. Templeton, with exercises and a vocabulary with the words repeated in phonetic transcription according to the Passy system and meanings given in French (Frowde); P. Perrault's "Les Lunettes de Grand'maman" (for younger children), with notes and vocabulary by M. S. Crawford (Holt).

The first eight chapters of Manzoni's "I Promessi Sposi," edited with introduction, notes, and vocabulary by J. Geddes, jr., and E. H. Wilkins, have appeared in Heath's Modern Language Series. This is a notable addition to the meagre list of well-edited Italian text-books. The notes are done with evident care; and a useful feature of the vocabulary is the indication, by simple typographical devices, of the stressed syllables in doubtful cases, of the open sounds of *e* and *o*, and of the voiced *s* and *z*. A well-reproduced photograph of Lecco forms an attractive frontispiece.

The number of Spanish grammars for English-speaking students, though already considerable, is steadily increasing. Of the two recently added to the list, that by C. P. Wagner (Ann Arbor, Mich.) comes out in a second edition, the first having appeared in 1909. Its most distinctive feature is the stress laid on oral work. Of the forty-four lessons into which the elements of Spanish grammar have been compressed, but one in four contains an exercise for translation into Spanish. Care and judgment are shown in the grouping of the grammatical material, and the rules are clearly stated.

The other new Spanish grammar (Longmans), by J. Warren of the Manchester (England) Education Committee's School of Commerce, offers a practical course in the language in sixty-three lessons. In accordance with the purpose of the series to which it belongs, the vocabulary is largely commercial. The book is, in the main, well done; reference, however, would have been facilitated by numbering the paragraphs; and occasional inconsistencies in the employment of the written accent should have been avoided.

The hope that the late Professor Ramsay might add a Portuguese grammar to his monumental treatises on Spanish was never fulfilled. However, his publishers, Holt & Co., have now brought out "A Brief Grammar of the Portuguese Language," by Dr. Branner of Stanford University. One of the chief difficulties confronting the student of Portuguese lies in certain peculiarities of pronunciation, such as the occasional sounding of *e* as *i*, *o* as *u*, *s* as *sh*. Regarding the *e*, we are told in this grammar (p. 6, n. 1) that at the beginning or end of a word it has the value of *i* short; unaccented *o* at the end of a word is equivalent, we are informed, to *u* short (ib. n. 3). It is somewhat puzzling, therefore, to find, in the examples illustrating the pronunciation of *x* (p. 10), that *exemplo* is to be pronounced *ezemplo*, when from the rules just quoted it should be *izemplu*. As to the frequent sounding of *s* as *sh*, this characteristic feature of Portuguese pronunciation is here ignored. Also, in other parts of the book there is an occasional lack of explicitness, as when the peculiarly Portuguese forms of the personal infinitive are set down on p. 72, with no explanation until p. 102. Aside from such easily-corrected defects, the book is a commendable effort, and furnishes the means of studying an undeservedly neglected language, of which many, it is to be hoped, will avail themselves.

In "German Style, An Introduction to the Study of German Prose" (Holt), Ludwig Lewisohn encourages advanced students to examine an aspect of the German language which has heretofore received scant attention in American universities, though hardly so little attention in Germany as Mr. Lewisohn implies. He gives extracts from the prose of Luther, Lessing, Goethe, Heine, and Nietzsche, with a summary characterization of the style of each and an analysis of the chosen specimens with respect to structure, diction, and rhythm. He pays most attention to rhythm. As to structure, he says most about the management of transitions; as to diction, his treatment is obscured by extravagant verbiage. Thus, he needs seventeen lines to convey the information that Nietzsche prefers metaphors to similes. In general, we could wish greater precision of definition and a clearer vision for fundamental distinctions. How, for instance, can we reconcile "that intellectual beauty which is the be-all and the end-all of the art of letters" with "the conception of style as a highly complex and essentially emotional communication of the individual's sense of beauty or truth by the choice of the inevitable verbal and rhythmic symbol"? Only on the basis of the latter conception can Nietzsche's "verbal orchestration" be esteemed as ultimate. There are differences between intellectual and sensuous qualities of expression which ought to be discussed under "diction." Mr. Lewisohn has the right to include in his compendium only such authors as seem to him representative. We wonder, however, that he found no place for Schiller, and we think his treatment of Heine would have been more satisfactory if he had contrasted Heine with Kleist.

Prof. J. A. C. Hildner has made his edition of "Götz von Berlichingen" (Ginn) a manual of information drawn from all quarters whence light can be thrown upon this play as a characteristic confession of Goethe's and as the model of the Storm and Stress drama. The Introduction is systematic and the Notes are full without being fulsome. There are reprinted in Appendices Goethe's panegyric on Shakespeare and twenty pages of his occasional utterances bearing upon the subject of "Götz."

Paul Heyse's "L'Arrabiata" has been many times edited for school use, but never so carefully and well as now by Steven T. Byington (Ginn). It is refreshing to read Mr. Byington's English and to ponder his skilful suggestions of ways in which the idioms of one language may be employed to express what is expressed in the idioms of another. A brief essay "On Translating" prefixed to the notes of this edition offers intelligent guidance to the groping.

HISTORY AND GOVERNMENT.

A free and easy discussion of the problems involved in teaching history, especially to young pupils, comes to hand in J. W. Allen's "The Place of History in Education" (Appleton). Mr. Allen is convinced that history is, or at least ought to become, a science, and that in the teaching of it, accordingly, neither the dramatic, nor the picturesque, nor the pathetic has any place. Unfortunately, the criticism is mainly destructive, dealing with the various things which history is not; but there is a good exposition of the way in which local history, worked up to by way of every-day incidents in personal, family, or community life, may be made to develop the broader historical sense, together with a wise insistence upon the need of connecting English history as much as possible with the history of Europe. The best things in the volume are the three hypothetical accounts of the English Reformation, embodying in purposely exaggerated form the Protestant, Catholic, and economic views, all of them, as the author points out, both unscientific and pernicious.

Percy L. Kaye's "Readings in Civil Government" (Century) is a catholic and well-chosen selection of extracts illustrative of the various departments and activities of

American government and administration, national, State, and local, town and county government being the only significant omissions. Unlike most collections of collateral readings, this one not only draws upon better known and accepted authorities, including documents, but also includes with special fulness contemporary material in magazines as well as in books. The arrangement follows, in general, that of Forman's "Advanced Civics," and the editor has kept in mind primarily the needs of high school pupils; but brief introductions to the several chapters and sections, together with lists of additional readings, make it possible to use the book with any textbook or as a handbook to accompany lectures.

The scanty list of textbooks for the study of European history in the nineteenth century receives a useful addition in L. Cecil Jane's "From Metternich to Bismarck," the latest volume in the Oxford Textbooks of Foreign History (Frowde). The narrative, covering the years 1815-1878, is brief, but shows intelligent discrimination in selection and emphasis of data, and is especially well written. As is usually the case with English historical textbooks, there is none of the elaborate provision of "helps" and pedagogical apparatus with which American writers are wont to envelope their narratives. The maps, roughly drawn in black and white, suggest the kind of work which the average pupil might easily be asked to prepare for himself, and are the more useful on that account.

Prof. Henry L. Cannon's "Reading References for English History" (Ginn) belongs to the small class of books which every teacher of English history, in high school or college, ought to possess, and which many college classes could use to advantage. Part i, comprising about one-third of the volume, presents in classified lists a very wide range of authorities, primary as well as secondary, including many in other languages than English. Part ii is an elaborate topical analysis and outline of events, with copious lists of readings. Exigencies of printing have made it necessary to limit the citations, for the most part, to books published before 1907. In the arrangement and grouping of the material, as well as in the detailed care with which the appropriate passages are indicated, we know of nothing to compare with Professor Cannon's volume; and even teachers who can make but limited use of collateral readings will find its pages a boon.

College teachers who offer introductory courses in the general history of western Europe will be interested in a "Syllabus of Continental History," prepared by the Department of History of the University of Illinois. The outline is broad, without too much burden of data or minute prescription; the references for collateral reading are sufficiently indicated and of generous range; and there are specific assignments of work, including map drawing, to be done by the student. The syllabus is adapted for use with any modern textbook, but at the same time is flexible enough to admit, on the part of the instructor, of considerable variety in emphasis and selection.

Under the auspices of the Association of History Teachers of the Middle States and Maryland, Prof. Charles M. Andrews, J. Montgomery Gambrill, and Lida Lee Tall have prepared "A Bibliography of History for Schools and Libraries" (Longmans), with descriptive and critical annotations. The references relate not only to the four historical fields now generally dealt with in high schools, but also with methods of studying and teaching history; world history and the history of different countries; historical stories for the elementary school, and stories for children preparatory to history. Naturally, only those works suitable, in whole or in part, for school use are noticed. The annotations are brief, but at the same time critical and informing. The usefulness of the undertaking, now for the first time attempted on so considerable a scale, is obvious, and the book may be heartily commended.

In his book, "Introduction to Political Science" (Ginn), Raymond G. Gettell aims at giving a general outline. After treating of the origin, evolution, and the essential attributes of the State, he takes up the relations between States, and the different forms of government. In the second part of his work he discusses the organization of government. The third part is devoted to the ends of the State and the province and functions of government. It would have increased the usefulness of the work if the author had devoted space to a more thorough discussion of some of the more important principles, instead of attempting to give us a more or less complete picture of the actual condition, political and social, of nearly all of the important nations. We regret to see that the author, while recognizing that the State is a product of evolution, and that neither its origin nor its functions can be explained by a rigid formula, forgets these principles when he discusses the question of sovereignty, and declares *ex cathedra* that there can be and is no dual sovereignty, and that, therefore, the American so-called States are merely administrative divisions with large powers of self-government. He tries to solve the difficulty by saying that they are not States but Commonwealths. Such juggling with words is both unscientific and futile.

SCIENCE.

After the culmination of the Greek geometry in the works of Euclid and Apollonius of Perga no significant advancement in the science was made until the invention of projective geometry by Gérard Desargues (1593-1662), an engineer and architect, whose chief researches were published under the title "Brouillon projet des coniques." Doubtless this work would have led to important developments in pure geometry but for the power and attractiveness of analytical geometry, invented about the same time by Descartes. Desargues's work was lost and actually forgotten till 1845, when by chance Chasles discovered a copy of it in a Parisian library. Meanwhile, in the early years of the nineteenth century, projective geometry had been invented anew. Since then it has attained to vast proportions. But the great pioneers and masters, Poncelet, Monge, Staudt, Chasles, Steiner, Cremona, Reye, and others were creators rather than critics, and their work, the science of projective geometry, is being reconstructed in accordance with the severely critical standards of modern mathematics. Among the more important contributions to this work of reconstruction is Veblen and Young's "Projective Geometry" (Ginn & Co.). For graduate students it is without a serious rival in any language. Its chief merit, namely its logical rigor, may disappoint the hope of the authors that the book may be available for beginners and discontinue the use of such less rigorous books as those of Cremona and Reye. As the point and the plane are the reciprocal elements of space, greater simplicity might have resulted from employing these, instead of the point and the line, as undefined elements.

Professor Church's "Elements of Descriptive Geometry" (American Book Co.) has been the standard work in this subject for nearly thirty years, and is so well known that attention need only be called to the fact that it has been revised and brought up to date by George M. Bartlett of the University of Michigan. A great improvement has been made by including figures and text in a single volume.

Prof. C. R. Mann of the University of Chicago, who has devoted much time to the methods of teaching, has, with Inspector Twiss of the Ohio State University, revised their preparatory text on "Physics" (Scott, Foresman). The aim of the book is best shown by a quotation from the preface: "Educational experience and educational theory both show clearly that scientific facts may be memorized but not mastered in this way. Scientific knowledge is acquired only on the basis of concrete experience by the trying-out process known as the scientific method." In the first place, to memorize is not a sin or a weakness, and is the natural way for a beginner to learn, and, in the second place, the authors have adopted a style of printing which is calculated to promote memorizing. They begin each section with a homely example, such as: "When you stretch a rubber band, it pulls equally hard on both hands." The phenomenon exemplified is then discussed, and, lastly, epitomized as a definition or law. The example and discussion are printed in common type, the definition in italics, and the general law in bold type. Experience teaches that the ordinary pupil, engaged in preparing a lesson, will skim over the example and discussion, memorize partially the italicized definition, and pin his hopes on an absorption of the bold-faced type. But in spite of an over emphasis on pedagogics, the book is better than most preparatory texts. The style is simple and clear, and would be very good if it were not for an excessive use of parentheses, dashes, and the abbreviation *i. e.*

The "Text-Book of Physics" (Heath), by C. E. Linebarger, can be recommended for use in preparatory schools of a high standard. In fact, it is as complete and interesting a preparatory text as has appeared in recent years. Only one serious slip in accuracy is to be noted. The ideas of pressure and force are confused in the discussion of mechanics of liquids. The presswork is also most satisfactory; binding, paper, printing, and diagrams are all excellent.

Recent textbooks on physics show a tendency to discard the mathematical and mechanical treatment, and to favor a presentation of physical concepts and laws. The "Text-Book of Physics" (Van Nostrand), by H. E. Hurst and R. T. Lattey of Oxford University, is an example of this tendency. After a brief introduction, giving only those parts of mechanics and hydrostatics which are essential to the understanding of the other branches of physics, the subjects of heat, sound, light, electricity,

and magnetism are discussed as branches of dynamics. Mathematical analysis is reduced to its simplest form, and virtually no trigonometry is required. There is no doubt that students find mechanics the most difficult part of the science, and it may be that we shall have to adopt the plan of these authors and defer the subject of mechanics to a later course. Even with this arrangement space has not been found to touch upon electric waves, electric discharge in gases, or radioactivity; this is unfortunate, as these are as interesting and as useful as most other parts of physics. Some rather serious omissions could have been avoided by a less diffuse treatment.

The "Testing of Electro-Magnetic Machinery," Vol. II (Macmillan), by B. V. Swenson and Budd Frankenfield, is devoted to the measurement of alternating currents. During the six years which have elapsed since the first volume on direct currents appeared, the notes for the present work have been used in the laboratories of the Universities of Wisconsin and Illinois, and have been subjected to rigid criticism. The very large number of experiments given and the care taken in their exposition should make this a valuable book in engineering laboratories.

In many colleges the department of physics has a double function: to present in a general way the laws of nature as a part of a liberal education, and to prepare future engineers for their technical work. This latter task has, in many cases, been the more urgent, and has exerted a bad influence on the college course, as often the teaching of physics has been changed from its proper function of a broad and cultural study to a drill for technical engineering. The engineer needs both science and drill, and the better plan would be to give him a year of physics of the broadest character, and afterwards a mathematical course in general dynamics. Of the three branches of dynamics most useful to him, ponderodynamics is generally studied separately, but there should also be added a course in thermodynamics and electrodynamics treated from the standpoint of the physicist. The "Introduction to Thermodynamics" (Ginn), by Prof. John Mills, is designed for this purpose. Careful selection of the more important problems, rather than originality, has been the author's aim. In five chapters the principal properties of general thermodynamic laws, gases, steam, superheated steam, and the flow of gases are treated in a satisfactory way.

In W. W. Scott's "Qualitative Chemical Analysis" (Van Nostrand) and Charles Baskerville and Louis J. Curtman's "Course in Qualitative Chemical Analysis" (Macmillan) we have two guides to qualitative analysis, equal in size and weight, and covering much the same ground in much the same way. The chief observable difference in treatment is that Mr. Scott bases his work upon the ionic theory of solutions and introduces the law of mass action at the start. This we believe to be a very great advantage, even with elementary students, in making analytical processes clear and rational, but many teachers think otherwise, and they will prefer Professor Baskerville's book, which says nothing of cations and anions and puts the law of mass action in a foot-note. Mr. Scott's book has the further advantage of illustrations; a color-plate of spectra and cuts of apparatus. Professor Baskerville makes a good point in calling attention to the importance of estimating the quantities of the ingredients in the course of the qualitative analysis.

Good teachers keep up a constant drill on the arithmetical relations of chemical processes, and the work must be individualized to get the best results. The problems given in the texthooks are rarely sufficient to give the students all the practice they should have, and it is a bother to have to invent new ones. Now Prof. Charles Baskerville comes to the rescue with a little volume of 3,000 problems of all kinds and degrees of difficulty, compiled from various sources ("Progressive Problems in General Chemistry"; Heath).

The "New Geographies" (Macmillan) of R. S. Tarr and F. M. McMurry, in their revised form, present complete and beautifully illustrated textbooks, and emphasize the great advance which has been made in the teaching of the subject in recent years. In the modern view the countries of the earth are, first and foremost, places where people live, who, though different from ourselves, are yet, to a greater or less degree, moved by like interests and aspirations. The first book, therefore, starts with the familiar occupations and needs of an American child's parents and neighbors. From this centre the circle widens, so as to embrace the people of more and more distant countries and more and more contrasted lives. Next the land, the water, and the atmosphere are described; the subdivisions of the first two are established and their connections with industry and commerce are made clear. World geography may now be developed, first in its general physical features, and second in the details of individual countries, among which, as is natural, special emphasis is laid on the United States. In the second and more advanced book, a knowledge of the elementary subject is assumed, and the plan of treatment is different. Physiography is much more in evidence and the descriptions are more detailed.

"Around the World" (Silver, Burdett & Co.), being No. 5 in Stella W. C. Tolman's New Century Geographical Series, is intended to furnish parallel reading for a school course in geography and to follow four similar introductory volumes which an American child is assumed to have previously read. The fourth having conducted the schoolboy or schoolgirl over his or her own country, the pupil finds in the fifth an entertaining account of an imaginary trip first through Ireland, Scotland, and England as illustrating Great Britain; and then across the water to the British colonies in Africa, Asia, Australia, the Pacific Isles, North and South America, and the West Indies. As this "round-the-world" trip is insufficient for an entire volume, a similar excursion through Italy and its African possessions is added. Taken altogether the book makes entertaining and instructive reading, although it hardly fulfils the somewhat sweeping claims of its preface.

It may now be confessed that the results of earlier efforts at agricultural education were not at all commensurate with the large amount of money expended on them by the Federal and State governments. The process chiefly consisted in giving clever country boys an easy road to the city, advancing individuals more than the industry. Now, however, we are entering upon a new era of agricultural education, when the school is being carried to the farm. This requires the development of a new pedagogical technique, such as Prof. Garland Armor Bricker of Ohio State University outlines in "The Teaching of Agriculture in the High School" (Macmillan). The author protests vigorously against making agriculture a sort of appanage to the various sciences now in the high-school course. Besides the theory and history of agricultural education in the high school, the volume gives methods of organization, instruction, and work in laboratory and field. Prof. W. C. Bagley of the School of Education in the University of Illinois provides an introduction.

Literature

BIOGRAPHY AND LETTERS.

John Viriamu Jones and Other Oxford Memories. By Edward Bagnall Poulton. New York: Longmans, Green & Co. $3 net.

Few on this side of the Atlantic will have heard of Viriamu Jones, who died in 1901 at the age of forty-five, shortly after he had been appointed principal of the University College of South Wales at Cardiff. But to the general reader of this book he will at least typify the best mental traditions of his time and serve as a convenient nucleus for some rich memories recounted by one who was a life-long friend of Jones's and whose outlook on the world has been directed and colored by many years at Oxford. Like Professor Beers's well-known picture of the Yale of forty years ago, Professor Poulton's reminiscences of an almost contemporary Oxford recall the days of full, well-rounded training, and enforce a lesson which cannot be too frequently repeated at this later time. Then science and literature and philosophy and history dwelt peaceably together, and each was looked to for its message. Because Jones was planning to be a scientist, he did not unduly confine his interests. We find him showing what for a budding physicist would to-day seem an almost criminal regard for literature. He writes to his sister:

> Have I told you that Ruskin is lecturing here three times a week? He has a very large audience—till special arrangements were made for members of the university it was impossible to get a seat without going a quarter or perhaps half an hour before the time. He reads most beautifully—his voice is wonderfully musical, full of tenderness, capable at times of the minor cadence of the Welsh, or something very like it. On Saturday he read to us the story of St. Ursula—the good princess, full of all wisdom and the fear of the Lord, who with 11,000 virgins went on a long pilgrimage. . . . You will find the story as he read it—a version by James Reddie Anderson of Balliol—in "Fors Clavigera."

He has been reading Swinburne's comparison of George Eliot and Charlotte Brontë, and again must write his sister about it. He is fond of poetry; follows keenly Bret Harte's parodies; and "just for the fun of the thing" writes a long essay on "Ulalume."

An incident toward the close of his residence at Oxford furnishes an amusing sidelight on Jowett, then the head of Balliol. Jones went to him for advice concerning his future career. "Jowett, without a moment's hesitation, said, 'Be a physician.' . . . 'I was hoping to get some work in physics.' . . . 'Yes, physics,' replied Jowett, who must have been thinking of something else." A long chapter is devoted to the scientist George Rolleston, in which the vigor of the man, his breadth and humanity, together with the eccentricities of look and utterance which help to crystallize personality, are inspiringly described. There are recollections of days at the Oxford Union, which housed, under the constant fire of debate, a miniature world—the politics, literature, and social and religious tendencies of England and elsewhere.

Professor Poulton includes in his memories an account of a delightful birthday treat on January 27, 1894, when he was staying in Boston to deliver a course of Lowell Lectures. On that day he dined with the Saturday Club, which met in the Parker House, School Street. Holmes sat at the head of the table, and, following his usual custom, "ordered a bottle of champagne, which he insisted on sharing with those around him." Of Holmes's sayings on that occasion Professor Poulton remembers in particular these:

> Life over eighty is the *bain de pied*—that good measure which, running over, bathes the foot of the wine-glass.
>
> After eighty a man has seen everything twice over.
>
> The mind in old age is like a palimpsest on which the uppermost records are faintly written, while those beneath are quite distinct. An old person does not remember the events of the day or year, but he recalls with perfect clearness those which are long past.

Holmes also spoke of Emerson stamping his foot with rage when he could not remember a name. He mentioned the Corbett-Mitchell prize-fight, which had just taken place, and said, "I own to a lurking sympathy with prize-fighting, perhaps because I am so unfitted for the ring myself." He told the author "he would never repeat to any one what Tennyson said to him when he entered his house." William James pressed him to do so, with the assurance, "There are no reporters here." But Dr. Holmes replied with emphasis:

> I have said that I will never tell any one. It was not a thing that I should have supposed any man would say to a guest he had invited to his house.

Professor Poulton reminded Holmes of the voice from the gallery in the Sheldonian Theatre when the doctor received his degree. It was addressed to Jowett, then Vice-Chancellor, and said, "The Autocrat's laughing at you." But Holmes had not heard it.

William Harrison Ainsworth and His Friends. By S. M. Ellis, in two volumes, illustrated. New York: John Lane Co. $10 net.

At sixteen William Harrison Ainsworth got extracts from his drama, "Venice, or the Fall of the Foscaris," into the *Edinburgh Magazine*, and the editor declared that Lord Byron, who had a drama forthcoming on the same theme, must look to his laurels. At seventeen, young Ainsworth dedicated a volume of narrative poems to his friend Charles Lamb. By his nineteenth year, Ainsworth was editing a short-lived magazine of his own, the *Bœotian*. At twenty, he contracted a not very durable marriage and set up in London as a sublimated bookseller and publisher. Men took him on the street for that prince of dandies, D'Orsay. People liked him. The aged Scott needed only a little begging to give to Ainsworth for the *Keepsake*, the immortal ballad "Bonnets of Bonnie Dundee." At the launching of *Fraser's Magazine* in 1830, having now reached the mature age of twenty-five, Ainsworth was enlisted. In Maclise's admirable sketch of the Fraserians at the round table, we see Ainsworth's Apollonian profile rising straight behind the doddering head of Coleridge. At twenty-nine, Ainsworth had written his first famous historical romance, "Rookwood," and henceforth success was his almost on his own terms. In connection with that romance was accomplished the feat which should insure the author at least anecdotal immortality. The famous passage, Turpin's ride to York—a full hundred pages of print—was scribbled off in a night and a day.

The rest of his long career merely rang the changes upon these beginnings. He published forty-eight romances, of which a handful still are read, he edited or owned magazines, *Bentley's*, the *New Monthly*, *Ainsworth's*. He quarrelled bitterly with his illustrator, Cruikshank, who preposterously contended that his drawings had virtually created the best of the romances, "The Tower of London." At his country lodge at Kensal Rise, Ainsworth long kept open house for such guests as Maginn, Thackeray, Disraeli, Bulwer Lytton, and Charles Dickens. All in all, he was a vivid well-loved man, with the nerves of a superman and many of the foibles of a bad boy. His biographer has had an embarrassment of materials. These two thick volumes are largely made up of Ainsworth's own letters. He is a spontaneous correspondent, never dull and never distinguished, so that one has in the present work an enormous surplus of him. The explicit confession of certain unsavory youthful escapades seems hardly worth preserving. Any knowing reader will without demonstration credit Ainsworth with the predacious habits of an early Victorian buck. Yet these letters with all their redundancies are evocatory. One hears Hunt, Shelley, and Keats roundly called "the filthy set," and there is a fragrance of fairness of yester-year in the following line to Ollier, bespeaking a notice for Lady Caroline Norton's poems. "By so doing," urges Ainsworth, "you will infinitely oblige one of the most beautiful women in the world." Robert Browning, whose hirsute charms are described as remarkable, even for that ambrosial day, won Ainsworth's admiration. He interested himself in the publication of "Sordello" and bravely predicted dramatic successes for the poet.

There were months in 1840, when Ainsworth was writing three serials abreast, "The Tower of London," "Guy Fawkes," and "Old St. Paul's." To parallel this one must look to the elder Dumas, but Ainsworth, contemporary slander to the contrary, had no "ghosts" in his employ. Of course, such feats are possible only on condition of not doing them too well. Ainsworth's eminently sagacious attitude in this matter is shown in a letter on "Nicholas Nickleby," the literary excellence and comparative lack of popularity of which he deplores:

> The fact is, to write for the mob we must not write too well. The newspaper level is the true line to take. In proportion as Dickens departs from this, he will decline in popular favour—of this I am certain. I think, however, he has so much tact that he will yet retrieve himself and become bad enough to suit all sorts.

Ainsworth himself never wrote too well. To a vivid, melodramatic incident, he easily rose, and his invention was profuse. Probably few writers of his note have written so badly. His diction is ready-made and its texture often the cheapest, but his pages present unfailingly excursions and alarums, shudders, tears, and guffaws. The dwarf Xit, in "The Tower of London," successively falls into pies, pastries, and all manner of giant dishes, but the trick never misses fire. In short, Ainsworth is about the most perfect example of the stalwart, unabashed, subliterary romancer that England has yet produced. The nearest parallel to him, perhaps, is Eugène Sue. And it may also seem significant that Ainsworth's chief literary discovery as an editor was Ouida. He fully deserved to have discovered Marie Corelli and Hall Caine, but the former began after Ainsworth's editorial period was over and the latter emerged in the deceptive guise of a man of letters.

As an example of the inordinate vitality of the early Victorians, Ainsworth is most interesting. What tall fellows they were after all! The mere convivialities and editorial diversions of an Ainsworth would promptly remove a popular modern novelist to the land where there are no best-sellers. It is the same with Bulwer-Lytton and Disraeli; their incidental vanities would consume utterly most of their successors either in fiction or in statecraft. Astounding boy-like figures they were, good eaters and drinkers, fine haters, nonchalant improvisers, undepressed by any appalling vision of perfection, sustained by a magnificent self-confidence. Ainsworth died in 1882, aged seventy-seven years, and with him disappeared a very fine, old man. He was among the last of the profuse giants of his day, and the record of his genial and random course still makes good, if by no means exemplary, reading. He fairly earned his paragraph in the literary histories for blending the manner of Smollett and of Scott, thereby creating the romance of roguery. And boys who want their adventure without literary drawbacks will surely continue to prefer "Jack Sheppard" to "Treasure Island."

Letters of Edward John Trelawny. Edited with a brief Introduction and Notes by H. Buxton Forman. New York: Henry Frowde. $3.40.

The greater part of these letters were addressed to Claire Clairmont from the time of the separation of the party at Shelley's friends until the death of the writer. A few other letters are added, notably a group to William Rossetti, which the recipient kindly placed at the disposal of the editor. The first letter in the collection is a brief note to Captain Roberts, dated from Pisa, February 5, 1822, giving instructions in regard to building and rigging the Don Juan for Shelley, and this is followed by long documents describing respectively the cremation of Williams and Shelley, after the capsize of the ill-fated boat. Trelawny was always an incoherent writer—his grammar and spelling are extraordinarily flexible—and these two letters are not the least incoherent in the book; but they are in part also almost painfully vivid, more vivid than his later formal account, and spare the reader no detail of about the most grewsome scene in the annals of English literature. "An old rag retains its form longer than a dead body—what a nauseous and degrading sight!" exclaimed Byron, as Trelawny reports him; but Trelawny himself appears to have gone through the whole ceremony with almost a callous curiosity. It seems to have been one of his grievances against Mrs. Shelley that, when he offered her Shelley's heart, "after a fitful glance on the black and charred piece of flesh, she was too shocked to touch it."

But if Trelawny had stanch nerves, he had also abundant emotions. In fact, his early letters to Claire are as good an example as one could hope to find of the effect upon a strong nature of the creed, very prevalent at that day, which valued feeling just in proportion to its intensity and its unregulated spontaneity. The third letter to her begins:

> You! you! *torture* me Clare,—your cold cruel heartless letter has driven me mad—it is ungenerous under the mask of Love—to enact the part of a demon—I who in the sincerity and honesty of my affection wrote *unhesitatingly, unreflectingly*—my *vaguest wildest* thoughts, all that my *heart* felt or head *surmised* . . .

That is the voice of the age speaking. Nor is it strange that the same writer, after many years, in his communication with the same woman, now like him grown old and lonely, should have looked back on his life with a kind of bewildered cynicism. "We are all fools! and there an end of it," he exclaims in one of his last letters. "Nothing amazes me so much as the labyrinth of follies I have wandered in all my life—so fare thee well—all the Poets of our day are thrown aside and almost forgotten."

In his devotion to Shelley he was constant to the end, showing in this a curious contrast with his feeling toward Byron. It is amusing to run down the list of references to Byron in the Index. In one place the death of the poet wrings from Trelawny the expression: "The world has lost its greatest man, I my best friend." A little later he is declaring that Byron saw no one and did nothing at Missolonghi, and that his death is a benefit to Greece. In sum, however, the account lies heavily against Byron, although Trelawny emphatically discredits the "Byron scandal."

The letters are not very interesting as a whole, but they do bring the reader close to the heart of one of the onhangers of the romantic movement. The editing is excellent, and the type and paper all that could be desired.

CURRENT FICTION.

Brazenhead the Great. By Maurice Hewlett. New York: Chas. Scribner's Sons.

Brazenhead, as admirers of Mr. Hewlett will recall, has been a figure in the writer's imagination for some time. He sums up, in his way, the glamour and extravagance of that fifteenth-century period which has so fascinated Mr. Hewlett from the first. Capt. Brazenhead appeared as one of the story-tellers in "The New Canterbury Tales." "Fond Adventures" gives an account of how he came to be among the pilgrims who set out for Canterbury with the Prioress of Ambresbury, and of ensuing adventures which placed him in a position of honor under noble patronage. This "Saga," as Mr. Hewlett terms it, is incorporated here as book iii, under the title, "The Captain of Kent." "The Countess of Picpus," book ii in this volume, was printed in *Putnam's Magazine* some years ago. Brazenhead's creator was then promising "a great Brazenhead cyclus": and here, presumably, we have it.

It must depend very much upon the taste of the reader, and his natural liking for Mr. Hewlett's sort of thing, whether he will judge this a work of rich humor, or a mere elaborate "stunt." If we are to credit a recent commentator upon Mr. Hewlett, in constructing Brazenhead he took something from Falstaff, Bombastes Furioso, Tartarin, Cyrano, and the swashbucklers of Dumas! Why not add Don Quixote and Gil Blas? The commentator in question evidently admired this composite derivation. We think it does the creator of Capt. Brazenhead some little injustice. He has an evident fondness for that adventurous gentleman as an offspring of his own fancy. "Brazenhead is a stand-by," he wrote in a private letter some time ago: "I keep him till I want him, and have a look at him now and then." It is clear that he has not consciously built his hero out of classic fragments of the picaresque order. But it must be owned that the Brazenhead tale is little better than fantastic invention. Mr. Hewlett has, we suppose, intended to present a satirical apotheosis of the swashbuckling hero—a figure related to D'Artagnan as Quixote is related to Amadis of Gaul. But he does not, like Quixote, so grow upon the author's imagination as to transcend caricature. He is merely an extravagant burlesque of the picaresque adventurer—a trivial fellow painted on the heroic scale. He is touched up here and there with humane and even generous colors, but they are not in the grain. One passage there is which may tempt one to reconsider this opinion—the final scene in which old Brazenhead, now past his time and almost forgotten by the world, confronts his own youth in the flesh, and from that more perfect self receives his quietus.

The Legacy. By Mary S. Watts. New York: The Macmillan Co.

It is hard to say how far a recognizably discipular quality in such a book as this really adds to or detracts from its charm. "The Legacy" is even more Thackerayan in manner than "Nathan Burke." Mrs. Watts has caught (or shall we say inherited?) not only many of Thackeray's minor tricks of speech, but his very air and carriage. The effect of a novel written by a contemporary American, a woman, on an American theme, in the style of a middle Victorian Englishman, is odd and not unpleasing. Only the other day Mr. De Morgan reminded us in a similar way

of Dickens. But, then, Mr. De Morgan is a man. It is a trifle disconcerting to find that famous easy "gentleman's style" of the author of "The Newcomes" so completely mastered by one of the ungentlemanly sex. Even that "cynical" tone of which the ladies used to complain is not absent. The sub-title of this novel is "The Story of a Woman," and it might be regarded as a feminine complement of "Pendennis."

Letty Breen, to be sure, is not at all a heroine of the old school. Thackeray could not have imagined her. But Mrs. Watts's study of her represents much the sort of good-humored yet unflattering analysis that Thackeray bestowed upon his heroes. Letty is not a remarkable person, but a young woman far from perfect and not particularly lovable. Her family has always claimed superiority, but its claims do not well bear examination. Letty grows up to the discovery that the Breens of fact are rather a sad lot. Her father is a thief (embezzlement, to be sure) and a weakling. Her grandfather is an idle parasite, for all his grand manner. Her father's brother is a dishonest promoter. Her great-aunt has spent a long life being no better than she should be. A great-uncle, a bishop, stands out as a thoroughly good man; and his reward is to be preyed upon by the rest of the family till his death. There is one virtuous uncle besides, who has married an impossible wife. A convent education is procured for Letty by the good bishop, and she enters womanhood a "lady" by instinct and training. Her mother has always been a drudge, and remains one. Letty is of a singularly cold temperament, but can get on with any one, and presently is ready enough to marry a young clerk of good blood and amiable presence, as the best fate that offers. But she has a century-old legacy of impulse from an ancestress who has technically gone to the bad, and when the inevitable hour of temptation comes it is only chance which keeps her from spending the legacy. Her life thereafter, till the death of her husband, atones, in so far as conduct may, for her virtual infidelity. But Mrs. Watts does not represent her Letty as totally overwhelmed and snuffed out by self-scorn. After all, it is natural and wholesome for us to make the best of ourselves as well as of others. Letty lives to be content, and, we suspect, happy. The story is as good in its way as "Nathan Burke." It is surprising to find so conscious a student of style repeatedly writing "laid down" for "lay down."

Quicksands. By Fannie Heaslip Lea. New York: Sturgis & Walton Co.

The very title gives the gentle reader a premonitory thrill of dark tragedy coming. The opening chapters hold out still more agitating promise. The hero is "absolutely primitive," he reveals the spirit of the cave-men in the guise of a wealthy iron-master. He ardently loves his beautiful and cultured wife, and has unfaltering faith in his best friend, a brilliant writer, who is credited with an artistic temperament and a way with women. And actually the friend and the wife of the Cave-Man fall in love with each other and decide to run away together. Fortunately our author has a fine regard for the proprieties and frustrates the elopement. The lady changes her mind at the last moment. And to make doubly sure that there will be no elopement, the author sends the brilliant literary man blundering fatally into a shooting affray that did not concern him. Fortunately, too, for the lady, the primitive Cave-Man who does nothing more primitive throughout the book than to use an occasional "ain't" and to drop the *g's* from the ends of his participles, learns nothing of his wife's love for his friend, and maintains his peaceful character to the end of the story. Finally, to make things end pleasantly the almost errant wife recovers her one-time love for her husband—when the other man dies.

Miss Livingston's Companion. By Mary Dillon. New York: The Century Co.

The stuff of pure romance is here in plenty. Its presence was predestined the moment the author chose for hero such a headstrong young gallant as Sir Lionel Marchmont, who is evidently modelled on Pendennis. Like Pen's affair with the Fotheringay, Marchmont's devotion to the well-preserved Peggy Wolverton, actress, leaves the reader at the outset in no doubt that here is a lover with a heart. It was, of course, in the interest of romantic adventure in the large that love's young dream should be shattered and that the youth should be sent to America to forget, and to exercise his valor. How he is entertained by Mr. Hamilton, Mr. Burr, Mr. Washington Irving, who also has for a guest Mr. Tom Moore, an Irish poet; how he fights yellow fever in Manhattan and contracts it himself in this humane service; is falsely accused by a rival of embezzling city funds, is imprisoned and then cleared by his lawyer, Mr. Hamilton; how he goes up-State with Fenimore Cooper on a dash among the Indians to capture the real culprit; how he has meanwhile been pressing his suit with Miss Livingston's companion—all this makes enjoyable reading, if the reader does not insist upon having the historical background absolutely accurate or particularly vivid.

Later Pratt Portraits. By Anna Fuller. New York: G. P. Putnam's Sons.

Old Lady Pratt, as all remember, had character enough to endow with individuality a vast number of descendants. And when to the strong Pratt traits of common sense, keenness, and independence are added the varying dispositions and tendencies of sons-in-law and daughters-in-law, there opens a vista of family portraiture of which it is to be hoped the vanishing point lies in a far distant future. Miss Fuller keeps a vigilant eye upon heredity. Thus the Pratt sterling worth wedded to airy irresponsibility overloads one child with self-righteousness, another with heedless charm. A crabbed Pratt mother and an insignificant Bennett father are the parents of a mute hero—and so on. For our greater content, the fine strain, on whichever side, wins in the end, each story being a record of the victory of the real thing in humanity over passing phases of the inferior. The incidents are dexterously fitted to their end, full of humorous touches in the author's characteristic manner. The stories flow easily and frankly in the trained style that deceitfully seems to do itself. If humor furnishes the sunshine, a decently veiled pathos supplies a gracious shade. May the Pratt family continue to multiply. Especially may Old Lady Pratt, as here at times, descend from her estate of blessed memory into pungent presence.

The illustrations, by Maud Fangel, are of a rare attractiveness and of the still rarer quality of an illuminating fitness.

THE MAKING OF HISTORY.

The Interpretation of History. By Max Nordau. Translated from the German by M. A. Hamilton. New York: Moffat, Yard & Co. $2 net.

History, as defined by the author of this pungent book, is in its broadest sense, "the sum of the episodes of the human struggle for existence." It thus embraces in its scope both nature and man; but it is natural processes, rather than political or philosophical ideas, that have had the greater influence in determining human destiny. Since history, however, "can never compass the actual event," it can claim no scientific value whatever; nor is it of any assistance in the present to know how man acted in the past. What history does is to supply a psychological, and above all a sociological, need by offering a plausible explanation of much which to-day seems illogical; thus to "oppress and deceive the present with the assistance of the past." Hence the encouragement given to the study of it by conquerors, rulers, and lawgivers, whose dark designs and selfish ambitions it serves; and this, too, notwithstanding the fact that great leaders, in proportion as they are great, show the possession of no historical sense.

The natural affinities of history, accordingly, being with the novel, any notion of a purpose in history is very prop-

erly denounced as "senseless twaddle," "empty nonsense," an impudent anthropomorphism which, by necessarily positing a God, turns history into theology. The key to all history is not purpose, but human need. Buckle perceived this truth, though he erred in making climate the determining factor; Comte was nearer right, as was Karl Marx, though the latter too narrowly excludes intellectual and spiritual desires from his specification of wants. In other words, the coming science is sociology, "history without proper names"; and under its beneficent sway the so-called philosophy of history will be relegated to the limbo of theology, dreams, and black art, while history itself will become only sociology "made concrete and individual."

There are further limitations, however, even after this rigorous demarcation of the field. While history cannot be omitted from a complete science of anthropology, there is no such thing as a "psychology of nations." The comparison of the state to a living organism is quite misleading; it is highly probable that humanity is destitute of primary "social feelings," and that men act in masses essentially as they would act as individuals under similar circumstances. According to Mr. Nordau, the only feeling "strong enough to call man out of his selfish isolation and command his relations to others," is the instinct of sex; and sex creates the family, not the state. The state is "organized parasitism, the exploitation of the weak many by a ruler and the mediate and immediate servants of his power." In its formation morality plays no part: the state begins in war, not in sympathy, and war, real or imagined, is still its principal object. Religion, too, arising psychologically from the desire for knowledge and the instinct for survival, developed the idea of God along the lines of the development of monarchy, and with much the same aim; it gave a sanction for morality without at the same time making men moral; and it has continued through all time an obstacle to intellectual advancement. The only reality, in short, is the individual; as for the civil institutions which form the burden of written history, they represent, one and all, merely a parasitic exploitation of the common herd. The only progress, too, for humanity is through a developing command of natural forces, but not along moral lines. We shall grow wiser and ever wiser, but we cannot hope to grow better. We are what we are, we shall be what we shall be; what we have been is little matter, since we cannot possibly know the whole truth about it, and what history tells us is a lie.

Admitting, as any one must who reads the four hundred pages in which the contentions just outlined are elaborated, that Mr. Nordau makes some keen and effective thrusts at what has often passed for history, one may nevertheless question whether the book is not, after all, only an ingeniously subtle and dangerous mixture of truth and shallowness. A good deal of nonsense, doubtless, has been written about unity and purpose in history, the progress of the race, and the development of a "social mind," just as a good deal has been ascribed to the influence of religion which can only remotely be credited to that agency. Toward religion and the church, indeed, Mr. Nordau displays positive malice; and he makes a strong point of the fact that theological speculation about the nature of God and the duty of man took, in a monarchical age, a predominantly monarchical form; but he seems oblivious to the tendency, in an age in which, like our own, monarchy has been markedly circumscribed by democracy, to the development of a social conception of religion. Moreover, it will certainly be no news to historians that the evolution of forms of government, or of civil and ecclesiastical institutions, is not the whole of history, however large a part of it such things may have seemed to be.

What he is acclaiming, in short, is a sort of mingled economics, sociology, and anthropology, in which the evolution of physical characteristics and bread and butter needs shall hold chief place. That anything of the kind, chastened and restrained by sanity and clear thinking, has entered the minds of scholars who humbly call themselves historians, seems to have escaped his notice. The authors whom he belabors are historians of the school of Bancroft, or philosophers like Hegel and Schlegel. So far as his pages show, he seems largely unaware of the extent to which, save in the hands of Marx, the economic or social treatment of history has lately gone; or of the breadth of view which marks the historical writing of such men as Janssen and Lea. The history which he so zealously combats is the kind which once monopolized the field, but which monopolizes it no longer. Nor does he take much account of change in the intellectual content of successive stages of civilization, though it is always intellectual content which, at bottom, determines both the form and the ideal of historical writing; nor is he disposed to concede much to the limitations of the finite mind when it undertakes to grapple the universe. No doubt an immense amount of work remains to be done, no doubt a vast deal of ignorance and prejudice remains to be got rid of, before even an approximately correct view of the course of human development can be had; but since no one intellect can possibly compass all the multifarious elements of that development which Mr. Nordau, brilliantly but without essential novelty, dangles before our eyes, historians will perforce confine themselves to such related and consistent parts of the vast material as they can intelligently manage. Clearly, the result will not spell perfection, but that does not mean that it will not be true as far as it goes. "Behind all appearances and all illusions," says Mr. Nordau, "we find the real meaning of history to be the manifestation of the life force in mankind." If, as John Fiske once humorously said of hypnotism, such an expression serves any other purpose than to conceal our ignorance of what we mean by it, it is only a generalized statement of the principle which, in our own age at least, has governed increasingly those who, with knowledge as well as seriousness, have sought to narrate the social experience of man. For the rest, we must still think that anthropology, ethnology, and sociology are not history, however useful a knowledge of them may be to the historian.

Alarms and Discursions. By G. K. Chesterton. New York: Dodd, Mead & Co. $1.50 net.

Appreciations and Criticisms of the Works of Charles Dickens. By G. K. Chesterton. New York: E. P. Dutton & Co. $2 net.

"Dickens as an essayist always had his eye on an object," says Mr. Chesterton, "before he had the faintest notion of a subject." Mr. Chesterton's own method is precisely the opposite of this. He is now, as ever, full of his subject, but he seems to be running a little short of objects. Some years ago, he burst upon us in a state of high excitement to announce that he had discovered monogamous marriage, Christianity, and democracy, and that they were very good. That was his subject. Impressed by his air of conviction, his wit, and his flashes of poetical insight, the public lent a patient ear to his defence of this novel view. Through repetition, it has now become somewhat less startling, the agitation of speaker and auditors has abated, Mr. Chesterton has presumably grown rather stouter and more prosperous, his allusions to his house in the country are frequent, and as a journalist he is settling back a little, if we are not mistaken, in his easy chair.

This settling betrays itself in his indifference to objects. Stalking through the country, full of his subject—full of his enthusiasm for democracy—his eye falls upon a newly ploughed field. Straightway his subject overflows his object after this fashion: "Equality free and flying, equality rushing over hill and dale, equality charging the world—that was the meaning of these military furrows, military in their identity, military in their energy. They sculptured hill and dale with strong curves merely because they did not mean to curve

at all." In this effusion on "the furrows," Mr. Chesterton is not an essayist, but a preacher. Start with an "object" and you may produce an essay. Start with a "subject" which has become an hallucination, stumble over an object, and you are likely to produce a sermon, which may become a bore.

We do not like to suggest that Mr. Chesterton is talking himself out; for even in "Alarms and Discursions" he rises to the occasion when the occasion really demands rising. For example, the speech delivered last summer by "a distinguished American visitor at the Guildhall" evokes an admirable characterization of the political sentimentalist:

> The sentimentalist, roughly speaking, is the man who wants to eat his cake and have it. He has no sense of honor about ideas; he will not see that one must pay for an idea as for anything else. He will not see that any worthy idea, like any honest woman, can only be won on its own terms, and with its logical chain of loyalty. One idea attracts him; another idea really inspires him; a third idea flatters him; a fourth idea pays him. *He will have them all at once in one wild intellectual harem, no matter how much they quarrel and contradict each other.*

Such passages as this relieve but do not entirely redeem the pages in which Mr. Chesterton presents the appearance of one continuing to talk without continuing to think—a habit into which men with a closed system of ideas are specially likely to fall. He has often assured us that a full mind can develop an essay from a ten-penny nail—can strike even a pebble and make the water gush forth. There is a limit even to the thirst for water, and now that our faith in his thaumaturgic powers is established, we prefer to have him strike something different and more important.

We are glad, therefore, to see his prefaces to the Everyman edition of Dickens collected and put forth together. Whenever Mr. Chesterton has said a good word for Dickens—which he has done pretty frequently—he has indirectly said a good word for himself; the praise of the master magnifies the apostle. Whenever his criticism approaches the author of "Pickwick," it rises to its highest level of suggestiveness and wit, of robustness, geniality, and penetration. His life of that great middle class genius, it is hardly an exaggeration to say, made at one stroke a reputation for himself and a new reputation for Dickens, recalling him from that limbo to which he had been condemned by a priggish and scientific generation. His introductions to the novels form an admirable sequel to the biography. He uses Dickens, to be sure, like everything else for doctrinal ends, but—to return to our text—he can wreak his subject upon this object with infinitely more effect than upon a pebble or a ten-penny nail.

A Cyclopedia of Education. Edited by Paul Monroe. Vol. I. New York: The Macmillan Co. $5 net.

There are 150 educational periodicals issued in the United States, and one out of twenty-five of the published volumes of each year in America is a work on education. In Great Britain one new book out of fifteen is an educational treatise. Despite this large output of educational literature, there has been hitherto no encyclopædia of education in English. The present publication, therefore, meets a real need and will be heartily welcomed, especially since its merit entitles it to approval as a worthy companion of the German and French educational encyclopædias.

Professor Monroe has the assistance of fifteen departmental editors. The first volume, A—Chu, contains about 1,000 articles by above one hundred contributors. One class of articles treats of the various subjects pursued in the schools, presenting, in each case, a discussion of the general nature of the subject, of its present status in the school curriculum, and of special methods of teaching it. The educational systems of different nations and of our several States receive thorough attention. There are full-page reproductions of the buildings and grounds of a number of American universities, a feature which can scarcely be said to add to the scientific value of the encyclopædia, and which increases needlessly its bulk. The biographies of educators are brief.

Among the noteworthy articles should be mentioned "Calvinists and Education," by Prof. Herbert D. Foster of Dartmouth; the enlightening and timely discussion of agricultural education, by Director Whitman H. Jordan of the Agricultural Station at Geneva, N. Y., Dean Eugene Davenport of the University of Illinois, and Prof. Liberty H. Bailey of Cornell; a sketch of school architecture, by Prof. Fletcher B. Dresslar of the University of Alabama, in which the plans of the Tilton School of Chicago are displayed as a model. The story of the early American academies is well told, but it may be noted that the seminary of Mrs. Emma Willard was founded, not at Troy, N. Y., but at Middlebury, Vt., from which village she issued her appeal to the New York Legislature for the higher education of women, which had so great an influence in that important movement. The article on the education of the blind is by Helen Keller. In general, one may say that the editors have shown discrimination in the selection of contributors and have succeeded well in procuring harmony and proportion.

This encyclopædia brings out prominently the fact that education in modern times has greatly enlarged its scope. Its function is said to be not only to impart a modicum of knowledge on a certain number of subjects, but to help to solve a great share of our national problems. We have discussions of methods of school management for training in activities formerly under the discipline of the home and church, as well as prescriptions for the development of bodily health, athletic skill, and social and civic responsibility. The chief interest of the editors is clearly in the utilitarian activities of the modern school. There is full discussion of every phase of industrial education and vocational training whenever opportunity is offered, while to topics which have been regarded as of some importance in the education that has brought the world to its present state of culture, scant attention is accorded. More space is allowed the apprentice system of the New York Central Railway than is paid to Plato's Academy. The scholar of the passing generation will consult this encyclopædia in vain to learn what modern educators think concerning Æschylus, but he will find elaborate directions for the construction of all manner of blackboards and five full pages, with two gaudy plates, on academic costumes. Aristotle's influence on the philosophy of the schoolmen is not so much as mentioned, but there are four pages of tables on statutory provisions relating to compulsory attendance and child labor. These instances may serve to indicate the general tendency of educational opinion represented by this encyclopædia, as well as the subjects which are regarded as most important in modern education.

The Income Tax: A Study of the History, Theory, and Practice of Income Taxation at Home and Abroad. By Edwin R. A. Seligman. New York: The Macmillan Co. $3.

Cynics can contemplate nothing more interesting than the economic legislation of the United States during the last few years. Of such legislation there has been an endless stream, whose sources are to be looked for in the pure opportunism which inevitably characterizes a democracy, rather than in the thinking and teaching of the political economists. The economists have generally had their say after the event, and have been content to put the best face possible on accomplished facts. To a certain extent Professor Seligman himself, in the matter of the income tax, has followed rather than led. His present volume was begun seventeen years ago, at the time of the discussion that preceded the passage of the income tax law of 1894. His purpose then was to publish a book on the general subject, but this purpose was abandoned when the Supreme Court in 1895 declared the law unconstitutional. The submission of the sixteenth amendment has, how-

ever, afforded him a new incentive. Yet it is an interesting, and perhaps significant, fact that he appears to intervene with no expectation of forming public opinion, such as his great learning and wide observation should properly entitle him to, but more in the guise of *amicus curiæ*. "As it seems probable," he says, "that we shall before long have an income tax in the United States, my chief object in writing this book has been to set the subject in a somewhat clearer light and to aid the legislator in constructing a workable scheme."

Doubtless that is a commendable purpose, and if the legislator is disposed to follow his own reason in the face of his constituents, too great importance cannot be attached to this work. The author has, in fact, done about the same work for the income tax that the Monetary Commission has done for banking reform, with the difference that in this instance the data are presented within one set of covers, and with the difference, too, that the ordinary man seems far more disposed to entertain the idea of an income tax than that of a central banking system. Professor Seligman's appeal is, however, not to the man in the street, but to the few who, recognizing that there is no royal road to a knowledge of the nation's economic needs, are prepared to devote no inconsiderable amount of time and hard thinking to the mastery of this very complex problem.

The history of finance, we are told, shows the evolution of the principle of faculty or ability to pay—the principle that each individual should be held to help the state in proportion to his ability to help himself. The inadequacy of the poll tax, the general property tax, the tax on expenditure and on product, having been successively shown, we reach the fifth and final stage—the income tax. But here innumerable difficulties meet us. First, there is the question of the kind of discrimination and the amount of discrimination that should be tolerated in levying an income tax, as a result of the different kinds of income. Then, too, we must consider the amount as well as the nature of the income; the fixing of a point below which there shall be exemption of taxation; the debatable points of a graduated tax; finally, the question of choosing between the various kinds of income tax—the presumptive income tax, the lump-sum income tax, the stoppage-at-source income tax.

With such questions confronting him at the start, Professor Seligman traces the history of the income tax both at home and abroad. In a concluding section of forty-three pages, he outlines "a practicable programme." This section and his preliminary section on "the fundamental problems," occupying thirty-six pages, in themselves make a fairly complete and consistent treatise, and can be read with great profit by those who lack time and inclination to study the income tax exhaustively.

Out of all this discussion Professor Seligman emerges with the conviction that the income tax is coming, that where the tax has been introduced under conditions not obviously fatal to its success it has worked better from year to year and from decade to decade, but that in the event of our failing to choose our administrative machinery wisely the result is bound to be disastrous.

Edgehill Essays. By Adrian Hoffman Joline. Boston: Richard G. Badger. $2 net.

There is an atmosphere of pleasant bookishness in these essays. The author is a collector who in his ripe years looks back upon a life spent largely with books and lovers of books, and who somehow in his pages constructs an attractive picture of himself moving about among the shelves in his library, taking down with pride some prized volume, watching for the bibliophile columns in home and foreign journals, adding in the interests of truth a note to somebody's historical notice of a Caxton, quoting rather frequently Doctor Johnson, and commenting with good-humored impatience upon political and social tendencies of today. A glance at a collection of essays by Woodrow Wilson sets him to thinking about after-dinner speeches, till he remembers that he is wandering and that for this habit the Hartford *Courant* had called him "an ass." Yet he is fain to reply with the amiable Hebrew who was denounced as a thief, a liar, and a scoundrel, "But outside of that, I'm all right, aind I?" He defends the quest of autographs, but is piqued that he should have paid ten dollars for eighteen lines "in the rather boyish scrawl" of a former President.

In two more serious essays—one on A Georgian Poet and the other on A Famous Reviewer—Mr. Joline hardly gets beyond the collector's habit of chit-chat. The possession of "an attractive example of typographic art, bound in decent crimson half-morocco, with delightful saffron edge," dated "MDCCLXXII," is sufficient excuse for his writing on Mark Akenside. It pleases him to think that Boswell and the Doctor "were chatting about the very edition" to which his copy belongs when Johnson asserted of the "Pleasures of the Imagination," "Sir, I could not read it through." Antiquarians like Mr. Joline are apt, however, to have at hand an almost complete history of opinion on writers with whom they are concerned; it is this which justifies the essay on Francis Jeffrey. Nowhere else have we met with so voluminous a portrait of the man. Long extracts from Jeffrey's letters to his sister on a love-affair; a vivid picture by Ticknor, who knew Jeffrey in Boston; the full exact words of Jeffrey's more notable literary judgments, instead of the customary paraphrases or briefest excerpts; the personal side of his relations with Byron and Moore, contrive, without the addition of one new document, to correct the warped estimate of Jeffrey's character and genius which for so long has been bandied glibly about. It was time to present to the public the evidence in all its fulness. If in trying to do away with traditional bias Mr. Joline himself bends backward and reads perfect justice into Jeffrey's remarks on Rogers and Campbell and into the short work with "Endymion," the temptation was natural.

An essay on Manners Makyth Man reveals in the author several decided views on modern life:

> The man who is most devoid not only of manners, but of morals, is the cigarette smoker, who puffs the acrid, noisome fumes in your face at all times, and in all seasons, even at your breakfast table, and adds insult by depositing the ashes and the "butts" on the floor, on the table, on the library shelves, . . . while the smouldering, nauseating remnants poison your air and upset your digestion. For this shameless offender, boiling oil and melted lead are scarcely adequate punishment.

He declares that even smoking in dining rooms of hotels and restaurants is a modern abomination, "and in all shame and humility I confess that I have been guilty of it myself." Finally, The War on the Colleges, an essay which was prompted by an editorial in the *Nation* last summer, blows a full, round note for humanism.

Notes

A new and complete limited edition of Stevenson's works is announced by an association of the publishers, Chatto & Windus, Cassell & Co., Heineman, and Longman & Co. The edition will take its name from that of the house where Stevenson wrote many of his earlier essays, Swanston; it will consist of twenty-five volumes.

The Oxford University Press is bringing out a "School History of England" from the earliest times to 1911. C. R. L. Fletcher is responsible for the prose narrative and Rudyard Kipling contributes twenty-three new poems, specially written to illustrate periods and episodes. There are as many pictures as poems, in color or in black and white, drawn by Henry Ford; and seven maps.

Nine unpublished Voltaire papers and letters have recently been discovered at Glasgow. They concern a law suit, in which Voltaire was involved in 1751, and had originally belonged to one of the judges who tried the case, the German jurist Socceji. They are now in the possession of Prof. W. B. Stevenson.

"Just now I'm all for the domestic nov-

el," writes H. G. Wells, who is now at work on a story which his publishers, Duffield & Co., say will probably be called "Marjorie."

Duffield & Co. also have in hand: "A Portentous History," a novel by Alfred Tennyson, grandson of the poet, and "Stories from the New Testament," by Elsa Barker.

Alfred J. Morrison announces his volume, "Travels in the Confederation, 1783-1784," a translation from the German of Dr. Johann David Schoepf, which will shortly be issued by the Lord Baltimore Press, in two volumes at a subscription price of five dollars.

Longmans, Green & Co. announce: "The Life of Spencer Compton, Eighth Duke of Devonshire," by Bernard Holland, 2 vols.; "The Life and Letters of Sir John Hall," by S. M. Mitra; "The Comic Spirit in George Meredith," by Joseph Warren Beach; "Half a Man, the Status of the Negro in New York," by Mary White Ovington, with a preface by Dr. Franz Boas; "The End of the Irish Parliament," by Joseph R. Fisher; "Beginnings, or Glimpses of Vanished Civilizations," by Mrs. M. Mulhall; "Big-Game Shooting in Upper Burma," by Major G. P. Evans; "The Moneyfolk of South Africa," by F. W. Fitzsimons; "History of Money in the British Empire and the United States," by Agnes F. Dodd; "British Dominions: Their Present Commercial and Industrial Condition," a series of general reviews for business men and students, by W. J. Ashley; "The Job Secretary: an Impression," by Mrs. Wilfrid Ward; "Civilization at the Cross Roads," by the Rev. John Neville Figgis; "A New Rome: a Study of Visible Unity Among Non-Papal Christians," by Richard B. De Bary; "Some Thoughts on God, and His Methods of Manifestation in Nature and Revelation," by the Rev. J. Gurnhill; "A History of Christian Missions in South Africa," by J. Du Plessis; "King Edward VII as a Sportsman," by A. E. T. Watson, and "The Collected Works of William Morris," Vols. V-VIII.

The Century Co. promises two novels for May 20: "John Sherwood, Ironmaster," by Dr. S. Weir Mitchell, and "An Ardent American," by Mrs. Russell Codman.

Henry McHarg Davenport has just placed with Sturgis & Walton a story of preparatory school life entitled, "The Likable Chap."

Ernest Thompson Seton is writing a series of twelve articles which will appear in the *American Boy* of Detroit.

"Philosophy as a Science" (Open Court Publishing Company) is the title given by Dr. Paul Carus to a synopsis of his writings. It is the index to an extraordinary activity. The Summaries of Books, for the most part quite short, occupy sixty-four pages, while the Summaries of Editorial Articles published in the *Open Court* and the *Monist*, scarcely more than a brief mention in each case, run to ninety-five pages.

William R. Jenkins will publish at an early date: "An Elementary English Grammar," by A. E. Sharp; "Modern Riding and Horse Education," by Major Noel Birch of the British army; Stedman's "Complete Pocket Guide to Europe for 1911"; "Helps for the Study of French," by Prof. J. H. Moore; Chateaubriand's "Atala," edited with notes and vocabulary by Dr. T. J. Cloran; "Exercises in French Sounds," by Philip Hudson Churchman; Guy de Maupassant's "L'Auberge," edited with notes and vocabulary by Dr. A. Schinz; "Précis d'histoire de France," with notes and questions by Prof. Joseph Patet; "An Italian Reader," revised with rewritten vocabulary by A. Marinoni; "English for Italians," by Edith Waller, and "An Elementary Grammar of the Italian Language," by A. Marinoni.

On May 13 Little, Brown & Co. plan to publish Eliza Calvert Hall's new Kentucky story, "To Love and to Cherish"; a romance called "The Spirit of the Island," by Joseph Hornor Coates; "The Old Dance Master," a novel by William Romaine Paterson (Benjamin Swift), and a book for boys, "The Captain of the S. I. G.'s," by Etta Anthony Baker.

Prof. Philip S. Allen of the University of Chicago is bringing out through Holt an elementary German reader, which he calls "Daheim."

The fifth edition of "Wer ist's" (1911), edited and published by H. A. Ludwig Degener of Leipzig, comes to us from G. E. Stechert & Co. of this city. It shows the usual increase in the number of names included, but the bulk of the volume is kept down by omitting the statistical tables which were a feature of the 1910 edition. To any one concerned with German affairs the book is indispensable.

We may call attention to the publication in the *Wiener Beiträge* of a volume on "Winthrop Mackworth Praed, Sein Leben und seine Werke," by Mathilde Kraupa.

George Meredith offered to the public far back in the dim 'fifties the first substantial fruits of his invention in the form of a brilliant and bewildering Arabian fantasy called "The Shaving of Shagpat." Meredithians have long held that this Oriental extravaganza is the novelist's salutatory profession of faith, and that it contains in germ "The Egoist" and the "Essay on Comedy," just as "Sartor Resartus" contains "The Nigger Question" and "Frederick the Great." The author himself was wont to discourage attempts to strip the allegory of its garb, but now that his ideas have been dancing out from the seven veils for more than half a century, the temptation to the expositor has proved irresistible. In a volume uniform with Moffat's "Primer to the Novels" James McKechnie presents "Meredith's Allegory, the Shaving of Shagpat" (Doran), an elaborate interpretation, which at any rate is an excellent moral homily. And it is only fair to add that he also presents in facsimile a letter from Meredith declaring, "You have done as much as could be done with the adventurous barber."

It was a gracious deed of the friends and former pupils of Prof. Charles Augustus Briggs to present to him on his recent seventieth birthday a testimonial volume of contributions to the theological science which he has done so much to promote ("Essays in Modern Theology and Related Subjects," Charles Scribner's Sons). The book contains twenty-three studies on biblical and theological themes, some of them technical essays on difficult problems, such as "The Meaning of Hebrew Bithron," by Prof. William R. Arnold; "Οἱ Ἄτακτοι, I Thess. v:14," by Prof. James Everett Frame, and "Notes on Two Passages in the Old Testament Apocrypha," by Prof. A. V. Williams Jackson. Others are scholarly essays on subjects of more general interest, of which may be mentioned "The Decline of Prophecy," by President Francis Brown; "The Definition of the Jewish Canon and the Repudiation of Christian Scriptures," by Prof. George Foot Moore; "Calvin's Theory of the Church," by Prof. Arthur C. McGiffert, and "The Greek and Hittite Gods," by the Rev. William Hayes Ward. Nineteen of the contributors are graduates of the Union Theological Seminary during the service of Dr. Briggs, an evidence of his influence in productive scholarship. Students of his recent volumes may easily forget his invaluable services a generation ago, when he was the pioneer of German critical scholarship in America. The Rev. Charles R. Gillett's bibliography of Dr. Briggs's productions, beginning with a translation of Dorner in 1868, and extending over twenty pages, includes a number of the most influential volumes in American religious life of the last twenty-five years.

The scheme of Prof. W. A. Neilson's "Chief Elizabethan Dramatists Excluding Shakespeare" (Houghton Mifflin) is admirably conceived and executed. Here in chronological succession one has the best and most representative of the English plays, thirty in number, from Lyly to Shirley (Shakespeare being properly excluded as a study apart), with obsolete words and obscure allusions explained briefly in footnotes, and with the necessary biographical and bibliographical information in appendices. The editing is careful and sufficient; the selection of plays seems to us thoroughly judicious. For those who wish to get a clear and general notion of the whole Elizabethan drama, the book will prove precisely suited; indeed it would not be easy to represent any other great movement in our literature in this adequate manner. We have only one fault to find—but that is serious. The inclusion of the whole work in one volume has necessitated the use of disastrously small type. Two volumes, and correspondingly larger type, might well have been given to a publication which ought to be of permanent value.

Dr. Paul Carus has found time to add to his already enormous list of publications a clear-cut and excellent little book on truth, entitled "Truth on Trial" (The Open Court Publishing Company). It consists of four essays, a poem, and an appendix, all of them reprinted from the *Monist*. The aim of the book is to give an exposition of the intellectualist view of the nature of truth, and to defend it against all pragmatic attacks. This view has seldom been so clearly defined as it is here by Dr. Carus: "Truth consists in a relation. There is a subjective statement and an objective condition of things. Truth means that the former properly describes or represents the latter. If I investigate, and find my expectations fulfilled, I call the statement true, and this correspondence, this congruence of thought and thing, is called truth." Dr. Carus's exposition of the pragmatic view of truth is not so satisfactory, and the pragmatists who read the book will insist that he has simply put up a man of straw. In fact, if we trusted to it alone for our conception of pragmatism,

we should conclude that logical consistency was nothing to the pragmatist, and formed no part of his notion of truth. Such a view, of course, would be quite mistaken; for in saying that the truth is that which works, the pragmatist means, among other things, that which works logically and consistently with the rest of our knowledge and experience. And yet to this criticism Dr. Carus might very well reply that, if this is the case, pragmatism has added nothing to our conception, and is with a vengeance only 'a new name for some old ways of thinking." The book is a timely one, and it is to be hoped that Dr. Carus's clear presentation of the subject will lead some of the pragmatists to reconsider their philosophy, and to develop it along some more promising line than that of their rather hastily formulated doctrine of truth.

The life of Cæsar has been a favorite subject of investigation since his own time, and his character has always appealed to students of affairs. It might perhaps appear that the works of Dodge, Froude, and Warde Fowler had furnished adequate treatment for present-day students, but "The Annals of Caesar, a Critical Biography," by Prof. E. G. Sihler (G. E. Stechert & Co.), is, as its name indicates, a study of a different kind. Professor Sihler gives a purely scientific investigation of the facts of Cæsar's life, as set forth by the ancient authorities. He treats Cæsar's life year by year, and tries to show how the successive steps in his career developed. In preserving a strictly judicial attitude of mind, he neither condones Cæsar's crimes, nor exaggerates his achievements. In one particular he seems to have thrown new light upon Cæsar's actions. Thus he shows that, in crossing the Rubicon, Cæsar was not following the dictates of a well-considered policy, but was merely yielding to the pressure of conditions. If he had given up his army, he would have put himself at the mercy of his opponents, and in his demands upon the Senate he was fighting not so much for power as for his life. To give up at this time meant his own death. Professor Sihler is not one of those who are charmed by the clearness and purity of Cæsar's style. He is inclined to regard Cicero's praise as merely the repayment of a compliment; but throughout the book there is evident desire to do justice, and justice alone, to the greatness of the subject. A long appendix contains a critical discussion of the sources, including a biting arraignment of Mommsen and Froude, with whose point of view the author has but scant sympathy. The English style leaves much to be desired, but this is lost sight of in the general excellence of the treatment.

The "Antigone" of Sophocles was recently performed in the Grand Opera House, Cincinnati. The metrical translation was prepared by Prof. J. E. Harry, primarily as an acting version (Robert Clarke Co.). Professor Harry recognizes the difficulty of the task. He claims to have rendered the trimeter portion into English pentameters within a period of thirty days, but says that thirty years would not suffice for the choral songs. To criticise a translation of this kind is an ungracious task, but there seems little to commend in it. Many of the pentameters are not exact in metre, and in many cases the rhythm halts in most unpleasant fashion. Sometimes the printing is at fault, but it is hard to resist the conclusion that the thirty days were too few for proper attention to details. The translations of the choruses are often ingenious, but the variations in the metres are too harsh to be enjoyable. But the chief difficulty with the translation is its total lack of dignity. Shakespearean reminiscences serve only to accentuate this fault. Doubtless, it thus approaches to the requirements of an acting version, but it would be unfortunate for the spectators to carry away the impression of Sophocles that they must gain from such a rendering. The translation is preceded by certain selections from the "Oedipus Rex" which serve as an introduction, and the bridge between the "Oedipus" and the "Antigone" is formed by a sketch of the "Oedipus at Colonus" and Aeschylus's "Seven Against Thebes."

"The Mother of Parliaments" (Little, Brown), by Harry Graham, is to be commended for accomplishing what its author set out to do. This was to give an account of the history and working of the English Parliament, which should not be excessively technical and should contain illustrative material to amuse as well as instruct the general reader. In this purpose we think that Mr. Graham has been highly successful. He sets forth the historical facts compactly, and, so far as we have tested his statements, accurately, and draws freely upon the biographies of English statesmen and collections of Parliamentary anecdote with the effect of producing an agreeable blend. Twenty plates showing buildings and interiors and great Parliamentary figures add value to the book.

The thirty-third annual conference of the American Library Association will be held at Pasadena, Cal., May 18-24. The following are the principal papers and addresses to be presented: President's address, "What the Community Owes the Library," by J. I. Wyer, jr., director of the New York State Library; address by Willard Huntington Wright, literary editor of Los Angeles *Times;* "Exploitation of the Public Library," by A. E. Bostwick, librarian of the St. Louis Public Library; "Modern Library Work with Children," illustrated address by H. E. Legler, librarian of the Chicago Public Library; "The Administrative Units in Library Extension," by M. S. Dudgeon, secretary of Wisconsin State Library Commission; "The County Library System in California," by Harriet G. Eddy, California State Library; "Basis of Support for City and State Library Work," by F. F. Hopper, librarian of Tacoma Public Library; "Materials and Methods in Bookbinding," by Cedric Chivers, Brooklyn; address by President Benjamin Ide Wheeler, University of California; address by J. A. B. Scherer, president of Throop Polytechnic Institute, Pasadena; "Effect of the Commission Plan of Government on Library Control," by Alice B. Tyler, secretary of the Iowa Library Commission; "Municipal Civil-Service System as Affecting Library Administration," by J. T. Jennings, librarian of the Seattle Public Library; "The Government of the Public Library," by J. L. Gillis, director of the California State Library; Symposium on Branch Library Problems. The following affiliated associations will hold their annual meetings at the same time and place: Association of Law Libraries, League of Library Commissions, Bibliographical Society of America, National Association of State Libraries, and Special Libraries Association. The American Library Association now has more than 2,000 active members, representing forty-nine States and Territories and fourteen foreign countries.

Col. Thomas Wentworth Higginson died Tuesday night in his home in Cambridge. Something will be said in the *Nation* next week about Col. Higginson's career.

Mrs. Hannah Whitall Smith, formerly of Philadelphia, and well known under her pen initials, "H. W. S.," as a writer on religious topics, died on May 1 in Oxford, England, aged seventy-nine.

Science

A Textbook of Botany for Colleges and Universities. By John M. Coulter, Charles R. Barnes, and Henry C. Cowles. Volume I. Morphology and Physiology. New York: American Book Co. $2.

Botany for High Schools. By George F. Atkinson. New York: Henry Holt & Co. $1.25.

In the obsolete Linnæan system of classification of plants, one class comprised all the so-called flowerless plants, such as algæ (seaweeds, etc.), fungi (mushrooms, rusts, etc.), musci (mosses), filices (ferns, etc.), while the flowering plants, the trees, shrubs, and herbs, were collected into about two dozen groups. In the two excellent books before us, which represent the new views now held by a great majority of our botanists, the ratio between the flowering and flowerless plants is completely reversed. In other words, the flowering plants are now relegated to a position which exhibits more or less clearly the fact that they constitute only one group out of a series of about a dozen or twenty groups of coördinate rank. Another phase of the reversal is almost as striking. Formerly one began his study with the flowering plants, whereas now it is a common practice to introduce the student first to the lowest or simplest forms.

This remarkable change of arrangement has naturally followed the increase of knowledge of relationships among plants. The endeavor nowadays is to present as far as possible the derivation and development of all plants, and to indicate the kinships. Much of this is a matter of conjecture, but is based upon safe probabilities, and is, on the whole, so reasonable that it has commanded almost universal assent. Our authors have done perfectly right in adopting the most recent views. But such a classification involves a distinct difficulty in teaching. In order to impress upon the student the important fact that the

flowering plants constitute only one class in above a dozen of nearly the same rank, it is absolutely necessary to dwell upon details of structure which can in some cases be demonstrated only by patient attention to microscopic technique. Now the evidence which lies at the foundation of such a classification must be largely taken on faith by the student. Very few teachers are qualified to lead their students practically through the intricate windings of the paths in modern microscopy, although the plainer steps can be shown with clearness. The selection, therefore, of what can be honestly learned at first hand, and the presentation of advice in regard to this line of study, require the soundest judgment and discretion. A careful examination of these two books must convince an unprejudiced person that the authors have shown distinct pedagogical ability in this very difficult part of their task.

But one is inclined to ask, What becomes of the old-fashioned botany which gave one a fair degree of familiarity in regard to the plants around us, such as our trees and flowering treasures in the fields? Much of that has been necessarily sacrificed in the attempt to give a clear idea of relationships, although a good deal has been saved from the wreck. For instance, in Professor Atkinson's book attention has been called to the useful plants, and to the relations of plants to their surroundings, while the general introduction to the subject of floral structure has been well worked out. We note with pleasure that in the larger work, prepared by associated professors in the University of Chicago, the attractive features of flowering plants have not been lost sight of. The chapters on Physiology, the field occupied by the lamented Professor Barnes, are admirable in form. The slight differences of opinion which may be held in relation to certain minor matters here presented, are not likely to confuse any serious student. These two treatises are a distinct and welcome addition to the long list of good, sound American textbooks on modern botany.

A "Bibliography of Aeronautics" has been compiled by Paul Brockett, assistant librarian of the Smithsonian Institution, and published under the Hodgkins Fund. It forms a solid volume of more than nine hundred pages.

Rand McNally & Co. have issued an excellent wall map of New York State, 57 by 45 inches, for school use. Some examination leads us to believe that the selection of towns and historic sites included has been judiciously made. Commercial routes, railways, and canals are also given. New York city and Long Island are printed in position, and there are small relief and physical maps. The printing is clear.

Dr. Joseph Charles Terby, who died recently in his native town, Louvain, aged sixty-five, was the author of "Aréographie, ou étude comparative des observations faites sur l'aspect physique de la planète Mars depuis Fontana (1636) jusqu'à nos jours (1873)." The book was published in 1875.

The death is reported from London of Prof. Thomas Rupert Jones, who, for almost three-quarters of a century, has been a well-known student of geology. He was born in 1819.

Drama

Louise Mallinckrodt Kueffner aims in her thesis ("The Development of the Historic Drama," University of Chicago Press) to prove the existence of a legitimate type of drama which deals with an historic movement and in which large and opposing, and equally justified forces clash and produce, in accordance with historic necessity, events of wide social concern. This corporate drama, more epic in structure than the individualist, logically-motivated Aristotelian tragedy, has, it is argued, struggled for existence since its birth in the English Chronicle History, and in modern Germany, under the influence of the genetic conception of history, has established itself in several definable types: individualistic character-drama, symbolic process-drama, and corporate movement-drama. In the present study we do not get beyond definitions and a summary of German criticism bearing on the subject; we are promised, however, a book for the general student which shall treat the development of the historic drama in its practice. It will be interesting to see the definitions put to this proof; meanwhile, a suspicion of their "closet" character is not allayed by the remark (p. 83) that "the thought of adaptation to the demands or tastes of our present stage and to our ordinary audiences ought not to be too much considered in the writing of an historic drama conceived in this form."

An interesting feature of the special theatrical coronation performance in London will be the reappearance of E. S. Willard, who has been persuaded to assume the part of Brutus in the Forum scene of "Julius Cæsar."

Charles Frohman has procured the English and American rights in a new play by Messrs. de Caillavet and de Flers, authors of "Inconstant George." The piece is not yet finished, but arrangements are completed for its production at the Théâtre Français in October. It is described as a woman's play, with a powerful love story, designed to show the evils of procrastination. Mr. Frohman has also procured the rights of "La Gamine," by Paul Veber and H. de Gorsse. This will be put into English by Michael Morton.

Sir Herbert Tree has accepted a new play, called "Prophet Percival," by Melchior Lengyel, author of "Typhoon." The piece is described as modern, with a dash of mysticism. A cynical man of the world, to save a woman's reputation, turns his back upon London and its fascinations, and takes ship for a distant island in the Pacific. There he finds himself among a savage tribe, who hail him as prophet and seer. In course of time he, too, is persuaded that he possesses all the qualities attributed to him by his followers. An unexpected catastrophe serves to disillusion him. As originally conceived, the piece ends tragically, but in this respect it probably will be modified.

"The Winter's Tale" has had a three months' run at the Queen's Theatre, Manchester. This result is attributed largely to the striking performance of Hermione by Nora Lancaster.

During the first week of the Shakespearean festival at Stratford-on-Avon, five of Shakespeare's plays were revived at the Memorial Theatre—"Much Ado About Nothing," "The Merry Wives," "The Merchant of Venice," "Twelfth Night," and "Richard II." "Of these, apart from the outside interest of Miss Violet Vanbrugh's Beatrice, in 'Much Ado,'" says a well-known critic, "Mr. Benson's poetic rendering of the part of Richard is one of the most forcible things that he does, and the finished performance of "Twelfth Night" was a real delight."

As a new method of self-advertisement, Bernard Shaw affected to maintain a mystery concerning the authorship of his latest dramatic production, "Fanny's First Play," which was produced the other day in the Little Theatre, London. Of course, everybody knew all about it. The nature of the piece would have enlightened them very quickly, if they had not. It may be described briefly as witty nonsense. The hero and heroine, reared in that atmosphere of precise respectability which seems to Mr. Shaw so abominable, suddenly break out into all kinds of excesses, are sent to jail, and, thereafter, rejoice in their new emancipation, which they celebrate by astonishing marriages. The moral of it all appears to be that of that ancient bit of cynicism, "The nearer the church, the further from Heaven." Incidentally, Mr. Shaw introduces a number of London dramatic critics, under very transparent disguises, and ridicules them after his own amusing and utterly irresponsible fashion.

There is an influential movement in England to put the Shakespeare Head Press—established at Stratford-upon-Avon in 1904 by A. H. Bullen, with the object of issuing a complete edition of Shakespeare's works—upon a permanent basis by public subscription. A memorial, to which many eminent literary names are attached, says:

There is a great mass of material that is inaccessible, or all but inaccessible, to students; and, if our suggestion is followed, the Shakespeare Head Press would be enabled to print MSS.—and reprint rare books—that under the ordinary conditions of publishing must remain inedited. Such a press, with a clear understanding of the wants and needs of scholars, and freed from the bondage of commercialism, could do much to advance the cause of learning and letters.

Most of the leading London critics grow rapturous over "Kismet," Edward Knoblauch's Arabian Night play, which has just been produced in the Garrick Theatre, London, by Oscar Asche. They dilate upon the interest of the Oriental story and the excellence of the acting, but most upon the splendor of the setting and the novelty and ingenuity of the manner in which the tale is told. For one thing, the performance is continuous, as in the intervals between acts the different actors are seen, in a street scene, passing, as it were, to their next adventure, while in two stage boxes singers

BURLINGAME PUBLIC

and a story-teller maintain the thread of the plot. One critic writes:

I must attempt to describe some of the scenes; for, capital as is the story, charmingly as it is written, and splendidly as it is acted—it is the spectacular side of this astonishing production which hits one hardest. Such crowds, such animation, such ceaseless variety, such perfection of "composition" in the building up of the picture, such vivid coloring, such artistic completeness, and such a wealth of imaginative detail have never been seen. Any one or two of these qualities may have been equalled elsewhere, but never surpassed; but altogether they constitute a record.

The first annual Shakespeare lecture of the British Academy will be given July 5 by Dr. Jusserand. He has chosen for his title, "What to Expect of Shakespeare."

Music

AMERICAN OPERAS.

When Mr. Gatti-Casazza announced that the directors of the Metropolitan Opera House, desirous of fostering native genius, offered a prize of $10,000 for an opera by an American composer, there were not many among those most familiar with the musical situation in this country who believed that a work worthy of production at the leading opera house of the world would result from the competition. Opera composers are scarce on this side of the Atlantic. In Germany, Italy, or France such an offer would have resulted in the submission of hundreds of manuscripts. The judges appointed by the Metropolitan directors—Alfred Hertz, Walter Damrosch, Charles Martin Loeffler, and George W. Chadwick—had twenty-four scores to examine, and they have unanimously bestowed the prize on an opera entitled "Mona," by Horatio W. Parker, professor of music at Yale University.

While Professor Parker has for years been ranked among the leading American composers—one of the few whose works are also performed abroad—the award of the prize to him comes nevertheless as a considerable surprise, for it has not heretofore been known that he had any operatic aspirations. Among his works, including more than sixty opus numbers, there is not one which is intended for performance in the theatre. The first of them is dated 1882. Is it likely that a composer who has for three decades written only for the concert hall, the parlor, and the church will succeed in the opera house? No one can tell in advance. Schumann wrote only for the piano during the first ten years of his creative activity; then he took up songs and symphonies and gave the world some of the best it had ever heard. The work which made Professor Parker famous, in England as well as in America, the oratorio "Hora Novissima," contains some dramatic pages, and one can see more or less dramatic intentions in the very titles of such of his cantatas as "King Trojan," "The Ballad of the Normans," and "Harold Harfargar." Whether he has been able to develop these dramatic germs the performance of the prize opera will show next season. In the meantime, it is encouraging to hear that the great Wagnerian conductor, Alfred Hertz, than whom no one could be better qualified to express an opinion, after hearing the orchestral score only through his eyes, has declared that the score is "dignified and musicianly, and the orchestration masterly."

It is interesting also to find that the same authority thinks the libretto is "excellent and most poetic." The critics, it is safe to predict, will rend it to shreds. It is an old habit of theirs. The most poetic opera book ever written, Wagner's "Tristan and Isolde," was pronounced "in every respect an absurdity," "the most unfortunate choice of a text-book ever made by a really prominent composer," and Mr. Redding was treated to similar compliments for the interesting libretto he wrote for the last American opera produced here, Victor Herbert's "Natoma." Professor Parker's librettist, Brian Hooker, was formerly a member of the Yale faculty. The scene of his story is placed in Britain during the Roman invasion. In this there is nothing revolutionary; what is suggested, in fact, is that one-time favorite of the public, Bellini's "Norma." What is novel, however—in fact, almost startling—is that Mr. Hooker did not think that an America opera must necessarily be a setting of an American plot, with red Indians and that sort of thing, as in Herbert's "Natoma" and Converse's "The Sacrifice," recently produced by the Boston Opera Company. Red Indians are well enough; they supply a picturesque element and provide opportunities for interesting experiments in musical ethnology; but the fact that Professor Parker had to deal with Druids instead, and with Roman captives and British maidens, need not have prevented him from writing a genuine American opera. The most German of all operas, "Tristan and Isolde," has an Irish subject, and Gounod's choice of Goethe's "Faust" and Shakespeare's "Romeo and Juliet" did not prevent his best two operas from being as French as French can be.

"Mona" is not the only American opera to be produced next season at the Metropolitan. Arthur Nevin's "Twilight," postponed from this winter because it needed revision, will also be done, and undoubtedly Mr. Dippel and his Philadelphia-Chicago company will also let us hear again Mr. Herbert's successful "Natoma." The tide has turned; the American composer is encouraged. No longer will he be able to say it is not worth while to write grand operas because nobody wants them. Really good operas are wanted very much by everybody, most of all by operatic managers, who are at their wits' ends to procure good novelties. Perhaps the opera Mr. Cadman is at work on will appeal to the Metropolitan's manager and conductors. It has Indians in it, with Indian music; and Mr. Cadman's songs, which have become very popular, indicate that he has the melodic gift, which is, after all, the most important asset for an opera composer.

Now that American opera may be said to be fairly launched, it may be well to utter a word of timely warning. Victor Herbert, Frederick Converse, and Arthur Nevin (whose "Poïa" had the honor of being hissed as well as applauded in Berlin) are the three Americans most prominent at present in this field. Fortunately none of them has shown a disposition to underrate the value of melody. There is some danger that others entering this now promising field may be misled by the sensation created by operas which deliberately taboo melody; but statistics show that the vogue of such works as "Salome," "Elektra," and "Pelléas et Mélisande" is already strongly on the wane. Dissonances and orchestral colors will never be accepted as a substitute for melody. The best models for American opera composers of the present and future are Wagner's "Die Meistersinger" and Bizet's "Carmen." In them there is everything that is musically interesting, including an abundance of melody.

Longmans, Green & Co. announce "The Philosophy of Music," a comparative investigation into the principles of musical æsthetics, by Halbert Hains Britain.

"Master Musicians," by J. Cuthbert Hadden (A. C. McClurg & Co.) is a collection of short sketches of prominent composers, from Handel and Bach, to Grieg and Tchaikovsky, in compiling which the author had in view the amateur rather than the professional, and the young reader rather than the adult. He has succeeded in conveying in a chatty way a good deal of information about the lives and works of more than two dozen famous musicians, though it is a mystery why such minor men as Pleyel, Dussek, Cramer, Moscheles should have been admitted and Liszt left out—in the year of his centenary, too, when all concert-givers are preparing to honor him.

Under the name of the National Society for the Promotion of Grand Opera in English, what was originally known as "The Society for the Promotion of Opera in English and the Encouragement of American Music" has now been organized. The society will not attempt to produce opera, and will devote itself to the propagation of the idea indicated in its title. The management of the society is vested in a president, not yet selected, and a board of management, including twelve members, elected annually. Among those members are: David Bispham, Walter Damrosch, Reginald De Koven, Arthur Farwell, Charles Henry Meltzer, Albert Mildenberg, Lillian Nordica, and Rudolph Schirmer; Anna E. Ziegler, secretary; Walter L. Bogert, treasurer.

At the recent International Congress of Musicians in Rome, one of the speakers, Maestro Fedeli, commented on the wretched condition of musical Italy ever since 1860. At that time, he said, the only kind of music cultivated in Italy was the opera; symphony and chamber concerts were neglected, and choral music non-existent. To-day, he declared, there was a slight improvement in the situation, but to achieve real progress the Government would have to reorganize the conservatories. The musicians assembled passed a resolution that choral singing should be introduced into the public schools, where it has hitherto been entirely neglected.

The eminent Austrian critic, Richard Batka, thus sums up his impressions of the first performance in Vienna of Richard Strauss's "Der Rosenkavalier":

The new opera was not so joyously received as had been expected. The first and most important act left the audience cold, the second was saved from the same fate by the waltz finale, and in the end even the much-lauded trio and duo failed to make the desired effect.

The neglected German composer, Hans Pfitzner, is at last to have his opportunity. At the instigation of the Oberbürgermeister of Strassburg, there will be in that city next spring a Pfitzner week, during which, among other things, there will be performances of his operas, "Der arme Heinrich," and "Die Rose vom Liebesgarten."

During her recent tour in the United States Madame Liza Lehmann was so much impressed by the life and characteristics of the North American Indians that since her return she has written a short song-cycle, entitled "Prairie Pictures." In a little prefatory note it is stated that "the songs do not purport to be authentic melodies (although a few native fragments have been introduced), but were written as a result of travels through those parts of America where the remains of a poetic, if primitive, race still linger."

One of the most entertaining books in the whole range of musical literature is "The Mendelssohn Family," written by a nephew of the great composer, Sebastian Hensel, and made up largely of letters and journals addressed by various members of that family to one another from various countries between the years 1729 and 1847. Many of Felix Mendelssohn's letters were printed for the first time in this collection, and his two clever sisters also figure largely in these pages. The general tone of nearly all the letters is as cheerful as Mendelssohn's music. As the editor remarks, that composer, "whenever he was unable to express approval, preferred to be silent rather than blame. But how unreserved he was in his admiration!" This attitude, to judge by these letters, was a family trait. Those of Felix are naturally of most interest to the music-lover; yet the others maintain so high a level that, after a while, one hardly cares who the writer happens to be, but reads on interestedly about the burning of the Berlin Opera House, the Alps in winter, pickpockets in London, bagpipe competitions, bathing at Sorrento, coronation anthems, the counterpoint of married life, chorus singing, and a thousand other miscellaneous topics that are apt to be touched on in private letters. Some of the letters are not by relatives of the composer, but friends; among them the Hanoverian diplomat Klingemann, who remarks in one of his epistles from London: "In one respect we Germans are especially favored here—we are all supposed to be born with a flute or a piano attached to us, every German is a person full of music. It is quite touching to see how fond these good people are of music, and what a stomach they have for listening! Like ostriches, they swallow pebbles or sweetmeats as it happens. And everything is so long here! I believe Beethoven must have been an Englishman." Of this entertaining book the Harpers have just brought out a new edition based on the revised second English edition, the only new feature being that the two volumes are in one cover.

Art

THE INTERNATIONAL.

LONDON, April 25.

It is only thirteen years since the members of the International Society of Sculptors, Painters, and Gravers held their first exhibition and made it at once the most important in London. Whistler was the president, and almost every distinguished artist not only in Great Britain, but on the Continent and in America, was represented. The success of the exhibition, at least artistically, seemed to promise a "secession" as brilliant and stimulating as were those of Paris and Berlin and Munich. And to-day? There really is not much to choose between the International show that has recently opened in the Grafton Gallery and any other in London, except perhaps that the tradition of intelligent hanging has not been quite outgrown, has, indeed, survived triumphantly in the Black and White Room. Nothing could be more disappointing. The work so well begun not much more than a decade ago, has apparently to be begun all over again, and it looks as if British art, like the British criticism of it, would rapidly and contentedly sink back into the old Victorian depths.

One cause of the change at the International is the weakening of the broad, international idea which gave it its name and was the reason for its existence. The truth is the British artist, left to himself, has no use for any art save his own. He has not the courage to face competition with men he knows are his masters, though he bases his objection to competing on his fear that British art, exposed to foreign influence, risks the loss of character, of individuality. He does not believe in protection for anybody and anything but himself and his work, and only recently a new society has been formed to see that he gets it. Enthusiasts are pointing to the success of the British Pavilion in Rome as a proof of the individuality that calls for such zealous safeguarding, forgetting how much of this success depends on the retrospective collection—on the work of the men, long dead, who gave to British art whatever greatness it may claim. I must add, however, that for the British success in having their Pavilion ready in time, we Americans may well envy them. It is rumored that some members are striving to add Royal to their name, though I find it hard to believe that they are so blind as not to see that a Society cannot easily be Royal and International at the same time. But their most praetical effort during the last few years to get rid of the foreigner has been to reserve for themselves the best places on the walls and so carry off the honors.

The result of their policy is that they now have their wish. Foreign exhibitors have been gradually diminishing in numbers until this year they have stayed away almost altogether. There are no Germans, no Italians, no Spaniards—and once Spaniards were the most conspicuous and distinguished exhibitors of all—no Belgians, no Scandinavians, no Dutchmen, except Storm Van 'sGravesande in a few not too notable still-lifes, and Bruckman, who makes his home in London. Nor are there any Americans except three or four who happen to be at work here at the moment, or, in one case, on the Continent. True, there is a French group, but it is far from remarkable. Another of the absurd contradictions under the present policy is that the Society, which gives sculptors prominence in its title, and has elected Rodin for its president, is without a sculpture gallery. As a consequence, Rodin, whom assuredly they should most honor, can send but small works: a bronze mask, Le Visage Emerveillé, and a marble, L'Eternelle Idole, a beautiful group but too well-known to be described again. Two early Monets (1871 and 1872), an impression of the Thames at Westminster, and a windmill in Holland, hardly do him justice, for they are without the dignity of design, the well-chosen lines, and well-balanced spaces, that make much of his early work more interesting than his later series of haystacks and cathedrals. Blanche and Cottet, who used to contribute their most important canvases, have now, apparently, selected their least important. Blanche has a large full-length of a Lady in White that dates back to the eighties, and, by its title, reveals its inspiration; but the title cannot save it from commonplace nor can the graceless fashion of the period explain this commonplace away: the ugliest fashion in the master's portrait defies the passing of time. Cottet has a study of an old Bretonne and her son, in which the rendering of old age in the woman's face, especially in the weak, watery, red-rimmed eyes, is wonderfully

well observed and uncompromisingly true, but it is not more than a study. Vuillard, Bonnard, and Maurice Denis, the fine interpreters of Post-Impressionism at the International for several years before the British critic suddenly discovered Post-Impressionism and saw in it the one way of salvation, are but meagrely represented. It is a pity, especially where Denis is concerned, for his Chambre Violette, a realistic rendering of a prosaic bedroom, helps to remind one that his methods are better adapted to less real themes treated conventionally in decorative panels, several of which have, in previous years, been shown at the International. The one concession to the foreigners is the centre reserved for Charles Guérin's Jardin Publique, a characteristic arrangement of dense foliage, terraces, and crinolines, which I seem to remember having seen in Paris and written of at the time. Such examples as there are of Aman-Jean, Anquetin, and Forain call for no special mention.

For the poor showing of the foreigners, there might be some excuse if the artist at home made an unusually good one. But he does not. On the contrary, he has seldom done less to justify the supremacy he usurps, or, rather, he has done so little that the London critics, who usually go on praising what they have once learned to praise, are busy deploring the falling-off in the quality and interest of the show. It looks as if the painters, above all, had been reserving themselves for the Academy. As long as the Society had its headquarters at the New Gallery, the exhibition was held in the winter when not one other of note was given in London, except the Old Masters at Burlington House, or abroad either, for that matter, and the artist could reserve himself for it. Now, at the Grafton, the exhibition is held in the spring, at virtually the same moment as the Royal Academy in London, the Salons in Paris, the show in Munich, the large international displays in other towns—this year in Rome and Barcelona—when the successful artist has more calls upon him than he can well meet. Moreover, several members of the International have recently been elected Associates of the Academy, and no doubt feel the necessity of acknowledging the compliment by making their very best possible appearance on its walls. Whistler insisted that no member of the Society should belong to the Academy, and he was right: if no man can serve two masters, neither can any artist be loyal to two societies of the same kind. Whistler's wish has been disregarded since his death. Strang, the vice-president, is an Associate of the Academy; so also are Lavery, C. H. Shannon, Orpen and Cameron, all members of the Council. As a consequence, the International has become, like almost every other large society of artists in London, but an annex to the Academy, and it is only natural that the Academy, with the social *réclame* it ensures and the pensions it promises, should be the more loyally supported. Certainly, this year at the International, there is as little to detain one among the British as among the foreign painters. Strang, who still fails to find himself, hesitates between the Old Masters and the Post-Impressionists. In a large allegorical Spring, he arranges a group of nudes, a youth supposed to be hurling through space but really in danger of tumbling heavily on his head, and a bit of crimson drapery, as a tribute of his appreciation of the Venetians; in The Elders in the Garden, who look as if they were posing for a photographer rather than troubling themselves about Susannah, he seems more inclined to borrow the deliberate primitiveness of the modern Frenchmen; while the absence of atmosphere in both gives them that effect of having been stencilled not uncommon in his paintings. Lavery, in his life-size, full-length Anna Pavlova, is singularly unfortunate. His model is a woman of rare charm, a dancer of rare grace, and on his canvas she might be a puppet pirouetting on wires. Shannon sends nothing, nor does Sauter. Nicholson, painting what is probably a presentation portrait of the Clerk of the Merchant-Taylors' Company, vies with the Academicians in dulness, neglecting for the time even to place the figure on the canvas with that feeling for its decorative value which, as a rule, is the one great merit of his work. Orpen, in his Knackers' Yard, Dublin, his sole contribution—a court with a few unconvincing figures and an archway in the background—is no longer Orpen but an unexpected re-echo of James Pryde, who, as if conscious of the liberty taken or the flattery proffered, effaces himself in an artificial architectural device with equally artificial figures, explained as The Vestibule: Costume Ball. But without going further through the Catalogue, I may sum up by saying that the principal British exhibitors appear to be passing through a stage—only a stage it is to be hoped—when they have nothing in particular to express for themselves in paint and are satisfied to express it with easy mediocrity. I do not know whether I should include James Morrice, the Canadian, among the British, or the French, with whom he has more closely identified himself, but in any case, he does not help, as he often has helped, to redeem the general apathy. For what interest there is, one turns to the younger men, to Glyn W. Philpot, for instance. His sombre portraits are immensely able and full of a vigor that is refreshing in their present surroundings.

There is a distinct improvement when it comes to the prints and drawings, though here, too, the high level of previous exhibitions is barely maintained. The work on the walls is not always as distinguished as the names in the catalogue. Degas, for one, has been seen to greater advantage. Forain, in his plates with Scriptural themes, is not the same eloquent satirist as in his drawings of people and subjects he knows. Louis Legrand is in danger of repeating himself too often in the lines and types of which he is master. If, on the one hand, the collection is not overladen with the once popular imitations of the old masters' notes and memoranda, on the other there is small revelation of hitherto unsuspected talent. The one surprise is a water-color by Mrs. Willoughby, whose name is new to me. She has, more entirely than anybody since Beardsley, invented a scheme of her own, and the skill, the ingenuity, and the originality with which she has used her evident knowledge of old Greek vases in a little Judgment of Paris, make one look forward with interest to seeing more of her work.

There are a few bronzes and small marbles and plaster castes by Bourdelle and Troubetzkoy and Wells among others, but, with no gallery for it, sculpture cannot but take the secondary place it is so far from deserving. N. N.

F. Frankfort Moore, the author of "The Jessamy Bride," has recently published an entertaining narrative of personal experiences in collecting objects of many kinds, primarily for the purpose of furnishing his own home ("The Common-sense Collector," Doran). In the opening chapter, which he calls How to Begin, the spirit of the collector is rampant, and no person who has ever felt the call can fail to assent to many of the sentiments there expressed. That the time still exists when choice objects may be purchased for moderate prices the author firmly believes; he bids all who long to fill their homes with venerable and beautiful things to go out with courage and faith, if with a lean purse, for they shall be rewarded. He regards specializing as expensive, and advises the beginner to be catholic in his taste. The second chapter deals with Common Sense Caution, and discusses the ethics of collectors in their search for whatever they particularly desire at the moment. Four chapters are devoted to oak tables, chests, settees, chairs, and interior woodwork. One chapter is devoted to Queen Anne and Georgian English furniture, and the last two chapters treat of eighteenth-century furnishings, largely French. The book is not scientific in any particular, but entertaining and readable. It is illustrated entirely from the author's collection, and shows many views of the house in which he lives and which, according to the narrative, he has furnished by pursuing the methods described. To the casual observer or experienced collector, however, these illustrations scarcely suggest a lean purse.

The *Bulletin* of the Brooklyn Institute presents in its issue of April 29 Prof. William H. Goodyear's article, "Temperamental Architecture in the Cathedral Church of St.

John the Divine." After study of Professor Goodyear's monographs on concealed curves and asymmetries in classical and mediæval buildings, the architects of the New York Cathedral, Messrs. Heins and La Farge, decided to introduce such irregularities into that building. Accordingly, it shows a rising floor, convergence of the piers, slight differences in the radius of the pier arches, in the height of the capitals, etc. These divergencies from geometrical accuracy have justified themselves in the effect of the building. It is noteworthy that while many have admired its lines and proportions, nobody has detected intentional asymmetries amounting in some cases to several feet. This seems a genuine experimental test of the theory of architectural refinements which Professor Goodyear inferred from historical examples. Very interesting are photographs of the nave and clerestory galleries of the Church of St. Ouen, at Rouen, which show that its plan is a return curve, an attenuation of the S or Hogarthian line of beauty.

Halsey Cooley Ives, director of the City Art Museum in St. Louis, died last Saturday in London, England. He was born in 1846; he represented the United States government in Europe on several occasions as commissioner; was chief of the art department at the Chicago Exposition, 1893, and had the same position at the St. Louis Exposition in 1904. He received decorations in the following countries: Norway, Sweden, Bulgaria, China, Japan, Belgium, Italy, Portugal, and France. At the Portland Exposition he received a silver medal for his landscape, Waste Lands.

John Henry Vanderpoel, a painter, and until recently instructor in the Art Institute of Chicago, died last week at St. Louis. He was born in Holland in 1857, and was the author of one book, "The Human Figure."

The death is reported of Augustin Mongin, the French etcher, who, in 1901, was awarded the Médaille d'Honneur. He was born in Paris in 1843, and was once president of the Société des Aquafortistes.

Finance

INTERESTING MOVEMENTS ON THE STOCK EXCHANGES.

It is traditionally in the spring-time that financial markets, in this country and abroad, are apt to display more clearly the tendencies of the hour, whether for good or for ill, and to move suddenly in new directions. This is especially true of periods like the present, when, so to speak, a chapter has been closed by the world-wide financial and industrial liquidation of 1910 and every one is aware that, whatever may be the nature of the ensuing chapter, it cannot be the same as the one before.

Both at home and abroad, two highly interesting financial movements have introduced the season. At home, it has been the sudden outburst of strength and activity on the market for investment bonds. Last week, that market not only became the paramount influence of the day on financial sentiment, but it clearly dominated other financial markets. Instead of following at a respectful distance an enthusiastic rise in stocks (as it did in 1901), or being relegated to neglect through diversion of interest to share speculation (as was the case in 1906), the bond market last week inspired vitality, through force of its own example, into a motionless and stagnant stock market.

The contrast between those two wings of the investment market is not new in this year's history; the end-of-April summaries showed that, while the Stock Exchange's transactions in shares, for the first four months of 1911, were barely one-half the corresponding period in 1910 or 1909, and less than in any other year since 1897, its total bond transactions up to April 30 exceeded all previous years except 1909, 1905, 1902, 1901, and 1899. But the striking demonstration was left for the present month, in which last Thursday's business was the largest of any day but one this year—that one day being the climax of the "January reinvestment"—and in which a dozen active investment bonds touched prices which marked a rise of 3 to 7 points above the year's low level.

All the circumstances of the hour considered, the incident was the best thing that could possibly have happened for the situation. It provides an example of financial confidence, in the quarter of the market where lack of such confidence has long been assigned as the most disquieting symptom of the day. It opens the door for raising necessary funds by domestic corporations from domestic supplies of capital—the denial of access to which, a year ago, brought to a crisis the disorder in the country's economic structure.

Finally, and of hardly less importance, this recovery in the market for high-grade investment issues, such as the savings banks hold in enormous quantity, points the way out of a serious dilemma which has lately embarrassed all such institutions. Illogical as was the fact that investment institutions of the sort were confronted, at a time when investment bonds were unusually cheap, with falling surpluses and with necessity for lower dividends, it was a manifest consequence of the long declining prices of sound investment bonds. Balance-sheets of the trust companies and the savings banks wear a somewhat different aspect, after a rise in values such as has occurred on the bond market of the week.

While this has been happening at home, something still different has been in evidence on the foreign stock exchanges. Following the violent rise in the long-neglected English railway shares at London, and occurring along with great inactivity in Continental markets as a whole, there have been repeated outbursts of speculation for the rise in special groups of stocks—at Paris, at Vienna, and even at St. Petersburg. Now it must be remembered that sometimes the careful watcher can obtain a clearer idea of an economic situation by looking away from his home environment, and sweeping with his spy-glass the financial world at large. It is not so very long ago that people in Wall Street were discussing the panic of 1907 as the exclusive property of the United States.

If our people, as they studied our stagnant markets of the season past and our decreasing trade, have once more been assuming that America was the sole exemplar of an economic situation, it is high time that they should look abroad. For in some measure at least, this stirring of the spirit of speculation for the rise, in numerous foreign markets, is a symptom of a changing situation. In character and direction, such movements may be favorable or not; but the noteworthy fact is their present wide distribution and their occurrence wholly without direct relation to one another. It might not at first glance seem that "booms" in English railways or Russian industrials or Austrian iron companies had immediate reference to our market. But when one is watching general tendencies, he has to consider the facts that the world's financial markets are nowadays subject to common economic impulses, and that the stock exchanges of all the world moved simultaneously down in 1907, up in 1909, and down again in 1910.

Even, therefore, if it is true that these scattered demonstrations of speculative activity have no immediate bearing on our Stock Exchange, it is important at any rate to explain them. One favorite explanation with which some European critics are at present amusing themselves, is the familiar theory of 1906, that, in view of the high cost of living, every-day citizens have decided to make good the deficit in their private accounts by Stock Exchange speculation. There is something just a bit comic in this theory. It assumes, first, that such people never cared about increasing their income when provisions and rents were low, and, next, that Stock Exchange operations are a sure source of profit to the simple-minded outsider.

Whether these assumptions wholly conform with practical experience, is rather an open question. People old enough to have read and remembered "Pickwick" will recall Mr. Bob Sawyer's regretful explanation to his insistent landlady: "I am very sorry, Mrs. Raddle, but the fact is that I have been disappointed in the City to-day." Impecunious gentlemen who should resort to the Stock Exchange to pay their grocers' bills, would be somewhat more likely to emerge from "the City" in Mr. Bob Sawyer's frame of mind than as the pillars of a sustained bull market.

But theories of this peculiar sort are entirely superfluous. In so far as speculative demonstrations of the sort reflect any real conditions of the day, they have to do with the facts that a year or so in which "bull markets" have been non-existent leaves the community in a distinctly improved condition of resources, but at the same time leaves a good part of it with an appetite stimulated by abstinence. This is the human and social side of such signs of reviving speculation. The economic side of it must be considered in its relation to the question what happens to the world at large, if thorough and necessary liquidation has readjusted market values, if capital has accumulated as a consequence, and if trade and industry are on the road to recovery.

BOOKS OF THE WEEK.

Ammerman, M.D. The White Rose of the Miami. Broadway Publishing Company. $1.

Baring, M. Collected Poems. Lane. $1.50 net.

Belgian Poetry. Selected and translated by Jethro Bithell. Walter Scott Pub. Co.

The New Hesperides

AND OTHER POEMS

By JOEL ELIAS SPINGARN

Boards, 12mo., $1.00 nèt.

A collection of the author's best poems—love poems, poems expressive of American aspirations, and others suggestive of the author's literary and intellectual interests.

The title poem elicited the following letter from the late John Hay, then Secretary of State:

"I thank you very much for your poem, which I have read with great interest and enjoyment. I am old and tired, but still I take pleasure in the dreams of other men when they treat of noble things—and are well told. Lines like

'For Spring finds Summer trembling in the root,
And the March mists are melting into flowers,'

and

'Only the seeker worthy of the quest
Shall find the perfect land,'

remind me of the days when I, too, dwelt in Arcadia."

STURGIS & WALTON CO.

31-33 E. 27th St., New York

INCIDENTS OF MY LIFE

Professional—Literary—Social

With Services in the Cause of Ireland.

By THOMAS ADDIS EMMET, M.D.

President of the Irish National Federation of America. Knight Commander Order St. Gregory the Great.

Large 8vo. Illustrated. Limited Letterpress Edition. $6.00 net.

Dr. Emmet's services to medical science and his labors in behalf of Ireland have made his name well known on both sides of the Atlantic. While these subjects find adequate place in his autobiography, the book covers much broader ground, and deals in a most interesting manner with men and events in *ante* and *post bellum* days, both in the North and in the South.

Send for New Illustrated Catalogue.

Books of Educational Value and Exceptional Interest

INDEX VERBORUM VERGILIANUS. By Monroe Nichols Wetmore, Ph.D., Assistant Professor of Latin in Williams College.

This is a complete word index to the acknowledged works of Vergil, the Eclogues, the Georgics, and the Æneid, and to the poems usually included in the Appendix Vergiliana. The value of this work to the student of the classics and the worker in the philological field is hardly to be exaggerated. *"It is a matter for regret that England has not produced this work; but it is good that it has been done at last. . . . A good clear type is employed. . . . We must offer a word of warm appreciation of the labour bestowed on the work. . . . Mr. Wetmore has placed all true Vergilians under an obligation."—The Athenæum.*

Crown octavo; size 6½ by 9½; 554 pages; $4.00 net; by mail, 30 cents additional.

GREEK IMMIGRATION TO THE UNITED STATES. By Henry Pratt Fairchild, Ph.D. With an Introduction by Professor Albert G. Keller, Yale University.

This first-hand study of the cause and effect of Greek Immigration is based on facts gathered in Greece and in this country. The work, based on scientific knowledge, forms an important contribution to sociological data.

Octavo, 278 pages; sixteen illustrations from photographs by the author; appendices, indices, and bibliography. $2.00 net; postage, 16 cents additional.

THE RECORDS OF THE FEDERAL CONVENTION OF 1787. Edited by Max Farrand, of the Department of History, Yale University.

This great work is indispensable in the library of any institution of learning in this country. There is no other work in existence which can enable the historian or student to so readily grasp the *spirit* of the Constitution. Over fifty of the leading Universities and Colleges have already ordered this most useful and illuminating work. Three volumes, royal octavo, each 650 pages, buckram binding, appendices and indices; wooden box, $15.00 net; carriage extra.

SENTENCE CONNECTION IN TACITUS. By Clarence W. Mendell, Ph.D.

The purpose of the work is to illustrate all the different methods employed by Tacitus in the connection of his sentences and clauses. 12mo, 158 pages, $1.25 net; postage, 10 cents.

Complete circulars of the above will be sent on request. **Yale University Press, 135 Elm St., New Haven, Conn.**

NEW EDUCATIONAL BOOKS

Writing and Speaking

By CHARLES SEARS BALDWIN, Ph.D., Professor of Rhetoric in Yale University. 465 pages. $1.20.

Also in Parts: Part I, 70 cents; Part II, 70 cents.

A text-book of rhetoric and composition for the secondary school. It contains hundreds of exercises, interesting, various, and often original, while the theory of rhetoric is shown to students as it is, brief and simple for all practical purposes.

High School Exercises in Grammar

By MAUDE M. FRANK, Instructor of English in the De Witt Clinton High School, New York City. 206 pages. 75 cents.

A review of grammar with exercises specially adapted to high schools.

An Anthology of Modern English Prose (1741 to 1892)

By ANNIE BARNETT and LUCY DALE, late Scholar of Somerville College, Oxford. 264 pages. $1.25 net.

The Teaching of Latin and Greek in the Secondary School

By CHARLES E. BENNETT, Professor of Latin, and GEORGE P. BRISTOL, Professor of Greek; both of Cornell University. (American Teachers Series.) NEW EDITION containing 354 pages, with a Colored Map, Bibliographies and Index. $1.50.

The Teaching of History and Civics in the Elementary and the Secondary School

By Professor HENRY E. BOURNE, B.A., B.D., Professor in the College for Women, Western Reserve University, Cleveland, O. (American Teachers Series.) NEW EDITION with Bibliographies and Index. 395 pages. $1.50. "A book which every teacher of history should have at hand for constant reference."—Bernadotte Perrin, LL.D., Professor of History, Yale University.

Public School for Girls

Series of Papers on their History, Aims, and Schemes of Study

By members of the Association of Head Mistresses. Edited by SARA A. BURSTALL, President of the Ass'n of Head Mistresses, and M. A. DOUGLAS, Chairman of the Curricula Sub-Committee. 318 pages. $1.30 net.

Elementary Practical Mechanics

By J. M. JAMESON, Head of the Department of Physics, School of Science and Technology, Pratt Institute, Brooklyn. SECOND EDITION. $1.60.

Elements of Plane Trigonometry

By DANIEL A. MURRAY, Ph.D. (Johns Hopkins); Professor of Applied Mathematics, McGill University, Montreal. *Just Ready*

An entirely new book, limited to the essentials, stated as concisely as possible.

Hand-Book of Commercial Geography

By GEORGE G. CHISHOLM, M.A., B.Sc., Fellow of the Royal Geographical and Statistical Societies. EIGHTH EDITION, revised throughout and extended. 732 pages. $4.80.

Individualism

Four Lectures on the Significance of Consciousness for Social Relations.

By WARNER FITE, Professor of Philosophy in Indiana University, Author of "An Introductory Study of Ethics." 321 pages. $1.80 net; by mail, $1.92.

". . . . . Prof. Fite's study is of particular interest to students of philosophy, for he takes issue with Professor Royce, Professor Dewey and other present-day philosophers on certain basic concepts, but the more general reader will also find the work helpful in getting his bearings as an individual and a member of society. Something of Nietzsche's robustness and self-respect, without his ruthlessness, and of the Utopian's idealism, without his mysticism, are discernible in the philosophy of life here set forth."—Springfield Republican.

The Principles of Electro Deposition

By SAMUEL FIELD, A.R.C.Sc. With 121 diagrams in the text. 399 pages. $1.80 net.

A Laboratory Guide to Electro-Plating.

New Ideas on Inorganic Chemistry

By DR. A. WERNER, Professor of Chemistry in the Universty of Zurich. $2.50 net.

Translated, with the author's sanction, from the second German edition, by Edgar Percy Hedley, Ph.D., A.R.C.Sc.I.

Qualitative Analysis (Inorganic and Organic)

Third edition, revised and enlarged, with illustrations and plates. $1.50.

By F. MOLLWO PERKIN, Ph.D., head of the Chemistry Department, Borough Polytechnic Institute, London.

Constitutional Law in the United States

By EMLIN McCLAIN, LL.D., Justice of the Supreme Court of Iowa, sometime Lecturer on Constitutional Law at the State University of Iowa. SECOND EDITION, thoroughly revised, with Bibliographies, an Appendix of Documents, and Index. 476 pages. $2.25.

Mechanics for Engineers

By ARTHUR MORLEY, M.Sc. With 200 Diagrams and numerous examples. THIRD EDITION. 302 pages. $1.20.

A Text-Book of Geology

By PHILIP LAKE, M.A., F.G.S., Royal Geographical Society Lecturer in Regional and Physical Geography in the University of Cambridge; and R. H. RASTALL, M.A., F.G.S., Fellow of Christ's College, Cambridge; Demonstrator in Geology in the University of Cambridge. With 32 full-page plates and 134 figures in the text. 510 pages. $4.50 net.

Longmans' Historical Illustrations

Illustrating English costume, architecture, ships, furniture, occupations, amusements, etc.

A series of 6 strong cardboard portfolios each containing 12 plates (each 12 in. x 9½ in.). Drawn and described by T. C. BARFIELD. 90 cents net, each portfolio, postpaid.

A Manual of English Church History

By Rev. CHARLES HOLE, B.A., Trinity College, Cambridge. 502 pages. $1.25 net.

SOME PROBLEMS IN PHILOSOPHY. A Beginning of an Introduction to Philosophy.

By WILLIAM JAMES, LL.D. 8vo. $1.25 net; by mail, $1.38. [*Immediately*

This was planned as an introductory text-book in Metaphysics and was purposely written with reference to class-room needs. At the same time, the author desired also to present in it his ripest judgment on some of the most fundamental problems known to philosophy. "Say," he wrote in the memorandum directing its publication, "that I hoped by it to round out my system which now is too much like an arch built only on one side." The book begins with a defense of philosophy against its critics and an exposition of its problems. It then analyzes in turn the problems of the relation of precept and concept, of the one and the many, of novelty, of the infinite and causation, and concludes with a discussion of "Faith and the right to believe." Though the book is unfinished, what it offers is complete in itself and develops still further the author's great pragmatistic programme of furnishing "a platform on which empiricism and rationalism may join hands in a concrete view of life."

BOOKS FOR SCHOOLS AND COLLEGES

Howland's Lessons in English

By GEORGE C. HOWLAND, University of Chicago.

Elementary, 40 cents net. Advanced, 60 cents net.

These books are designed to cover the work in Language and Grammar usually done in Elementary Schools.

The method is unlike that of either the old-fashioned Grammars or the new so-called Language books. The former emphasized the mastery of rules and definitions, and the latter, the study and interpretation of Literature. One has to do with the *memorizing* process, the other with the *imitative*.

The Howland books recognize both these methods, but *vitalize* them, and work them out in such a way as to develop their proper functioning. The result is a well-balanced set of books in which the THOUGHT SIDE is brought out.

The ability to memorize rules and definitions is no longer regarded as a fair measure of the pupil's progress.

Write for introductory terms and discounts to schools.

Sherwin Cody's World's Best Series

Practical books for use in the study of English. Printed on thin Bible paper and bound in a convenient size. $1.00 net per volume.

THE WORLD'S GREATEST SHORT STORIES
A SELECTION FROM THE BEST ENGLISH ESSAYS
A SELECTION FROM THE WORLD'S GREAT ORATIONS
A SELECTION FROM THE GREAT ENGLISH POETS
THE BEST POEMS AND ESSAYS OF EDGAR ALLAN POE

A circular describing "The World's Best Series" will be mailed upon request.

Biblical Stories Retold for Children

By EDITH OGDEN HARRISON

These books contain the best short fairy stories for children that Mrs. Harrison has written. Each of the three books contains two and they make a valuable addition to any school library for use by the primary and intermediate grades.

"THE MOCKING BIRD" and "SUNRISE AND SUNSET"
"LADDER OF MOONLIGHT" and "COTTON MYTH"
"POLAR STAR" and "AURORA BOREALIS"

Each with frontispiece in color. Per volume, 50 cents net.

Two Books which commend themselves at once for school library inclusion and for supplementary reading in connection with class work.

Donkey John of the Toy Valley

By MARGARET W. MORLEY

This was one of the books included by the New York State Library in its short selected list of the Best Books Published in 1910. It is a charming tale of the wooden-toy makers in a famous Austrian valley. The illustrations are reproduced from a collection of the quaintly carved toys and are unique. $1.25 per copy.

Maggie McLanehan

By GULIELMA ZOLLINGER

All of Miss Zollinger's stories are regarded by educators as first-class pedagogy and the quaint, homely philosophy and irrepressible humor in this story of Irish life make it at once a favorite with young people. $1.25 per copy.

In addition to the titles mentioned here we have a number of others eminently desirable for school library and supplementary purposes. They are all described in our "List of Books for Supplementary Reading, School Libraries, Teachers, and Parents," which will be mailed on request.

Correspondence with reference to introductory terms, or the purchase of single copies, is invited.

A NEW

Variorum Edition

OF THE WORKS OF

William Shakespeare

Edited by
HORACE HOWARD FURNESS

This edition of the works of Shakespeare, prepared by one of the foremost living Shakespearian scholars, has been received everywhere with the greatest possible favor. It is the most exhaustive edition of the plays of the great dramatist, containing, as its name implies, a record of the notes and textual readings of all the editions that have preceded it. Dr. Furness has also added new notes, and articles on the text, date of composition, sources of plot, etc., of the different plays.

The VOLUMES which have thus far appeared are:—

ROMEO AND JULIET
HAMLET (two volumes)
MACBETH
Revised edition by
HORACE HOWARD FURNESS, Jr.

KING LEAR
OTHELLO
THE MERCHANT OF VENICE
AS YOU LIKE IT
THE TEMPEST
A MIDSUMMER NIGHT'S DREAM
THE WINTER'S TALE
MUCH ADO ABOUT NOTHING
TWELFTH NIGHT
LOVE'S LABOUR'S LOST
ANTONY AND CLEOPATRA
RICHARD THE THIRD
Edited by
HORACE HOWARD FURNESS, Jr.

"Encyclopædic and exhaustive."—Dr. *William J. Rolfe.*

"To the honor of the American branch of English literature."—*Richard Grant White.*

"Splendid alike in conception and execution."—*Atlantic Monthly.*

"Indispensable to every student of Shakespeare."—*The Nation.*

WATSON
ON THE
CONSTITUTION
OF THE
United States
Its History, Application and Construction

By DAVID K. WATSON, LL.B.; LL.D., of the Columbus, Ohio, Bar

This great, this magnificent work is considered the most philosophical and comprehensive treatise extant on the Constitution. In all sections of the country, legal critics agree that nothing more exhaustive or more profound has appeared on the Constitutional Law of the United States. It is the work of a lawyer, as well as of a close student, and has the merit of combining both points of view, which renders it valuable alike to all classes of readers.

The numerous decisions of the courts which are cited, its frequent references to the proceedings of the Constitutional Convention and its historical treatment of the various provisions of the Constitution, make it the most reliable work which has yet been issued concerning this great Instrument of which it treats.

Copious and reliable foot-notes, appearing on almost every page, add greatly to its historical and literary value. The subjects of Interstate Commerce; Amendments; The Federal Judiciary Before The Constitution; The Power of The Judiciary to Declare Laws Unconstitutional; Police Power; Corporations; Combinations; Acquisition and Government of The National Domain; Taxation; and Due Process of Law, are all exhaustively dealt with.

The work is published in two large volumes, handsomely bound in buckram. $12.00 delivered.

By William B. Price and Richard K. Meade. 12mo, cloth. (June.)

Analysis of Paint and Varnish Products

By Clifford Dyer Holley. Large 12mo, cloth. (August.)

ABOUT BOOKS

¶ Here is a group of new books of varied character and interest that you should consider for your library:

The Danger Zone of Europe By H. CHARLES WOODS, F.R.G.S.

¶ Mr. Woods tells impartially of the changes and problems in the Near East as the result of two extended visits since the advent of the Constitutional régime in Turkey.

He devotes special chapters to the Turkish Army, the Military Revolution in Greece, the Cretan Crisis, the Albanian Question, the Independences of Bulgaria, and the attitude of the Young Turks towards the Armenian massacres.

¶ A 328 page book with 3 maps and 52 illustrations, including signed photographs of leading men, sold at $3.50 net; by mail, $3.66.

¶ Of great human interest and permanent value is

Ancient, Curious and Famous Wills By VIRGIL M. HARRIS

¶ Mr. Harris, who is a lecturer on wills at the St. Louis University and an officer of the Mercantile Trust Company of that city, has utilized his rare collection of about 500 wills, principally left by men and women famous in history from the time of Adam down to Mary Baker Eddy.

These last testaments of such men as the patriarch Jacob, Virgil, Cæsar, Columbus, Voltaire, Washington, King Charles I, Shakespeare, show the vagaries of the human mind.

¶ There are in addition chapters on Will making, Wills in Fiction and Poetry, etc. This is a serious work of 472 octavo pages, enlivened by the curious whims of the will-makers, and the author's comments.

Price $4.00 net; by mail $4.18.

¶ In the Modern Criminal Science Series, that series of translations of the best Continental literature on the subject, we have just issued

Crime, Its Causes and Remedies By CESARE LOMBROSO

¶ Lombroso needs no introduction to American readers. The work here selected for translation is his last general survey on the subject. Translated by Henry P. Horton. Price $4.50 net.

¶ The two previous volumes in this series, issued early this year are:

Modern Theories of Criminality, by C. Bernaldo De Quiros. $4.00 net.
Criminal Psychology, by Hans Gross. $5.00 net.

There are six more volumes by equally eminent authorities to be issued during the next two years. We should like to send you a complete descriptive pamphlet with a special offer.

SECOND IMPRESSION.

THE NEW LAOKOON

An Essay on the Confusion of the Arts

By IRVING BABBITT

Westminster Review: "The most stimulating contribution to Aesthetics that has appeared in England for twenty years. One may differ widely from the author's conclusions, but no one can fail to be struck by his boldness, brilliancy and originality."

Oxford and Cambridge Review: "Professor Babbitt's book puts the matter broadly and without pedantry; his language and treatment are vigorous and sharpened by pieces of cutting wit. . . . It will serve as another outpost on the threatened frontiers of literature and learning."

Contemporary Review: "Mr. Babbitt's concluding chapter is the portion of this brilliant book to which we would draw special attention, for in it he finely and bravely attacks the causes of that decadence in every form of art that now oppresses the Western world."

Richard Müller-Freienfels in **Zeitschrift für Asthetik:** "Unmistakably a work that displays not only substantial learning but an abundance of original and independent thought. . . . As a whole it is a judicious, an interesting, a stimulating book."

Crown 8vo, $1.25 net. Postage 10 cents.

HOUGHTON MIFFLIN COMPANY,
BOSTON NEW YORK

Dr. Schoepf of the Ansbach Troops:

TRAVELS IN THE CONFEDERATION

1783–1784

The work of an extraordinary observer whose American Notes are unquestionably the best for that interesting period.

DISTURBING ELEMENTS IN THE STUDY AND TEACHING OF POLITICAL ECONOMY

By JAMES BONAR
M.A. (Oxford), LL.D. (Glasgow)

156 Pages. 8vo. Cloth. Price $1.00

This volume consists of five lectures delivered at the Johns Hopkins University in the Spring of 1910 by Dr. James Bonar, the distinguished English economist now filling the office of Deputy Master of the Royal Mint, Ottawa.

Orders should be sent to

THE JOHNS HOPKINS PRESS,
BALTIMORE, MARYLAND

IMPORTANT BOOKS IN EDUCATION

OUTLINES OF ECONOMICS. Prepared by members of the Department of Political Economy of the University of Chicago. 120 pp., 12mo, boards; postpaid, $1.35.

THE EDUCATION OF WOMEN. By Marion Talbot, Professor of Household Administration and Dean of Women in the University of Chicago. 266 pp., crown 8vo, cloth; postpaid, $1.37.

QUESTIONS ON SHAKESPEARE. By Albert Harris Tolman, Associate Professor of English Literature in the University of Chicago. Vol. I. Introduction. 220 pp., 16mo, cloth; postpaid, 81 cents. Vol. II. First Histories, Poems, and Comedies. 364 pp., 16mo, cloth; postpaid, $1.09.

THE HIGHER EDUCATION AS A TRAINING FOR BUSINESS. By Harry Pratt Judson, President of the University of Chicago.

A notable contribution to an all important subject in education. 56 pp. 12mo, cloth; postpaid, 55 cents.

SOURCE BOOK FOR SOCIAL ORIGINS. By William I. Thomas, Associate Professor of Sociology in the University of Chicago.

Ethnological Materials, Psychological Standpoint, and Classified Bibliographies for the Study of Savage Society. 940 pp., 8vo, cloth; library edition, postpaid, $4.77; school edition, postpaid, $3.02.

THE UNFOLDING OF PERSONALITY AS THE CHIEF AIM OF EDUCATION. By Thistelton Mark, M.A., Lecturer on Education in the University of Manchester.

To study in the light of modern psychology "the characteristic endowments of human nature" and to "present a view of education which has the unfolding of personality as its central aim" is the purpose of this book. 224 pp., 12mo, cloth; postpaid, $1.07

THE ELEMENTARY COURSE IN ENGLISH. By James Fleming Hosic, Head of the Department of English in the Chicago Normal School.

A working theory of Elementary English, with a suggestive course of study in composition, grammar, word-study, reading, and literature. Graded lists of material provided. A practical guide for teachers, supervisors, normal school classes and parents. 152 pp., 16mo, cloth; postpaid, 82 cents.

FIRST-YEAR MATHEMATICS FOR SECONDARY SCHOOLS. 378 pp., 12mo, cloth; postpaid, $1.13.

SECOND-YEAR MATHEMATICS FOR SECONDARY SCHOOLS. 290 pp., 12mo, cloth; postpaid, $1.63. By George William Myers, Professor of the Teaching of Mathematics and Astronomy in the College of Education of the University of Chicago, Assisted by the Instructors in Mathematics in the University High School.

A new series which endeavors to give Mathematics a vital connection with the students' whole experience. The two texts cover the essentials of what is commonly required of all pupils in the first two years of secondary schools in this country, and include, in addition, the elementary notions of plane trigonometry through the solution of right triangles, as well as an introduction to some topics of formal algebra not usually treated in secondary texts.

Two Important Works on the Genesis of Christianity

DER VORCHRISTLICHE JESUS (*Enlarged Edition*).
ECCE DEUS: Die urchriſtliche Lehre des reingöttlichen Jeſus.

By WILLIAM BENJAMIN SMITH.

"Insbesondere in Professor Smith würde er einen Mann kennen lernen, den zu widerlegen wirklich nicht so leicht ist. Schon die theologischen Kenntnisse dieses Mathematikers stehen keineswegs jedem Theologen, auch nicht jedem strengwissenschaftlich arbeitenden, zu Gebote. . . . Noch überraschender jedoch wirkt die Kunst seiner wissenschaftlichen Methode. . . ."—*Schmiedel*, in *Vorwort* to *"Der vorchristliche Jesus."*

In "Ex Oriente Lux" Winckler agrees with Smith on the crucial question of *Nazaree-Nazareth*, in these words: "Vom Begriffe *neçer* ist die Religion derjenigen genannt, welche an den 'Retter' glauben: Nazarener-Christen und Nosairier. Nazaret als Heimat Jesu's bildet nur eine Bestätigung seiner Retternatur für das symbolisierende Wortspiel." Vol. II. pt. 2, 5, Anm. 20.

"Erst in den allerletzten Jahren ist hier ein entscheidender Schlag geführt worden. Und zwar durch den Amerikaner **William Benjamin Smith** in 'Der vorchristliche Jesus,' . . . So reiht sich hier, wie man sieht, ein Beweis an den anderen. Aeussere und innere Zeugnisse unterstützen sich gegenseitig. Und es scheint tatsächlich so, als wäre nun endlich für eine neue, wahrhaft geschichtliche Ansicht von der Entstehung des Christentums eine feste Unterlage gewonnen."—*W. v. Schnehen*, in *Das Freie Wort.*

"In der 2ten Abhandlung behandelt der Autor den Beinamen Nazoräus, den er mit guten Gründen auf die semitische Wurzel nazar zurückführt."—*Hans Vollmer*, in *Preuss. Jahrbücher.*

"Der grundlegende erste Abschnitt legt ein besonderes Gewicht auf den mehrfach vorkommenden Ausdruck τὰ περὶ τοῦ Ἰησοῦ. Diese Worte bedeuten in der Tat wohl nicht die Lebensschicksale Jesu als vielmehr die über Jesus geltende Religionsanschauung."—*W. Soltau*, in *Berliner Philol. Wochenschrift.*

"Il faut rendre justice à la science et à l'habileté de M. Smith: son travail est à ce point de vue très remarquable. . . . L'ouvrage de M. S. révèle une grande science et une habileté consommée."—*Eug. Picard*, in *Revue de l'histoire des Religions.*

"M. Smith est un érudit du plus grand mérite: les exégètes ne pourront plus désormais négliger les difficultés qu'il a signalées."—*Revue historique.*

"Het optreden op theologisch gebied van den mathematicus **William Benjamin Smith** is ontegenzeggelijk een hoogst belangwekkend verschijnsel."—*Meyboom*, in *Theol. Tijdschrift.*

"In seinem 'Ecce Deus' hat der Amerikaner mit staunenswerter Gelehrsamkeit in alle Winkel des Problems hineingeleuchtet und eine ganz neue Auffassung der evangelischen Geschichte angebahnt."—*Drews*, in *"Christusmythe," II. Teil.*

PRICE $1.50 NET. POSTAGE EXTRA.

NOTABLE NEW BOOKS OF FICTION JUST READY

NEW STORIES BY THE AUTHOR OF "THE VIRGINIAN"

Mr. OWEN WISTER'S

Members of the Family

A sequence of stories which bridge the years between the West of The Virginian's days in the sage-brush country and the modern West in its great telephone-wire net. There is unadulterated fun in them, now and then tragic motives are handled with a genuinely poignant touch. And of the last one—fit to rank with the unforgotten "Em'ly"—one critic says: "It should stand as a classic—the subtlest thing we have seen since first we read Maupassant, and infinitely healthier. Nor is this hasty extravagance, for as a matter of construction alone, . . . it is the work of a master."

Illustrated. Cloth, $1.25 *net; by mail,* $1.35.

IMPORTANT BOOKS ON TROPICAL FEVERS AND MOSQUITO INFECTION

YELLOW FEVER AND ITS PREVENTION

A MANUAL FOR MEDICAL STUDENTS AND PRACTITIONERS

By SIR RUBERT W. BOYCE, F.R.S.

With numerous plans and illustrations, $3.50 net.

This practical manual is a summary of the author's experiences and investigations on Yellow Fever in New Orleans, Central and South America, the West Indies and West Africa, and the subject is treated very completely, historically, geographically and clinically. It also contains chapters on Treatment, Pathology, Diagnosis, and Epidemiology. Prophylaxis and Entomology have a complete section to themselves. The book is illustrated by some 60 figures, maps, and charts, and is intended as a practical manual for the medical student and practitioner.

THE PREVENTION OF MALARIA

By MAJOR ROLAND ROSS, F.R.S., C.B.

Professor of Tropical Medicine, University of Liverpool, and Liverpool School of Tropical Medicine.

Illustrated, $5.00 net.

This work, by the discoverer of parasitic transmission of malaria by the anopheline mosquito, contains a short history of Paludism (malaria), a compendium of facts about the disease, its distribution, discussions on various points, details, descriptions, and comparisons of the various antipaludic measures, a discussion of the cost, the antipaludic strategy and state policy, accounts of work done in various parts of the world and its results, and condensed accounts of the parasites, the mosquitoes and necessary technique.

HEALTH PROGRESS AND ADMINISTRATION IN THE WEST INDIES

By SIR RUBERT W. BOYCE, M.B., F.R.S.

With 47 plates from photographs, microscopic enlargement, plans, etc., and one colored map. $3.50 net.

This epitomized record of the progress of sanitation and sanitary administration, mainly in the British West Indies, is of vital importance to every health officer in the United States, the Philippines or the Panama Canal Zone, to every business man having interests in the tropic or the Southern States and to every one having the amelioration of human conditions at heart.

MOSQUITO OR MAN

THE CONQUEST OF THE TROPICAL WORLD.

By SIR RUBERT W. BOYCE, M.B., F.R.S.

With 40 illustrations from photographs, microscopic enlargements, etc. $3.50 net.

A short history of the Tropical Movement in England and its subsequent expansion, together with an account of all the principal campaigns against Malaria, Yellow Fever, Tropical Anaemia, Sleeping Sickness, etc., throughout tropical and sub-tropical regions.

"There is probably no one who is more familiar with the conquest of the tropics for modern civilization by means of mosquito control and the prevention of malaria, yellow fever, and sleeping sickness by the destruction of insect germ carriers than Dr. Boyce. The book is therefore a capital first-hand authoritative account of actual practice, and not a second-hand compilation as are most popular books dealing with the subject."—*The Dial.*

STANDARD WORKS

BY A. D. HALL, M.A., F.R.S.

Director of the Rothamsted Experimental Station, Foreign Member of the Royal Academy of Agriculture of Sweden.

JUST PUBLISHED

THE FEEDING OF CROPS AND STOCK

By A. D. HALL, M.A. $1.50 net.

An introduction to the Science of the Nutrition of Plants and Animals, embodying the results of the latest and most careful experiments in Soil-Feeding, Plant-Culture and Scientific Animal-Maintenance, as well as in Farmyard and Artificial Fertilizers, expressed in simple, direct language, and especially addressed to the young agricultural student and the work-a-day farmer, but interesting to every intelligent man and woman.

SECOND EDITION, REVISED AND ENLARGED.

THE SOIL

AN INTRODUCTION TO THE SCIENTIFIC STUDY OF THE GROWTH OF CROPS

By A. D. HALL, M.A. $1.50 net.

"A careful revision of one of the most authoritative works in print (in A. L. A. Catalog), bringing it into accordance with the results of the latest research. The greatest addition is in the chapter on living organisms of the soil. There is a 3-page bibliography."—From the Bulletin of the American Library Association.

COMPANION VOLUME TO "THE SOIL"

FERTILIZERS AND MANURES

By A. D. HALL, M.A. $1.50 net.

This book deals not only with the history, origin, and nature of various fertilizers and manures in use, but also with their effect upon the yield and quality of crops, in practice. Much unpublished material has been drawn from the Rothamsted Experiments, but other series of field experiments have also been utilized to furnish examples elucidating the principles upon which manuring should be based.

THE BOOK OF THE ROTHAMSTED EXPERIMENTS

By A. D. HALL, M.A. With illustrations. $3.50 net.

In this book, an attempt has been made to set out the whole history of the Rothamsted Experiments in a form that will appeal to the intelligent farmer and to the student of agricultural science. The broad general outlines of each experiment are given, the reader being referred to the various original papers for the details, and the results are illustrated by simplified tables and as far as possible by diagrams.

E. P. DUTTON & CO., 31 West 23d St., New York

The Nation

NEW YORK, THURSDAY, MAY 18, 1911.

The Week

There are Senators who see in the proposed Arbitration treaty an unjustifiable limitation of their own constitutional prerogatives. The situation is well described in the New York *Times:*

> The treaty will be a slim affair in general terms, leaving many details to be settled when particular cases come up, and the Senators now believe that the treaty will bind them simply not to nullify the subsequent efforts of the Administration toward arbitration by any unreasonable position in regard to these details.

Exactly this the treaty of arbitration is intended to do: to let no question of detail interfere with the main principle that these two nations prefer peace to war as a means of settling their disputes. This is precisely the limitation which the people of the two countries, as a whole, are imposing on themselves: for the sake of this great basic idea, they are willing to give up the right to fight over details. This is precisely the idea which underlies every court of law: that in order to promote justice all litigants must bind themselves in advance to accept the court's decision, no matter how this or that detail may chafe. It is always within the power of the Senate to nullify arbitration by refusing its assent to legislation necessary to carry an arbitral award into effect. If ever the Senators' consciences compel them to so formidable a step, they will find they have the constitutional power. Their present objections would seem to point to cases involving their vanity rather than their consciences

---

To the man in the street, the United States Supreme Court's decision in the Gompers case presents the usual difficulties connected with a pronouncement by our highest tribunal. The technical victory is on one side, the concrete victory is on the other. The man in the street, who argues from concrete cases without looking into principles, may interpret the verdict in favor of Gompers as a victory for all that Gompers represents. Yet the Court took unmistakable ground in condemning the principle of the boycott, which was the essence of the matter in dispute, while reversing the judgment against Gompers and his co-defendants on technical grounds. Thoughtful people will find satisfaction in the court's pronouncement for the reason that, coming so soon after the decision in the Danbury hatters' case, it makes it hard for Labor to raise its classic complaint about the hostility of the courts. If, as the labor unions are wont to maintain, "capital" is always ready to take advantage of the technicalities of the law, it has now been made plain that the same technicalities can be invoked in behalf of the opponents of "capital."

Henry L. Stimson added to his reputation neither for good manners nor for intellectual power when a candidate for Governor of this State last autumn. His appointment to Mr. Taft's Cabinet must, therefore, be a satisfaction to him and his friends, since it gives him the opportunity to demonstrate anew in high public office just what his talents are. That he is an able lawyer no one denies; the Bank of North America and Charles W. Morse discovered that in and out of court. For a man of this type the office of Secretary of War offers many opportunities for distinction, as Mr. Root, Mr. Stimson's former law-partner, clearly proved. Besides his trained mind and public spirit, Mr. Stimson, by reason of his service as an officer in the best National Guard cavalry organization in the country, will take to Washington considerably more useful military knowledge than is the possession of the usual Secretary of War when he assumes office. The army needs the attention of a skilled administrator as rarely before. The War Department is run by a clique; the General Staff Corps is in danger of becoming a political machine, with its chief purpose the increase of army officers, in which direction it has been particularly successful of late years. The whole Department is unscientifically managed, over-officered, and wastefully conducted. There are millions to be saved to the Government within its walls, as the House Democrats are proving by their reorganization bills.

The truth is that, since Mr. Root's retirement, there has never been a real Secretary of War. That official of late years has been so absorbed by politics—notably Mr. Taft—and by colonial questions, the administration of Cuba, the Philippines, Porto Rico, the Panama Canal, etc., that the army as such has had very little attention, and the War Department has virtually run itself. Mr. Stimson will find under him two men of first-rate ability, Gen. Leonard Wood and Gen. Ainsworth, the adjutant-general, both of whom are apt to dominate if permitted. Gen. Wood's extreme militaristic ideas were voiced before the House Committee on Military Affairs on Friday of last week, although it has been announced that the President, who made Gen. Wood chief of staff, favored the bills Gen. Wood opposed. Men of this type know the ropes so well that they are virtually the masters of the War Department, and at times have written the Secretary of War's reports and formulated his policies. The situation, therefore, calls for a powerful personality as Secretary. So far as the colonies are concerned, Mr. Stimson is a follower of Roosevelt, an Imperialist, a New Nationalist in considerable degree, if we are correctly informed, and one from whom the Filipinos seeking independence may expect little sympathy. Like the new Secretary of the Interior, Mr. Fisher, Mr. Stimson represents distinctly the Roosevelt wing of the party, and gives the Cabinet a more progressive cast.

Senator La Follette seems capable of enduring every taunt and every accusation save that of disloyalty to the Republican party. Subtlety of mind no one has ever denied the Senator from Wisconsin. But we are close to the heart of metaphysics when a statesman insists that he can vote against policies inserted in the platform of his party, against a candidate for President pro tem. of the Senate, supported by the majority of his party, against measures earnestly advocated by the President of the United States elected by his party, and yet remain a loyal member of the party. However, conceded that no one has the right to read Senator La Follette out of the Republican party, why should he shrink from the possibility of the thing as if it were the worst

of fates? Is Senator La Follette, with all his radical views, still a fervent believer in the gospel that salvation can come only through the Republican party? Or are we to believe that however gone to the dogs the Republican party is to-day, the name, good-will, and fixtures are still worth fighting for?

With the induction into office last week in Butte, Montana, of a Socialist administration, there are now two municipalities of some importance in the United States under the rule of this party. According to the census of 1910, Butte has a population of between forty and forty-five thousand, against Milwaukee's 373,000. The political position of the Socialists in the former city, moreover, is quite different from that in Milwaukee, inasmuch as they have not a majority in the legislative council of sixteen members; but without the votes of the five Socialists neither of the other two parties can obtain the necessary majority to pass ordinances, and the administrative offices of Mayor, treasurer, and police magistrate are all in the hands of the Socialists. The election was won upon promises of economical and efficient business rule, and not by pledges of socialistic schemes impossible of attainment; and in his first message to the Council Mayor Lewis J. Duncan made simply a sober and sensible appeal for an honest conduct of municipal affairs. Butte's turning to the Socialist party, which has always been a strong third, comes after unsuccessful experiments in entrusting her government to so-called "reform" or "anti-Trust," to Republican, and to Democratic administrations, all within the past six years. Now, however, the people hold a weapon over the heads of those in power, in the law enacted by the last Legislature permitting the voters to decide to adopt the commission plan at any time; and with ready Western resourcefulness Butte stands prepared to make this last protest against party municipal rule if the Socialists fail.

Members of the Senate Labor Committee must have been moved to tears the other day as they listened to the pitiful entreaties of a delegation of Troy factory girls to please not deprive them of the privilege and the opportunity to work more than fifty-four hours a week. The manufacturers under whose auspices the working-girl delegation made its protest rose to the very heights of self-sacrifice when they pointed out that their own interest in the affair consisted entirely in sparing their girls the loss of wages that would surely follow, if women and children in the collar factories were not allowed to work more than nine hours. Altruism could go no further. In an age that has carried the business of accelerating legislation to the high point of perfection, an age when you can influence a Senate committee by sending it five thousand telegrams or fifty thousand postal cards, or threatening it with a refusal of campaign contributions, it is fine to come across an example of the good old method of influencing legislation, which consists in bringing forward a dozen workhouse children to say that they like to be underfed, or a gang of slaves to say that they like to be whipped, bought, and sold, or a delegation of woman factory workers to say that they like to work twelve hours a day and seven days in the week, and positively dislike air, light, and safe machinery.

Col. Roosevelt will hardly be dismayed by the sight of the placard bearing the legend "The Bigger the Family, the Higher the Death Rate Among the Children," which, a press dispatch states, happened to be put up at the Child Welfare Exhibit in Chicago at the very moment when his acceptance of an invitation to be a guest at the affair was received. To the large and vital question with which Mr. Roosevelt is so prominently identified there are many sides, and his vision is centred on only one; but the fact that in the congested districts of Chicago there is heavier mortality in families in which eight children are struggling along under the burdens of poverty and close crowding than in those families that have four or six children, does not give much guidance in the matter. In the first place, it is not to families in the city slums that Mr. Roosevelt's exhortations are directed; and secondly, there is the very important question, which always comes into statistical showings of this kind, how far the figures themselves indicate selection, and how far causation. Families of eight children, in such a situation as that of the Chicago slums, are, in the main, doubtless families in which traditions, habits, and standards of living are very different from those represented in the smaller families, in many things quite independent of the question of the number of children.

A tradition of long standing has ascribed the authorship of cities to men and of the open country to God. It is the habit of an author to rejoice in his works, but it may be doubted whether Providence is particularly pleased with Adams County, Ohio, or with those sections of Putnam County, New York, whose political standards have been so vividly described in the press. Private morality and public morality are not synonymous; but neither can they be absolutely separated. If criminal indifference to the first duties of citizenship is any index of the general moral tone of a community, it is clear that not Tammany at its worst, not even Philadelphia or Pittsburgh, has sounded the depths of degradation to which the rural voter in some sections has attained. It has recently been estimated that the purchasable vote in New York city is about 30,000 strong, or 5 per cent. of New York's total electorate. That modest 5 per cent. is dwarfed by Adams County's 66 2-3 per cent., or Putnam County's apparently unanimous venality. You cannot bring an indictment against an entire people, but in the case of Adams County they actually have indicted two out of every three voters.

Take it all in all, the inhabitant of the modern city has no cause to blush before his rural neighbor. The tradition of bucolic virtue goes back to the golden age; but it is a long way back to the golden age. The tradition took on new strength in the eighteenth century when the country was inhabited by laborious and God-fearing Corydon and Thyrsis, by simple-hearted Chloe and Strephon, whereas the city was the abiding place of Lovelace and ladies who patched their faces and broke their marriage vows. The nineteenth century witnessed a sharp reaction. It produced the terrible peasant types of Balzac and Zola, of Thomas Hardy and Gorky. Nevertheless, the tradition persisted out of sheer force of inertia. Popular melodrama continued to deal with the Lights of London and the Streets of New York. Even in France, the home of unblinking realism, a succession of writers have contrasted provin-

cialism with Parisianism, to the disadvantage of the latter. In popular political oratory the farmer has remained the backbone and sinew of the nation, while the city, with its Gay White Ways and its alien hordes, is the plague-spot of democracy. Habit is hard to break; but some day a writer of melodrama will depict the under-side of Dunton Four Corners or the perils that lurk for the young girl in Swinton Cross Roads, and the city will have been avenged.

We read that of all occupations farm life is the most hazardous; in support of which assertion, German statistics are cited to show that 45 per cent. of all accidents in industry occur among agriculturists, whereas mining, the steel and iron industry, and the building trade each contribute only 9 per cent. There is irresistible fascination in the idea that the man who feeds the pigs at night is engaged in a business five times as hazardous as the man who bestrides a steel girder forty-five stories in the air. However, refusing to succumb to the charm of this truly Chestertonian situation, we turn to a pageful of German statistics and find that in 1907 the number of agriculturists in Germany was ten times the number of miners, and nearly nine times the number of iron and steel workers. Five times as many accidents among ten times as many people puts somewhat a new face on matters and gives at least one instance in which fiction is stranger than truth.

Chicago will wait a long time for artistic bridges if Commissioner McGann has his way. He instructs the city engineer that endurance, efficiency, and economy should alone control the plans. Suggestions for "ornamentation and experimentation," he adds, these terms apparently expressing his idea of art, may be considered only upon his specific order. The difficulties, as he views them, are insuperable. First is the matter of cost. Then there is the painful fact that artists themselves have conflicting notions as to what constitutes art. "Some of them would think a scroll would be an ornament, while others would favor an eagle." No one will dispute the Commissioner's prudence in avoiding decision between such subtle differences of opinion. However, Mayor Harrison knows of bridges which even the quarrels of artists did not prevent from being a delight to the eye. At the risk of being charged with lack of patriotism, he boldly declares that in Europe bridges are works of art, though in this country they are often monstrosities. He saves himself from being thought utterly un-American, however, by shaking his head over the expense.

The commander of the foreign legion in the Maderist army bears the fairly well-known name of Giuseppe Garibaldi, and he is, as a matter of fact, a member of the family which seems destined to go down into history as the musketeers of liberty and revolution. The great Garibaldi himself, after achieving the emancipation of his native land, fought with the French armies against the invading Germans in 1870. With him were his two sons, Menotti and Ricciotti. After the death of their father, the two younger men continued the great revolutionary tradition in different parts of the world. Ricciotti, who died in 1904, the last of the great Liberator's sons, had fought with the Greeks against the Turks in 1897, been active in Cuba, and coöperated with the patriot movements in Albania and Macedonia. Undoubtedly, there is here an inherited love of battle; but it has been a talent always placed at the service of the juster cause or at least the under dog. For years to come it may be that just as there is no great international loan in which the name of Rothschild does not occur, or no great war from which the name of Krupp is missing, there will be few big or little struggles of emancipation without a Garibaldi in them.

By the full Government majority of 121 in a packed house of 603, the House of Commons on Monday passed the House of Lords Veto bill. Certain as the outcome was beforehand, the formal fact deserves note as marking an historic moment in the history of the English Constitution. No serious fears are entertained of the bill's failing to become law. The Liberal press takes for granted the King's promise to create a sufficient number of Liberal peers to override a hostile majority in the Upper House. It also points to the fact that the country at large has absolutely refused to rise to the Unionist appeal against Asquith's Constitution wreckers. The taming of the Lords is taken everywhere for granted. The question henceforward is not of the Lords' right to veto, but of the Lords' ability to survive. In other words, the Unionists, having really lost the first battle two years ago, when they allowed the Lords to reject the Budget, are now forming a second line of battle on the question of the reform of the House of Lords. And this is a matter in which they are more interested than the great mass of the Liberal party, pledged though it formally is to the task.

The charge of ritual murder brought by anti-semitic agitators against the Jewish inhabitants of Kieff, in southern Russia, has induced fears of a general massacre. The Jews of Russia are not to blame if the horror of the *pogrom* is still a real thing to them. To the outsider, however, in his safer vantage point, such an occurrence seems hardly possible. One thing that was clearly established during the revolutionary upheavals of a few years ago is that Jewish massacres are impossible in Russia without the connivance or the benevolent neutrality of the Government. When it was for the interest of the Government that the Jews should be attacked, they were attacked. There were Jewish massacres as long as massacre of the Jews was a part of the Czar's machinery for combating the revolutionary movement. Now that the revolution has been thoroughly put down, it is no longer for the interest of the Government that Jews should be slaughtered.

A Japanese statesman who does not regard Japan as a first-class Power strikes one as an anomaly, and Mr. Itakura's reason for his view only adds to its strangeness. In a military way, he grants, his country may claim to be among the leaders, but in other respects he thinks she should be placed among second or even third-class states. A combination between Japan and England he terms a union of a lantern and a bell, that is, a one-sided alliance. The daily life of lower-class Japanese, as shown at the recent Anglo-Japanese Exhibition in London, he points out, highly astonished those who had known only the bright side of Japan, pictured by Chamberlain and Hearn. Whence he concludes that, with trouble with Russia removed regarding Persia, Afghanistan, and Tibet,

Great Britain will not care to renew the alliance in 1915. If Mr. Itakura speaks for any large section of his countrymen, he reveals a trait that is more valuable than the possession of large armaments. That, in the face of the world adulation which they have received, the Japanese should not have lost the keen self-criticism that first enabled them to achieve greatness, is the guarantee of further achievement.

THE STANDARD OIL DECISION.

The three facts of fundamental importance in Monday's Supreme Court decision against the Standard Oil Company are these: The principle of the Anti-Trust Law has been again upheld. Its prohibitive provisions have been applied by a virtually united court, instead of by vote of five justices to four, as in the Northern Securities decision. Its scope has been defined with sufficient clearness to exclude from further consideration the preposterous applications of it which have played so great a part in recent misgivings on the subject. It had been imagined that the court, with a membership so greatly changed from that which rendered the decision of 1904, might retreat from its earlier attitude toward the great industrial combinations. This has not occurred. There can be no such dissatisfaction or uncertainty as surrounded the close decisions on the Northern Securities and the Income Tax. And there is also laid down a general principle which will dispose of such sweeping interpretations of the law, in reference to ordinary business contracts, as were contained in the Circuit Court's recent opinion on the Tobacco Case.

Concerning the Standard Oil itself, Chief Justice White's opinion clearly upholds the view of the lower court, that the company's acts and policies "operated to destroy the potentiality of competition." He recognizes "the prima facie presumption of intent and purpose to maintain the dominancy of the oil industry, . . . with the purpose of excluding others from the trade and thus centralizing in the combination perpetual control." Furthermore, he rejects the argument that, since complete control of sources of supply was not exercised by the company, no attempt at monopoly could have existed. Monopoly of the channels of distribution, acquired as it had been acquired by the Standard Oil, inferred substantial power of control in all branches of the industry. The decree of dissolution is accordingly reaffirmed, though with abundant time allowed for reconstruction of the business.

In its broader interpretation of the law, the court affirms, as a necessary purpose of the Act of 1890, "a consciousness that the freedom of the individual right to contract, when not unduly or improperly exercised, was the most efficient means for the prevention of monopoly." Assuming this, it declares that room is left for but one conclusion:

> It was expressly designed not to unduly limit the application of the act by precise definition, but while clearly fixing a standard—that is, defining the ulterior boundaries which could not be transgressed with impunity—to leave it to be determined by the light of reason, guided by the principles of law, . . . whether any particular act or contract was within the contemplation of the statute.

This part of the decision has been widely referred to as an innovation by the court. To understand its origin and significance, however, some review of previous anti-Trust litigation is absolutely essential. The law was drawn up in 1890 by Senator Edmunds, who declared, in a published letter of a year ago, that "the act was not intended to be an administrative act in any sense, but was intended to provide, in broad and all-embracing language, for the prevention and punishment of restraint of trade." If not an administrative act, then the Anti-Trust law evidently was a statute requiring judicial interpretation as to scope.

Now such limitation is not new in the decisions. Justice Brewer's deciding opinion, in the Northern Securities case of 1904, declared that "Congress did not intend by that act to reach and destroy those minor contracts, in partial restraint of trade, which a long course of decisions at common law had affirmed were reasonable and ought to be upheld." The Circuit Court, when deciding in 1909 this very case against the Standard Oil, set forth as the true construction of the act that "monopolies of part of interstate and international commerce by legitimate competition, however successful, are not denounced by the law and may not be forbidden by the courts." This tendency in interpretation was concurred in by President Taft and his advisers; an amendatory act drawn up by them proposed to insert a provision regarding intent at restraint of trade—such intent to be determined by the logical and necessary consequence of proven acts.

Congress did not adopt the amendment. It was obviously thought, and in our judgment rightly, that statutory restrictions would be a dangerous experiment, and that the courts were the proper machinery for interpretation. Possibly, however, the dictum of Monday's opinion was immediately called forth by the appearance in the lower courts of a radically opposite interpretation, when the senior justice of the Circuit Court, deciding against the American Tobacco Company in 1908, went so far as to declare that, under the Act of 1890, "two individuals who have been driving rival express wagons between two villages in two contiguous States, who enter into a combination to join forces and operate a single line, restrain an existing competition" and are presumably subject to the penalties of law. This interpretation was rejected, in his argument on appeal, by the very counsel in whose favor the case had been adjudged by the Circuit Court. It is finally disposed of by the new Supreme Court opinion.

We shall venture no opinion as to exactly how Justice White's restrictive definition will be applied in future cases under the Act of 1890. What will remain to be established, in such cases, is primarily a question of fact; the question of law under the existing statute may be held as reasonably settled. There has at least been no great difficulty in the past for observant men to frame their own opinion as to whether, in methods, scope, and purposes, a given combination did or did not transgress the bounds of legitimate trade restraint. The courts are more deliberate in making up their minds; but their task, and the basis for performing it, are the same. The immediate results of the Standard Oil decision, so far as concerns the community's general attitude, are that we shall hear on the one hand much less of random talk that our Government is assuming a reactionary attitude in its policy of restraining powerful capitalistic combinations, and, on the other hand, little of that frothy and futile assertion that restrictive laws are bound to tear down the foundations of the country's industrial structure.

THE FREE-LIST DEBATE.

The two weeks' debate on the free-list bill brought out a number of able speeches on both sides, some dealing chiefly with the general principles involved, others occupied with voluminous details. To attempt to give any idea of the particular merits of these arguments in a brief space would of course be out of the question; nor would it be worth while to single out for criticism the errors and defects which could easily enough be discovered in the great output of tariff talk that fills the issues of the *Congressional Record*. A few examples, however, of futility of one kind and another may in some degree be entertaining or instructive. Thus, a striking instance of that failure to come to grapples which so often chracterizes our Congressional debates is to be found in the speech of Mr. Moore of Pennsylvania, on April 28:

> But let us take up the bill which now bears the name of the gentleman from Alabama [Mr. Underwood], and see where it leads us. It puts upon the free list, first of all, "agricultural implements." And what was the duty collected at the custom houses on these important articles during the last fiscal year, 1905, for which we are given comparative figures? Why just exactly $2,775. That was all the government received from the importer, and that is the amount which our Democratic friends propose to save to the American farmer.

Now, this would have been bad enough if Mr. Underwood had said nothing about the matter; but, as a matter of fact, in his speech opening the debate, the Democratic leader had said:

> The first articles we place on the free list are agricultural implements. Now, I desire to call your attention to this fact, that the census of 1905 shows that the domestic production of agricultural implements amounted to $111,345,000, that the importations coming into this country were less than $14,000, and that the duties paid at the custom houses from this magnificent tax levied on agricultural implements amounted to $2,775.
>
> You levied a tax at the custom house on the agricultural implements used by the farmers of this country, which only raised the pitiful sum of $2,775, and we propose to deprive the treasury of the United States of $2,775, and in lieu thereof to give to the American farmer absolute freedom in the purchase of the agricultural implements he needs for working his farm.

With a smaller hall, no desks, and a thoroughly reformed *Congressional Record*, there would be vastly less of the particular kind of futility that is illustrated by the first of these quotations.

An old-time trouble with which the Republican orators had to contend was in evidence a number of times. Free-trade England was of course their chief resource in the way of bugaboo; but against the poison of fear thus introduced the Democrats were ready with the appropriate anti-toxin. Beside the low wages of free-trade England they insisted on putting the still lower wages of the protectionist countries of the Continent. Mr. Graham of Illinois, indeed, confronted a Republican colleague, who had been dragging out the British free-trade scarecrow, with a speech the latter gentleman had made during the discussion of the Payne bill, in which Congress was asked to make a careful inspection of wages in this country, and the wages paid in free-trade Europe. The table offered by the Republican orator had displayed the wages of bricklayers, stone-cutters, painters, etc., in the United States, Great Britain, Germany, France, and Belgium; with an enormous advantage to Great Britain over these Continental countries, the protectionist Congressman being apparently under the impression that Germany and France and Belgium were free-trade countries. But usually these gentlemen, though perfectly aware of the inconvenient fact, simply shut their eyes to it. Thus Mr. Hill of Connecticut, winding up one of the important speeches of the debate with a portrayal of the horrors of British free trade and low wages, met an interruption of this sort as follows:

> Mr. Hardy: They have a high tariff in Germany. Are the laboring people any better off in high-tariff Germany than they are in free-trade England?
>
> Mr. Hill: Now, really, I do not want to stop in my line of thought to argue out a question of that kind. If you cannot draw your own conclusion from the things that I am going to tell you, from what I have seen, no argument that I could make would satisfy you.

There is one passage in Mr. Hill's speech that deserves to become classic. Turning from mere details, he took up the broad question of labor, basing his remarks on his personal experience in foreign travel. And this was his *pièce de résistance:*

> I was riding, I say, in the streets of Oxford one day in a cab, with the driver sitting in front of me, and I said to him, as we went down the street, "How much do you get for driving this carriage, or do you own it?" He said, "No; I do not own it. I drive it by the week." "What are your hours? When do you begin?" He said, "From nine o'clock in the morning." "How long do you work?" I said. "From nine in the morning until ten o'clock at night, and if I have a fare I stay with it until it leaves me."
>
> I asked him, "How much do you get?" He said, "I get $2.50 a week." "How old are you?" said I. He said, "I am fifty-five years old." "Have you a family?" He answered, "Yes; I have a family of five." I asked him, "How in the world do you manage to live?" "Of course, I cannot," he said, "but I have a son and daughter at work. The daughter is at work in a linen mill and she gets $2.25 a week, and my son is a printer, and gets $2.50 a week, and we manage to get along." There were three people at work, with an aggregate income of $7.25 a week.

In the face of this damning and conclusive evidence of the horrors of free trade nothing but irredeemable wickedness can account for the votes that were cast in favor of the free-list bill. There is, to be sure, one consideration that may, in a measure, break the force of the cabman's harrowing story. He belongs to a class which, even in the good old days of protection in England, plied its trade under strange difficulties. It was in the year 1827—long before the repeal of the corn laws—that Mr. Pickwick had *his* memorable encounter with a cabman:

> "How old is that horse, my friend?" inquired Mr. Pickwick, rubbing his nose with the shilling he had reserved for the fare.
>
> "Forty-two," replied the driver, eyeing him askant.
>
> "What!" ejaculated Mr. Pickwick, laying his hand upon his notebook. The driver reiterated his former statement. Mr. Pickwick looked very hard at the man's face, but his features were immovable, so he noted down the fact forthwith.
>
> "And how long do you keep him out at a time?" inquired Mr. Pickwick, searching for further information.
>
> "Two or three weeks," replied the man.
>
> "Weeks!" said Mr. Pickwick, in astonishment—and out came the notebook again.

THE PUNISHMENT OF CRIME.

From the Conference on Reform of the Criminal Law and Procedure which was held in New York on Friday and Saturday last it is clear that there are two different, and in some respects sharply contrasting, tendencies in this great field of human interest. Hardly a paper was read, hardly an address made, that did not reflect the feeling that an urgent necessity exists for far-reaching improvement in our methods of dealing with crime; but whereas most of the speakers dealt with specific—though perhaps very comprehensive—defects, and with concrete projects of practical improvement, there were some also whose utterances were directed rather to a general arraignment of the whole existing system of criminal law

and administration. According to this view, the methods of dealing with crime thus far prevalent throughout the world have been worse than useless; they have been simply means of manufacturing criminals and producing hopeless degradation among the unfortunate

Now, although this attitude toward the problems of the criminal law was represented in only a very minor part of the proceedings of the conference, it has been exercising a great deal of influence on general thought for a number of years past. If its only fault lay in wrong emphasis, it might be passed by; for there might be no harm in encouraging such humane movements as the juvenile courts, the probation system, and genuine reformatory methods, even though such encouragement were drawn from exaggeration. But the effects of such a view cannot be so limited. Take away, or undermine, the feeling that the institutions of penal justice, whatever their defects, are fundamentally sound, and you cannot fail to make their administration less energetic and more uncertain; and, as a matter of fact, it is the opinion of many sober students of the subject, both in this country and in England, that a considerable part of the crime of recent years is to be attributed to this sentimental enfeeblement of the criminal administration.

It is worth while to point out, therefore, that this view of the futility of the criminal systems of the world is vitiated by two cardinal fallacies. In the first place, it ignores what would have happened if the system had not existed. It is idle to decry a human institution of any kind on the mere ground that it is attended with evils, without attempting to show further that in its absence there would have been available a better system. Upon this plan there is no institution of mankind that could escape—and there is none that does escape—at the hands of irresponsible critics. The institution of marriage and the institution of private property can, without the slightest difficulty, be held up for their association with evils, and atrocities, and even horrors; yet sober men are not ready to cast them into the abyss until it has been proved that mankind would be better, or happier, without them. But in addition to this fundamental defect there is another almost as vital. By a remarkable oversight—all the more remarkable because so generally made, even by those who are not addicted to any dogma on the subject—attention is centred exclusively on those who fall under the ban of the criminal law, while nothing is said of those whom the existence of that law keeps altogether from straying. Yet until we consider the millions who, because of the traditions as well as the actual operation of the criminal law, are kept from even contemplating such an act as forgery or embezzlement or murder, is it not absurd to attempt to pass judgment on what the law has done or failed to do?

In striking contrast with such easy-going and irresponsible excursions into universal space were the papers that dealt with the specific improvements. Mr. Heney pointed the contrast most vividly in his comparison between law and medicine. It was a magnificent thing to discover and eradicate the source of yellow fever, but it would have been a monstrous thing for physicians to do nothing with the particular cases of yellow fever that presented themselves, because the ideal thing is to remove causes and not to cure "symptoms." The task of so regenerating society that it will produce no criminals is likely to occupy us for some time to come, and in the meanwhile such sagacious advice as that of President Taft, such exhortations—and such performances—as those of Mr. Heney, such carefully thought-out recommendations for the strengthening of the law and the expediting of criminal justice as were summarized in the paper read by Mr. McChesney, will be of measurable value in making the world as it is a better place to live in—a place with fewer criminals, more safety for the non-criminal, and more thorough satisfaction for that sense of justice which, from the dawn of history to the present time, has been one of the indispensable supports of human society and of individual character.

CITY GOVERNMENT BY COMMISSION

Whatever the fate of the Buffalo Commission Charter, the action of the Senate Judiciary Committee in reporting it to the State Senate may be looked upon as a concession to the growing demand for a change in the form of our municipal governments. Originating in the temporary government established in Galveston after the flood, the commission plan has had its most striking growth in the States west of the Mississippi. Today about two-and-a-half millions of people in one hundred and thirty cities scattered through twenty-five different States are living under some form of it. Most of these cities are under fifty thousand in population, but the plan seems to be working with success in such larger places as Dallas, Spokane, Tacoma, Oakland, Memphis, and Lynn.

The commission scheme has found little favor in the Eastern States, save in Massachusetts, where Gloucester, Haverhill, Taunton, and Lynn have adopted it. The New Jersey Legislature enacted a general law, on the recommendation of Governor Wilson, under which cities may, if they choose, adopt a commission form of charter without applying to the Legislature. New York began to feel the impetus of the movement a year ago, when three special bills providing commission charters for Buffalo, Mount Vernon, and Melzinga (Matteawan and Fishkill) were introduced. The first two failed of passage; the Melzinga charter was vetoed by Gov. Hughes, because it was carelessly drawn. This year there were seven commission bills before the Legislature, two proposing general optional laws for cities of the second and third class, and five special bills granting commission charters to Buffalo, Batavia Beacon (the new name for Melzinga), Mount Vernon, and Saratoga Springs. Last year, when the Buffalo charter was under discussion, Senator Hinman suggested that a bill should be drawn under which cities could reincorporate as they do now under the so-called White Uniform Charter act. This suggestion is carried out in the Wainwright bill for cities of the second class and the Gittins bill for cities of the third class.

The underlying principles of all these pending measures are the same. All are "short ballot" bills in that they place the administration in the hands of a small group of commissioners. Almost without exception, too, the charters take a long step in the direction of eliminating party politics from city elections by providing either for nominations by petition or by non-partisan primaries; and they go farther by providing that not only shall the Massachusetts form of ballot be used, but that it shall contain no party names or designations. Finally, they provide those agencies that have

come to be looked upon as going hand in hand with the commission form of government—the initiative, the referendum, and the recall.

The Buffalo charter, if enacted, would afford an opportunity to see how the commission plan works in a larger city than any that has yet adopted it. Similar charters have given satisfaction in cities of a hundred thousand, but Buffalo has more than four times that number. Another problem is whether it is possible to draw a general law, such as the Wainwright bill, which will fit the varying local conditions of all cities of the second class—that is, of places having a population between 75,000 and 150,000.

By far the greatest interest in this series of bills, however, attaches to the optional plan for the third-class cities introduced by Senator Gittins for the Lockport Chamber of Commerce. It is generally spoken of as "the Lockport plan," and marks quite as distinct a departure from the Des Moines plan as that plan did from the original Galveston scheme. Under the Lockport plan power is lodged in a council of five aldermen elected at large on a non-partisan ballot for a period of five years and subject to recall after six months on a petition signed by 25 per cent. of the voters at the previous election. Nomination is either by petition or by "deposit"—a method adapted from the Dominion of Canada Elections act—the deposit being returnable if the candidate proves by polling a certain percentage of the votes that he was a serious aspirant for office. The alderman polling the highest vote becomes chairman of the board, and has the honorary title of Mayor, but possesses no veto power. The initiative and referendum are provided for. But the most radical feature of this plan lies in the fact that the council selects a "city manager," who appoints all city employees subject to civil service rules, prepares the annual budget, and is responsible to the council for the administration of all the city departments except the schools.

Advocates of the Lockport plan contend that in the creation of this city manager lies the chief advantage of the plan over any other. It completes, they hold, the resemblance of the city government to the efficient private corporation. They see an advantage in a single-headed executive in place of the five-headed system of Des Moines, because it disposes of the conflict of authority and responsibility where the board as a whole is responsible for all the departments and where each commissioner is at the same time responsible for his own. The anomaly of commissioners in their legislative capacity passing ordinances which they enforce as executives, and voting moneys which they expend, is also obviated. It is contended, too, that the new plan frees the voter from the necessity of trying to gauge the fitness of candidates to undertake executive and technical work as department heads for which they may have neither the ability nor the inclination. It is believed that the list of available candidates will be greatly widened if the aldermen are not compelled to abandon their private business entirely. Under the Lockport plan they are simply the representatives of the people at the City Hall, with power to review, direct, advise, and criticise their employee, the city manager.

It is true that there is very little likelihood that any of these bills will get through the Legislature this year. But meanwhile the legislators and the public are becoming better acquainted with the principles involved in the commission movement, and are coming to know what it does and what it does not do, and how it is working in other States.

THOMAS WENTWORTH HIGGINSON.

Col. Higginson's death removes the last eminent survivor of the great New England age. Noteworthy in himself, he was still more noteworthy for having been deep in the confidence and the friendship and the plans of the reformers and writers and philanthropists who kept heroism and hope alive in this country. His own varied activity was enough to have given him fame had he not been associated with more famous men. But that was a penalty which he gladly paid. A productive author himself, he delighted in the higher reputation of his friends, Emerson and Longfellow, Lowell and Holmes. Instant in reform movements himself, he bowed spontaneously to Garrison. Younger than the protagonists of the philosophical and political movement of New England, he held up their hands while living, piously recorded their virtues when dead, and was content to sink his personality in that of the generation in which he was proud to have played a minor part.

We can hardly mistake in thinking that Col. Higginson's career was typical of his time. He had the many-sided alertness which was common in the New England of his early days. Preacher, writer, lecturer, reformer, soldier—he was ready to turn his energy to anything, and to do with his might what his hand found to do. There was in this a reflection of that indomitable and resourceful spirit which made his age so stirring. Beaten only to fight better, the men of that epoch did not noisily preach about strenuosity, but they were the truly strenuous breed. The bare record of their versatile labors is enough to appall a generation less daring and hardy.

Higginson touched life at many points, and at every point with zest. He carried into the advocacy of unpopular causes something of the lightheartedness of Wordsworth's Happy Warrior. He might have said of himself, what one of Dr. Johnson's acquaintances did: "I tried to be a philosopher, but cheerfulness was always breaking through." Higginson's good humor and serene temper and high hopefulness stayed with him throughout his life. The very title of his book of reminiscences, "Cheerful Yesterdays," was of the true essence of the man. If he had written another volume in his extreme old age, he might have completed the quotation and called it "Confident To-morrows." For to the day of his death he was stubbornly sanguine. A praiser of past time, he was also a prophet of the better new time to come.

This characteristic he shared with the men of the New England heroic age. They were perhaps the most unbending meliorists that this earth has ever seen. They knew that the world was bad in many respects, but they believed that it could be made over. It was for them to set about the work. In the existence of a great national injustice like slavery they saw a challenge which was to be taken up and taken up hopefully. Emerson at once applied himself to cutting away its intellectual foundations. Garrison let loose his inexorable propaganda. And the strange thing to us doubters is that they not only hoped but expected to succeed. As the transcendental philosophers of New England conceived of

the world of thought as something to be made over under their plastic touch, so did the reformers look upon political error and public wrong as simply the raw material for them to work with and subdue to their own will and sense of right. There was an immense hopefulness in that age and a kindling expectation of mighty revolutions. These things, too, Col. Higginson typified in his own person, both at the time and afterward.

He was happily endowed with a sense of humor, which helped to keep life sweet for him and, no doubt, prevented him from fretting away his strength. For the absurdities about him he had a keen eye, and did not overlook the whimsicalities or weaknesses of the men with whom he was making common cause. His amusing paper, a few years ago, on "The Eccentricities of Reformers" was a delicious example of the way in which he could indulge in what George Eliot called the "laughter of the intellect." But Col. Higginson was the kindest of men, ever willing to help the literary striver. As a reviewer for many years, especially of poetry, he was brought into touch with a large number of young writers, to whom he played the part of a generous but sagacious godfather. They will miss him now; as will also the many who may have had but slight personal contact with him, but who liked to think of him as a dignified and genial figure still shining in the tender light of a day that is dead.

NATIVE JOURNALISM IN EGYPT.

CAIRO, April 20.

When a European editor and a European newspaper manager were ordered to leave Egypt last December, it became evident that the Government had decided to show a firm hand by means of the press. These two men were conducting a French-Arabic paper owned by Nationalists, and they were expelled by their respective consuls because of an article attacking the Khedive. At about the same time the Coptic paper, *Al Watan*, received its second warning under the press law; and the month before, the extremist paper, *Al Lewa*, founded by Moustapha Kamel, the young head of the Nationalist party, received its second warning. In other words, if either journal commits another offence, it goes out of existence. And it is not an easy matter for an editor to tell exactly when he is going too far, as witness the fact that the Coptic paper received its last warning for writing a criticism upon Arabic literature. Another proof of this unintentional offensiveness came last summer when an American missionary review, *Al Mourshed*, saw fit to suppress itself forever. It had reprinted an English article upon the Moslem religion. This policy of the Government is a wide departure from the attitude of the Earl of Cromer, who regarded the native press as a safety valve for pent-up patriotism.

In an illiterate country like Egypt, it may be fairly said that the native press gives an almost certain indication of the most advanced stage of education. These daily articles by natives should show the existence of any literary achievement. And, above all, they ought to bring forth the real mental capacity of the higher Egyptians who are seeking constitutional government and the evacuation of the British. In a recent article in *Der Tag*, Berlin, Dr. Carl Peters said: "The Nationalist movement is conducted by the educated elements, such as officials, teachers, journalists, and students." Had Dr. Peters confined his statement to "journalists and students," he would have spoken more accurately. Indeed, when on February 20, 1910, Boutros Pasha, the Prime Minister of Egypt, was murdered by a political assassin, the London *Times* said that "the root of the mischief is the Egyptian press." It meant the Nationalist press; for the Arabic newspapers which are published in Egypt may be divided into three classes. The smallest but most respectable class comprises journals like *Al Mokattam*, which favors the British occupation. These are almost entirely edited and owned by foreigners, especially Syrians, who treat the Egyptian Nationalist and his pretentions to self-government with the utmost contempt. The second class is composed of the Coptic, or native Christian papers. They are also pro-English at heart, though their chief stock-in-trade consists in declaring that the British government neglects the Copt and favors the Mohammedan. But, strictly speaking, these Coptic newspapers are rarely included in the term "Egyptian press," as used, for instance, by the *Times*, nor are they included in what is about to be said concerning the Nationalist press. The reason is that the Coptic newspapers are not representative, as the entire Coptic community amounts to less than 8 per cent. of the population. The Mohammedan newspapers which speak for the Egyptian Nationalist party are made up of the journals that are read by the moderate and by the extreme Nationalists. It is difficult to define the difference between these parties, unless one were to say that the moderate Nationalist seeks the evacuation of the British in theory, while the extremist demands it in practice. The moderate desires to receive self-government gradually, whereas the extremist deems himself worthy of immediate constitutional government. The only way in which one can judge the capability of the Egyptian Nationalist is by his press. Let us see how he reveals himself.

In a recent article contributed to the *Nation* (July 28, 1910) by Saint Nihal Singh, entitled "English Literature in India," there appears the statement that "hundreds of thousands of natives in India now speak and write faultless English; millions of boys and girls today are acquiring a more or less intimate acquaintance with the English and American masters of prose, poetry, and drama." There could not be a more striking contrast to the situation in Egypt. It might be said that many educated Egyptians speak and write faultless French. But the native papers oppose in every conceivable way the introduction of the English language. The Ministry of Education announced last August that it was going to import twelve English teachers to teach English in the secondary schools; and the moment the fact became known the native press covered the English Adviser with a torrent of abuse. In the Egyptian University the courses of lectures have now been increased to eight; of these four are given in the Arabic language, three in French, and one in English, that being English literature.

So far from the Nationalist press opposing instruction in English, one would think that it would do the utmost to encourage these foreign professorships. Mohamed Said Pasha, the present Prime Minister, wrote rather strongly on this subject as far back as the year 1888:

> We are unable to cite a single Egyptian who, knowing Arabic exclusively, has been either distinguished, or even made a name, in modern sciences; a single Egyptian who has been able, with the Arabic language alone, to acquire complete instruction and education. On the contrary, we have others, who, with no better intellectual qualifications than the former, but knowing one European language and having made their studies in this language partly in Europe and partly in Egypt, have become really accomplished men.

The Prime Minister is himself an example of the highly educated Egyptian who speaks French as well as he does Arabic, but not one word of English. Yet the native press, jealous in its care of the sacred tongue of Mohammedanism, and also because of its intense hatred of everything English, fights the introduction of English teachers on every occasion. Here we have an illustration of the difference in character between the Indian and the Egyptian.

The most effective test of the native editor is the character of the articles which he employs to undermine the British influence. A year ago the Nationalist party appointed *Al Shaab* as its official organ; and in the very first week

of its existence it printed an article by a barrister-at-law, who is also a bey. It was entitled "The Withdrawal of England from Egypt." We select three sentences as typical:

In Malta and Gibraltar I noticed that England's policy was entirely the one of a nation about to withdraw. This, together with the rumored intention of evacuating Cyprus, will suffice to convince us of the fact that England no longer appreciates the route to India via the Suez Canal.

On my return to Egypt, I was asked to account for the present financial crisis, and I then said that it was due probably to the English people's intention to leave Egypt; and that in such a case the merchants, banks, and companies must collect their outstanding money and cease giving them any more.

Now, were a person who is not acquainted with the mind of the educated Egyptian to read the above lines, he would instantly say: "Here is some ironical satire of rather an unusual order." But this article is merely one of the numerous revelations of educated intelligence. What is of vastly more importance, it reveals the capacity of the editor of the official organ of the largest party in Egypt, at a time when, to quote the words of Lord Milner, "as a potentially independent state Egypt is having a last chance. Is she capable of profiting by it?" In his report for 1906, Lord Cromer said:

I do not remember ever to have read, in any of the newspapers of which I am now speaking, a single accurate, well-argued, or useful article on such matters as finance, education, or the working of the judicial system. On the whole, I think it may be said with truth that a constant perusal of those vernacular papers which strongly advocate Egyptian autonomy is well calculated to convince any one who, like myself, is most desirous to afford reasonable sympathy to Egyptian aspirations, that the rapid realization of those aspirations would be disastrous to the Egyptians themselves and to all interested in the welfare of Egypt. I commend the above remarks to the attention of the writers in these newspapers. Notably, I would observe that, if they wish to be taken seriously, and to obtain the ear of any but those who are wholly ignorant of Egyptian affairs, they will do well to base their conclusions on real instead of on purely imaginary facts.

No impartial person could possibly come to any other conclusion in regard to the Egyptian's potentialities as exhibited by his journalism, which is virtually his sole literary achievement at the present. Indeed, we are inclined to go further than Lord Cromer, and say that the really sad aspect of the situation is that the young Egyptians inherit qualities which a little education seems to intensify, and not to eradicate. Of the University of El Azhar in Cairo, to which 9,800 students are attached, Dr. Martin Hartmann, the Arabic scholar, says:

In reality the University has always been a theological seminary in which inefficiency, laziness, and the passion for intrigue have celebrated orgies.

It is that passion for intrigue which the native carries into his newspaper work; both the proprietors and the writers regard their journals as part and parcel of their personal plots.

D. W. Kittredge.

Correspondence

THE ENGLISH IN INDIA.

To the Editor of The Nation:

Sir: It would not have occurred to me to write you on so difficult and stormy a subject as India had I not been told, just as I am on the point of sailing for Europe, that a number of American newspaper men are travelling through the peninsula. Naturally, the majority of these gentlemen, possibly all of them, realizing how complex is the society upon which they are to report, will write with reserve and impartiality. There is danger, however, that some of them, under injunctions from the home office, or in the desire "to send in something spicy," or through lack of time to study the question, may influence public opinion in the United States to an extent not warranted by their knowledge of Indian affairs.

We are too apt to regard India as a vast country inhabited by Hindus. It is a vast country, but it is no more populated by Hindus exclusively than Europe is by Latins. The Hindus, racially speaking, form no more than a majority of the occupants of this great peninsula, and even they are divided into clans such as Bengalese, Mahrattas, Rajputs, etc., that rarely if ever look upon each other with a friendly eye. More serious still is the cleavage along religious lines. The contempt, the loathing, the bitter hatred which here actuate the Hindu, and, let us say, the Mahometan, are incomprehensible. Oil and water will mix as readily as these two sects will pull together in amicable union.

Nor are the Hindus themselves a homogeneous community. They are split up into countless castes that are as distinct as if stone walls divided them. They may not eat, they may not marry outside their own circle, nor may they do work of any kind which has not been exclusively theirs for generations. This slavery may be self-imposed, but it is no more to be escaped than the law of gravitation. It has been for ages, and will remain for no one can tell how many centuries to come, the one absolutely dominant factor in the Hindu's existence. Naturally, the institution of caste lends itself to—if it is not based upon—a ranging of the people on different social planes, each caste holding its own place in the scale, from which no human power seems capable of dislodging it. The whole Hindu system is founded on a strictly ordered and horribly cruel inequality. To our democratic ears the cry: "India for the Hindus," sounds as the yearnings of an oppressed nation for self-government, and it enlists our sympathy and something of our support. What does this cry mean to the Hindu himself? Individual freedom, the equality of all, the opening up of all avenues of progress to all natives of every creed, race, and caste indifferently? To the Hindu who lectures in our cities on Indian affairs, and who stirs our blood by the recital of his alleged wrongs, it means nothing of the sort. It means the handing over to the Hindus of the reins of government that they may rule in their own fashion—the upper castes holding all offices, handling all public moneys, dispensing their ancient substitute for justice.

Every American must wish that Indians may, sooner or later, enjoy real self-government, although the failure of true republics to maintain themselves within the tropics should make him doubtful of immediate success. If he visits their land and uses his eyes, he will recognize the magnitude of the task of fitting this congeries of people to guide their own destinies. They have, speaking generally, always been ruled by others—an experience which has left its mark on their character, and which has sapped their political backbone. They are hopelessly ignorant. Out of above three hundred millions, less than fifteen million men, less than one million women, can read or write any language. What this nation of agriculturists requires is peace, order, universal primary education, unbiassed and unbought administration of justice for a foundation stone upon which any lasting economic and social structure may be reared. All these, except universal education, the British rule (or raj, as it is called) has given to India, besides other benefits in the way of industry, commerce, irrigation, and higher education. In addition, there is an earnest effort to take the natives more and more into its councils and to trust them with more and more of the actual workings of the administration. *Festina lente.* He who would encourage a sudden and violent termination of the British raj would be as discreet as a man entering a powder magazine with a lighted torch in his hand. Such a counsel, if followed, would be attended by massacres of white men, women, and children, in comparison with which Delhi and Cawnpore would be afternoon teas.

Much is made of an assumed determination on the part of the British to treat the natives with contempt, and especially to have nothing to do with them socially. Put yourself in the place of the British officials before condemning them. How can they enter into friendly relations with a Brahman who looks upon them as unclean, their very touch pollution; who cannot eat with them; who regards their wives and daughters as lost to all shame, and characterizes them in words that may not be translated; who will not receive them in his house or permit them to cast their defiling eyes upon the female members of his family? With the very best of intentions, and a hearty desire to cultivate cordial terms with him, what can the British officials do? While I was camping out in Mysore my attention was called to a captain of police, a Chitpavin Brahman, detailed to guard the Governor of Bombay, then visiting those parts. "He is my subordinate," said his excellency to me, "but he would be disgraced and lose caste were he to dine with me, for in his eyes I am unclean."

It is idle to contrast our own attitude in the Philippines with that of the British

in India. We bought the former ("Ten millions of niggers, at $2 a head," was Tom Reed's description of the transaction), and we announced our platform from the first—to rule the islands in the interest of the natives and to train the latter to govern themselves. The British acquired India by conquest—not from the peasant and landholder, but from their masters, substituting a just and kindly rule for the tyranny and oppression of their predecessors. What they have done to raise the standard of living, to educate, to fight the plague, to mitigate the horrors of famine, to irrigate, to develop, should be remembered to their credit—for they were under no obligation, other than moral, to do these things. To have given a distracted country a hundred years and more of peace, justice, and order entitles them to fair treatment.

I leave India after a three months' residence, by no means idly spent, with a lively sense of my own ignorance and a reluctance to sit in judgment on either rulers or ruled. C. F. GOODRICH.

Bombay, March 14.

ARIZONA AND REPUBLICAN GOVERNMENT.

TO THE EDITOR OF THE NATION:

SIR: A republican form of government is not prejudicial to a democratic form of government and the Constitution of the United States in guaranteeing "to every State in this union a republican form of government" does not preclude any State in the union from adopting such direct methods of law-making as the initiative and referendum or such means of popular control over officials as is afforded by the recall. Republican government to the Fathers meant a government opposed to monarchy, whether that government was a pure democracy in which the electorate assembled and administered it in person, or a government administered by representatives chosen by the people.

Without this guaranty clause in the Constitution, said Mr. Gorham in the convention, "An enterprising citizen might erect the standard of monarchy in a particular State; might gather together partisans from all quarters; might extend his views from State to State, and threaten to establish a tyranny over the whole—and the general government be compelled to remain an inactive witness of its own destruction." Although eleven members took part in discussing this clause, not one uttered a thought that could be construed as hostile to democracy. All agreed that some safeguard against the establishment of monarchy in any State was necessary for the tranquillity and integrity of the union The *Federalist*, too, avowed this to be its purpose:

> In a Confederacy founded on republican principles, and composed of republican members, the superintending government ought clearly to possess authority to defend the system against aristocratical or monarchical innovations. (*Fed.* No. 4.)

Charles Pinckney also held that a republican government did not mean any particular form of government, but a democracy was also to him a republican government. "A republic," he said, "[is a government] where the people at large, either collectively or by representation, form the legislature." ("Elliot's Debates," IV, 328.)

James Wilson, too, defined a democracy and a republic in the same words. "A republic or democracy," says his definition, "(is) where the people at large *retain* the supreme power and act either collectively or by representation." ("Elliot's Debates," II, 433.)

According to Jefferson a democracy was the most republican government possible. The degree of democracy in a government, indeed, was to him the measure of its republicanism. "The further the departure from direct and constant control by the citizens," he said, "the less has the government of the ingredient of republicanism." (Works, Ford's Ed, X, 28.)

Madison, however, it must be admitted, repeatedly defined republicanism in terms of representative government. (*Fed.* Nos. 10, 14, 37, 39, 57.) He, unlike others, divided all anti-monarchical and anti-aristocratic governments into two classes, republics and democracies. In the former, the people legislated through representatives; in the latter in person, and in the fashion of a big assembly or folkmote. But in defining republican government as essentially representative, Madison stood alone. John Adams indeed, severely criticised Madison's definition, saying, that "his distinction between a republic and a democracy, cannot be justified. A democracy is as really a republic as an oak is a tree, or a temple a building." ("Life and Works," X, 378.)

If the initiative, the referendum, and the recall are not outside the pale of Hamilton's republicanism, then, those, who accept him as their oracle in all things political, might well be expected to join the Arizona and Oregon contingents in singing hosannas to the new democracy. Although republicanism seems to have had a connotation of representative government to Hamilton, I know of no passage in his works that ascribes this to be one of its fundamental and essential features. Republican government to him, too, was anti-monarchism. The exclusion of all constitutional rank he "denominated the corner-stone of republican government." (*Fed.* No. 39.) Having defined republicanism in terms opposed to monarchy, Hamilton, unlike Madison, did not define democracy in terms of anti-republicanism. Expressly, Hamilton never made any clear-cut distinction between republicanism and democracy, but that he tacitly did so we are justified in assuming, Gouverneur Morris's charge to the contrary notwithstanding. ("Elliot's Debates," I, 450; II, 254.) In the Carrington letter, he guilefully asserted that he was "affectionately attached to the republican theory." (Works, Fed. Ed. IX, 534.) He never sufficiently compromised himself to assert either his affection or his attachment for democracy.

At heart, Hamilton believed, of course, in both monarchy and aristocracy. His justification of these forms of government was rather unique. Although he thought the rich and learned vicious, as well as the plain people, yet their vices, he contended, partaking less of moral depravity, were of a more virtuous kind, and consequently more favorable to the state's prosperity than those of the poor and ignorant. ("Elliot's Debates," II, 257.) But in case it is not admitted that democracy, according to Hamilton's definitions, is essentially republican, it is well to remember that he championed republican government at all only in the sense that he despised representative government less than he despised direct and collective government by the people. HERBERT S. SWAN.

HOWE AND WASHINGTON.

TO THE EDITOR OF THE NATION:

SIR: In your notice of the "Military Study of the American Revolution," by Charles Francis Adams, you criticise the operations of Howe and Washington. In my opinion, neither of these commanders can be censured for blunders. Sailing down the New Jersey coast in a fine fleet was certainly an easier task for Howe than marching an army across the country to Philadelphia, through a hostile population, subjected to all the dangers that attend military movements.

Until a few years ago, regular communication was maintained between the Brandywine flour mills and New York by means of sailing vessels. As they competed successfully with the modern forms of transportation, these big sloops and schooners could not have found the voyage a long or difficult one. Anyhow, the manœuvre was successful, for, as Mr. Adams intimates, Howe was able to oppose Washington at the Brandywine with the better and stronger army.

Then, again, as to Burgoyne. Mr. Adams says Washington should have gone north immediately after Howe had left New York. Washington could not have known how long a period would elapse before Howe resumed active operations, and what would his interior lines have become as soon as he had started north?

The awful realities that confronted a revolutionary general in 1777 cannot be well appreciated by cultured gentlemen of our age, however great their accomplishments.

Hopewell, N. J., May 12.

ARCHIVES IN WASHINGTON.

TO THE EDITOR OF THE NATION:

SIR: Recently I was in Washington, and there saw some of the priceless documents in the archives of the State Department, such as the petition which Benjamin Franklin tried to present to George III, the treaties of peace of the Revolutionary war, the war of 1812, the war with Spain, the Emancipation proclamation, and numerous other treaties. These valuable documents and, in fact, all the records of the State Department, are piled carelessly, one on top of the other, in wooden cases in a room which is far from fireproof, in the State, War, and Navy building.

I had been hoping that some one would apply the lesson taught by the Albany fire to this case, but as no one has I am taking the liberty of drawing your attention to the matter, in the hope that you may use your influence to have something done to protect these treasures. An appropriation of a couple of thousand dollars would at least insure their safety. It is a shame that Congress has not done this already, although I am told that every session the matter has been brought up in one way or another. HUBERT W. FOWLE.

Boston, May 8.

MISPRINTS IN DEFOE.

To the Editor of The Nation:

Sir: An interesting error in the text of "Robinson Crusoe," which has just come to my attention, has apparently not been pointed out before. At any rate, no modern edition that I have seen corrects the reading.

In the description of the storm in Yarmouth Roads (Aitken's edition, Vol. I, p. 10), occurs the sentence, ". . . we rode with two anchors ahead, and the cables veered out to the better end." Should not "better end," which makes no particular sense as it stands, be read *bitter end*, the "better" of the old editions—it stands thus in the first, third, fourth, and sixth, and probably in all the others—being the typesetter's misreading of the MS.? In support of this emendation it is only necessary to quote an instance of the use of the term cited in the New English Dictionary under *bitter end:*

Capt. Smith: "Seaman's Grammar" (1627): "A Bitter is but the turne of a Cable about the Bits, and veare it out by little and little. And the Bitters end is that part of the Cable doth stay within boord."

The occurrence of "veere" in both passages makes it virtually certain that Defoe was using the nautical term.

Two other passages which contain unsatisfactory readings have come to my attention. The first, p. 137, line 23, is an obvious corruption, though the general sense is clear: "fancying the seeing the mainland, and in an inhabited country." The second is the use of *abated* on p. 188, line 5. *Abated* seems the opposite of what is meant, and some modern editions correct silently to *abetted*, which seems a good guess.

It is worth while, in this connection, to mention the fact that the text of Aitken's attractive edition of Defoe's narratives is not as reliable as is generally supposed. It seems to be pretty generally followed in present-day editions. The *de luxe* edition prepared by Dr. Maynadier, and sold widely with the imprint of various "Societies," is apparently a direct reprint of Aitken; it is certainly that, so far as "Robinson Crusoe" is concerned. Aitken's text is also taken as the basis of school editions of "Robinson Crusoe." But I have found, in a casual comparison of his text with that of the 1st, 4th, and 6th editions of "Crusoe," that its accuracy is unfortunately not to be relied on.

It is not necessary to do more than cite a few instances. The text is, of course, modernized in spelling, punctuation, etc. This, however, does not justify the editor in expanding the colloquial contractions of the text, such as "ha'," "I'm" (p. 104), "th'other" (p. 104); or in spasmodically correcting the grammar—as changing the "run" of the old text to *ran*, in one sentence, and leaving it unaltered in the next (p. 267, lines 1 and 3), changing "who" to *whom* (p. 300, line 11; p. 311, line 12), modernizing "fleet" to *float* in one passage (p. 256), and leaving it in another (p. 290), and falling into a similar inconsistency when the original reading in two cases is "other" instead of the modern *others* (p. 161, line 17; p. 301, line 9).

That this is not characteristic of "Robinson Crusoe" only I have proved by comparing with Aitken the first and second editions of "Duncan Campbell." Here, in a passage picked out at random, I find: p. 105, lines 15, 20, "'tis" and "can't" preserved, as in the original; do., line 13, "Duncan" dropped before "Campbell"; p. 106, line 22, "don't" expanded to *do not;* p. 107, line 36, *do* instead of "too"; p. 108, line 3, the mistaken interrogation point of the early editions preserved; do., line 26, *the time* instead of "that time"; p. 110, line 6, *it is* instead of "'tis"; do., line 35, *sight; up steps* instead of "sight. Steps un"; p. 115, line 16, *on* instead of "in"; do., line 19, *and* instead of "or"; do., line 20, *very kind* instead of "kind"; p. 120, line 32, *back* instead of "beck"; etc.

Apparently there is still opportunity for an ambitious editor of Defoe.

William T. Hastings.

Chords of the Zither. By Clinton Scollard. Clinton, N. Y.: G. W. Browning. $1.25.

At Sunset. By Julia Ward Howe. Boston: Houghton Mifflin Co. $1.25 net.

A reform of poetry is always accompanied by a reform of versification—witness Wordsworth and Hugo. Every school has its characteristic measure, whether blank verse, heroic couplet, or sonnet. The ages of Elizabeth, of Anne, of Victoria had each a rhythm of its own—Marlowe's "mighty line," Pope's even systole and diastole, and Tennyson's nostalgic cadences. Nor are the anxious staccato, the doubtful resolutions, the fluttering suspensions of our day less indicative. Either the respiration of the time is troubled or the poets have not yet succeeded in taking its pulse.

Even Mr. Rice, whose "Immortal Lure" shows a sense for dramatic situation if not for dramatic architectonics, has an unpleasant habit of catching his breath in the midst of what should be by rights blank verse and interjecting one or more short lines, which, however admirably they may represent the dissolution of soul that passes current nowadays for tragedy, suggest as clearly a disintegration of prosody too. It is, however, when the poet is brought face to face with the modern problem in his own person, as in lyric poetry, that the uncertainty of his metre becomes most striking. Here are three attempts to confront much the same sort of subject matter, with three different measures by as many versifiers. The first is from Mr. Smith's "Blossom of the Sea" and is called, elusively enough, "Shadows":

O Earth, colossal charnel heap,
To thee all life must tribute give;
Thou dost the dead of ages keep,
Shalt be the grave of all that live. . . .

O Earth, from days of dawning time
Hast thou been steeped in purple flood;
The monsters of the early prime
Contending drenched thee in their blood. . . .

But man with more undying wrath
The trail of slaughter hath pursued;
The taint of blood is on his path,
His brow with brother's blood imbued. . . .

O Earth, thou art the nurse of life!
O Earth, thou givest man his breath!
Then why this universal strife,
And why this carnival of death?

Is man in all the doom and din
But plaything for the whirling gust?
Is Life—this life that stirs within—
A passing eddy in the dust?

The second is a "Song of a Weary World," by Mr. Phillpotts, whose little book of verse, by the way, will seem to admirers of his novels but a doubtful venture:

——But so came Man, out of the ages blown—
A shining master-bubble on the crest
Of the last wave that Life had upward pressed—
And claimed me for his own. . . .

At first I joyed in him as at a boon;
Then wakened evil on my startled face,
Until I cursed this comprehending race,
And envied the dead moon. . . .

His purposes and good, his rights and wrongs,
Choke the sweet air, the clamors of his claim
Deafen my ear, deride his Mother's aim,
And strangle Nature's songs.

Lusting and lying, murdering his kind—
Each stronger kingdom at a weaker's throat—

He shrieks forever the discordant note,
This monster with a mind.

Dust of my dust—last and supremest race
Of races lifting on from age to age—
This conscious creature's awful pilgrimage
Maddens the eyes of space.

The third example, addressed to Palæolithic Man, is from Miss Newman's "Adventurers":

My Father! Lo, thy hundred thousand years
Are but as yesterday when it is past.
To-day thy very voice is in mine ears;
On mine own mirror is thy likeness cast. . . .

Be it however contoured, this frail cup
That holds the stuff and substance of my brain
From thy prognathic skull was moulded up:
Do I not share with thee the mark of Cain?

And shall I shudder at the thickened neck,
Full from thy shoulders to thy sloping head?
It bore the brunt of many a rout and wreck
That spared the slender loins where I was bred.

And do I blush, my Father, seeing how
Thy furry jowl is kindred to my cheek?
It shuts upon a tongue, I mind me now,
Which stuttering spent itself that I might speak.

The fact is that for this anthropological or ethnological sentiment which seems to be so popular just now, we have developed no inevitable form. But the same remark seems to be true of many other of our sentiments as well. There is the enthusiasm of democracy, of which Walt Whitman constituted himself the prophet. But Walt Whitman seems to have had no very large or influential posterity, in spite of a few inheritors of his spirit like Mr. Traubel with his lines on "My Dead Comrade, for W. W."

O my dead comrade—my great dead!
I sat by your bedside—it was the close of day—
I heard the drip of the rain on the roof of the house:
The light shadowed—departing, departing—
You also departing, departing—
You and the light, companions in life, now, too, companions in death,
Retiring to the shadow, carrying elsewhere the benediction of your sunbeams.
I sat by your bedside, I held your hand:
Once you opened your eyes: O look of recognition! O look of bestowal!
From you to me then passed the commission of the future,
From you to me that minute, from your veins to mine,
Out of the flood of passage, as you slipped away with the tide,
From your hand that touched mine, from your soul that touched mine, near, O so near—
Filling the heavens with stars—
Entered, shone upon me and out of me, the power of the spring, the seed of the rose and the wheat,
As of father to son, as of brother to brother, as of god to god!
O my great dead!

All that is certain about these efforts is the disposition to abandon the older forms of verse with the shifting of the feeling which they once represented. Miss Keller, for instance, whose writings are always significant as revelations of an exceptional consciousness, has a poem, in celebration of the stone walls of New England, which is of particular interest as an example of the manner in which poetic observation is affected by her peculiar circumstances. While some of the impressions seem merely borrowed and second-hand, much of her work sounds true to the conditions. But the important matter is her lack of confidence in the power of traditional measures to reproduce her state of mind:

Hear O hear! In the historian walls
Rises the beat and tumult of the struggle for freedom.
Sacred, blood-stained walls, your peaceful front
Sheltered the fateful fires of Lexington;
Builded to fence green fields and keep the herds at pasture,
Ye became the frowning breastworks of stern battle;
Lowly boundaries of the freeman's farm,
Ye grew the rampart of a land at war;
And still ye cross the centuries
Between the age of monarchs and the age
When farmers in their fields are kings. . . .

Sing, walls, in lightning words that shall cause the world to vibrate,
Of the democracy to come,
Of the swift, teeming confident thing!
We are part of it—the wonder and the terror and the glory! . . .

O eloquent, sane walls, instinct with a new faith,
Ye are barbarous, incongruous, but great with the greatness of reality.
Walls wrought in unfaltering effort,
Sing of our prosperity, the joyous harvest
Of the labor of lusty toilers.

Even Mr. Phillips, whose ear for rhythm is so unusually fine, is betrayed, by a dissatisfaction with the old bottles for his new wine, into a rather anomalous attempt to coerce a naturally stichic verse into stanzas—or, perhaps, the other way about, to deprive a naturally stanzaic verse of rhymes. Of his "New Inferno" the lines on Napoleon are by far the best; the remainder of the poem is vague and deficient in actuality:

"Behold the Cause!" he answered, and I saw
All motionless, upon a frozen Alp,
With dreary stare and hands behind him clasped,
The Corsican who shook and lost the world. . . .

Then, as he spoke, slow flakes began to fall,
And white in his own dreams the Emperor stood,
Roofed by the purple vault of his own mind,
And glassed upon a glacier of the soul.

But when the dreamy storm had ceased to fall,
Then I perceived how many others stood
Around him, Marshals, Captains, soldiers old,
Comrades of many battles of the Earth. . . .

Now falling pyramids I seemed to see,
And toppling cities, fire, and burning towns,
Whirlwinds of cavalry, storms of spears, and heard
Trumpets and neighing, drums, cannon, and cries. . . .

How good to hear the patter of earthly rain,
After that silent arctic of the soul;
Noises of summer dawn and far away
A sweet monotony of creeping seas!

Perhaps one of the most successful attempts to catch a new thrill with a new metrical trap is Mr. Mackereth's "Lion":

I met a Lion in the way;
Heigho! his eyes were wild!
A bright, magnificent beast of prey,
A daemon's child.
He scowled, and scowled,
With bristling mane,
And growled and growled
Like an angry pain.
He stood aloof: I liked him well.
Heigho! his ivories!
His lips were curled, and his smile was fell;
His breath steamed hot as the hate of hell,
Hot from the heart of hell. . . .
His lithe mass, rhythmic as a wave,
Sank rigid, to a passion wrought;
He seemed some splendid sin, a brave
Embodiment of treacherous thought. . . .
I had nor lance, nor any spear,
But a palm twig;
No doubt had I, nor any fear:
I stepped the gorgeous creature near
And plucked his wig. . . .
I tumbled the great tangled brute;
His smelling brightness spurned; my foot
I planted on his flabby mouth:
Prone lay he like a beast in a drought. . . .

The morrow-morn a man in arms
Fate that way drew;
His life was sick with his soul's harms,
And him the Lion slew.

This is quite modern and makes a suggestive pendant to Blake's "Tiger."

On the other hand, Mr. Scott, who is something of an innovator, too, tries his hand at experiments with the rhyming system—sometimes with rather odd results:

Upon my pathway shines the *Soul* of Parting,
Whispering words that even silence never speaks:
I gain your heart at last; the *dole* of Parting
Gives me the fulness that my transport seeks.

It is ill to question a poet's sincerity. To whoever publishes a volume of verse in these days must be conceded the convictions of his courage. But the fact remains that in one way or another most of these efforts seem a little factitious. The native feelings of humanity which carry conviction with them move to a simpler, more elemental beat. So it is in Dr. Burton's threnody on the un-

timely death of his friend, Arthur Upson, the young poet:

If there be torture for the dear ones gone,
It must be in the thought that they are quite
Forgotten: no one soul to reckon on,
Of all who pledged them faith in death's despite.
Alas, Sad Heart, if thou return to see
Another in thy place and strange to thee!

Hear me, dear Arthur, by whatever shore
Thou pacest! As the year brings round the rose,
As winter wanes and all the harshness goes
Out of the ground; as balmier airs restore
Midsummer's soft elysian miracle,
And earth resumes the witch-work of her spell—

I shall renew the sweet old habitudes
Were ours, forget thee never, cherish fond
Each look and tone and word, as one who broods
On something sacred from a land beyond
These present troublings; hear the oath I swear:
Where I am thou shalt be, forever there!

Is this a little commonplace? Perhaps so; but at all events it does not make the mistake of confounding difference with distinction. There is, after all, a kind of virtue, not only in the bare associations of the English pentameter, but in the replication of familiar echoes, in the suggestion of faint familiar tunes. It is some such cause as this to which the verse of the late Sophie Jewett owes at least a part of its charm, as in the little poem, "Brief Life":

He came with the wind of dawn, when rose-red clouds were flying;
In the glory of his coming the old world drifted dim.
He went when the evening star outwatched day's quiet dying;
His path upon the sea made a white straight road for him.

Did he dream a radiant dream in some wistful place supernal?
Did he hear the human call, follow and lose his way!
Has the touch of earth on the child made strange to him things eternal!
Is he heir to sorrow and love, being mortal for one swift day?

Nor is Miss Whitney's verse without something of the same quality modified by a kind of fancifulness personal to her:

I will write letters to my friend the grass,
I will sing all my songs to lilac flowers.
Gather the spices in the airs that pass,
And wrap my heart close shrouded to the hours.

I dread man's huge impertinence; he creeps
Thro' the inviolate silences of Spring
Like a marauder, waking that which sleeps
To gather strength for lyric blossoming.

I will write all my letters to the grass.
The world shall be resolved into a cry
Faint as a little voice that cries Alas!
And I will laugh alone beneath the sky.

In his "Chords of the Zither" Mr. Scollard reëvokes the spell of the Orient with its eternal antithesis of death and desire, of desert and aspiration:

Night and the desert and the quenchless stars—
Unfathomed mysteries—
The door whereto no mortal key unbars,
Lo, all things change but these!

Night and the desert and the quenchless stars—
I who have known your spell,
Shall I one day, when Death's dark door unbars,
Learn the unfathomable?

In the death of Julia Ward Howe poetry has lost another friend and familiar. While her memorable pieces are perhaps few, her "Battle Hymn of the Republic" is a poem that no one would willingly let die. Her last verse is written with her habitual evenness of temper—a little subdued, it may be, by the years. Particularly admirable are the composure and serenity with which in the manner of so many English poets she pronounces her valediction to a long and varied life:

I have made a voyage upon a golden river,
'Neath clouds of opal and of amethyst.
Along its banks bright shapes were moving ever,
And threatening shadows melted into mist.

The eye, unpractised, sometimes lost the current,
Where some wild rapid of the tide did whirl,
While yet a master hand beyond the torrent
Freed my frail shallop from the perilous swirl.

Music went with me, fairy flute and viol,
The utterance of fancies half expressed,
And with these, steadfast, beyond pause or trial,
The deep, majestic throb of Nature's breast.

My journey nears its close—in some still haven
My bark shall find its anchorage of rest.
When the kind hand, which every good has given,
Opening with wider grace, shall give the best.

CURRENT FICTION.

Account Rendered. By E. F. Benson. New York: Doubleday, Page & Co.

This story is built upon the old, old foundations—the impecunious lord, the designing dowager, the young and beautiful governess who turns out to be a great heiress. Twenty times a year the assiduous reader of British fiction renews his acquaintance with these classic figures, this immortal situation. They would become unbearably tiresome to the American reader, if long familiarity with British fiction had not given him a secondary set of standards for arm-chair use purely.

The original elements here are what may be called the incidental character of the dowager and the abrupt and dramatic ending. The dowager is, on the surface, very different from the type. She is neither stately nor angular, but a brisk, merry, modern, oldish person who refuses to be old and prides herself on being, under all circumstances, the life of the party. She unaffectedly likes the young governess for her own sake. But when the younger lady becomes a great catch, the elder crumbles into a wretched old party. There is a fourth person in the action, a young soldier whom Violet (for Violet is the governess's name, and violet the color of her eyes) has had a leaning toward, and who, with more than a leaning toward her, has nobly refrained from making love to a mere governess. He is ordered to Cairo; shortly thereafter governess becomes millionairess, and it only remains for the dowager to get in her dowagerly work. Discovering that Violet's fancy for the soldier is the obstacle to the matrimonial prosperity of the needy lord, she pretends to have had a letter from Cairo announcing the exile's engagement. So there you are: the girl marries the lord, whom she likes but not loves; the soldier comes back, and the two fall desperately in love; they are about to part in the name of virtue, when the dowager's trick is discovered. Exit dowager. Violet tells the truth to her husband, whereupon exit magnanimous lord, over a cliff. And then there were two.

The Making of a Fortune. By Harriet Prescott Spofford. New York: Harper & Bros.

This is a lady-like attempt to give to the merest airy nothing of a matrimonial difficulty a local habitation in the enchanted realms of finance and fashion. The setting is strangely flimsy, even for fairyland, being indicated by such wavering strokes as "those men in the millions," "a woman moving with those at the head of gay life," and—a euphemistic appellation for the criminal classes—"the world of the lower order of graft." Nor are the hero and heroine much more substantial than their surroundings; they, too, have every appearance of being spun out of the author's brain rather than modelled after actual human types. Mr. Aversleigh is "a gentleman, of extremely good temper and good appearance, of an old family, as families go with us, with a great many engaging and endearing qualities," "exceedingly temperate," "intuitively" honest, and "a tower of strength" on Wall Street. This mighty man of affairs marries a village maiden who is pure angel, and toward whom his attitude is one of "deplorable humility." While promoting her social triumphs and lavishing jewels upon her, he is ever secretly consumed by the suspicion that she does not, cannot love him for himself alone, a sense of marital

insignificance which is the more touching since it would not necessarily accompany the gentleman's other qualities in real life. His spiritual abasement before the lady, her child-like love of glittering adornment, the gift of a ruby *parure* worth a quarter of a million, a crucial moment in a railway deal—and nothing is lacking to Mr. Aversleigh's ordeal. Rather than put her affection to the test by asking for the gems, he purloins the necklace, has the setting filled with paste imitations, and covers up the theft by the pretended loss of a safe-key—only to be overwhelmed by the wife's voluntary offer of her jewels, nocturnal mutterings having betrayed to her his need of funds. Having thus deftly tossed the unfortunate Mr. Aversleigh from one horn of the dilemma to the other, the author leaves him firmly impaled and still writhing. Some time, she fancies, he will be able to take more comfort out of the situation.

The Old Dance Master. By William Romaine Paterson (Benjamin Swift). Boston: Little, Brown & Co.

When genial Austrian dancing masters turn out to be barons, and lovely daughters of cabmen to be the offspring of lords, though illegitimate, we all feel better. Yet the strongest interest of Mr. Paterson's story is not gilded rehabilitation, but unconventional portraiture and marvellous language. It is not often that the guardian angel of fiction is a dancing teacher; or that one meets a duchess so original as to hold long telephone conversations in the small hours of the night from her pillow with a sleepy wit on his, about a perplexing guest at her reception the evening before. Sir John Marduke, spending upon the masses the fortune his fathers had acquired in the slave trade, and finding his socialistic theories tested by his son's falling in love with a supposed daughter of the people, is drawn in a wholly unhackneyed way. So, too, the son in his unhesitating march toward marriage with the pretty daughter of the cab-yard. So, too, the aspiring hansom-driver, and the truly terrible old aunts. These are figures original to an extent; but it is in the language of each that is found real achievement in adaptation, the highest flight of genius being dedicated to the lowest orders of society. In the slang of cabbies and their women-kind, of London landladies and their boarders, of porters, bottle-washers, and ticket-of-leave men, there is an opulence of attainment which is positively vast.

Patsy. By H. de Vere Stacpoole. New York: Duffield & Co.

Whether such a being as Patsy ever was, on land or sea, the present reviewer does not know, but, if not, then the earth is poorer, as the world of fancy is richer, for his absence from the one and his presence in the other. Mr. Fanshawe pictured him when he remarked: "Patsy, as far as I can understand his character, is a compound of Machiavelli, Bismarck, Puck, and one of Shakespeare's fools all compressed into a page-boy in buttons." This description was suggested to Fanshawe by Patsy's latest trick of putting a cork into Lady Seagrave's ear-trumpet, which effectively interrupted conversation between her and Fanshawe's uncle, Gen. Grampound, and thus prevented the spoiling of an elopement between the general's nephew and his ward. No wonder that Miss Lestrange thought that Patsy seemed "to have had a lot to do with our affairs"; but, as Fanshawe pointed out, "Ireland is an accident factory. These things could never happen in England." One is glad, therefore, that Mr. Stacpoole took such of his personages as were not already there to Ireland. The result is as delightful a tale as one reader at least has perused in many a day. It presents just one problem, and that an old one—how to unite the hands, the hearts being joined fast enough, of two beings whom the duly constituted domestic authorities are resolved on keeping apart. Well, with Patsy to help it was not an impossible feat; and, besides Patsy, to make matters livelier, are the M.P. who loses his glass eye in an unexpected encounter, with disastrous results; Paddy Murphy, burglar and wag, and the children, who take the right side in the struggle with prompt and charming instinct.

The Shadow of Love. By Marcelle Tinayre. Translated by Alfred Allinson. New York: John Lane Co.

It is due in part to a wise choice of setting that this story of a young consumptive's love seems scarcely theatrical at all. The theatrical has been neutralized by the superstitions of the Limousin in which is situated our town of Monadouze. There the sense of impending fate is felt in the gulch and its cataract, in the village tolerance of a magician who "forges" his patient, in the chief hold which the curé has over his people—the fear of death. Even from the sunshine of the beautiful town the memory of the shadow is never quite absent. To this setting Jean Favières is brought, a poor, wasted man of twenty-three, to fight for life in the home of Dr. Cayrol, a widower, with a daughter, Denise, the senior of Jean by four years. The author proceeds to the business of the central theme, without apology or reservation, as a recorder simply of the inevitable. But impulse and instinct are tempered by character in both hero and heroine, and the steps of their affection, from its first glimpse to its urgent necessities, furnish a story of a rare and awful power. The translation reads like an original.

WESTERN LANDS.

Yosemite Trails. By J. Smeaton Chase. Boston. Houghton Mifflin Co. $2 net.

Lights and Shadows of Life on the Pacific Coast. By S. D. Woods. New York. Funk & Wagnalls Co. $1.20 net.

Heroes of California. By George Wharton James. Boston: Little, Brown, & Co., $2 net.

"Yosemite Trails," if it gets as many readers as it deserves, will give a powerful impulse to the "See America, Too" movement. Though its author is an Englishman, he declares that Wawona Meadows is the most idyllic spot he has seen anywhere, and throughout his book he bubbles over with enthusiasm over the sights he enjoyed in the Yosemite Valley, with its surroundings, and in the High Sierra beyond. Three journeys he has made through this region, and the time is coming, he thinks, when the highlands of this great California range, with their superb features of mountain, forest, river, glacier, lake, and meadow, and lying under a climate of unequalled regularity and perfection, will be the playground of America. Wonderful waterfalls there are, too, but Mr. Chase is inclined to think that too much emphasis has been placed on them, as compared with "the unequalled majesty of the cliffs"; and to these, therefore, he devotes more of his space than to the falls, giving four chapters to a description of a circuit of the Yosemite rim, which he made with no companions, except the burros that carried his supplies, and on whose peculiarities he frequently stops to descant entertainingly. A lover of solitude is this writer, and he likes it unadulterated and "enhanced by the presence of wind." Never in his life was he happier than one night when, having made up his mind to sleep on the very crest of the precipitous El Capitan, he felt as if he might be the last survivor on an asteroid.

Mr. Chase has written a treatise on the conebearing trees of the California mountains, and in the present volume also he has much to say about "that magnificent zone of firs" which he can "never enter without a feeling that approaches the religious." The impressiveness of the giant Sequoias seems to him of the architectural kind, giving the spectator an idea of how the Egyptians must have been affected by their vast temple-halls with the colossal figures of the king-gods of their race. But also, there are men who look on these big trees as mere curiosities, men who have indulged in the "childish, unsightly, and paltry practice" of marking them with the names of cities, states, and persons, thus, with their hideous tin labels, degrading the groves to the level of freak museums. The author also bewails the names of some of the scenic points and waterfalls of the Yosemite Valley itself—which, by the way, not being

really a valley, would have been better named Yosemite Gorge. By any name, however, it is a paradise for birds and men and flowers.

Of the mountainous features of the Yosemite region Mr. Chase likes best the hemispherical mass of solid granite known as Half-Dome, which is one of the world's geological wonders. Professor Whitney described it as "a new revelation in mountain forms," and Mr. Chase remarks that "one looks upon it almost as one would gaze at some majestic fragment of statuary." Having completed his circuit of the Yosemite rim, of which the Half-Dome is the climax, the author sets out, with some companions and a guide, to explore the high Sierra, visiting first the Hetch Hetchy Valley, which has come into such prominence of late because of San Francisco's outrageous attempt to convert it into a water-tank, making inaccessible, among other things, two waterfalls equal to those of the Yosemite, and superior to them in features of wildness. The campers saw none of the rattlesnakes which they had been told abounded here; but mosquitoes were in evidence, and these tormentors they found everywhere, more "malicious and diabolical" the higher they went, the only consolation being that at that altitude they soon succumb to the chill of the falling temperature after sunset.

While this mountain enthusiast is evidently as far as John Muir himself from holding with Ruskin that evidences of man's presence are essential to the perfection of natural scenery, he nevertheless brings the human element into his narrative in some charming pages on Indians, guides with tall bear stories, and a Mexican and his invalid musical boy. A map and a number of excellent mountain views enhance the value of this admirable book.

Mr. Woods also describes a jaunt in the snowy Sierra, and by way of contrast, takes his readers down to the mirages and the heart of Death Valley, where he found the midnight thermometer at 100 degrees, the midday at 125 in the shade. He makes one long to visit the Owens River Valley, with its mountain views—the valley made famous in the newspapers by the enterprise of Los Angeles in bringing down its waters by an aqueduct which is the eighth wonder of the world, being a hundred and fifty miles in length. The bulk of Mr. Woods's volume, however, relates to the cities of California and Oregon, particularly Los Angeles, San Francisco, and Portland. Samuel D. Woods, well-known as a lawyer in California, and for a number of years a United States Senator, went to the Pacific Coast at a time when ships required eight months. The vessel in which he sailed was driven by storms to within eight hundred miles of Africa, then had to return to Rio de Janeiro, and devote six weeks to readjusting the cargo. There are chapters on the old days in Stockton, when men were indifferent to all things except gold; on the old Spanish days in Los Angeles; on the later times of the spelling and singing schools, debating societies, and camp-meetings; but perhaps the most valuable chapters are those concerned with prominent San Franciscan editors, lawyers, doctors, preachers, and merchants of former times.

The heroes of California included in the third volume in our list were by no means all born in that State. Most of them were not; yet they helped to make California what it is. The book is one chiefly for boys, whose minds may be thrilled by these stories to emulate such heroes. There is plenty of variety for a choice, the names ranging from Alarcón, Diaz, and Junipero Sara, through the heroes of the pony express and Death Valley, to Starr King, Clarence King, James Lick, Adolph Sutro, John Muir, Helen Hunt Jackson, Luther Burbank, Hubert Howe Bancroft, and many others. Mr. James has done his work well; he is thoroughly familiar with the locale, having written several other books on California and the Southwest; and for this volume, he has had access to a good deal of unpublished material. His account of the career of the publisher-author, H. H. Bancroft, is a story of pluck and perseverance that could hardly be matched by a writer of fiction.

Beowulf. Edited by W. J. Sedgefield. Manchester: At the University Press.

Beowulf. Von Moritz Heyne. Neunte Auflage, bearbeitet von L. L. Schücking. Paderborn: Ferdinand Schöningh.

Studien zur germanischen Sagengeschichte: I. Beowulf. Von Dr. Friedrich Panzer. München: C. H. Beck'sche Verlagsbuchhandlung.

The Poems of Cynewulf. Translated into English Prose. By Charles W. Kennedy. New York: E. P. Dutton & Co. $2 net.

An edition of "Beowulf," with English apparatus, has long been needed; Wyatt's is out of date and was never wholly adequate, and Klaeber's has not yet seen the light. It is, therefore, with high expectations that one turns to Professor Sedgefield's substantial volume. To say that one's expectations are not altogether fulfilled does not imply that the present edition is not a manifest improvement over its predecessors in English. Placed, however, beside the revised Heyne-Schücking, which, now purged of its misprints, and its notes made more acceptable to the eye, represents as close an approximation to a *variorum* as we shall perhaps ever need, Professor Sedgefield's work gives the impression of having been done, not without learning, but with a certain lassitude. He is willing, for example, to omit all notes to the "Finnsburg Fragment" and refer the student to Schücking and Holthausen. Of the Finn episode itself only Möller's reconstruction, surely the least acceptable, is given in any detail. Kluge's treatment of the *elan crēn* crux (l. 63), in many respects the most successful, is not mentioned. A work which comes thus short of fulness cannot with advanced students supplant the Heyne-Schücking text.

But, if a *variorum* was no part of Professor Sedgefield's plan, many features deserve hearty praise. Variations from the MS. are carefully indicated in the text; rejected MS. readings and the name of the proposer of the accepted emendation are, where they should be, at the bottom of the page. The vocabulary is generous in its entries under the head-word (but *agweard* seems nowhere defined), and, excellent innovation, the stem of each noun is indicated. It was a good idea, too, to include texts of "Widsith," "Waldhere," and "Deor"; a vocabulary might have been provided for them. The text itself is reasonably free from the inevitable misprint; we notice only *golde* for *wolde* (l. 880), a lower-case letter beginning the sentence (l. 1069), period for comma (l. 1,488), *thæ* for *thæt* (l. 1,664), *semminga* for *sæminga* (l. 1,767), period missing (l. 1,865), *mæssas* for *næssas* (l. 1,912), *rhyhtsele* for *dryhtsele* (l. 2,320); *ho* (l. 3,171) has a very strange look. The omission from the text of all marks of quantity is greatly to be regretted.

Professor Sedgefield also provides a selected bibliography and an introduction, summarizing the criticism of the poem. Here he adopts a somewhat noncommittal attitude between the older view which saw in "Beowulf" a degenerate myth, and the position, most elaborately worked out by Dr. Panzer, which regards it at bottom as a *Märchen*.

Dr. Panzer makes a more careful study of the class of *Märchen* known as the "Bear's Son," widely distributed at present and demonstrably reaching back to the common Indo-Iranian period, in which the hero, in another world, fiercely encounters one or more demoniac beings, by this means freeing several damsels, of whom he is robbed by his faithless companions, and only after further adventure succeeds in identifying himself as the rescuer, and marries the fairest. This central episode is introduced by various formulæ: involving the *enfances* of the Bear's Son and an encounter in a lonely house with a demon; or a night-watch in a king's palace or garden, the youngest proving the best.

A tale belonging to this general group of the "Bear's Son" is the basis of Beowulf's deeds at Heorot; the dragon fight is an independent, widespread, though

always localized, folk-saga (Thor). These were put together by a Scandinavian *scop* and attached to an historical Beowulf of Hygelac's fatal raid, perhaps because he was a man of great strength and of prowess in swimming, and his name suggested "bear." On this combination rest, according to the theory, not only the English "Beowulf," but also the Scandinavian material dealing with Bodhvar Bjarki. The sagas of Orm and of Grettir, however, are independent adaptations of the "Bear's Son" *Märchen* to historical characters, not uninfluenced in literary form by the developed "Beowulf."

It is impossible here to enumerate the points, not obvious in a bare outline, at which "Beowulf" connects itself with the *Märchen* group. However much one may dissent in matters of detail or smile, occasionally, at the pained surprise with which any departure of "Beowulf" from the *Märchen* is naively greeted, still the results are broadly founded and, in the main, seem right. To American scholars, Dr. Panzer's general position will not seem, perhaps, quite so revolutionary as he appears to think it. But they can be grateful to him for the skill with which he has analyzed an important group of stories and the clearness with which he has related "Beowulf" to it.

For his excellent prose translation of the poems of Cynewulf, Dr. Kennedy merits much thanks. He interprets the title broadly and has for the first time assembled in a single volume, not only the four signed poems, but also "Andreas," "Dream of the Rood," "Guthlac," and "Phœnix." A long introduction summarizes clearly and conservatively the whole Cynewulfian question. Professor Tupper's startling recantation came, of course, too late for inclusion in the discussion of the "Riddles," but the treatment of the sources of "Elene" might have gained something by reference to the researches of Holthausen and Brown. The translation itself is close, yet idiomatic and dignified. Quaint and obsolete words, so characteristic of the late Prof. John Earle's prose-version of "Beowulf," now reissued in the Oxford Library of Translations, have been rigorously avoided. There are occasional careless slips, as where *strange* ("Dream," 30), is rendered "strange," instead of "strong," and *lof, lofe* ("Juliana," 233, 139), by "love," instead of "praise." And it is somewhat to miss the characteristic indirection of Anglo-Saxon expression to translate *mæte werode* ("Dream," 69, 124), "with a little band," when it clearly means "alone withouten any companye." But these lapses are not characteristic of the book as a whole. Indeed, introduction, bibliography, and text form a most welcome store-house of Cynewulfian lore, to which we direct the student whose knowledge of German is not robust. We wish Dr. Kennedy might be persuaded to perform a similar task for the Cædmonian poems, which, with Gummere's "Oldest English Epic," would go far toward placing the bulk of Anglo-Saxon poetry and the gist of its problems in the hands of the general student.

Lady John Russell: A Memoir, with Selections from her Diaries and Correspondence. Edited by Desmond MacCarthy and Agatha Russell. New York: John Lane Co. $3.50 net.

This book has three claims to attention. In the first place, it sketches, often in her own words, the career and character of a remarkable woman. Lady John Russell, the daughter of Lord Minto, may well stand as the representative of the best type of British aristocratic women in the nineteenth century. Cultivated, sympathetic, truly religious, with a deep sense of her obligations in every relation of life, she was fitted to be the wife of one of the most attractive and, on the whole, one of the most influential British statesmen of modern times. We might devote a page, if space permitted, to Lady John's personal qualities; but it must suffice to say that she eminently deserves the epithets sterling and stanch, that she was wholesome both in mind and heart, clear in judgment, and unspotted by the world.

A second point of interest is the picture of Lord John in his private life. His wife's memoir supplements Spencer Walpole's admirable biography of the statesman; for, though Walpole did not overlook this side of his subject, he yet very properly concentrated his attention on the public man. And here, too, it must suffice to say that the view we get of Russell *intime*, even after we make allowance for possible magnification by a devoted wife, is very attractive. Although he was twenty-three years older than Lady Fanny, he kept his vigor of body as well as of mind far into old age, and we have glimpses of him at sixty-five dancing or galloping with his children and entering into their sports and fun with the zest of youth.

But the most important aspect of this memoir is the political. From their marriage in 1841 throughout Lord John's public career, Lady John shared his political secrets and counsels; so that in the course of the book the reader comes upon many revelations—some of almost capital importance—and of innumerable sidelights, which will enable him to understand better the hinterland of Victorian politics. The most important chapters are probably those which record Lord John's motives during the Aberdeen Ministry, motives which, we need hardly say, were very harshly criticised by his contemporaries and have been condemned only recently by John Morley in his "Life of Gladstone." Mr. Morley went so far as to say of Lord John's resignation in January, 1855:

> That a minister should run away from a hostile motion upon affairs for which responsibility was collective, and this without a word of consultation with a single colleague, is a transaction happily without precedent in the history of modern English Cabinets.

The explanations furnished in Lady John's Memoir will certainly modify so severe a verdict as this, even if they do not wholly exonerate Lord John. In brief, he had long chafed at the incompetent management of the Crimean War, but he had felt it his duty to remain in the Cabinet as long as possible, to influence it, if he could, and to prevent a ministerial crisis in the midst of military operations. When, however, Roebuck, in January, 1855, gave notice that he should move for a committee of inquiry on the conduct of the war, Russell felt that his own duty was to the country first, and not to the Aberdeen Ministry. The inquiry could not fail to censure the mismanagement: in other words, it would do in public exactly what he had been doing in private. If he stayed in the Ministry, therefore, he would have to defend the Government against the very charges he was himself bringing against it. This he could not do, and so he resigned. Technically, of course, he was responsible for whatever the Ministry did; accordingly, he was partly responsible for the mismanagement. By resigning, he gave plausibility to the slur that he was quitting the ship before it went down, and leaving his colleagues to bear the brunt of criticism which he ought to have shared. In fact, however, he gained nothing by his resignation; so that the charge that he sought personal advantage falls down. What his action meant was that he believed that the lives and success of the British army in the Crimea were of far greater importance than the permanence of the Aberdeen Ministry. This is clearly brought out in Lady John's Memoir, as well as the fact that he had twice attempted to resign, and that the Premier and his colleagues knew his strong disapproval of the conduct of the war. His chief blunder seems to be that he resigned without previously warning the Cabinet.

Another episode on which this book throws some additional light is the Russell-Palmerston quarrel with the Queen, and to Victoria's credit it must be added that, though officially she and the Prince Consort resented the cavalier fashion in which Foreign Office dispatches went out without her cognizance, she never disturbed the Russells in their occupancy of Pembroke Lodge, which she had offered to Lord John in 1847. There are several interesting references to Lord John's most effective support of the Italians in 1859-61, and we find for the first time in English a brief account

of Lady John's interposition, which prevented the blockade of the Straits of Messina in August, 1860, and so enabled Garibaldi to cross from Sicily to the mainland and complete his destruction of the Bourbon régime. The significance of this stroke, due directly to Cavour's suggestion, has not yet been sufficiently understood, even in Italy.

We mention these specimens of the importance of the book, but there are many others, almost equally worthy of note. Lady Russell survived her husband for nearly twenty years, until 1898, keeping alive her interest in public affairs and cultivating her friendships to the end. Her letters and diaries reflect her frank nature. Occasionally, they have a touch of humor, as when she says, speaking of Gladstone's speech on the Reform Bill of 1866: "The passages were striking, but *nobody seemed to be struck*." Justin McCarthy's Recollections and Frederic Harrison's Memorial Address serve as epilogue to this memoir of a noble woman. Among its unexpected treasures is the report from Lord John's journal of the interview he had, on Christmas, 1814, with Napoleon at Elba. So far as we are aware, it has not hitherto been printed in full.

Music of the Wild. With Reproductions of the Performers, Their Instruments and Festival Halls. By Gene Stratton-Porter. New York: Doubleday, Page & Co. $2.50 net.

Whoever is fond of the typical present-day nature book—in which the illustrations are the main thing—will welcome this volume to his library. It is composed of about 125 photographs held together by a decidedly rambling commentary. A half-dozen passages—such as the description of the Limberlost and of the wild life along its banks—are really effective. The rest of the volume is hit-or-miss gossip about birds and trees and flowers, and about the wickedness of man and the excellence of the Creator. The pages are liberally sprinkled with Great Secrets, Compelling Visions, and impressive capital H's, and it is clearly hinted that not when two or three are gathered together does the spirit come closest to man, for "here [in the forest] you can meet the Creator face to face, if anywhere on earth."

No attempt is made to rival the studies of the music of nature by Mr. Mathews, Mr. Cheney, and others; in fact, one may search the book in vain for a careful reproduction, on any principle, of a bird or insect song. There is, further, no evidence of close observation in the manner of Mr. Burroughs; no sustained fancy of the sort that Mr. Packard commands so pleasantly; and none of the ripe and humorous moralizing that enlivens the pages of Mr. Sharp. Instead, one finds chiefly bald description, dull enthusiasm, and ill-concealed sermons.

But the illustrations well-nigh redeem the book. They are delightfully numerous and various, and are often excellent. Birds, insects, toads, trees, old roads, stream sides, swamps occur on every other leaf. The book has, by consequence, something of the abundance and variety of nature itself, so that only a mercenary soul can lay it down unrefreshed. The scraps of verse printed under the photographs no doubt add to this sense of abundance. Some of these scraps are well chosen: one can easily fancy old Walt Whitman striding down the open road facing page 274, and surely the imperious hawk facing page 64 is improved by the name of Jean-Jacques in the lines below. Other scraps, often by the writer of the text, are primitive in idea and craft; these lines on "Trees" are a fair example:

They cut them for cabins, stables, and fences,
For mauls, rakes, scoops, and ladles,
They cut them for pumps, beehives, and troughs,
They even cut them for cradles.

Notes

Houghton Mifflin Company announces the removal of its New York offices and book room from its present quarters at No. 85 Fifth Avenue to No. 16 East Fortieth Street.

L. C. Page & Co. will bring out immediately "Miss Billy," a novel by Eleanor H. Porter.

Hauptmann's first novel has been translated and will be published in the autumn by B. W. Huebsch, with the title "The Fool in Christ."

The Putnams have in hand: "William the Silent," by Ruth Putnam; "The Republican Tradition in Europe," by Herbert A. L. Fisher; "A Chinese Appeal to Christendom Concerning Christian Missions," by Lin Shao-Yang, and "The Caroline Age," being Volume VII in the Cambridge History of English Literature. Some of the more general topics considered in this last volume are: Jacobean and Caroline Criticism, Hobbes and Contemporary Philosophy, Scholars and Scholarship from 1600 to 1660, English Grammar Schools, The Beginnings of English Journalism, and The Advent of Modern Thought in Popular Literature.

As agents for the Cambridge University Press, the Putnams will publish "A Short History of the Roman Republic," by W. E. Heitland.

Dent has in preparation for the series Tous les Chefs-d'œuvre de la littérature française, Amyot's "Deux Vies parallèles," Voltaire's "Philosophie," and Rabelais's "Œuvres," Vol. I.

The Appletons announce: "Prejudices," a Volume of essays by Charles Macomb Flandrau; "The House of Seven Gabblers," a new novel by Nina Larrey Duryea; "Along Andes and Down the Amazon," by Dr. H. J. Mozans; "The Rose with a Thorn," by Priscilla Craven, and "The Woman-Haters,'" by Joseph C. Lincoln.

Forthcoming books in Macmillan's list include: "A Big Horse to Ride," by E. B. Dewing, and "The Colonel's Story," by Mrs. Roger A. Pryor.

Four works of fiction are announced for September by T. Y. Crowell & Co.: "A Watcher of the Skies," by Gustave F. Mertins; "Mona Lisa: the Quest of a Woman's Soul," a translation of a journal alleged to have been kept by Leonardo da Vinci and to relate his passion for his beautiful subject; "Ranier of the Last Frontier," a narrative of the adventures of a newspaper man in the Philippines, and "On the Iron at Big Cloud," a story of the Rockies, by Frank L. Packard.

Harvard University is publishing this week "Applied Ethics," by Theodore Roosevelt, being one of the William Belden Noble lectures delivered last December.

The early completion of the second and third-year books in the Davis-Julien series is promised by Heath.

The Columbia University Press will have ready shortly: "The Business of Congress," by Samuel W. McCall; "World Organization as Affected by the Nature of the Modern State," by David Jayne Hill, and "Social Evolution and Political Theory," by Leonard T. Hobhouse.

Messrs. Sotheby will sell on June 12 and 13 a collection of autograph letters in 246 lots. They include Fielding's autograph receipt for £600 paid to him by Andrew Millar, June 11, 1748; Burns's autograph manuscript of "The Jolly Beggars," and the autograph manuscript of Lamb's essay, "Grace Before Meat.

To their Thin-Paper edition of Thomas Hardy, Harpers have now added "The Trumpet-Major," the story which connects Wessex with the stirring realities of the Napoleonic wars. It is one of Hardy's great tragic tales.

We commented recently upon the reproduction of the line-for-line reprint by the University of Oxford, in 1833, of the *editio princeps* of the King James Bible, and also upon Alfred W. Pollard's "Records of the English Bible." We have now received from the Oxford University Press a photographic facsimile, slightly reduced, of the actual 1611 Bible, with preface, containing the Bibliographical Introduction by Mr. Pollard that appears in the other two volumes, and the sixty-three documents that comprise his "Records." The facsimile measures 11¾ by 8¼ inches, and differs from the line-for-line reprint not only in being in black letter, but also in including the "Genealogies of Holy Scripture" and the "Map of Canaan." Of this feature Mr. Pollard writes, in his Bibliographical Introduction:

> In October, 1610, John Speed had obtained a privilege from the King enabling him for ten years to saddle every edition of the Scriptures with his decoratively printed but useless Genealogies, and so the cost of the book was needlessly increased by from sixpence to two shillings a copy, according to the size. In some copies, it may be mentioned, the Genealogies begin with a blank page; in others this is occupied by a fine cut of the royal arms, subscribed Cum Priuilegio Regiæ Maiestatis.

In the facsimile the latter arrangement has been followed. The text is printed in

double columns, enclosed within rules, with ornamental headpieces and a few tail-pieces, and with capitals at the beginning of each chapter and psalm. The inserted words, which are now printed in italics, are in small Roman, which is used also for the summaries at the head of each chapter, for the subject headlines at the top of each page, and for the references to parallel passages in the margin. The volume contains 1,550 pages, less than 200 of which are numbered, page numbers having been used in the original edition only for the thirty-four pages of the "Genealogies." The pages give evidence of the photographic process. This, as constituting an assurance of accuracy, is the slightest of blemishes.

Martial's epigrams have been rendered into English by Paul Nixon, and issued by Houghton Mifflin Co. In this form they will not completely satisfy those who are acquainted with the original, it is true; their Latin compactness and pointedness have suffered, as they do even when translated into so flexible a medium as the French. Readers, nevertheless, whether scholars or not, will find pleasure in sampling Mr. Nixon's work. He is racy, strictly contemporary in his slang, and usually manages, like Martial, to reserve the point until the last word. We give an example or so:

> Philænis weeps with just one eye.
> Queer, is it not?
> You wish you knew the reason why?
> That's all she's got.

> You damn every poem I write,
> Yet you won't publish those of your own.
> Now kindly let yours see the light,
> Or else leave my damned ones alone.

John Fyvie is one of the more conscientious of those who are dishing up the realism and romance of the eighteenth century, and his "Noble Dames and Notable Men of the Georgian Era" (Lane) is the best of the three books he has now published on the period. One of the studies in the present volume—that on "A Metaphysical Humorist, Abraham Tucker"—introduces a book and character unknown to any but the minute student of deistic philosophy. One reader, at least, has been so interested by this record of Tucker's work as to be on the lookout for the seven volumes of "The Light of Nature," if he may find them. Other chapters of Mr. Fyvie are on better-known people. That on Lady Mary Coke contains a number of Walpole's letters, which, as Mr. Fyvie somewhat pretentiously observes, are not in Cunningham's edition of Walpole; seeming not to have heard of Mrs. Toynbee's later edition, which contains these letters to Lady Mary in their proper place. So, too, in his chapter of Lady Holland, Mr. Fyvie makes no mention of Mr. Sanders's "Holland House Circle" (1909). But these oversights are of small importance; Mr. Fyvie has sketched these two great ladies with a clever pen, and that is sufficient. Other chapters contain lives of Sir Henry Bate-Dudley, the journalistic and pugilistic parson, who turns out on better acquaintance to be by no means so bad as we had supposed him to be; of the much abused Countess of Strathmore and her brutal husband; and of Bampfylde-Moore Carew, the extraordinary gentleman-beggar.

Prof. T. K. Cheyne's latest volume, "The Two Religions of Israel" (Macmillan), is a sketch of the prophetic development down to and including Jeremiah, under the headship of two rival deities. The older deity (a creation of Dr. Cheyne's), Yerahme'el, who appears also as Ishmael, Melek, Yarbaal (whence Baal), represents the North Arabian lower type of religion, superficial, non-moral; alongside of him is the younger god, Yahweh, probably differentiated from Yarhamu (Yerahme'el), representing a progressive ethical purification of popular religious forms. From the conflict between these two ideals, says Cheyne, comes the Israelite religion as we find it set forth by the prophets. As in his former books he here regards North Arabia as the focus of prophesy and divination; the terms Misraim and Ashur signify not Egypt and Assyria, as is the common opinion, but two regions in North Arabia—it is with these countries and not with the great empires on the Nile and the Euphrates that most of the early Israelite history has to do. In an introductory chapter he gives a sketch of preëxilic prophetic thought and touches on the origin of Hebrew prophecy and messianic conceptions. While he agrees with Eduard Meyer that the scheme of Egyptian prophecy is of primitive mythic origin, he properly holds that a literary influence of Egypt on southern Palestine is improbable. He reaffirms his belief (herein influenced by Gressmann and Zimmern) that the messianic faith rested on a body of myths relating to the beginning and end of cosmic history; but this very doubtful theory he does not discuss, merely remarking that the old eschatology seems not to have been accepted by the great prophets (Amos and his successors).

Cheyne cannot be said to add anything in this volume to our knowledge of the religion of the prophets. His recognition of a conflict between higher and lower ideals is not new, and the history of the conflict is obscured by his insistence on North Arabia as the source of inspiration. The body of the work is a minute criticism of the Hebrew text of the preexilic prophetical material—the sub-title is "a re-examination of the prophetic narratives and utterances," and he indulges without restraint his passion for transformation of words. Mere verbal metamorphosis may be passed over as an innocent recreation, but when it is used as a means of creating an ancient opinion it becomes harmful. Arbitrary etymology is not less dangerous. The enigmatical name of Jerusalem in Isa. xxix:1 he pronounces Aral, identifies it with the Babylonian Aralu, the world of the dead, and conjectures that it is a corrupt form of the divine name Yerahme'el; the conclusion is that the latter was the North Arabian and popular Semitic Pluto, and that probably it was by means of images of him and his consort that necromancers undertook to consult the spirit of a deceased person. Here a whole mythological chapter is constructed out of a fictitious deity and an impossible etymology! All scholars regret that Dr. Cheyne, with his learning and sincerity, so largely vitiates his work by his adherence to his North Arabian theory.

In these times of much talk about reciprocity with Canada it is refreshing to find a reputable book dealing with the tariff and industrial conditions in the Dominion, written by a man who has had exceptional opportunities to observe the actual conditions of which he speaks. Such a book is welcome because of its authentic statement of facts in spite of the partisanship of the author, who is a free trader of the extreme individualist school. "The Revolt in Canada Against the New Feudalism" (Cassell & Co.), by Edward Porritt, gives a detailed account of the tariff history of Canada from the revision of 1907 to the movement, by the Canadian Western farmers, in favor of freer trade relations during the latter half of 1910. Mr. Porritt, the author of various works on industrial and political conditions in Canada and Great Britain, and at one time the London editor of the Manchester *Examiner*, has been for thirty years a student of the working of representative institutions, and during that time he has pursued his observations at first hand in England, Canada, and the United States. He was the only correspondent who travelled continuously with the Canadian Tariff Commission of 1905-06, and his latest book, frankly controversial, bears down with relentless logic on the protectionists of the Dominion. A large part of his criticism is aimed at Sir Wilfrid Laurier and his party, because of the complete reversal of their tariff policy immediately after they were returned to power in 1896. Before that date the Liberals, headed by Sir Wilfrid, were pronounced free traders, and they condemned the protectionist policies of the then Conservative Government. After having formed the opposition party continuously for eighteen years, they were elected in 1896 on a platform in which an important plank was a downward revision of the tariff. In his righteous indignation Mr. Porritt charges the Liberal Government with having made Canada the most distinctly protectionist country in the Anglo-Saxon world. In spite of the actually higher rates in the American tariff the author makes good his charge by showing that the Canadian Government has committed itself to the granting of bounties and to various other devices which are not practised in the United States. Mr. Porritt refers to protectionism in Canada as the "New Feudalism," and he asserts that it "is organized and equipped to exploit." In his opinion "all protection is in its nature oligarchical" and benefits a small group of people only. "There can be no effective democracy," says Mr. Porritt, "with the New Feudalism in control."

"Reminiscences of the Geneva Tribunal" (Houghton Mifflin Company) is a readable book of some four hundred pages by Frank Warren Hackett, who was present at Geneva as secretary to Caleb Cushing. "For some time I have been minded to tell the story of Geneva in the form of personal recollections," says the author. But he found that to make such recollections intelligible to the present generation it would be necessary to interlard them with a good deal of historical narrative. Hence, "in the following pages an attempt has been made to combine the easy and familiar terms of personal reminiscence with that more sober delineation of events, and that graver tone of reflection, which are demanded of a work professedly historical." This describes the work exactly enough: journalistic and sketchy in tone, the narrative is without coherence and without much sequence, but runs pleasantly along, and manages somehow to get to the end, although the reader

is taken twice to Minneapolis and once through the Chicago fire en route. The "professedly" historical part is permeated with anti-British prejudice. Lawyer-like, the author brings together all the evidence he can find tending to show English sympathy with the South, and is easily able to convince himself since the other side is not presented. He is intent to prove that the American case presented to the Tribunal is a surpassingly fine document, and justifies the inclusion of the "indirect" or national claims which came near wrecking the arbitration. To confute Mr. Rhodes, who says that the case is not a document to be proud of, he quotes Caleb Cushing, who thought it a good document, indeed. Mr. Hackett is frankly an advocate, and his discussion of the merits of the questions involved in the Alabama claims is of little value. But his book contains some good things for all that: the good things are in fact just those personal recollections—the description of the men who were present, of the opening of the Tribunal, of its procedure—which he had originally in mind to relate. Perhaps it would have been better after all to follow the original plan.

The Keats-Shelley Memorial in Rome has been steadily increasing its collection of books. With the large purchases made in London this spring by the executive committee it may now be said to possess one of the best libraries existing for the study of the four poets, Keats, Shelley, Byron, and Leigh Hunt. Important original documents and relics have also recently come into the possession of the Memorial. A bequest from the Keats collection of the late Charles Dilke includes a cameo portrait of Keats which once belonged to Charles Armitage Brown, and a miniature portrait of Keats by Joseph Severn, the same as that reproduced in the Monkton Milnes edition of Keats. From the heirs of Joseph Severn have been received several valuable unpublished documents, including letters of Severn and Trelawny, together with an important pen-and-ink portrait of Keats on his deathbed, done in Rome, and a fragment of Keats's manuscript of "Lamia." Other friends of the Memorial have given valuable Shelley letters. A second number of the Bulletin of the Memorial, published by Macmillan & Co., containing articles by H. Buxton Forman and others, with unpublished documents, is announced for the coming year.

The April number of the *American Journal of International Law* opens with a comprehensive paper on questions arising out of the succession of states—the change of sovereignty in cases of total absorption, whether through voluntary agreement, forcible annexation or subjugation; the division of a state into several international persons, or the union of several states in a single international person. The complex character of the question becomes apparent to one who reflects that through concession or conquest a state may acquire a portion of the territory of another state, or that one may be formed in consequence of successful revolt or a declaration of independence; or a state which is completely sovereign may lose a portion of its external sovereignty or independence from being incorporated into a federal union or through placing itself under the protectorate of a stronger power. In case of total absorption, it is generally agreed that the annexing or absorbing state succeeds in the main to the rights and also to the obligations of the extinguished state; and that, as Mr. Adams when Secretary of State wrote to Mr. Everett in 1848, "the conqueror who reduces a nation to his subjection receives it subject to all its engagements and duties towards others, the fulfilment of which then becomes its own duty." But cases other than those of total absorption are so numerous and so varied that an apportionment of rights and duties becomes complex, and often extremely difficult. A concrete instance is found in the case of Cuba, when Spain relinquished sovereignty over it. The American negotiators of the Treaty of 1899 declared that the Cuban debt was in no instance created for the benefit of the Island, but rather for the support of the Spanish army there, employed for the purpose of subjugation. On the cession of Alsace and Lorraine by France to Germany in 1871, there was no assumption of any part of the general debt, nor did the United States assume any portion of the British debt in 1783 when the treaty of peace acknowledging independence was signed. The Spanish American colonies when they revolted assumed generally the local debts. To what extent the rights of a seceding section—as the United States from Great Britain—remain after separation, was discussed in the recent Fisheries arbitration. The case of mixed private and public rights was considered by the Transvaal Commission of 1901, and the difficulty of a solution made apparent. The paper abounds in authorities and citations of historical instances and precedents.

The next paper, that of Richard Olney, on "The Fortification of the Panama Canal," though very short, should command much attention. In the Clayton-Bulwer treaty, 1850, since abrogated, the contracting parties agreed that neither government would erect or maintain any fortification at the canal or in the vicinity thereof; while the Hay-Pauncefote treaty of 1900 stipulated that the United States should be at liberty to maintain such military police along the canal as might be necessary "to protect it against lawlessness and disorder." Mr. Olney thinks that that stipulation gives the United States no right to determine fortifications to be a part of the military policing of the canal; that the claim that the United States by this treaty obtained the right to fortify and the right to maintain military police on the canal, is untenable; that in this treaty no mention was made of fortifying as a means of defence; that lawlessness and disorder are not the same as war, and that in case of war the treaty would authorize the United States to close the canal. The editorial comment contains reference to two noteworthy matters; the Joint Resolution, the passage of which, and signature by the President are expected, requesting the President and Secretary of State to enter into negotiations with other American Republics looking to the making of a treaty that shall forever quiet the territorial titles of all the various American States; and the International Opium Conference, the International Commission having already arrived at unanimous conclusions as to the best means of solving national and international opium problems. The subject of a new general arbitration treaty with Great Britain, of broader scope than any treaty heretofore entered into, is also fully commented on; so, also, is the United States Supreme Court decision in Virginia vs. West Virginia, on a controversy of many years' standing concerning the apportionment of bonded obligations. The opinion of the Court in this case, delivered by Justice Holmes, is also given.

The Biblioteca Nazionale at Florence, which has had quarters under the Gallery of the Uffizi, is to be removed to the more adequate space which extends from the Corso dei Tintori to the south side of the church of Santa Croce. The foundation stone of the new building was recently laid by the King of Italy.

From the Bureau of the Census at Washington, we learn that the plans for publishing the results of the thirteenth census offer some unique features. It is proposed to make the most general circulation of the results through the bulletins, but to group them so that they may be available for permanent use and preservation. The bulletins will be of two main types, general bulletins for the United States, and corresponding bulletins for each of the States. In the former, the results published for the United States as a whole will be subdivided by States; in the latter, State totals will be subdivided by counties, and, where appropriate, by cities. The four main divisions of the census enumeration, population, agriculture, manufactures, and mines, will thus be represented by a series of bulletins presenting by States the principal results of the census as rapidly as they can be tabulated. For each State a corresponding bulletin will be issued in which the facts will be presented by counties. As results are to be published as soon as available, the State bulletins will naturally come first in order of time. The greater number of inquirers as to census figures have heretofore found virtually all the information they desired in the abstract of the census. The proposed plan will give them this information in the State compendium, together with special information regarding the State and county, or city, in which they live. The State compendium might therefore be described as a State edition of the Census abstract.

Thomas Wentworth Higginson, the news of whose death reached us too late for extensive notice in the *Nation* of last week, was born in Cambridge, Mass, on December 22, 1823. He was the son of Stephen Higginson, who from 1818 to 1827 was the steward of Harvard College. Higginson graduated from Harvard in 1841, when not yet eighteen, and entered upon a course of several years at the Divinity School. There he was associated with Samuel Longfellow, Samuel Johnson, O. B. Frothingham, and William Henry Hurlburt. His first settlement was at Newburyport, where he went in 1847. A radical in the manner of Emerson and Parker, he caused dissatisfaction by his anti-slavery hopes and plans, and resigned in 1850; he organized, shortly afterward, "The Free Church of Worcester," to which he ministered with marked success until 1858. He was called the citizen preacher, interesting himself actively

in educational matters; was a founder of the Young Men's Christian Association; an advocate of physical culture, taking special interest in sports and pastimes suitable for girls, and necessary to their health. After the passage of the Fugitive Slave law, he was as determined as Theodore Parker that the unjust judgment must not be obeyed. He was deep in various plans to rescue Thomas Sims in 1851; and in trying to rescue Anthony Burns he was badly clubbed and wounded, was indicted, but was never brought to trial. When the Kansas troubles broke out, Higginson was made a brigadier-general of the Free State forces, under the redoubtable Jim Lane; and in 1858 entered enthusiastically into John Brown's Virginia scheme of invasion, and the wonder is that he was not found among the followers of Brown at Harper's Ferry. In the winter of 1860-61 he was at the head of a volunteer company of fifty men, enlisted for the defence of meetings in the Music Hall, where Wendell Phillips was crying, "All hail, disunion!" In September, 1862, he accepted a captaincy of the Fifty-first Massachusetts volunteers. The same year, November 10, he was made colonel of the First South Carolina Volunteers, the first slave regiment mustered into the service of the United States. Owing to disabilities arising from a wound, he resigned his commission in October, 1864. He settled at Newport, R. I., residing there until 1878. It was in this period that he made his first voyage to Europe, and met many of the foremost men of England and the Continent. Later, he assumed an editorial function on the *Woman's Journal*, advocating always equal rights for women. As early as 1850 he had signed the first call for a national convention of the friends of woman's suffrage. For a while he contributed a weekly article to *Harper's Bazar*. He also wrote frequently, on a variety of subjects, for the *Atlantic Monthly* and for the *Nation*. He was the author of the following books: "Outdoor Papers," 1863; "Malbone," a romance, 1869; "Army Life in a Black Regiment," 1869; "Atlantic Essays," 1871; "Oldport Days," 1873; "Young Folks' History of the United States," 1875; "Young Folks' Book of American Explorers," 1877; "Short Studies of American Authors," 1879; "Common Sense About Women," 1881; "Life of Margaret Fuller Ossoli," 1884; "Larger History of the United States," 1885; "The Monarch of Dreams," 1886; "Hints on Writing and Speechmaking," 1887; "Women and Men," 1887; "Travellers and Outlaws," 1888; "The Afternoon Landscape" (poems), 1889; "Life of Francis Higginson," 1891; "The New World and the New Book," 1891; "Concerning All of Us," 1892; "Such as They Are" (poems), 1893; "English History for Americans," 1893; "Massachusetts in the Army and Navy" (1861-65); "Cheerful Yesterdays," 1898; "Tales of the Enchanted Islands of the Atlantic," 1898; "Old Cambridge," 1899; "Contemporaries," 1899; "Collected Works," reprinted in seven volumes, 1900; "Henry W. Longfellow," in the American Men of Letters series, 1903; "John G. Whittier," in the English Men of Letters series, 1903; "A Reader's History of American Literature," 1903; "Part of a Man's Life," 1905; "Life of Steven Higginson, member of the Continental Congress," 1907; "Carlyle's Laugh and Other Surprises," 1909.

Dr. William Robert Anthony Wilson died last Sunday at his home, in Pittsfield, Mass. He was born in Washington, Ill., in 1870. He graduated from Williams College in 1892, and studied at the New York College of Physicians and Surgeons. He practised medicine for a short time in Peoria, Ill., but relinquished his profession, owing to ill health, and travelled for several years. Dr. Wilson went to Pittsfield in 1906, and devoted himself to literary work. He was the author of the novels "The Rose of Normandy" and "A Knot of Blue." His boys' books, "Comrades Three" and "Journeys of the Kit-Kat Club," are widely known.

Dr. Andreas Schmid, whose death in his seventy-second year has been reported from Munich, was professor of pastoral theology and author of "Geschichte des Georgianums in München" and other works.

Science

The Putnams, acting as agents for the Cambridge University Press, will publish: "Large and Small Holdings—A Study of English Agricultural Economics," by Hermann Levy, translated, with additions, by Ruth Kenyon; "An Introduction to Experimental Psychology," by Dr. Charles G. Meyers; "Exercises from Algebra for Secondary Schools," by Charles Davison; "Lessons on Soil," by E. J. Russell, and "A Course of Practical Work in Agricultural Chemistry for Senior Students," by T. B. Wood.

The Columbia University Press will issue shortly "Education and Preventive Medicine," by Dr. Norman E. Ditman.

"Practical Methods in Arithmetic," by John H. Walsh, and "High School Physiography," by Albert L. Arey, will be brought out this season by Heath.

Cassell & Co. announce, after many postponements, the publication of the new and thoroughly revised edition of the textbook, "Practical Electricity," by W. E. Ayrton and Thomas Mather.

The seventeenth volume of the "Yearbook" (1910) will soon be issued by the United States Department of Agriculture. In appearance and make-up it differs but little from its predecessors; it contains 28 articles, 49 full-page illustrations, of which 8 are colored, and 31 text figures.

Longmans, Green & Co. announce: "Monographs on Topics of Modern Mathematics," edited by J. W. A. Young; "The Mechanics of the Aeroplane," a text-book by Capt. Ducheue, translated by John H. Ledeboer; "Practical Photo-Micrography," by J. Edwin Barnard; "The Chemistry of Synthetic Drugs and the Application of Chemistry to Pharmacology," by Percy May; "The Corrosion of Iron and Steel," by J. Newton Friend, and "The Star Pocket Book," by Robert Weatherhead.

In the "Care and Training of Children" (Funk & Wagnalls Co.) Dr. Le Grand Kerr, having already discussed "The Baby" in an earlier book, seeks to aid parents in the supervision of their older offspring. He takes the point of view that what seem to be moral defects in older children are often merely the results of physical conditions, inborn or acquired, which are capable of marked amelioration if not complete removal when early recognized and appreciated. There is much good advice about the room of the child and about its clothes, with a marked preference for wool and an entertaining aversion to special weaves and "natural" fabrics, whose virtues are the theme of many advertisers and the source of much pride or perplexity to mothers. Strange as it may seem to the childless, Dr. Kerr finds it desirable to insist that the clothes should fit the child rather than the reverse. That is indeed the text of the book, that it is the right of the child to have the right thing done for it, and by no means the least valuable lesson in the book is found in the stress laid on the individuality of the child, of every child. There are chapters on a large variety of topics, those on school life being particularly interesting. The advice is everywhere excellent, even if in a few instances we may disagree as to the underlying reasons. Fortunate, indeed, will be the young children whose parents read this booklet and reading, take its teachings to heart.

"Insects and Disease" (Holt), by Rennie W. Doane of Stanford University, is a recent volume of the American Nature series. It contains a simple and popular account of the part played by insects in transmitting disease, particular attention being paid to flies, mosquitoes, and fleas. The relation of these animals to the spread of typhoid fever, yellow fever, malaria, and the plague is fully described and the means for controlling the evils are adequately discussed. The book has many illustrations of the insects and their development. With few exceptions the pictures are very clear and instructive; several of them are unusually beautiful. Other diseases known to be carried by insects, or reasonably suspected to be such, are treated very briefly; in the case of the sleeping sickness, at least, the state of our knowledge would justify a longer story. Certain common insects productive of great discomfort and sometimes quite serious disturbances although we do not as yet know that they actually transmit diseases, hardly receive the attention they deserve. We refer more particularly to the bed bug and various varieties of the louse which, despite their bad standing in polite conversation, may at any moment, such are the accidents of human intercourse, upset the dignity and destroy the peace of the cleanest household. The information (p. 160) that naphthaline is a trustworthy exterminator of fleas is sure of a hearty welcome from many readers. Not the least interesting part of the book is a bibliography of some three hundred and fifty titles, covering nearly fifty pages, but making no pretence to completeness, since only articles in English are noted and these have been selected as being important.

The "Science of Human Life" (Badger), by Dr. W. R. Dunham, has something like five subsidiary titles to indicate that it contains the long-delayed solution of a great mundane problem, and a full explanation of the action of vital force. Whoever undertakes to read this little book will soon learn that it does not deal with vital force quite in the sense of the old students of that question or of the advocates of a more modern neovitalism. What it does

contain is said to be presented in this brief form because for fifteen years "the cultivated intellect of the nation" has declined to show any interest in the efforts of the author to bring these matters to its attention. It is a mere synopsis instead of the larger book originally planned, but "for the first time in the history of the world there is presented in this small volume an interpretation of the operative plan of vital force as exercised in the functions of the living organism." This involves an appeal to the nature of things rather than to the beliefs of the schools, and marks an epoch in human progress, if we may judge by the allusions to Copernicus, which occur no less than a dozen times. The ultimate life powers are four in number, and the definition of them is somewhat special: instinct, the constructor of organisms; sensation, a purely nervous function whose pathological manifestation is "irritability"; contractility, a function of muscles; sensibility, the mental division which is both a mind and a life function. The human organism carries on its voluntary and automatic activities by coöperation of these life powers; in disease there may be modified combinations, as when "irritable sensations" coöperating with instinct may produce a morbid growth, as cancer. The causes of disease have no other relation than the production of irritable sensation, and microbes are effective merely because constructed of filth material. Medicine acts not by virtue of any active principle, a mere myth, but by causing special sensations; the involuntary vital power, a reality, acts. The human life power becomes thus a complex matter, dependent on cooperation and capable of development, the limits of development in some directions being indeterminate. This is particularly true of the mind function known as the sub-conscious mind, of whose possible cooperation with the conscious mind and its control Dr. Dunham has strange things to tell in the last chapter.

In the *Geographical Journal* for May Dr. H. A. Lorentz describes an expedition of which he was the leader, into the interior of Dutch New Guinea, the object being to explore its mysterious snow mountain range. After overcoming well-nigh insurmountable difficulties from swamps and primeval forest, he succeeded in ascending the principal peak, 15,420 feet high, or nearly the altitude of Mont Blanc. Much light is thrown upon the historical geography of the Red Sea coast by J. W. Crowfoot, in an account of the examination of the remains of some of the ports in the Anglo-Egyptian Sudan, which in ancient Roman days were important trade routes between Egypt and southern Arabia.

Drama

PARIS PLAYS AND POLITICS.

PARIS, May 5.

There is sure to be much political talk, much social philosophising, over the three-act play—"L'Apôtre" (the Apostle)—in which Paul Hyacinthe-Loyson (the son of Père Hyacinthe) answers the "Tribun" of Paul Bourget. If not an answer, it is at least a wonderfully coincident counterpart in plot and in ideas of public and private life around us. A single representation, on invitation, has been given at the state theatre of the Odéon with Sylvain in the title rôle to counterbalance Guitry as the Tribune. We shall probably see the play again, when it may or may not have the success of the other.

For, whatever professional critics may say, Paul Bourget's piece is a continued success. It has been so pecuniarily, since it has passed its fiftieth night with net receipts of more than 300,000 francs—a large sum for the theatre—and it is kept on to the close of the season and may be taken on again after vacation. Socially, it continues drawing a public of education and position and even of labor leaders who like to think. Three hundred persons were turned away Sunday for what it had been decided should be the last matinée of the season, and the decision has been overruled by their demands. Guitry consents to appear again afternoon and evening, for he openly enjoys his acting of the hero of the piece more than he did Rostand's "Chantecler." It is a literary success and writers on public life already cite the Tribune or Parliamentary leader as they have been doing Daudet's less serious Numa Roumestan. Politically, it has had the honors of mention in Parliament; and Revolutionary syndicalists have taken cognisance of it, perhaps from kindly memories of Paul Bourget's previous "Barricade."

Paul Hyacinthe-Loyson seems to be trying to convert Young France backward to a Republicanism of 1848, with, however, some of the present Republican emphasis on the right of "free thought" to control. He is tremendously, almost controversially, in earnest. He writes strong prose and gives an effective plot. Is he likely to have the success of the other? Paul Bourget's demand for liberty for the traditional Old France chimes in with the growing opposition of thinking youth to the New. Opposition is pleasant to youth and the intellectual pendulum was bound to swing back. In any case, it is to the credit of the French people that they are capable of taking their drama so seriously.

The new play is itself not too much in harmony with Parliamentary rule of the French people, as it has been working of late. It is in sympathy with the moral recoil against politics based on private or party interests, and, most of all, against politicians without principle. Now, political corruption in France reaches into the most intimate recesses of family life. And here each play catches it up.

Paul Bourget goes on steadily working out the principle to which he was fully converted only after the writing of his "Disciple," which so struck Gladstone. The corruption, the moral anarchy of society and public life, among discontented workmen and idle rich and new middle-class generations and those who are most notorious as leaders, has become possible according to him because of the neglect of one principle, namely—"The real unit of society is the family, and not the individual." Hence the destruction of marriage by divorce, of family inheritance by state confiscation, of the family's right to its children by the state monopoly of education in which teachers are the instruments of a party. All these are burning questions in France, touching every family in its religion or its irreligion.

Paul Hyacinthe-Loyson, like Paul Bourget, takes a successful politician who has not himself yielded to the circumambient self-seeking, but whose son is compromised. In practice, the politicians of the traditionalist's play are morally no worse than those of the rationalist's, except that Bourget has emphasized the consequences of morality based on the exasperation of individual rights and the attenuation of duties that reach beyond the development of self. Hyacinthe-Loyson attempts to show that, in his hero at least, "lay" morality, unassisted by religious thought or social tradition, is sufficient, if not superior. So Bourget's Tribune succumbs to his family tragedy and saves his son, but breaks his own public life. The Apostle of the Republic, like another Brutus, denounces his son to justice against his wife's prayer and against all the entreaties of the leaders of his party, which will be involved in the disgrace.

Meanwhile the new Minister of Public Works, Charles Dumont, has taken occasion to assure Frenchmen that the Bible never taught them the use of the telephone. Like Lady Ambrose in the "New Republic," Paris theatre-goers who flock to each of these two plays must go away asking, "We must really have some morality, must we not?"

S. D.

The title of "Early Plays from the Italian" (Henry Frowde), edited by R. Warwick Bond, does not correspond exactly with the contents, as the editor himself acknowledges. Of the three plays contained in the volume, one, "Misogonus," has, properly speaking, no connection with the drama of Italy. Nevertheless, no one will regret the inclusion of this excellent Elizabethan comedy of the earliest period, when the dramatic muse was still in her nonage, for it has hitherto been accessible only in Brandl's "Quellen des weltlichen Dramas in England" (1898). It is the best English example of the education-drama which was so popular in Germany and Holland during the sixteenth century. Mr. Bond believes that the unique (and fragmentary) MS. of this play represents a *rifacimento*, dating from about 1576 or 1577, of the piece as first composed some ten years earlier. He rejects the interpretation of the name, "Laurentius Barjona," written under the list of *dramatis personæ*, as a disguise for Lau-

rence Johnson, and suggests that the person so named, whether author or merely transcriber of the play, was a converted Jew. The remaining plays in the volume are Gascoigne's "Supposes" (1566), which, as is well known, is a rendering of Ariosto's comedy, "I Suppositi," and "The Buggbears" (assigned by Mr. Bond to 1564 or 1565), a similar rendering of Grazzini's "La Spiritata," with more considerable modifications, however, partly from Latin and partly from Italian sources. There are several other editions of "The Supposes," but of "The Buggbears" the only previous edition was Grabau's in Herrig's *Archiv*, vols. 98 and 99. All three plays are provided with introductions, notes, a glossary, and an index. We observe in the notes (p. 291) that Mr. Bond curiously misses the meaning of *Chichefacc*. This is, of course, the *Chichevache* of Chaucer's "Clerk's Tale" (derived by him from the Old French)—that is to say, the fabulous monster who lived exclusively on patient wives and so kept very lean. An important feature of the present volume is the introductory essay, extending to more than a hundred pages, in which the editor gives a sketch of the Italian Comedy of the Renaissance in its relations especially to Latin comedy and the plays in this volume. It seems to us that Mr. Bond exaggerates present-day ignorance of Latin and Italian comedy, but his essay will prove useful, none the less. We learn from this book that the editor is engaged in preparing an independent treatise on the subject of this essay.

It is reported that Madame Nazimova, who is now under the management of Charles Frohman, will make her first appearance before the British public as soon as a suitable London theatre can be found for her.

Jerome K. Jerome's woman's suffrage play, "The Master of Mrs. Chilvers," recently produced at the Royalty Theatre in London, seems to be compounded, in almost equal measure, of the improbable, the conventional, and the maladroit. Briefly, he imagines a case where—the House of Lords having decided that women have the right of franchise—the wife of a member of Parliament is compelled, by virtue of a previous pledge, to become her husband's opponent at the polls. A radical difference of opinion on the question whether the state ought to be charged with maintenance of illegitimate children leads to a rupture of all domestic relations. In the end the wife, Mrs. Chilvers, is elected, and Mr. Chilvers, who has just won a seat in the Cabinet, is left out in the cold. At this juncture Mrs. Chilvers discovers that she will be unable to attend to her Parliamentary duties because she is about to become a mother. Thereupon she seeks and finds a means of reconciliation, and the usual happy ending is procured. In the early part of the play, in the campaign and election scenes, there is said to be much amusing matter, Mr. Jerome making free use of the stock arguments on either side; but in the more serious passages the improbability of the incidents and the baldness of the talk evidently tried the patience of the audience, in spite of the admirable acting of a cast which included such performers as Mary Rorke, Lena Ashwell, Esmé Beringer, Sydney Fairbrother, Dennis Eadie, and Leon Quartermaine.

"Playing with Fire," which has just been produced at the Comedy Theatre in London, is an English adaptation of one of Franz Molnar's pieces, and is founded upon an idea which is older than the title. A jealous actor, wrongly suspecting his wife, bids her farewell in order that he may return to woo her in the disguise of an imaginary Russian prince. He is repulsed at first—the lady declaring her love for the supposedly absent husband—but in the end obtains a kiss and a fresh appointment. Then he reappears in his own proper shape to encounter furious denials and bitter reproaches. By way of a finishing blow, he discloses the secret of his disguise, only to find himself utterly at the mercy of his fair antagonist, who contemptuously remarks that she had known him all the time, and was only desirous of seeing how big a fool he could make of himself. Manifestly, the tale is altogether theatrical and incredible. But, from the actor's point of view, it is full of effective situations, of which Robert Loraine and Alexandra Carlisle are said to make excellent use in London. Moreover, report says that the dialogue is very smartly written.

The performances of the Stratford Commemoration this year included sports, processions, the crowning of the May queen, and a ball.

It is a notable fact that when "Othello" was played at Stratford, in the order of the programme, by Oscar Asche and his company, all the actors, except three, had been trained by F. R. Benson. This shows the sort of work that one real stock company is doing in England.

Speaking of the recent performance of "The Piper" at Stratford-upon-Avon, the special correspondent of the London *Times* says:

> There were always great things in "The Piper"—the gathering of the children as the magic of the minstrel's piping steals into their hearts and limbs, the frolic and laughter with which they dance after him, many from those they love—the mother love of Veronica searching for the little lame Jan, like Ceres for Persephone, the pathos of her vain pleading with the Piper, and the Piper's agonized resistance and submission to the sorrowful silence of the Lonely Man—all these must always have dramatic as well as emotional value. But the Benson Company now show a much firmer and surer grasp of the meaning of the whole story than when they played it last year. It has been fitted to the requirements of the stage, the ragged edges have been trimmed, the action passes smoothly from scene to scene, and the picture of the eternal conflict between spiritual selfishness and the blindness of worldly wisdom, between the outcast artist and the comfortable money-loving Philistines of Hamelin, stands out as a beautiful and consistent parable of the meaning of life. That Mrs. Marks, writing neither for Stratford nor Mr. Benson, should have conceived a character so well suited to the genius of the place and the man was a happy accident.

A London theatrical writer says that Edward Knoblauch's "Kismet," the greatest success of the day, was offered to manager after manager before it procured acceptance at the hands of Oscar Asche. In more than one instance the costly nature of its mounting proved an obstacle to the production, but in others that was not the principal reason for its refusal. At the suggestion of a well-known manager, Mr. Knoblauch was engaged in rewriting his piece when the original draft was shown to Mr. Asche, who unhesitatingly declared in its favor. "Kismet" is the outcome of a prolonged study of "The Arabian Nights," and so abundant is the material collected by Mr. Knoblauch that he contemplates weaving a new play out of the surplus at his disposal.

Music

Wagner at Home. By Judith Gautier. John Lane Co. $3.50 net.

Théophile Gautier, his daughter Judith, and her husband, Catulle Mendès, were among the first Parisians who understood Wagner's music and his ideals and labored to make the French public appreciate this new art. Judith Gautier, in particular, was one of those who had "the fanaticism of priests and martyrs" among the faithful who at a time when, to use her own words, "only a little group of disciples stood by the master, upholding him against the jeers of the masses." From the year 1869, when she first made his acquaintance, to the end of his career, she was one of his most enthusiastic friends. Her "Richard Wagner et son œuvre poétique" appeared in 1882, the year of the first performance of "Parsifal," of which she made a translation into French. Her Souvenirs relate her experiences during ten days in July, 1869, which she and Mendès and Count Villiers de l'Isle Adam spent, largely with Wagner and his family, at Triebschen, near Lucerne. Mendès also wrote up his impressions for a periodical and afterwards reprinted them in his book on Wagner; but there is much in these pages of his quondam wife that had escaped him, and Mme. Gautier also adds to her Triebschen narrative some very interesting pages about her experiences in Munich at the time of the extraordinary "Rheingold" première. Her sympathetic narrative should have been translated long ago; but it was worth while waiting for the present excellent version by Effie Dunreith Massie. The publication, this month, of Wagner's own memoirs makes the issue of these Souvenirs opportune.

Judith Gautier's acquaintance with Wagner began with her sending him a series of articles she had written on his music; she hardly dared to hope for an answer, but it came—four whole pages, in which, after thanking her for her sympathy, he made some interesting remarks concerning the music of his "Meistersinger," particularly the introduction to Act III. This letter is, like the others he sent her, printed in full in this volume. Wagner expressed the hope of seeing her in Paris some day, to which she replied that, as she was going to the art exhibition in Munich, she might stop over at Lucerne and call on him, with his permission. A cordial in-

vitation followed. The composer awaited them as the train arrived, found rooms for them, and during their stay entertained them daily at his home or else took them with him on mountain excursions. One of the places he took them to was the village where, as he related, he had first taken refuge after his flight from Germany. To his astonishment, on the first night, several boatloads of men rowed up to the inn in which he slept and serenaded him with choral fragments from his operas. On now revisiting this place,

> Very soon a crowd assembled; boatmen, residents, attendants, all hurried toward him, and with wonderful enthusiasm acclaimed Richard Wagner, kissing his garments with a sort of adoration. The master thanked them laughing, but with wet eyes. He drew us quickly away from the crowd. "These good people," he said, "they have not forgotten me yet."

At another place he found "old acquaintances, old servants, with whom he joked familiarly, which annoyed Madame Cosima very much, as she could have wished him to be more reserved, more Olympian." He was too democratic for his wife, the daughter of Liszt—for was she not also the daughter of a countess? His simian habit of astonishing visitors by climbing trees also displeased Frau Cosima; but these were slight dissonances in the happy life they led on the lake of Lucerne at the time shortly after their son Siegfried had been born. Of this life, and of Wagner's creative activity, Mme. Gautier gives many pleasant glimpses. One day Wagner sat down at the piano, told his visitors the content of his "Siegfried" poem, and then played the music. At the moment when the hero cleaves the anvil with his sword and the dwarf, Mime, terror-struck, falls over backward, Wagner rose to exemplify this fright. Then he declared that, not being a pianist, this music of the future was too difficult for him.

Proceeding to Munich, Mme. Gautier had the good luck to hear the greatest of all pianists play—and of his own accord, too—a very rare thing at that time. Liszt "went to the piano, lifted the cover with a quick movement, and ran his masterful fingers over the keys in an impetuous, thrilling, and passionate improvisation." It was his way of expressing his feelings of joy over the reconciliation with his daughter—the end of the estrangement caused by her desertion of Hans von Bülow. Another eminent musician this Frenchwoman met in Munich was Hans Richter. Wagner had written to ask him to take care of his Parisian friends in that city; and to the King he had telegraphed asking him if possible to order some special performances of his early operas for them. But things were happening just then which for the moment clouded the friendship between Ludwig II and Wagner. "Rheingold" was to have its first performance anywhere; the King had allowed 60,000 florins for the staging of it, but the result made Mme. Gautier exclaim: "They would not dare to present anything so badly at the Punch and Judy show of the Champs-Elysées." A famous specialist, Brandt, was summoned at the last moment, but he declared the situation hopeless. Hans Richter refused to conduct under the circumstances, and was discharged; yet in spite of this and of Wagner's siding with Richter, the King was so eager to hear the music that he ordered the performance on the date announced. The details of this extraordinary episode are given in this volume with greater fulness than anywhere else except in the third volume of Glasenapp's official biography, and they throw a lurid light on the difficulties with which Wagner used to be confronted—the strange indifference to his artistic demands which finally caused him to build his own theatre at Bayreuth. That there had been what we now call "graft" in the expending of the King's 60,000 florins was plainly intimated by Wagner in his remarks to Mme. Gautier.

From Lemcke & Buechner we have just received the long-expected autobiography of Richard Wagner, entitled "Mein Leben," in two volumes.

There is to be no lack of music in New York this summer. An orchestra of seventy-five men, recruited from the Philharmonic and Metropolitan Orchestras, and under the direction of Giovanni E. Conterno is to give concerts at popular prices every night after the middle of June. The Twenty-second Regiment Armory, at Sixty-seventh Street and Broadway, has been leased from the authorities for these entertainments.

The first thirty performances of Massenet's latest opera, "Don Quichotte," at the Théâtre Lyrique de la Gaïté, brought in the record figure of 167,433 francs.

The Berlin Municipal Council has voted a subvention of $15,000 to the Philharmonic Orchestra, on condition that it accept no engagment outside the Prussian capital, and that it give in the course of the summer twenty popular concerts in various quarters of the city.

It is now expected that the cost of the new opera house to be erected in Berlin will be nearer $5,000,000 than the $3,000,000 of the original estimate.

From Berlin comes the good news that N. Simrock has undertaken to publish the posthumous works of Antonin Dvořák. Among them are overtures, symphonies, piano pieces, and songs. Doubtless some valuable melodic gems will be found among them.

Elgar's second symphony is to have its first performance anywhere on May 24 in London, under his own direction. It is officially stated that the contrast between this work and Elgar's first symphony is as striking as that which exists between Brahms's Symphony in C minor and his work in D major. No definite programme is associated with Elgar's new symphony, but the following lines from one of Shelley's songs serve as a motto for the score:

> Rarely, rarely comest thou,
> Spirit of Delight.

Raoul Laparra, the composer of "La Habanera," which was to have been produced in this city last year, has written the text and music of another Spanish opera, "La Jota," which, judging by the comments on it in the Paris journals, goes beyond even the young Italian "verists" in its coarse realism.

During the Mozart and Wagner festival performances in Munich this summer the Concert Union will give a series of performances of symphonies and tone poems by Strauss and others. A special feature will be made of the symphonic poems of Liszt, in view of the Liszt centenary.

The Liszt centenary will be celebrated in Boston next season by a special programme of the Symphony Orchestra on October 22. The number of concerts given last season by this famous organization was 116 and two Pension Fund concerts, this figure exceeding by four the largest number of concerts given heretofore in any one year.

Charpentier's "Louise," which was made popular in New York by Mary Garden, Charles Dalmores and Charles Gilibert, had its three-hundredth performance in Paris a few weeks ago.

The production of Massenet's opera, "Thaïs," and Offenbach's "The Tales of Hoffman," for the first time in the language of the country, by the Aborn English Grand Opera Company, has proved so successful that Milton and Sargent Aborn have announced that their répertoire in the future will consist mainly of novelties. "Samson and Delilah," "Pelléas and Mélisande," "Tho Juggler of Notre Dame," and "Königskinder" will all be given in English by their forces next season, as will also several older works that have never been presented in the vernacular before, such as "The Barber of Seville," "La Gioconda," and "The Bartered Bride."

Art

John La Farge: A Memoir and a Study. By Royal Cortissoz. Boston: Houghton Mifflin Co. $4 net.

Twice John La Farge's life has been written, and in both cases from passive helper he became active collaborator. Miss Waern's monograph of 1896 remains the best account of his external life and work; Mr. Cortissoz's memoir gives admirably the subtle and vivid thinker, the fastidious talker, the delightful man of the world, who was perhaps the greatest social figure in America of our time. Were Miss Waern's book brought up to date—an easy task—it, with the present memoir, would admirably fill the present need of information and admiration. John La Farge, as is shown by the readiness with which he slipped into the autobiographical rôle, had a very definite idea of the effect he wished to leave. And it should be said in praise and definition of Mr. Cortissoz's

adroit and sympathetic study, that no opinion and no phrase in it would disappoint La Farge himself. The biographer has been faithful to an implied trust, and has handled with rare tact an unusual and somewhat refractory combination of biography and autobiography.

The book is what the moment requires. Its reticences, its frank indulgence of the note of adoration were inevitable. And this *parti-pris* of hero-worship involved pitfalls of every sort. To write a book along the lines of a memorial pamphlet was to court the gods of literary disaster. Only by the subtlest modulations of the uniform theme, by humor, irony, and all the sophisticated arts was such a feat as Mr. Cortissoz's possible. Upon him has been conferred much of that shrewd, intellectual urbanity which was the master characteristic of La Farge himself. When we say that the book is for the moment, we do not wish to be misunderstood. Much of it should retain a permanent value. Mr. Cortissoz expresses a humorous disregard of posterity, yet it cannot wholly displease him to feel that his first chapter, an elaborate portrait, modestly called a study, is likely to become a classic. Its fineness and veracity will be acknowledged by all who knew Mr. La Farge. Very charming, too, are the pages on the early days in New York and in Paris which are based on Mr. La Farge's own autobiographical notes.

The book is neither a record nor a criticism but a character study, and this is as true of La Farge's part as of his biographer's. La Farge's painting is touched only in fine and typical instances. Much is made of that admirable decoration, the Ascension, for the New York church of that name, and the material loveliness of certain of the early works is rightly emphasized for the first time. La Farge's activity in stained glass and his Polynesian sketches are treated quite summarily. In short, details are consistently sacrificed to portraiture. The aim is to make us hear and see the man; a knowledge of his works is presupposed, and the delightful effect of the book depends precisely upon this limitation of the field. Such concentration upon the man, a little at the expense of the artist, is justified by the well-known fact that La Farge invariably made the impression of being much greater than anything he had done. From Mr. Cortissoz's pages he emerges illuminated and undiminished.

In general this is so personal a book that to dissent from it would be merely to exploit another idiosyncrasy. On the side of fact, Mr. La Farge, in casual talk, to be sure, is authority for the statement that he made a brief sojourn at Yale College. The matter is worth looking up. On the subject of La Farge's overt and avowed borrowings from older art, it seems to us Mr. Cortissoz is neither quite ingenuous nor in right perspective. He plays the apologist where no apology seems necessary. He says of the great wall-painting of the Ascension that La Farge "has escaped the faintest suggestion of his predecessors." Such a suggestion can escape only one who happens not to know the Venetian picture from which many of the figures are conveyed. It seems to us that the facts are awkward only in Philistia. It is no discredit, surely, to Mr. La Farge to be classed with artists, who, like Raphael, Rubens, and Reynolds, often preferred their nature predigested. Again, Mr. Cortissoz's praise of the lucidity of Mr. La Farge's essays on the old masters ignores the rather open secret that such clearness was obtained by exceptionally heroic and successful editorial measures. It was of the essence of Mr. La Farge's literary style to be elaborate, insinuating, difficult. Whenever he was wholly clear, as in the Scammon Lectures, it was because he had very little to say.

Let us repeat that Mr. Cortissoz gives us with unfailing sympathy, tact, and lucidity the John La Farge that the world knew, the John La Farge who was himself a consummate expression of the art of life, a magnificent appearance that undoubtedly contained the better part of the reality. Yet La Farge himself loved all significant truth. He has left voluminous and revelatory materials. From these may be carved someday not a Gospel according to St. John, but a vivid, varied, and most instructive biography. Any future untrammelled biographer must be greatly beholden to Mr. Cortissoz for writing in the first glow of affectionate memory and admiration.

The publishers have made the volume in letter-press and illustrations fully worthy of the theme.

The Scribners state that Louis Hourticq's "Art in France," the new volume in the Ars Una series, will not appear until autumn.

Edward Garnett's "Hogarth" in the Duckworth-Dutton "Popular Library of Art" is a workmanlike essay characterized by discreet hero worship. Mr. Garnett recommends the hanging of Hogarth's Beer Street on every Englishman's walls as an offset to his daughters' admiration for Burne-Jones. Yet Mr. Garnett himself is amusingly non-committal on Hogarth's favorite doctrine of variety within reality. It is as if our author feared to face an issue which might even posthumously involve offence to the eclectic and eminently aristocratic Sir Joshua Reynolds. To the beauty of Hogarth's technique scant justice is done. Without indulging in the superlatives of Whistler and Meier-Graefe, the primacy of Hogarth might have been admitted more generously. While the study lacks critical incisiveness it is packed with information agreeably presented. Except for a lamentable color plate of the Shrimp Girl the illustration is up to the level of this excellent miniature series.

In the middle ages, mountain scenery had no attraction even for the cultivated classes of Europe. The *minnesingers* and other mediæval poets, who frequently gave expression to their love of green fields and forests, and flowers and the songs of birds, were filled with aversion and horror at the sight of the Alps, which they never approached or crossed unless compelled to do so. Artists of that time seem, also, to have had no desire to represent them in paintings. It was not until the fifteenth and sixteenth centuries that this aversion began to give place to admiration. In effecting this transformation and æsthetic evolution, the German painters, especially Dürer and his pupil, Altdorfer, took the most prominent part, and may he regarded as the creators of Alpine landscape painting in German art. This whole subject has been treated very carefully and critically from an historical as well as an artistic point of view by E. W. Bredt, in his book, "Die Alpen und Ihre Maler," just published by Theodor Thomas in Leipzig. It is an octavo volume of 197 pages, and contains 153 illustrations, exceedingly well chosen. The value of these illustrations, however, would be greatly increased if some of them were printed in colors.

We have received the first number of *Vision*, a quarterly journal of æsthetic appreciation of life. The leading article is by John Collier on the Celtic Revival. For the rest there are numerous short paragraphs and verses in praise of modern New York. Most interesting of these attempts to invest our own surroundings with glamour is Edwin Leeds's article on Jerome Myers, with facsimiles of drawings by that able chronicler of our poor streets. The printing of this slender quarto is done very handsomely at the Stone House Press, Johnsville, Bucks County, Pa. The capitals and ornaments are designed and boldly cut on wood by the editor, Walter Storey. The whole effect is attractive along the line of Gordon Craig's various periodicals. Like them *Vision* represents young hopes, and seems destined only for the term of life allotted to favorites of the gods. The yearly subscription, payable at No. 60 Washington Square S., New York, is one dollar and a half.

The death is reported from Cracow of Prof. Martin Sokolowski, the eminent historian of Polish art. Among his writings are studies of German artists who worked at Cracow, especially Hans von Kulmbach, and Veit Stosz and his son.

Finance

PROPHECIES.

For a number of past years there have been occasions when the Stock Exchange and the business community listened with eager interest for predictions or warnings, regarding the immediate financial future, by important men in the field of affairs. The present time, with its conflicting indications and confusing phenomena, is clearly of that nature—not less so, certainly, when the Standard

Oil decision, whose advent had long been pointed out by Wall Street as a possible landmark in the year's financial movement, was handed down last Monday. In the past these prophecies, taken as a whole, have been wrong quite as often as they have been right. There was James R. Keene's famous prediction of October, 1900, that if McKinley were to be elected, Stock Exchange prices would fall, and that they would only fall further if Bryan were to win. To those who remember 1901, the October prophecy is humorous. There was William Rockefeller's assurance of June, 1907, that no signs of business reaction were in sight, and that "the outlook for the future is bright." Four months away, in that future, stood the October panic.

But if eminent financiers have occasionally blundered in their judgment, they have also, on occasion, called the turn. James J. Hill's frank declaration, in the autumn of 1902, that the country was "at the top of the industrial hill," and, inferentially, that we were slipping downward on the other side; Mr. Schiff's prediction, as far back as January, 1906, of a panic "which will make all previous panics look like child's play"; Judge Gary's prophecy, in the early spring of 1908, that revival would be fairly in progress by midsummer; Mr. Harriman's statement, when the great "Steel boom" was first getting under way in June, 1909, that "if a tide of speculation sets in and we jump things up thirty or forty stories and then smash, the fall will naturally be greater"—all these were the words of oracles.

What, it will naturally be asked, was the reason for so accurate prediction on some occasions, and for so very inaccurate a view on others? It is not difficult to answer. The four correct prophecies just cited were deduced, as any one who recalls the dates in question will admit, from a study, not of markets and tendencies of the hour, but of underlying influences. The basis for the incorrect prophecies was exactly opposite. Mr. Keene's gloomy forecast of 1900 was founded on visible phenomena. Stock Exchange business of the year, up to the date of his prophecy of evil, had been only 60 per cent. of the year before; the country's bank clearings had decreased 13 per cent.; iron output for the second half of the year was 20 per cent. below the first half, and prices were falling rapidly. Nevertheless, the year 1901 came next. When Mr. Rockefeller made his sanguine prophecy of June, 1907, the country's bank exchanges were running 14 per cent. above 1906; railway net earnings for the year to date were larger in the aggregate by 25 per cent.; iron production had run 7½ per cent. beyond the year before, and had broken all previous records. Yet the panic of 1907 was just ahead.

This year, the prophets have been considerably less outspoken than at similar junctures of the sort. In private exchange of views, Wall Street was made acquainted several months ago with the judgment of one important international financier, to the effect that times would be very dull until the harvest, but that trade revival would come then. On the other hand, a canvass of the railway presidents lately elicited little but discouragement; some of them declared that even the influence of a "bumper" harvest could be only temporary. Yet another railway oracle, Mr. Hill, returning last week from the West, remarked that business throughout the country was already fairly good, chiefly because of the harvest outlook; while Judge Gary of the Steel Corporation, speaking to the steel manufacturers at their recent New York dinner, declared that "the fundamentals were never better than they are to-day," that "financial conditions were never on so sound a basis," and that "there are many things which should make us feel absolutely certain good times are ahead of us."

The business community as a whole reflects this interesting division of opinion. It may be fairly classified into optimists who see a decided turn for the better some months off, in response to important underlying influences, and pessimists who see, both in surface conditions and in fundamental influences, little to mitigate discouragement.

Numerous inferences have been drawn from this conflicting sentiment; but there is one which people seem curiously slow to draw. The very fact that opinions are so widely separated is itself reassuring. Except for the automatic mechanism of the markets, there seemed to be no check on the entire community's premature enthusiasm of 1909 or on its overdone gloom of 1910. A good part of the trouble into which we rushed by bidding up everything, six months after the panic of 1907, arose from the fact that caution and skepticism were proscribed. The order of the day was the motto of the "Prosperity Leagues"—talk nothing but another boom, and we shall have one. To resist that programme was unpatriotic; even the sober New York Chamber of Commerce had to send delegates to a Sunshine convention at Coney Island. That was a fit preliminary for the egregious blunders of 1909.

There has been no such preliminary to whatever is to occur in the later months this year. Not only have our financial men refrained from dismissing the great liquidation of 1910 (as some of them dismissed the panic of 1907) as a flurry or a silly accident of a week; but they are still looking warily about to see if the thing is over. Some of them think there is more to come, and are keeping their houses in order with a view to it.

Now, whether the immediate motive for it is right or wrong, the existence of this spirit of great conservatism is a balance-wheel. If things were to turn out disappointingly after harvest (they did so in the fourth year after the panic of 1873), at least the business community would not be caught off its guard. If, on the other hand, events were fully to bear out the hopeful forecasts, then the ultra-conservatism of so large a part of the mercantile community would be seen to have translated itself into empty shelves and depleted yards and warehouses, in the face of a sudden demand from consumers. "Booms," if they come, are not the less substantial for arriving under such circumstances. Even the Stock Exchange knows what follows, if events take a really favorable turn when rank and file are "short of the market." It is also a proverbial Wall Street saying that at a time of prolonged uncertainty and of repeated disappointments, the real turn in the situation comes when people at large have at last concluded that it is not to come at all. July, 1897, was a case in point in the one direction; visible indications of the day were so discouraging that some people were abandoning hope even of the country's longer future. May, 1901, was an instance of the other; the signs of the day had convinced even sober business men that the wild financial boom could never end. It ended that very month, just as the great depression of the nineties ended in midsummer, 1897.

JUST PUBLISHED

MAX PEMBERTON'S NEW NOVEL
WHITE MOTLEY

The art of flying and the art of love; the dreadful hazards of an Alpine flight, and the dangers of a perilous love-affair;—these are the thrilling themes of this dare-devil tale of adventure in the air and on land.

Cloth, 12mo. Frontispiece. $1.30 *net*

THE SECRET BOOK
By GEORGE WEMYSS

The adventures of a young American abroad who loves a girl known to him only by the chance finding of her diary. The novel tells how he sought her, wooed her, and won her despite Sicilian banditti, and in the teeth of a titled rival. *Cloth, 12mo. Colored frontispiece by Clinton Balmer.* $1.20 *net.*

STURGIS & WALTON CO. 31-33 E. 27 St. New York.

THE LIFE OF GEORGE JOACHIM GOSCHEN

First Viscount Goschen (1831-1907)

By the HON. ARTHUR D. ELLIOT. 2 Vols. 8vo, with 2 Photogravure Plates and 6 other illustrations. $7.00 net.

This biography has been written at the request of the present Lord Goschen, and is founded on documents in the possession of the family, supplemented by Mr. Elliot's own recollections of Lord Goschen's political activities.

LONGMANS, GREEN, & CO., New York

IN THE TIME OF THE PHARAOHS

By ALEXANDRE MORET, Sub-Director of the Musee Guimet, Professor of Egyptology in l'Ecole des Hautes Etudes. Translated by Mme. Moret.

8vo. with 16 Illustrations. $2 net.

The first concern of the traveller is to get some information about the ancient civilization—the political tenets, the diplomatic practices, the religious beliefs of the people that of old inhabited the land; where these people came from and when they came, what they brought with them and what they acquired; how they raised the time-defying pyramids and the colossal temples, and what prompted them to expend such Herculean efforts on these monuments; what literature they produced and what myths they handed down; what their ideas were of the present and of the hereafter. All this is set forth in Moret's volume, and much more that will prove invaluable to an appreciation of the country.

Send for new illustrated catalog.

The Literary Event of the Year

The Long Roll

A NOVEL OF THE WAR BETWEEN THE STATES

By MARY JOHNSTON

Stonewall Jackson is the central figure in this powerful, stirring and absorbing novel, the literary event of this semi-centennial year of the War.

THE FIRST REVIEWS

"A genuine war novel—after the manner of Hugo and Tolstoy and Sienkiewicz. . . . It is charged with a distinctive personal note, as though the writer has seen and taken part in these brilliant forays and smashing battles."—*Philadelphia North American.*

"It is wonderful how much of the wild courage and crimson agony of war the author has put into this book. Her spirit is large and fine, free from sectional bitterness, though loyally Virginian in viewpoint. . . . It is a great book."—*Chicago Record-Herald.*

Illustrated in color by N. C. Wyeth. $1.40 *net.* Postpaid $1.55

EARLY SUMMER PUBLICATIONS FOR THE GENERAL READER

BIOGRAPHY AND HISTORY

Harriet Beecher Stowe
BY HER SON AND GRANDSON.

HISTORY OF AMERICAN LITERATURE
By Reuben Post Halleck, M. A.,
Author of "History of English Literature"
$1.25
This history presents an interesting and inspiring account of the development of our literature from the earliest colonial times to the present. While it has the clear and definite manner of presentation necessary for the comprehension of secondary school pupils, the treatment is sufficiently full and suggestive to meet the needs of any class or individual beginning a systematic, progressive study of American literature. It is profusely and attractively illustrated.
Specimen pages and descriptive circular on request.

THIRD EDITION NOW READY

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

First Edition, October 1st; Second Edition, November 21st; Third Edition, March 1st

Fully illustrated with portraits and other illustrations. With copious notes and bibliography. $5.00 net. Postage 26 cents.

TWO NEW BOOKS
By JOHN JAY CHAPMAN

LEARNING
AND OTHER ESSAYS

12mo. $1.25 *net*. *Postage* 10c. *additional.*

These miscellaneous writings of a middle-aged scholar are characterized by extreme clearness of statement, and are colored by an ethical purpose. The writer's evident ambition is to stimulate new thought upon old subjects, and to induce the youth of the country to view again the whole structure of our inherited education, and see whether the old-fashioned beliefs as to the classics, to learning, and to civilization were not fundamentally sound. The essay on Dr. Howe, the teacher of Laura Bridgman, is an exceedingly interesting biographical contribution.

TREASON AND DEATH OF BENEDICT ARNOLD

A Play for a Greek Theatre.

Small 12mo. $1.00 *net*. *By mail*, $1.08.

A play of great beauty and force written out of the life and death of Arnold. It is a poetical production of a very high order, and will add materially to a reputation founded upon substantial literary achievement.

MOFFAT, YARD AND COMPANY, NEW YORK

Cloth, 75 cents; limp leather, $1.00 per volume, postpaid.

Thomas Y. Crowell & Co., New York

BARBAROUS MEXICO By JOHN KENNETH TURNER. The only book telling the unvarnished truth about the tyranny of Diaz and the helpless slavery of the peons. Twenty engravings from photographs corroborate the story. Extra cloth, $1.50 postpaid. Charles H. Kerr & Company, 118 West Kinzie St., Chicago.

GETTYSBURG

The Pivotal Battle of the Civil War.
By R. K. BEECHAM.
Late Captain, Second Wisconsin Cavalry.

The publishers believe this to be one of the best short accounts of the battle of Gettysburg ever written.

With many illustrations and maps. $1.75 *net.*

A. C. McCLURG & CO., CHICAGO

LISTS ABOUT TO BE CLOSED

How many copies of the new Encyclopaedia Britannica will it be necessary to print and bind to fill orders at the lowest prices—prices in effect today and until May 31st?

The most extensive manufacturing in the history of publishing is now under way. Sixty-eight printing machines have been requisitioned for the American Edition, and eight of the largest New York binderies.

MORE THAN 26,000 APPLICATIONS ALREADY REGISTERED (*May 23*)

In order that the manufacturing may be completed economically and rapidly, it is essential that the total number of sets for the first distribution shall be accurately determined by the last day of this month, and then all of the copies that will be required to execute orders registered by that date will be completed as one continuous operation and with the utmost possible dispatch.

No more copies will be printed and bound at present than those for which applications shall be received up to the day on which the lists are closed.

While several thousand early subscribers have had delivery of the first fourteen volumes, and further deliveries are being made from day to day, the increasing demand for the new edition has for some weeks exceeded the capacity of the binders. It has therefore been necessary to place many applicants on a waiting list, each application as it is received being given a serial number.

The manufacture of this work (29 large quartos of from 960 to 1060 pages each) in quantities sufficient to satisfy the present daily requirements of the sales department, is, for the time being, out of the question. Complete sets of 28 volumes of text are now coming from the binders.

Application lists for this first distribution will be closed on May 31st, and the prices advanced by 50 cents a volume or $14.50 per set, but meanwhile intending subscribers are urged to have their names registered without delay, the date of delivery in all cases to be contingent upon priority of application.

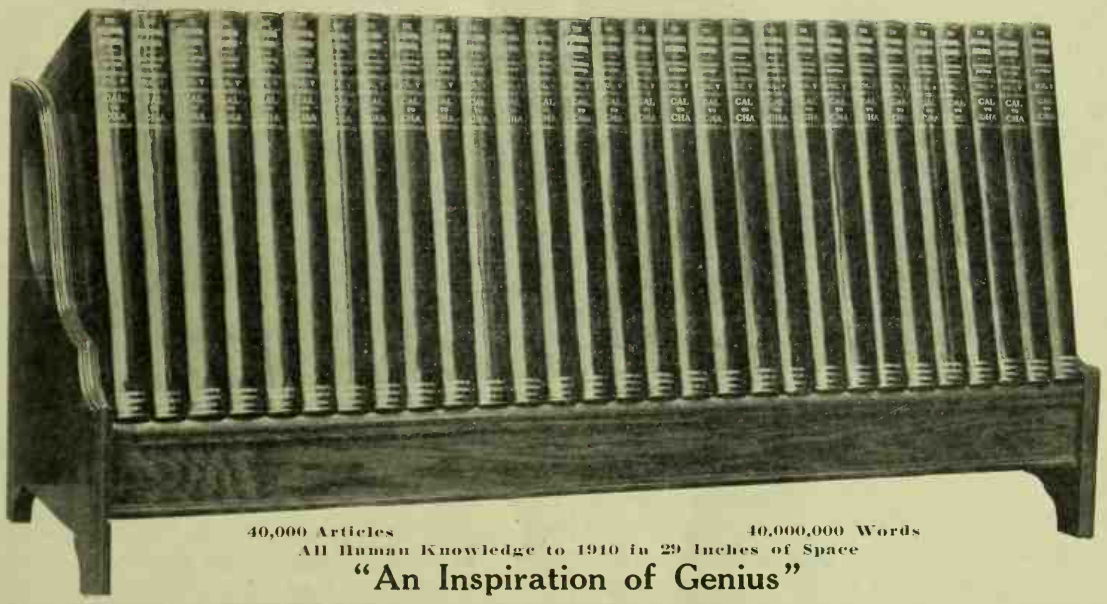
The advantage of subscribing now is therefore twofold—to enjoy the benefit of the saving in cost by having your name entered on the subscription list before the low prices are discontinued, and to secure delivery of the work at the earliest possible moment.

ORDERS BY TELEGRAPH WILL BE ACKNOWLEDGED BY WIRE

INDIA PAPER EDITION of The Encyclopaedia Britannica

(11th Edition)

29 Vols. Each But One Inch in Thickness



40,000 Articles 40,000,000 Words

All Human Knowledge to 1910 in 29 Inches of Space

"An Inspiration of Genius"

"It is a joy to see and feel and handle the new Encyclopaedia Britannica. The change from the ponderous forbidding volumes of the past to this charming India paper issue represents nothing less than an inspiration of genius. The Britannica was a work of reference—now it is a book which one takes down for the pleasure of reading it."

***Rev. CHARLES F. AKED., D. D.*, Former Pastor of the Fifth Avenue Baptist Church.**

The adoption by the Cambridge University Press of India paper (with flexible bindings) for such a huge and profusely illustrated work as the New Eleventh Edition of the Encyclopaedia Britannica marked a veritable revolution in the making of large books. The innovation, of course, was not decided upon until thoroughly convincing tests had been made of its complete practicability. The public of the English-speaking world has been quick to see the advantages of the new format. Eighty-nine per cent. of the 26,000 orders so far received in this country and in England for the new 11th Edition have been for sets on India paper, and subscribers have shown the greatest satisfaction and enthusiasm over the light, thin, beautiful volumes of the India paper edition. These volumes, though they each contain about 1,000 pages, are only 1 inch thick. The whole set of 29 volumes occupies only 29 inches of shelf space, whereas the edition on ordinary book paper requires nearly seven feet.

The Necessity of Investigation

Those who, for one reason or another, have not as yet given the present offer the attention they would perhaps have accorded an equally advantageous business opportunity of a more familiar kind should bear in mind that *on receipt of request every facility will be afforded them for deciding whether in their own particular case the acquisition of the world's greatest work of reference would be a business measure answering the test of business principles.* Unless this investigation is made, the potential subscriber must inevitably have at best but a hazy idea of the reason why as a practical efficiency appliance the 11th Edition stands on a plane by itself. For, *no adequate estimate of the purpose of the book can possibly be formed without a careful study of the prospectus,* which is not a mere brief in behalf of the new Britannica, but an impartial scientific analysis of a pressing modern need made in the light of the experience gained in 140 years of continuous endeavour to meet it.

Advance-of-Publication Prices to Be Withdrawn May 31st

All subscribers who register their applications before May 31st will effect a saving of 50 cents per volume or $14.50 per set and will acquire the world's foremost work of reference at a price which has never before been possible.

Vols. I to XIV are now being delivered to early subscribers, and Vols. XV to XXVIII are in the binders' hands.

DEFERRED DELIVERY

Subscribers who for one reason or another may prefer to take delivery of their books next Fall or at the end of the year may do so, and their payments need not begin until delivery has been made. It is advisable, however, in their case that their applications shall be registered during the present month; that is, before the closing of the period for making application at the lowest prices.

Illustrated Prospectus (40 pp.), 56 specimen pages on India paper, 4 specimen plates, and form of application showing the special advance terms, will be sent upon receipt of request.

THE GREAT NOVEL OF THE YEAR

The Broad Highway

By JEFFERY FARNOL

For a number of years no novel has evoked such generous and unanimous praise from critics, book-trade, and public. "The Broad Highway" is not only the year's biggest success thus far, but it gives every indication of taking its place among those few novels that, by reason of their universal appeal, achieve permanence beyond their day and generation.

A FEW OF THE MANY OPINIONS

Pulsates with life and overflows with originality.—*Boston Transcript.*

A remarkable book. "The Ancient" would have done credit to Dickens.—*N. Y. Herald.*

A completely delightful book.—*Chicago Tribune.*

It almost seems as if the genius of a Dickens—or a Thackeray had been repersonified suddenly.—*St. Louis Globe Democrat.*

An enchanting book. A series of incidents as swift as any of the romances of Dumas.—*London Daily Telegraph.*

The Land Claimers
By JOHN FLEMING WILSON
A virile story of the Oregon timber lands, with sterling characters. *Illustrated.* $1.50.

The Path of Glory
By PAUL LELAND HAWORTH
A fascinating romance of the French and Indian war. *Illustrated.* $1.25 *net.*

Forged in Strong Fires
By JOHN IRONSIDE
A story of South Africa and England—"a work of real power, and beauty."—*New York Herald.* $1.25 *net.*

The Gift of the Grass
By JOHN TROTWOOD MOORE
Pronounced the best story of its kind since "Black Beauty." *Illustrated in color,* $1.50.

A FEW MISCELLANEOUS BOOKS

Ancient, Curious and Famous Wills
By VIRGIL M. HARRIS
A rare collection of 500 wills, with biographical sketches, etc. 485 *pages.* $4.00 *net.*

The Danger Zone of Europe
By H. CHARLES WOODS, F.R.G.S.
Deals with the changes and problems of the Near East. *Maps and pictures.* $3.50 *net.*

Boston Days
By LILIAN WHITING
New, revised, and enlarged edition of the best account of Boston social and literary life.
Illustrated. $1.50 *net.*

Science and the Criminal
By C. AINSWORTH MITCHELL
Scientific methods as applied to conviction of criminals by a Scotland Yard expert. $2.00 *net.*

Brain Power for Business Men
By ANNIE PAYSON CALL
By the author of "Power Through Repose." 75 *cents net.*

Practical Salesmanship
By NATHANIEL C. FOWLER, JR.
With 29 expert contributors. $1.00 *net.*

TWO BOOKS FOR THE YOUNG

Buddie: The Story of a Boy
By ANNA CHAPIN RAY
The first of a new series for boys. $1.50.

The Captain of the S. I. G.'s
By ETTA ANTHONY HAKER
The story of a State Island boys' club. $1.50.

LITTLE, BROWN & CO., Publishers, 34 Beacon St., BOSTON

The Nation

NEW YORK, THURSDAY, MAY 25, 1911.

The Week

Two years and two months after the March storm which marked a change of Republican Administrations at Washington, resolutions have made their appearance in both House and Senate providing for the submission of a Constitutional amendment making the last Thursday in April the date for future inaugurations. It is to be presumed that the framers of the resolutions have looked up the records of the weather on the proposed date, and feel as sure of escaping blizzards as of avoiding the occasional Sundays that hitherto have necessitated two ceremonies. But, while the climatic conditions that have given rise to the resolutions are the more spectacular, they are far less important than the incongruity of the meeting of an antiquated Congress after the national election, while its chosen successor, unless specially convened, waits thirteen months for its first assembling. If a serious attempt is to be made to pass the resolutions putting the inauguration forward, they should by all means be altered to include some provision for doing away with this serious defect in our governmental arrangements.

There is no longer any doubt that the Lorimer case will be reopened, nor is there much room for doubt that the investigation this time will be thoroughgoing, to whatever committee it may be entrusted. As the moral effect of the decision is fully as important as its specific result, it is desirable that no reasonable ground should be given for any cry of persecution. That is a most serious objection to Senator La Follette's resolution naming as the members of a special committee of investigation five new members of the Senate. These may all be perfectly fair-minded men; but, named under the pressure of an intense public sentiment against Lorimer, his friends would always be able to make a plausible plea that the formation of this committee was designed to be a prejudgment of his case.

The total absence of public interest in the direct-primary bills now before the New York State Legislature is not in need of any recondite explanation. People are not interested because they long ago settled down to the conviction that no direct-primary bill worth having stood any chance of being passed by the present Legislature. The whole subject was shelved for a long time, and when it did emerge into public view Gov. Dix was found to have committed himself to a bill which contained the pleasing and original device of giving the use of the party emblem to the ticket put up by the party committee, which could thus be voted in its entirety by the making of a single mark on the ballot, while names put up by anybody else labored under great difficulties.

Profiting by the experience of New York, the lower house of the Illinois Legislature has amended the Workmen's Compensation bill by making acceptance of the provisions of the measure optional with both the employer and the employee, thereby seeking to avoid the flaws which led to the New York statute being declared unconstitutional. In its amended form the bill passed the House on Tuesday of last week by 98 to 2, and the Senate has already concurred. As in the New Jersey law, the bill fixes in detail the compensation for death or disability, the amount being governed by the employee's usual earnings To the fund from which the awards are granted employer and employee are required to contribute. It is provided that both employer and employee shall be bound by the act unless notice is given to the contrary to the State Bureau of Statistics. The Illinois measure follows the New Jersey act also in abolishing for those employers who elect not to accept the provisions of the compensation law the defences of assumption of risk, fellow-servant, and contributory negligence; this last factor, however, may be considered by the jury for the purpose of possible reduction of damages awarded. With the failure of the Wainwright law in New York State, the attempts of other States to deal with this problem must be followed with keen interest.

The action of the Chicago City Council's Committee on Local Transportation, in placing itself on record as favoring absolute municipal ownership of the proposed subways, with the cost of construction to be borne wholly by the city, is a striking indication of the progress made by the second city in the country in the last dozen years. The advance on the transportation side is even exceeded by that on the political. A dozen years ago, not only the city, but the State as well, was menaced by Mr. Yerkes's attempt to gain control of the surface lines for ninety-nine years without compensation to the municipality. It was not simply the attempt, but its brazen methods, that constituted the real danger; and, with a Council and a Legislature that gave every sign of merely waiting to be bought, the peril was unmistakable. It was this crisis that brought forth the Voters' League, which from its inception showed a skill and a determination that won the fear of the corrupt and corrupting forces it was born to fight. There are still in the Council men who eagerly took the wrong side in the struggle, but they no longer dominate. The American city has seemed slow in learning how to govern itself, but it gives every evidence of retaining, in respect to its streets, the lessons which have cost it so dear.

Again is the value of indictments and exposure of corruption as an influence in accelerating wished-for legislation illustrated in Ohio, in the acceptance of the Green Workmen's Compensation bill by both branches of the Legislature, and in the passage by the House of the Women's Nine-Hour Workday bill—the latter bill amended, however, to limit the hours of labor to fifty-four a week, without express stipulation that the period of daily employment shall be only nine hours. Under the provisions of the workmen's compensation measure, employers are required to contribute 90 per cent. and employees 10 per cent. of the fund which shall be used for compensation; and awards from this fund are to be made to injured workmen or to the estates of the dead by a State board. Employers may elect to act under the provisions of the Green law or not; but as in the New Jersey law recently enacted, the benefits of accepting its conditions are made greater by that section which abolishes the usual grounds of de-

fence in actions by employees for damages. These measures were the two important labor bills in the programme of Gov. Harmon, which now bids fair to have more success than seemed possible six weeks ago.

The Government's suit against the lumber combination is no sudden move, having, of course, long been in preparation; but if the President and the Attorney-General had been looking for a case calculated to draw out some of the most important specific bearings of the Supreme Court's recent deliverance on the Anti-Trust law, they could hardly have found a thing better adapted to the purpose. If we could but have at once the court's decision on this case, treated as a hypothetical question! A combination of that with the now impending decision in the Tobacco Trust case might clear up a large part of all the doubts that hang over the whole question of the practical interpretation of the law, as broadly indicated in the Standard Oil decision and the opinion read by Chief Justice White. The importance of the economic aspect of the question involved in the lumber case can hardly be overestimated. To the barriers which arrangements like those attacked by the Government in this case interpose between producer and consumer there is good reason to ascribe a notable part of the abnormal rise of prices in certain classes of commodities—especially some of the necessaries of life—on which public attention was so intensely concentrated a few months ago.

A controversy as to whether five years or three years is the proper enlistment period for the army has arisen because of Representative Hays's bill to change back from three years to the longer term. Two major-generals, Wood and Ainsworth, have appeared before the House Military Affairs Committee to discuss the bill, Gen. Wood for and Gen. Ainsworth against. Curiously enough, both were originally medical men, and not professionally trained soldiers. Gen. Wood's contention is that the shorter term scatters more men of military training throughout the country, and Gen. Ainsworth thinks that it will be cheaper to have the longer term. He is unquestionably correct in this view; if the question of economy is to decide, his opinion should prevail. Against the bill it is also argued that there will be more desertions, for it was in the hope of checking desertions that the term was originally reduced. But it has not had an appreciable effect; the percentage of desertions still runs very high, and many of them occur in the first year or so, just as there are many applications for discharge by purchase in the first two years of a recruit's service. The committee can readily obtain the figures to judge upon this point. Gen. Wood's argument would be more valuable if our army trained its men as do the Continental armies. They get their recruits all at one time, and have a regularly systematized training for one, two, and three years. We have nothing like it in our service, and there is no guarantee that when a man is discharged he is really a trained soldier, in the European sense.

Victor and vanquished are to unite in celebrating the fiftieth anniversary of the first battle of Bull Run. The plans are for a love feast to be attended by the Union and the Confederate survivors who took part in the battle, to be held on the field on July 21. Such a reunion is decidedly praiseworthy. In the nature of the case, the South can feel little but a melancholy interest in the "civil war day by day" feature of the newspapers, with its continual reminder of the approach, however unsteady, of Gettysburg and Appomattox. But wearers of gray as well as of blue need have no hesitation in participating in a celebration which aims to emphasize reconciliation rather than conflict, and the triumph of brotherhood rather than the winning of a military victory. For such a purpose Bull Run should seem to be well chosen. There the memories of the final losers in the struggle may be anything but gloomy as they recall what troops were those that poured across Long Bridge in panic—and that, regardless of which of the two battles on the spot they recall.

The formal opening of the New York Public Library on Tuesday suggests the way in which public spirit in an American city has to struggle to achievement through difficulties. The enormous obstacles to be overcome and the dragging out of the work beyond all estimates, might be cited for discouragement. But when we reflect that the official action of the city in completing support of the Library and providing a fine site for it was taken under a Tammany administration—with a ruffianly Mayor in the City Hall—we ought not to despair of any movement for beautifying and enriching our municipal life. Many adverse criticisms of the architecture of the Library have been made. We fear to tread in such artistic controversies. No one, however, who has often passed by the new structure in varying conditions of light and weather can have failed to be impressed at times by the mass and gleam of its white walls. In the rosy glow of a late autumn or winter sunset, or looming through a fog, the Library has come to have a fascination for many a beholder. And what we have to consider is the softening effect of time, and also the probability—we may say the certainty—that nearly all the buildings adjoining the Library east and west and north will soon give way to new structures, making for it a more harmonious approach and setting. It will, in any case, soon acquire the advantage of being a city landmark about which kindly associations will cluster, while in its generous provision for the intellectual life civic pride will find renewed satisfactions.

In a letter to the editor of *Science*, Prof. Sidney Gunn of the Massachusetts Institute of Technology brings forward a consideration that is not without weight in favor of having university professors appointed by the president, rather than by the faculty. The president, he says, "is not, like members of the faculty, influenced by a fear of competition. It is natural that professors on whom the task of recommending appointments falls should prefer docile mediocrity to men of ability sufficient to develop into rivals for the positions they hold." He is far, however, from indicating a belief that, as a matter of fact, the power of the president over either appointments or removals has been exercised in a wholly satisfactory manner; and he speaks of removal as though it were an operation quite as normal as appointment. It is unfortunate that the importance of the life tenure of professorships, in all except highly unusual cases, should find so little theoretical recognition; for though in practice the violations of it are not very frequent, they are sufficient in number

to affect vitally the psychology of the professorial estate. Indeed, the very danger to which Professor Gunn refers would be reduced to small dimensions if professors habitually looked upon their positions as beyond the reach of attack. In a certain measure jealousy of possible superior talent might still play a part; but the deep-seated feeling of security would produce such an attitude of mind that the "fear of competition" would not influence, to the detriment of the university, any professor of ordinary integrity of character.

Washington is, we believe, the first city to avail itself of the generous offer of Julius Rosenwald of Chicago, to contribute $25,000 toward the erection of a $100,000 building for a Colored Young Men's Christian Association in any city which would raise the remaining $75,000, subject only to the approval of the Chicago Association based on its judgment that the local Association was able to maintain the building. The athletic, educational, and social features of a flourishing Young Men's Christian Association, housed in a spacious, attractive, and dignified building, supply an element that is perhaps more acutely needed than any other for the development of *morale* among the colored youth of our cities, at a time that is in many ways the most critical in their lives.

The signing of the peace agreement at Juarez dispels the fond hopes of intervention which our Jingoes had built up, and confirms the three steps by which the transition from autocracy to Constitutionalism is to be effected in Mexico. The resignation of Diaz, the interim administration of De la Barra, and the holding of an election "according to the terms of the Constitution," are a direct path to what the successful revolution desires. Madero's forces have been fighting not for the procuring of new Constitutional arrangements, but only for the observance of those already long in existence. That such a course should be capable of description as "revolutionary," is an indication of the possibilities of political irony. Nevertheless, if the men who are aspiring to govern Mexico, or to help Mexico govern herself, according to the terms of the restored Constitution, succeed even moderately, revolution will hardly be too strong a word to apply to the peaceful portion of their task.

The provision for payment of members of the House of Commons contained in Mr. Lloyd George's new budget, would in any case be a matter of prime importance; but coming instantly on top of the vote abolishing the Lords' power of veto, it assumes extraordinary significance. Radicalism in England has been going forward at an astonishing pace in the past few years. Old-age pensions, increment taxes, destruction of the power of the House of Lords, invalid and unemployment insurance—these form a series of measures of fundamental importance and far-reaching significance, which it would be difficult to match in the legislative history of any country in a time of tranquillity. Whether the people of England have themselves realized the full import of these changes may well be doubted. As for the strictly Constitutional side of the matter, the change is one that, in the nature of things, is in a manner elusive; but it is none the less profound or momentous. If the House of Lords—however it may be reformed in its composition—is to remain without any other power over legislation than that of a suspensory veto, England is on the eve of an era of democratic government far freer from checks than anything that either her history or ours has thus far presented; and the payment of members of the House of Commons would go far to wipe out what remains, after the extinction of the Lords' veto, of the distinctive characteristics of the British Constitutional system.

The toll of deaths that has been taken by the aeroplane in its initial years is, naturally enough, beyond all comparison with anything that stands to the record of the introduction of the locomotive engine; but the lamentable disaster in Paris last Sunday is a reminder of the fatal accident in England which marked the inauguration of the steam-railway era throughout the world. The jubilation of great crowds was at an even higher pitch at the ceremonial opening of the Liverpool and Manchester railway on September 15, 1830, than was that of the vast assemblage at the French capital to witness the starting of the race through the air from Paris to Madrid; and every one knows how the English event was marred by the fatal accident to one of the country's most eminent statesmen. In Huskisson's case, too, as in that of MM. Berteaux and Monis, the accident was entirely due to a failure to observe clearly necessary precautions. When a stop was made for water, Huskisson and others, though they had been instructed to the contrary, left the carriages and stood on the track; and this, through a little complication, led to his being struck by an engine. In Paris, it appears that to the Ministerial party was expressly given the "privilege" of going within the lines outside of which spectators in general were required to be—a form of mistaken kindness which, we trust, will never again be indulged in. The inherent dangers of the aeroplane are quite sufficient without adding unnecessary peril to bystanders.

A fundamental difference between East and West is made plain by the Shanghai *Mercury*. Prince Ching has once more been impeached. How serious is the nature of the charges against him may be judged by one of them, to the effect that a certain disgraced and dismissed official has appeared again in Peking with two lacs of taels, about $200,000, as a *douceur* to the Prince, who has promised his reinstatement. This should seem to be conclusive of the Prince's fate, but, laments the *Mercury*, "in China these things are not managed as they are elsewhere. . . . In the West a man must court the utmost publicity in order to clear his name, or else be forever banished from the society of the honorable; here accusations may either be altogether ignored, or put aside with a wave of the hand." Such depth of degradation is, indeed, almost beyond realization by a Western mind. That a man in a public office of honor and trust should be able to ignore, or worse, to smile at, grave indictments of his official conduct, is nothing less than an arraignment of the people whom, in his very misconduct, he truly represents. What hope can there be for such a civilization? And, as the Shanghai journal adds, until corruption is rooted out, the innocent are bound to be suspected along with the guilty, so that it becomes difficult to believe in the integrity of any one in government employ, and "denunciations by censors may be so common as to average almost one a week." How incomprehensible those Orientals are!

THE LAW AND THE TRUSTS.

The central point upon which the decision of the Supreme Court in the Standard Oil case turns is that such a law as the Anti-Trust act does not interpret itself, but must be interpreted by the courts in the light of reason, and with full consideration of the facts of the legal history of the past. It may be said, with perhaps equal truth, that such an enunciation of the meaning of the law as is contained in Chief Justice White's opinion does not interpret itself, and that the discovery of its full significance will appear only in the legal history of the future. It does away, for good and all, with the possibility of so understanding the law as to make every business operation a violation of it which in any possible sense may be looked upon as constituting a restraint of trade; indeed, the necessity of doing away with this possibility is insisted on, in the opinion, as an indispensable condition of making the law workable at all. It does away also with the contentions put forward in behalf of the Standard Oil Trust which would have reduced the law to a nullity. Beyond this, however, the position of the Court is indicated only in such broad and abstract terms as leave room for wide difference of opinion as to the application the Court in future cases will make of its own doctrine. That the decision, made as it was by a unanimous court, is to be followed by others, in the light of which the doubts that have so long enveloped the subject will be gradually cleared up, may be taken for granted; in the meanwhile, it is the bearing of the opinion on the broadest aspects of the question of monopoly, rather than its more specific consequences, that challenges the attention of the public.

Everything turns on the question, What is the test of "undue" or "unreasonable" restraint of trade? Are we to understand that the Court's insistence upon "the light of reason" in applying the law is equivalent simply to a vague division of Trusts into good Trusts and bad Trusts? Such seems to be the view that some inveterate opponents of anti-monopoly legislation are eager to put upon it. "The statute," we are told by one of these, "retains all its prohibitions; it arms the prosecutor and the court with all the power necessary to defend the people against monopolies and restraints that would *work to their injury*." But we do not believe that the Court meant to arrogate to itself the power to determine in each instance whether a given monopoly or restraint works to the injury of the people. No such intention is to be found in the Chief Justice's opinion. While the language of that opinion is, at some crucial points, less lucid than might be desired —a circumstance that may plausibly be ascribed to the reconcilement of divergent views which was necessary to procure unanimity—yet it seems safe to understand the position of the Court to be that which was laid down in Justice Brewer's partly concurrent and partly dissenting opinion in the Northern Securities case. Unreasonableness, indeed, was of the essence of the matter, according to that opinion; but the unreasonableness was to be discovered not through a balancing of the concrete good and bad effects actually produced by the conduct of the party in question, but by the nature of his acts taken in themselves. "The ruling," said Justice Brewer, referring to preceding decisions of the Supreme Court, "should have been that the contracts there presented were *in themselves* unreasonable restraints of interstate trade, and therefore within the scope of the act." This is a different thing from a paternal discrimination between Trusts, according as the Court should hold that they were on the whole doing "good" to the community or the reverse.

Nor is the difference one that affects merely the subject-matter immediately concerned, large as that is. It touches the inmost nature of the functions of the judiciary. To pass upon kinds of action, determining whether they are lawful or unlawful, is an indispensable part of the work of courts, an indispensable supplement to the work of legislatures. Human affairs are too complex to permit the line between the lawful and the unlawful to be charted with such accuracy in the statutes as to leave no discretionary margin in the application; but the discretion exercised by the judge should serve to make more definite the intent of the law, not to substitute for it the preference of the Court, however benevolent. In a message to Congress last year President Taft emphatically rejected the idea of making "a distinction under which good combinations may be permitted to organize to suppress competition, control prices, and do it all legally, if only they do not abuse the power by taking too much profit from it out of the business"; and this general idea he doubtless had in mind when, a little further on, he declared that to put the word "reasonable" into the Anti-Trust law itself would be "to thrust upon the courts a burden that they have no precedents to enable them to carry, and to give them a power approaching the arbitrary, the abuse of which might involve our whole judicial system in disaster."

And behind all this lies an even more fundamental issue. It may be that the shrewdest and wisest men of business in the country think the growth of monopoly a good thing. It may be that skilled economists—not to be suspected of any such personal bias as would naturally affect men with large business interests—throw the weight of their authority into the scale either with the declaration that unlimited concentration of economic power is a benefit to the people, or that such concentration, whether good or bad, is inevitable, and not to be hampered without mischievous results. We do not for a moment admit such views. But if they were granted, it would still remain as true as ever that the policy of the nation in regard to monopoly must be declared by the nation, through the lawmaking power. The nation may not desire to purchase the maximum of prosperity at the cost of the extinction of competition. The nation may be willing to stake a great deal on the endeavor to maintain opportunities for individual initiative, even if the loudest of voices proclaim the fight a forlorn hope. The nation has a right to try its own experiment, however high the cost of it may be estimated by interested or disinterested advisers; it has a right to fight what it dislikes or detests, regardless of anybody's computations of the chances of victory. The Supreme Court, reading into the Anti-Trust act that concept of reasonableness which is indispensable to the rational working out of the act, is not defying the nation's will; but if it were to undertake—as some comments on the decision seem to expect—to exercise a benevolent guardianship over the nation's welfare instead of carrying out the clear purpose of the law, it would invite consequences far more serious than any of those that have so

often been pictured by alarmists as threatened by the operation of the Sherman law.

THE DEMOCRATIC PROGRAMME.

Reports and rumors are thick, in the dispatches from Washington, concerning the attitude and expectations of the House Democrats. It is definitely asserted, for example, that they will absolutely refuse to adjourn or even to take a recess until the Republican Senate has passed or defeated the bills which the House sends to it. What position the Senate will take, there is thus far nothing to indicate except the fact that it has been very indolent. Its committees are doing nothing, save for the hearings on Canadian reciprocity before the Finance Committee. Yet it is this very air of indifference on the part of the Senate that seems to have roused the aggressiveness of the House leaders. They will not, it is said, permit all their work cavalierly to be pigeon-holed in the Senate. Rather than submit to that, they will not consent to adjournment even if Congress sits all summer.

Now, though we may not pretend to speak with authority of Democratic plans at Washington, some things are clear from the very nature of the case. It is obvious, for example, that the legislation urged in the House is urged seriously. All of it the Democratic leaders would like to see enacted at this session of Congress if possible. And to bring that about they will do everything that can be reasonably asked of them. Yet their idea, after all, is that of constructing a concrete programme for the future. By the succession of bills which they press upon the attention of the House and the country, they aim chiefly to let the people know what sort of law-making is to be expected from the Democrats if full power is given to them. In this purpose they may be successful, whether the Senate will hear or forbear. Take, for instance, the farmer's free-list. The Senate may consider that bill. If as many Republicans voted for it, proportionately, as in the House, the Senate might even pass it. More probably, however, the Senate will seek to smother the measure in committee. But that would not be a disastrous check to the Democratic plans. It might even further them by letting the country see in the most conspicuous way that the Republicans were not willing to lift a finger to lighten the burden of taxation.

We take it that a clear definition of party policy in such matters is all that the House Democrats would be ready to fight for stubbornly. They are ready and even anxious to see their bills made law without delay. Favorable action by the Senate on Canadian reciprocity and on the bills for the relief of farmers, for the new apportionment, for the admission of Arizona and New Mexico, for the reduction of duty on wool and woollen goods, would unquestionably please the House leaders. But they will not be wholly displeased if the Senate declines to have anything to do with the Democratic measures. Only that declination must be a matter of record. The Democrats will not rest content with seeing their special bills strangled in committee rooms. They will demand that a vote be had at least on the point of consideration. Under the Senate rules, any Senator can make the motion that a given committee be discharged from further deliberation on a given bill, and by that method the Democrats will be able to force the Republicans to take a position openly. In short, the House bills may not be passed by the Senate, but they cannot be secretly done to death. In one way or another, a test-vote will be taken.

If that is had, there is no valid reason for expecting the House to settle down to an obstinate resistance to adjournment. If the hot weather or other things soon spur the Senate into activity; if the agreement with Canada is ratified and thus the chief end of the extra session attained; and if the Senate makes it clear by deliberate vote that it will not even take up the bills passed by the House, there will be no ground for a prolonged fight over adjournment.

This is politics, but it is of the good kind. From "playing politics" in the bad sense, the House Democrats refrained, in their treatment of the reciprocity bill, so handsomely that President Taft felt moved to compliment them. Among the Democrats of the Senate, it is reported, there is an element which favors a less clean-cut method of dealing. Some Democratic Senators would attach riders to the reciprocity bill—perhaps the farmer's free-list. They would put before the President a bill containing what he wants and also what he does not want. But we are convinced that this would be mistaken tactics, through which the country would at once see. It would be far better for Senate Democrats to imitate the House and deal with reciprocity entirely by itself. That would be a fair and honorable way of treating the matter, and would also be the shrewdest party policy.

PARLIAMENTS AND PEOPLES.

On both sides of the Atlantic, though for very different reasons, the question of the referendum has recently been pushed to unexpected prominence. With us this has been part of a general movement of dissatisfaction with the working of our State Legislatures; and the driving force behind the movement has been, above all, the feeling that the members of these bodies were not worthy of that trust which is reposed in the lawmaking body by the people. Such worthiness—as a general rule, of course, to which there may be many exceptions—is an essential presupposition of the institution of representative government; and it is difficult for the stanchest upholder of that institution to quarrel with a people for being restive when that presupposition is habitually and flagrantly violated, or for seeking a remedy when its patience has been tried beyond reasonable limits. Speaking for ourselves, we feel that the time has by no means come for pronouncing the case of the existing system, even as regards our State Legislatures, to be hopeless; but we are ready to say that such disclosures as those at Columbus the other day, or those at Springfield in connection with the Lorimer matter—to speak only of some of the most recent of a long line of dismal experiences—cannot go on indefinitely without producing an irresistible, and a justified, demand for some radical cure.

It cannot be too clearly understood, on the other hand, that the sudden advance of the referendum idea in England is not—as are the recent economic innovations in that country—a manifestation of radicalism, but quite the reverse. In the interesting debate on the referendum amendment proposed by the Unionists to the veto bill, Mr. Balfour insisted as strongly that he was endeavoring to conserve the ancient Constitution of England in the advocacy of the referendum as Mr. Asquith made the

same contention for his opposition to it. And there is no inherent incompatibility between the two claims. Mr. Balfour finds the limitations that in the past have vetoed the Commons' power of making profound Constitutional changes by a mere majority vote slipping away with the reduction of the House of Lords to impotence, and he desires the referendum as a substitute, in default of a better, for those ancient restraints; Mr. Asquith, on the other hand, finds in the referendum a violation of the fundamental nature of parliamentary government, and declares his immovable hostility to it on that ground. Thus, so far from basing their position on the failure of the institution of representative government, the two opposing leaders vie with each other in acclaiming its virtue and affirming its title to the loyalty of the British people; only Mr. Balfour finds its safe working bound up with an effective two-chamber system—which, if weakened, must be propped by the referendum for cases of difference between Commons and Lords—whereas Mr. Asquith holds that a powerful second chamber is the very thing to be got rid of if parliamentary government is to have a fair chance.

Not the least of the many penalties we pay for the grosser defects of our practical politics is to be found in the obstacle they present to a sober and adequate discussion of grave public questions. Upon the vital energy that the public is able to give to the consideration of political issues, there is always so heavy a mortgage in the need of fighting palpable abuses that little is left for weighing the deeper merits of political proposals. This has never, perhaps, been more distinctly illustrated than in the matter of the referendum and the recall. The people of a Tacoma or a Los Angeles point with pride to their recall of an unscrupulous Mayor, many of the best men in California look forward with joyful expectation to the prospect of being able to kick a judge off the bench when they don't like him; comparatively few persons realize that anything more is at issue than the getting rid of an individual administrative officer who has abused his opportunity, a particular set of judges who have been unfaithful to their trust. What effect upon the calibre of judges will be produced in the long run by a tenure of office such as that proposed in Arizona or California? What kind of standards of official conduct will become established for Mayors and Governors when the likelihood of their being swept out of office by any wave of popular disapproval shall have become a familiar part of the ideas associated with their office? What will be left of the traditional concepts of parliamentary government when the acts of Legislatures have come to be regarded as merely tentative, subject to overriding by popular vote? In the centres of the referendum and recall movement, the pressure of the immediate evils against which it is directed has—naturally enough, we admit—thrown such considerations as these completely into the background.

"I believe from the bottom of my heart," said Mr. Asquith, in closing his speech, "that if you introduce this referendum, not as a rare, exceptional, possible solution of some conceivable difficulty, but as part of the regular working machinery of popular government, you are undermining the very foundations of representative government." But he did not have to contend with any assertion on the part of Mr. Balfour, or of anybody, that those foundations had already been undermined, or were being undermined, by the play of sinister influences or the growth of degenerate practices. In a State whose Legislature has come to be looked upon as hopelessly given over to the uses of corrupt corporations or to the control of sordid bosses, of what avail can it be to set up high-sounding phrases relating to the virtues of representative government in the abstract? To prove that these vices are not incurable is the one supremely necessary task for those who wish to make effectual opposition to radical changes; and there are no better friends of the Legislatures of the future than those Governors who have been goading the Legislatures of the present into paths of public duty to which they had long been strangers.

DRAFTING THE ARBITRATION TREATIES.

In less than four hundred words, Secretary Knox has made an admirably clear summary of the proposals submitted to the Governments of Great Britain and France as a basis for a general treaty of arbitration. The document lays stress on the one feature that has everywhere been accepted as constituting the great advance over previous treaties of arbitration: the usual provision which excepts questions of vital interests and national honor is eliminated. This, however, does not mean that the contracting parties now pledge themselves beforehand to submit all future disputes to arbitration. It only means that formerly certain questions were regarded as *prima facie* unarbitrable, and that now all questions are *prima facie* arbitrable. In other words, the new agreement gives formal expression to a broadening intention of good-will. It shifts the presumption from disagreement to harmony. Where formerly it was assumed that questions were bound to arise on which a pacific agreement was impossible, to-day we are ready to assume the improbability of serious dissension, and in any case to let the future deal with its own tribulations.

We may imagine a specific case in order to illustrate the workings of the machinery which Mr. Knox's memorandum contemplates. A dispute arises between Great Britain and us over the Northwest boundary. The two Governments, through the regular diplomatic channels, endeavor to come to an agreement. They fail to do so, and recourse to arbitration is suggested. The contending parties may agree that the question in dispute is arbitrable, or one of the parties may hold that the question is not a fit subject for arbitration. In either case, the question passes into the hands of a commission of inquiry, composed of the representatives of the two nations on the Hague Tribunal. This commission of inquiry has a two-fold function: (1) In cases where both Governments are willing to arbitrate, it decides whether all diplomatic resources have been exhausted, so as to make arbitration necessary; (2) in cases where one Government opposes arbitration, the commission of inquiry decides whether the question in dispute is arbitrable; and if the commission of inquiry so decides, both Governments are bound to go before the Hague Tribunal. However, before the two Governments approach the seat of justice, they must, by treaty, agree upon the terms in which the question shall be submitted for adjudication. Such preliminary treaties of reference must, in the United States, receive the consent of the Senate. The preliminary treaty having been agreed

upon, the Hague Tribunal proceeds to make its award.

The features in which this scheme falls short of the ideal system of international justice are, of course, apparent. Sanguine friends of peace who believe that the elimination of the proviso regarding questions of vital interest and national honor would mean obligatory arbitration on all questions will find that the change has been not to "must" but to "may," or, more correctly, to a position half-way between "may" and "must." A nation that refuses to arbitrate may be forced to arbitrate if the Commission of inquiry so decides; but since this commission is composed of the citizens only of the two parties to the controversy, the probabilities are that the Commission of Inquiry would divide on lines of nationality as so many commissions of arbitration have hopelessly done, though circumstances are conceivable where a member of the commission would take sides against his own Government. At any rate, the fact that arbitration is not completely obligatory is the first weak point that suggests itself. The second is that which makes the consent of the United States Senate necessary to a preliminary treaty of reference. On this rock many an arbitration proposal may be wrecked, especially when a Commission of Inquiry has forced arbitration upon a reluctant Government.

A closer examination, however, shows that such objections to Mr. Knox's scheme are more apparent than real. They are largely unreal, because they are directed against weaknesses inevitable in any voluntary system of arbitral justice. Thus, the composition of the Commission of Inquiry, which is to decide whether or not a nation must go to court, might be improved by making it something more than a bi-partisan board. But as long as our Constitution gives the Senate a voice in shaping our foreign relations, the Senate must intervene at some point or other in the arbitral process. In the last resort, it is the intention and not the machinery that makes arbitration possible. If the Senate so desires, it can at any time wreck the entire scheme by adopting a policy of obstruction. The question is whether the Senate will venture to do so, or will have the desire to do so, in the face of a passionate public sentiment in favor of peace.

That the proposed arbitration treaties will not give us peace by compulsion does not detract from the immense value of the achievement now apparently on the eve of consummation. In the last resort, there is no such thing as compulsory law anywhere. If I want to pay the price of murder, I can commit murder. But to have placed the cause of peace on the high and solid footing in the practical affairs of nations which the proposal of the treaty with Great Britain brought about was an inestimable service to mankind; and in bringing another great nation, France, within the scope of the same beneficent plan, Mr. Taft has further greatly added to his claim upon lasting honor and gratitude.

CRITICISM OR GOSSIP?

If publishers continue to have their way, the critics of the future will not lack biographical facts in the case of the writers over whom they sit in judgment. Far from needing to dig in a river-bed for a lost identity, or to play the sleuth with anonymous pages, the indications are that they will have to close their ears to a bombardment of trifles. The amount of chit-chat that publishers send out week by week is appalling. We read that one writer has been travelling in the Malay Peninsula, where the temperature in his carriage was 112 degrees; that the brother of another writer purchased by cable, without having seen it, a furnished castle; and that still another owns a dog which is fond of having its mistress read her works aloud. The publishers' purpose in unloading so much gush is obvious enough. It is the stuff that fads are made of. The custom suggests, however, a larger issue: What is its effect upon criticism, both popular and expert?

It has always been said that to be just to a work of literature, a critic should be able to put himself in the position of the writer, and should relate biography to literary expression. The fullest application of the principle that occurs to us is the great bulk of Goethe criticism. The meagrest incidents of his life have been ferreted out and are held priceless. Who suggested to Goethe the conception of "Werther," what poems were inspired by Lili Schönemann, when he last saw Lotte—all these details are accounted jewelled facts in a soul's awakening. No doubt acquaintance with biography is apt to lend a sense of reality to the art which rests upon it. And yet there is a danger here, too. Much the larger portion of Goethe criticism is biography, and nothing else. Goethe saw a peasant girl walking across a field, her frock was open at her throat, she smiled, it was just after he had run away from Lili, he wondered at her strong ankles, the next day he started for Weimar, jotting down *en route* the poem that is thus criticised.

True criticism, we take it, should, whatever else it does, measure the work in question by the literary type to which it belongs. "Paradise Lost" can rightly be called great, not simply because it is the sincere and powerful utterance of one fighting for his religious creed, but quite as much because it embodies an almost perfect assimilation of elements as huge and diverse as those of the world of Homer or Virgil, to the literary type known as the epic. Formless as Shakespeare is, compared, say, with Racine, the demands of great tragedy as a type are well enough established to make possible, inevitable, the appraisal of "Macbeth" or "Othello" as tragedies, regardless of the question whether their author was once a youth who poached on the preserves of Sir Thomas Lucy, or was later to be a great judge with peculiar notions about the acceptance of silver plate from a defendant. One of the gravest dangers which criticism meets to-day is the tendency to evade looking a literary type in the face. It is much easier to toy with its frills and even to make one's self believe—so completely is the historical method upon us—that they are the essentials. The conditions out of which a work grew, what books the author had access to, where he got his idea—these circumstances have been magnified to ten times their real meaning. The habit has been fortified by a host of amateur critics whose interest in literature is purely antiquarian; who, however admirable their love of books may be, are not competent to deliver literary judgments.

Meanwhile, the confusion of standards goes on apace. A hopeful writer works in a coal mine for a year and puts forth a book. His publishers vouch for the experience, the public for itself senses first-hand testimony, and behold! a great realistic novel is before us. A playwright seeks the slums of Cherry Street, presents his picture; again the

credentials are examined, and he is proclaimed the Antoine of America. Where's the use in comparing his work with similar themes expressed a century or two before—conditions have changed too much for the comparison to be profitable. The truth is that, with the feeling for the controlling importance of literary types gone, the sense of emphasis has fled too. Take a play which had a successful run in New York this past season and which critics were chary about censuring—"Havoc." Its plot is fundamentally the same as that of Sardou's "Divorçons." A paramour proves to be a huge failure when he becomes husband, and the husband eminently acceptable to his former wife when he later turns lover. By every artistic precedent, "Havoc" should have been treated as a fantasy, as was "Divorçons," with a light imaginative touch. Instead of so doing, the author, seeing the possibility for tragic moments and dwelling heavily upon them, mixed types and took away from his piece all literary meaning. That a few tears fell in the audience is no argument. The author might have studied to advantage Shakespeare's conduct of another fantasy—"A Midsummer Night's Dream." He would have found that certain human beings in the play were permitted to be shadowy that they might not intrude reality upon a purely poetic conception. We see little chance for present-day criticism until the sense of literary type is recovered. Nothing, we believe, could be of greater value, to public and authors alike, than a resolute habit of classifying our countless novels and plays, etc., according to the literary types long ago built up by master hands. The danger of dogmatism—such is the confusion at present—would not arise for many a day.

THE NEW BRITANNICA.—I.

Never has the appearance of an encyclopædia, or indeed of any literary production, been heralded in the way in which the new Britannica* has been announced in the United States. The American public has been overwhelmed with prospectuses and advertisements the style and manner of which have not invariably reflected credit on the University of Cambridge, under the name of whose press the eleventh edition of the Encyclopædia Britannica issues. A work has been promised incomparably superior to the old Britannica, one that would constitute a storehouse of the world's knowledge and a record of human achievement altogether unique. We have before us fourteen volumes out of the total number of twenty-eight (exclusive of the index volume), and a cursory examination shows that the new Britannica bears out the claims made for it by the publishers. They have produced a work of transcendent merit, one unapproached by any similar publication.

The last regular edition, the ninth, published by the Blacks of Edinburgh, appeared in twenty-four volumes, in the years 1875-88. The tenth edition, so-called, got up by the London *Times*, was made up of the ninth edition (unaltered) and eleven supplementary volumes. In discussing the merits of the present publication, we shall make comparisons with the ninth edition, ignoring the *Times's* supplement, which, to use the expression of Hugh Chisholm, the editor-in-chief of the work before us, was merely a "stop-gap." The lapse of three decades and a half between the publication of the first volume of an encyclopædia representing such a profitable undertaking as the Britannica and the appearance of a strictly new edition, argued a lack of enterprise and of regard for the fitness of things that was quite inexplicable. The publication of a greatly enlarged edition in such a way that the whole set could be brought out virtually at one issue without any portion being seriously antiquated, is a unique achievement in the history of the book-publishing business. The long delay that was interposed will inure to the benefit of the present generation of readers, which gets an encyclopædia entirely made over instead of one partly renovated.

The way in which the Britannica at the very high-tide of success was allowed to become thoroughly antiquated is not the only curious episode of the kind in the recent history of encyclopædia-making. Equally inexplicable was the failure to keep up the American Cyclopædia (Appleton's), a work that had deservedly become a household treasure throughout the land. It is inconceivable how a publication so firmly established in the esteem of the people of the United States and capable of being reconstructed into an encyclopædia that would have been looked upon as a sort of national institution, almost like the Britannica, should have been thrown overboard for a successor of comparatively small merit bearing the title (Johnson's Universal Cyclopædia) of the publication which had come out in 1874 to dispute the field with the American Cyclopædia. Another instance of lack of enterprise was afforded by the publishers of Chambers's Encyclopædia, who, after bringing out an admirable work in the edition that appeared twenty years ago, failed to see their way to the publication of a first-class Anglo-American encyclopædia of moderate size for which that edition would have made an excellent foundation. The American Cyclopædia and the New International Encyclopædia, a work modelled largely on similar lines but much more comprehensive in its scope, are the only two general encyclopædias brought forth in the United States whose plan and execution have represented a serious endeavor to produce an imposing work of reference. The recently published Encyclopædia Americana, which contains about as much matter as the International, does not merit serious consideration.

Encyclopædia-making in Germany has long been at a stage that indicates a singular narrowness of vision on the part of publishers there. They appear to have no conception whatever of the possibilities open to them. Meyer and Brockhaus continue to travel along the same well-worn grooves, intent in their keen rivalry mainly on developing *à outrance* a rather uninspiring type of reference-book, half encyclopædia and half universal lexicon, overflowing with topics not to be found in any Anglo-Saxon encyclopædia, but almost destitute of the quality of readableness. The manner of treatment is largely standardized. Much dead and useless matter is carried along and the element of picturesqueness is sacrificed. The cut-and-dried manner of presentation leads to singular flaws. Who would have thought it possible, for instance, that both in Meyer and Brockhaus, neither the name of Darwin nor the word *evolution* occurs in the article on Huxley? The tens of thousands of cross-references alone (a large proportion absolutely useless) take up so much space that the contributors in too many cases have no free hand in dealing with their topics. With respect to their comprehensiveness, we cannot, of course, deny that the German encyclopædias possess extraordinary merit. No conceivable kind of topic is permitted to escape their closely-meshed nets. They are universal question-answerers to a degree to which no encyclopædia that has ever appeared in an English-speaking country could lay claim. Yet we cannot help thinking that the German reading public would be better served if, instead of its all-embracing Konversations-Lexikon, it had a work constructed somewhat on the lines of the New International Encyclopædia (which contains approximately the same amount of text as Meyer or Brockhaus), whose pages are everywhere readable, and which, by husbanding its space, can afford to deal generously with many important topics but meagrely treated in the German encyclopædias. Where German enter-

*The Encyclopædia Britannica: A Dictionary of Arts, Sciences, Literature, and General Information. Eleventh edition. Vols. I-XIV. New York: Cambridge University Press.

prise shows to great advantage is in the frequent editions (with complete resetting of the work) of such a publication as Meyer and in its magnificent pictorial and cartographic equipment, far surpassing what the new Britannica or any other encyclopædia can offer.

In addition to the functions belonging to such a work as the International, the whole of whose contents is presumed to be not above the level of the comprehension of the ordinary intelligent reader, the Britannica assumes an additional function, that of introducing the special student in any branch of science to the intricacies of his subject and of presenting to him an exposition of the development which that branch of science has attained. It thus contains a large array of weighty scientific treatises, intended for the very few. Collectively, they render it an imposing monument to the sciences, one that shows the level that each has attained. This encyclopædia is, therefore, a mirror of the world's intellectual achievements in a sense in which the ordinary encyclopædia cannot profess to be. The discharge of this function, however, entails the failure of the Britannica in some measure to meet the fundamental requirements of a popular encyclopædia. The applicant for information or the seeker after knowledge will often be turned away from its pages with his curiosity unsatisfied. Much of what the Britannica contains on physics and chemistry, for instance, will remain as heretofore a sealed book to many who come to learn out of its pages. But all this is in conformity with a deliberate plan. If the owner of the work is in quest of elementary information regarding heat, electricity, or light, for example, he will be told that the Britannica does not propose to lay before him the instruction that he can obtain from an ordinary school book. It would have been possible, perhaps, to adopt a double treatment in the case of many scientific articles, especially where mathematics enters largely into the subject, giving first a popular exposition, intelligible to the ordinary reader, and after that a full scientific compendium for the benefit of the specialist or the student who is able to follow intricate mathematical demonstrations. It is easy to see, however, that the preparation of such a composite article would in most cases not have been a very congenial task, or a very feasible one, for a scientific expounder.

The old Britannica, while it was a monumental structure, was only a half-fledged encyclopædia. The eleventh edition contains about fifty per cent. additional matter. Such a large increment, where the scale was already so generous, was deemed necessary as much in order to round out the work as to meet the demands made upon space by more than three decades of the world's progress and history. It would have been feasible by judicious excision and a more careful delimitation of spaces to avoid expansion on such a large scale without sacrificing anything of importance. We may as well be thankful, however, that there has been little condensation, for there is no more treacherous business than the condensing of articles in an encyclopædia. The most salient change is the introduction of the biographies of living people. To be compelled to pass judgment on the achievements and character of persons not yet deceased has hitherto been regarded as something not compatible with the legitimate functions of such an august publication as the Britannica. A more practical view has prevailed in the new edition, one of whose most valuable features is the collection of articles on contemporary celebrities. Nor will any part of the new matter be appreciated more highly than the biographies of the many eminent personages who adorned the period in which the ninth edition appeared or who had achieved fame long before and still survived when the work reached their names in the alphabetical arrangement.

The old Britannica was constructed in large measure on the principle of relegating the treatment of specific topics to comprehensive articles, some of them long enough to make a good-sized book. The ninth edition started out, indeed, apparently without any conception as to how far this method might legitimately be carried, for in the article Agriculture a full and practical treatise on husbandry was presented to the British public, in which the various kinds of crops and of live stock were treated individually on a very extensive scale. The corresponding article in the present edition embraces only about one-third as much text, the material being placed where it properly belongs and where the user of the encyclopædia will naturally look for it. Thus, too, the specific information regarding the various chemical elements was before largely relegated to the article Chemistry. This feature of the Britannica impaired its value as a work of reference. The defect has been remedied in the eleventh edition, whose design conforms to that of ordinary encyclopædias with respect to the accessibility of the information that it contains. At the same time, the feature of long treatises, as we have seen, has not by any means been discarded. Many subjects, indeed, are treated at inordinate length, even for such a copious encyclopædia. An illustration of this is afforded by the article Hydraulics, covering seventy-six pages, in which the discussion of special problems having no important bearing is carried too far. An innovation is the introduction of purely lexicographic matter, which, in addition to scientific and technical information, affords much antiquarian lore culled from the most recent sources, such as the New English Dictionary.

The new Britannica can justly claim to be an Anglo-American encyclopædia, whereas the ninth edition was a British encyclopædia slightly Americanized. The article Agriculture contained no reference whatever to American conditions. The article Railway allowed barely three pages to the United States out of a total of thirty-two. In the eleventh edition, this topic, as far as economic aspects are concerned, was entrusted to the great American authority, President Hadley. In the twenty-eight-page article on Music there was no allusion to American musicians or composers. Of course, there was no blame to be attached to the editors of the old Britannica in every instance of the kind here mentioned, as they did not profess to go out of their way in order to make their work especially adapted to the American market. Their remissness with respect to the United States took the shape, however, in places of adding insult to neglect. The article Horse contained the following: "The development of speed in the trotting-horse . . . is one of the great industries of the United States of America." We wonder where the writer of the article Bison in the ninth edition got his information that the animal was sometimes ("rarely") found "to the east of the Appalachian range." The proofreaders of the old Britannica need not have been quite so ignorant of American geography as to allow "the St. Louis bridge at Cincinnati" (in the article Bridges) to pass uncorrected. But, then, we must remember that it was a fashionable error in England at the time of our civil war to believe that the Mississippi River was the boundary between the North and the South. The sins of former British encyclopædists in matters American are only on a par with those committed by such painstaking encyclopædists as the Germans. Brockhaus, in its latest edition (the fourteenth), still informs its readers that Mt. Vernon, N. Y., is the place where Washington had his country seat and where he was buried. Both Brockhaus and Meyer strive to be pretty full with respect to American biography, but neither has ever heard of Chief Justice Marshall.

In the eleventh edition of the Britannica a favored position is accorded to the United States. There is no general encyclopædia of recent date that contains such full biographies of Americans, although in the matter of inclusion the line has naturally been drawn much closer than in the International. For our part, we should have preferred to see the standard of inclusion set higher than it has been. A detailed biography of Mrs. Eaton ("Peggy O'Neill"), whose tribulations caused so much trouble in Jackson's first admin-

istration, mars a work like the Britannica. Timothy Dexter, soldier and crank, to whom nearly a column is devoted, might likewise well have been spared. The history and politics of the United States are generously dealt with, and the geography of our country leaves nothing to be desired on the score of fulness. The articles on the very small towns in the United States are even on such a scale as to disturb the symmetry of the work. Of course, in most departments the process of Americanization could by no means be carried out so effectually as in those of biography, history, and geography. In the case of a great many subjects, as, for example, legal topics, the introduction of information regarding the United States on a scale required in an American publication would have marred the articles as contributions to a British encyclopædia. That full justice is not always done to the United States even where there was nothing to prevent is exemplified in the article Aqueduct, in which there is no mention of the new aqueduct that the city of New York is constructing, which will dwarf every work of the kind, ancient or modern, into insignificance; or of the Los Angeles aqueduct, which will be by far the longest in the world. This article was contributed by several writers, and the section on modern aqueducts was assigned to a member of a firm of civil engineers in London, who shows by the amount of attention that he bestows upon iron and wooden conduits his unfitness to deal with the broad aspects of his subject—an illustration of the peculiar need of caution that should be exercised by the editor of an encyclopædia in entrusting technological articles to practical men. The article Canal does not concern itself with canals in the United States, although the Erie Canal is the longest artificial waterway in the world. The article Irrigation (13 pages) deals at length with the reclamation work prosecuted on such a vast scale by the United States government, but gives no idea of the extraordinary character of some of the engineering achievements.

A curious feature of the old Britannica was its neglect of military history. There were no articles on such subjects as the Seven Years' War or the Thirty Years' War, and famous battle-fields were for the most part omitted if the place from which the engagement took its name was in itself unimportant. There was no such caption as Dettingen or Hohenlinden, Bull Run or Chancellorsville. The Londoner whose daily walk took him past the Nelson Monument might look in vain for Trafalgar. The new Britannica devotes an amount of space to wars and battles that would make in itself a large volume on military history. We cannot help feeling, indeed, that this feature is exaggerated. Eighteen and a half quarto pages devoted to the Great Rebellion in England is too much even for an encyclopædia that has almost boundless space at its command. In the various ways which we have indicated and in many other respects the eleventh edition of the Britannica is an immense advance beyond the ninth. But the new work is cast in the pattern of the old and breathes the same spirit, even if in some ways a concession is made to demands hitherto regarded as too plebeian to claim recognition.

As the Britannica has always been so strong on the scientific side, while maintaining the traditions of old-time culture, one does not have to discern in the new edition any particular change of complexion that would reflect the retrusion of the cult of letters by that of the arts and sciences which has characterized the world's intellectual development in the course of the last generation. A glance at the list of leading articles (with the names of the contributors) prefixed to each volume will show that the Britannica remains as much as ever a scholar's encyclopædia in the face of the innovations required to make it a practical work of reference. While pulsating with the activities of modern research, it continues to exhale the atmosphere of the old scholastic halls. Many of the fine essays written for previous editions have, as a matter of course, been retained virtually unchanged, or but slightly altered. The impressive monograph on Descartes, for example, contributed by William Wallace to the ninth edition, reappears with little change in the eleventh. So, too, Jebb's Demosthenes. Possessors of the new Britannica will enjoy reading Macaulay's life of Goldsmith, which has done such good service in previous editions and which is reproduced "slightly revised" by Austin Dobson. Dickens, who appeared for the first time in the ninth edition, has his life retold and his writings subjected to a fresh criticism by Thomas Seccombe.

Louis Heilprin.

NEWS FOR BIBLIOPHILES.

To the scholar and to serious readers generally, the opening, on Tuesday of this week, of the beautiful new building of the New York Public Library, was a significant event. A study of the floor plans of the building, and a journey through it, disclose at once the cheering fact that much thought and care have been spent on the needs of the research student.

A distinctive feature of the plan consists of the close relation of the book stacks to the main reading room, which is here placed directly above the stacks. This arrangement not only provides better air, and more light and quiet in the reading room, but also gives the most direct communication with the stacks. The ordinary reader will find his needs best served in this main reading room, on the third floor, which is easily reached by passenger elevators. Here, in a noble room nearly 300 feet long by 75 feet wide, and with a seating capacity of 768, the reader will find twenty-five thousand volumes of reference books ready to hand. Here also he may have brought to him any book in the building. He may have generous space in which to use his books at the well-lighted tables, the service being as free from irksome red tape as is possible in a large library. Most readers will find such facilities all they require; but for the specialist there are rooms set apart with the various collections.

To begin with the first floor, besides a reading room for current periodicals, there is a series of rooms devoted to Technology, including patents and applied science generally. On the second floor are the collections of pure Science, including biology, astronomy, chemistry, physics, etc. These rooms are connected by book lift with the Technology rooms below, thus making any book in the collection quickly available on either floor. On the same floor with Science is a room devoted to Economics and Sociology, and connecting with this another large room for Public Documents. On this floor also are separate rooms for the Slavonic, Jewish, and Oriental collections. On the third floor are special rooms for American History, Genealogy, and Local History, Maps, Art and Architecture, and the library's fine collection of Prints. In all these rooms there are ample facilities for readers, and to assist them librarians who are specialists in their particular fields. While any one may use freely the facilities provided in the main reading room, admission to the special rooms is by ticket, which may be issued to any responsible person who, to facilitate his work, requires immediate access to books on a particular subject. For the investigator engaged in important work which requires the continuous use of a large number of volumes, further facilities are provided in six small studies on the second floor.

The key to the whole system is the admirably lighted and equipped public catalogue room on the third floor, leading directly to the main reading-room. Here are the information desk, card catalogues of all the collections in the building, together with the catalogues of the British Museum and other libraries, and such indices as are useful in bibliographical research. Here also is a complete set of the printed catalogue cards of the Library of Congress.

In the basement, on what is really the ground floor, are grouped around the Forty-second Street entrance a circulating library, a children's room, and a newspaper room. On this ground floor are commodious quarters for a library school for the training of librarians. Mr. Carnegie has just given $15,000 a year for five years for the maintenance of this school, and its first term will open in September.

To descend to mere statistics, the new library building was opened to the public with a collection of about 1,200,000 volumes, while it has a shelf capacity for 3,500,000. There is therefore ample room for growth. The old Astor and Lenox Libraries are merged here, and their separate existence has ceased. In general it may be said that the plan of the building was conceived in the mind of the director, Dr. Billings, while

the architectural envelope was designed by Messrs. Carrère and Hastings.

Correspondence

WAS POE NEVER ETHICAL?

TO THE EDITOR OF THE NATION:

SIR: In a valuable article on "Poe's Cosmopolitan Fame," in the *Century Magazine* of December, 1910, Prof. Brander Matthews says:

> Poe never preached; and there is no moral purpose, explicit or implicit, to be discovered in his poetry or his fiction. . . . He had no message for mankind, but only melody for youthful melancholy. His poems and his brief tales lack not only moral purpose, but also spiritual meaning.

Thus, in effect, have said many of the many Poe critics. Thus said the critics of Poe's own day, so persistently that under pretence of satisfying them, but really to have a quiet laugh at their expense, he wrote, "Never Bet the Devil Your Head: A Story with a Moral." And therein recorded the history of Mr. Toby Dammit, who, like naughty little boys in old-fashioned Sunday School books, gave indications even in the cradle of the inherent viciousness which would bring him to a bad end.

All critics agree that Poe's pen never rambled. He never wrote one sentence or one word without design—without meaning something very definite by it. Even in his detective stories and in the tales of pseudo-science the links in the chain of evidence or of reasoning follow each other in nice and perfectly natural order. Are we, then, to conclude that in the higher field of the imagination his stories had no meaning—no object save to make the flesh creep? It is hard to believe.

To begin at the top, take "The Fall of the House of Usher." If in telling this tale, Poe had been seeking simply to produce an effect, to make an impressionistic word-picture, he would have been as careful as ever in the selection of just the right word and phrase to produce this effect, for his art was his master and would not suffer him to slouch. But could this picture have been drawn with as certain a hand if there had been behind that hand no definite thought, no deliberate meaning, no message? Would the effect of the word-picture be so vivid? Would it be so long remembered, so strongly felt at each re-reading?

I think not. And I offer the following interpretation of the parable of "The Fall of the House of Usher":

The life cloaked in egoism, turned in upon itself, feeding upon itself, existing for itself, having no touch with other lives, must come first to desolation, then to despair, finally to destruction. To my mind the House of Usher and its master, Roderick Usher, were the symbol of such a life. The peculiar atmosphere that surrounded them was the egotism in which an isolated and self-centred life is sunk. No detail of the story should be taken as meaningless, any more than the ballad of "The Haunted Palace," which Poe puts into the mouth of the master of the house himself, and which is plainly the symbol of a wrecked intellect, should be taken as meaningless. This ballad so effectively interpolated into the story is simply an allegory within an allegory—that is all.

Who then, was the Lady Madeline, the twin sister whose illness and evidently approaching death filled Roderick Usher with deep gloom? In the ballad of "The Haunted Palace," Usher prophesied the loss of his own mind, but in such a life as his the decay of reason would be inevitably preceded by another decay—that of the soul. As the master of the House of Usher was conscious of the approach of death of the mind, may he not have been conscious also of the more imminent death of the soul, personified by the Lady Madeline? Let us see how far this idea is borne out by what Poe (who never wastes words, be it remembered) is at pains to tell us of the lady.

In the first place, she is the "sister," the "twin sister." In the highly symbolic poem, "Ulalume," Psyche (the soul) is addressed as "sister." There is "a striking similitude between brother and sister—sympathies of a scarcely intelligible nature had always existed between them"—such as exist between one's self and one's soul. We are reminded of the resemblances Poe describes in another story between "William Wilson" and his double who plainly personifies Conscience. A fleeting glimpse of the lady, as she passed through the shadows of a remote part of the room, was afforded to Roderick Usher's guest—"as Usher talked of her." The allegory here is plain. After the lady's death Usher "roamed from chamber to chamber with hurried, unequal, and objectless step—the luminousness of his eye had utterly gone out." The allegory again seems plain—the soul had gone out of him. Even in the change in his tones this is indicated. The "occasional huskiness" (characteristic of the voice of one whose emotions are deeply stirred), gave place to "a tremulous quaver"—the whimpering of one capable of no deeper feeling than self-love or self-pity.

The soul dies hard, and so it seems the Lady Madeline—though apparently dead—was only in an unusually deep, cataleptic slumber. Her brother, tortured by conscience, confesses having heard her struggles to free herself from the coffin and the vault in which he had entombed her. At the very moment of his confession (note the allegory again) she succeeds in bursting her bonds and for a moment stands before him, "lofty and enshrouded," but to totter and fall, sweeping him down with her in a terrible embrace to actual death and more—complete destruction and extinction of him and his house.

Is there no spiritual meaning in this dark allegory?

Poe sometimes deliberately takes a text and preaches a sermon, but with such art does he cover his didacticism, with such grim and splendid, such weird and barbaric colors does he decorate his pages, that the result seems merely the fantastic dream of an abnormal brain. Take, for instance, the story "Ligeia"—Poe's own favorite of all his "tales"—which has for its text this quotation from Joseph Glanvill:

> And the will therein dieth not. Who knoweth the mysteries of the will, with its vigor? For God is but a great will pervading all things by nature of its intentness. Man does not yield himself to the angels, nor to death utterly, save only through the weakness of his feeble will.

All students of Poe are familiar with the sermon he preaches from this quaint text—a sermon upon the exercise of will in the shape of a wonder-tale, in which he makes the Lady Ligeia, whom he has presented to us as a woman of unusual intellectual vigor, and into whose mouth he has placed one of his most striking poems ("The Conqueror Worm"), actually rise from the dead through the mere force of will.

Take "The Black Cat," in which he uses for his text the transformation by alcoholism of the character of a man naturally kind and affectionate to one irritable and brutal, until he who before the changes in his nature took place would not have laid his finger on a dumb animal save to caress it, destroys, and in the most atrocious manner, first his pet cat and then his own wife. Were the consequences of intemperance ever more fearfully, more warningly, set forth?

This brings us to another favorite theme of Poe's—the mastery of conscience—strikingly illustrated in "The Tell-Tale Heart," in which the murderer hears above all other sounds the beating of the heart of the old man he has ruthlessly slain. Even after he has securely concealed the body under the planks of the floor, he hears it, until he can endure it no longer, and, terrified by the awfulness of that fancied sound, confesses his guilt.

The same theme is presented in the story of "The Man of the Crowd," who, with the secret of sin committed lying heavy on his breast, spends his days and his nights in futile effort to lose himself in street crowds. Could there be found a more vivid and forceful picture of a man convicted of wrongdoing by his own heart?

The most complete and carefully worked out of Poe's conscience stories is "William Wilson," in which Wilson's conscience appears as his double, like him in all things save in rigorous conformity to morals and duty, and in the voice—a mere whisper—with which he checks, or seeks to check, Wilson whenever he is tempted to depart from the path of virtue. The whisper is hateful to Wilson, and becomes more and more so as he deafens his ears to its warnings. Many times he seeks to hide himself from the double—many times to get beyond the sound of the hated whisper—but in vain, and finally he decides to meet the double in hand-to-hand combat and slay him outright. He succeeds, as all must who wage a sufficiently persistent warfare against conscience, but with dying breath the double addresses him thus:

> You have conquered, and I yield. Yet henceforward art thou also dead—dead to the World, to Heaven, and to Hope! In me didst thou exist—and in my death, see by this image which is thine own, how utterly thou hast murdered thyself.

Is there nothing of the preacher, no moral purpose, no lesson drawn from human experience in this arraignment?

EDUCATION IN GERMANY.

TO THE EDITOR OF THE NATION:

SIR: We all know that the present practice in education is to follow, rather than to thwart, the natural bent, and the primary interest in Professor Shorey's article on "American Scholarship" (*Nation*, May 11) lies not so much in his opinions, which are strikingly in accord with our familiar

notion of human nature, but in the theories and generalizations by which he upholds certain ideas which have already been noted and labelled in forum and mart.

His theory of an insulated national culture, for example, seems to be conceived in the spirit which has begotten the demand of "America for the Americans," for protection of home industry, and for the closed shop. It seems a tenable theory for a Grecian to hold, but there is a slightly ironic touch in his embodying it in advice to the barbarians. Does Professor Shorey really believe that Roman culture would have been better without Greek, English without French, and Japanese without Western influence? In short, that the only essential part of a garden is the fence? That belief would suggest a comparison with the idea of a tariff wall which should cause wool to grow without sheep.

As to the inferences drawn from the fact that our graduate students do not go abroad for study, is not that very like the process of reasoning which would bring us to the conclusion that we are buying the products of our American manufacturers on account of their intrinsic superiority, or our preference of shoddy to wool? Are there no students who work in the graduate departments of our universitles because it is to their economic advantage to do so? If we see a man, instead of paying his passage to a foreign land, and supporting himself there at considerable expense, only to return to this country to rely largely upon his own efforts, and, perhaps, to find against him the presumption that, having seen something besides his native land, he may not prove "adaptable"—if we see him, instead of this, choosing to attend a school where his bills are paid, to a greater or less extent, and where his instructors will feel a certain obligation to find him a position in teaching after his work is done, in such a case, can we be sure that the choice proves that he is convinced of the greater value of American instruction?

The statement tbat German scholars do not know their own literature, is astounding; but, as it is of such a nature as not to be met effectively by a counter-generalization, which would merely raise the question of personal experience, it may be enough to note that the instances which Professor Shorey gives are curiously inconclusive. The mention of a number of dry-as-dust books does not prove that there is nothing better, and, to show the German lack of culture, he mentions only their ignorance of some English and Freneh books. Surely, it would be somewhat difficult to substantiate so broad a charge.

The difficulties in our educational work are appalling, and Professor Shorey rightly attributes them largely to the lack of discipline in home and school, and rightly attributes the failure of our students to profit by work abroad to this lack of preparation. But this is not the fault of the German instructors, who rightly hold that certain sorts of training are the duty of homc and school, and not of the university. Our own university work might be much more effeetive, as well as less perplexing, if we could take the same stand.

Scholarship has been suffering sadly from tho causes which Professor Shorey mentions—"specialism, commercialism, democracy," not only in this country, but in Europe. It is a time for all lovers of true learning and vital culture to help each other by every means in their power to withstand the pressure of materialism. Let us humbly recognize the need of all tho help we can get, and take it wherever we can find it, and we may discover in German idealism and in the German notion of discipline forces not without value in our present emergency. V.

Chicago, May 13.

SHAKESPEARE'S SAMPHIRE GATHERER

To the Editor of The Nation:

Sir: In the interesting passages from Goldsmith and Wordsworth, cited and compared by Prof. John L. Lowes in your issue of March 23, both those writers are shown to have adduced a line in Shakespeare to illustrate the imaginative use of the word *hang*. It is the familiar line in "Lear,"

> Half-way down
> Hangs one that gathers samphire.

Wordsworth's comment is: "Neither the goats [of Virgil] nor tbe samphire-gatherer do literally hang."

I am sorry to deprive these eminent critics of so excellent an illustration, but I fear that Goldsmith was betrayed by his imagination and Wordsworth was probably betrayed by Goldsmith; for the samphire-gatherer does literally hang. One of the most vivid recollections of my own inland childhood is that of a wood-cut in an old volume depicting one of these interesting creatures suspended on the face of a cliff by a heavy rope, pursuing his "dreadful trade." Turning now to the commentaries on the passage in "Lear," I find that George Tollet, who contributed some notes to the Johnson and Steevens edition of Shakespeare, quoted the following from Smith's "History of Waterford" (p. 315, edit. 1774):

> Samphire grows in great plenty on most of the sea-cliffs in this country; it is terrible to see how people gather it, hanging by a rope several fathom from the top of tbe impending rocks as it were in the air.

There can scarcely be doubt that this is precisely what Shakespeare was describing; let it be remembered, too, that Edgar pretends to be looking *down* from the top. If any should feel sorrow at losing the imaginative element from the picture, they may console tbemselves with reflecting once more that Shakespeare knew just what he was talking about.

A PEACE PACT.

To the Editor of The Nation:

Sir: I have read with interest tbe letter of Mr. Edwin Ginn in tbe *Nation* of April 20, offering as a solution of the peace problem the proposal "to take a portion of the present armaments, say 10 per cent., and establish an international army and navy." It should seem that Mr. Ginn overlooks the fact that an army and navy without an executive behind them to determine when and how they shall be used, would be an awkward possession, and "there's the rub."

I have long had in mind to suggest to the *Nation* a solution equally simple, and one which seems to require no mechanism for its enforcement. The United States and Great Britain should propose to the civilized nations of the earth a peace pact for the adoption of those nations favorably inclined to the same, providing that no one of the signatory Powers should commit an act of war against another Power without the formal issuance of a challenge to war, and then not until two years had elapsed after the date of the challenge. A second clause might provide that a nation violating the pact should be regarded as the common enemy of the signatory Powers.

Literature

UNIVERSAL HISTORY.

Foundations of the Nineteenth Century. By Houston Stewart Chamberlain. A translation from the German by John Lees, with an introduction by Lord Redesdale. Two volumes. New York: John Lane Co. $10 net.

Pursuers of learning's paths will be interested in the work of one who has trodden vast lengths of them, and not as a wanderer, but with mind fixed on a constant purpose. This is none other than to bring a consideration of the entire intellectual and spiritual history of man to bear upon the nineteenth century, and to use the whole contents of this armory of argument in the still unfinished warfare of light and freedom against their opposites. But before following our author's lines of militant exposition, the reviewer in the present instance pauses in order to deprecate omniscience on his own part, and to comment on the character of the book. Since it considers all matters of deep buman import from the times of Moses and Homer downwards, no reviewer can have knowledge of them all, any more than the author has. And if in matters where the reviewer is informed he finds his author's statements resting more surely on temperament than on fact, how will his conscientious mind be teased at other statements which rouse his incredulity, but leave him helpless, because with regard to them he also does not know?

The author is by birth an Englishman, but educated on the Continent, and apparently in language and ways of thought and adumbration thoroughly Germanized. He would doubtless deem himself Teutonic, in that large and noble sense in which he himself uses this word; but to us he seems Teutonic rather more specifically. His energetic mind is stored with an extraordinary range of knowledge. He wrote his book in German, and according to the preface of the English translation sixty thousand copies of the German editions have been sold. This large sale doubtless is due to the striking character of the work, and to the fact that it embodies and emblazons every prejudice that makes the Teutonic bosom swell: it lives and

breathes in the conviction of the pre-excellence of the "Teutonic race"; it is fiercely anti-Semitic and anti-Roman Catholic. Indeed, it is rendered very living through its author's virile and, we may say, constructive prejudices. It is also picturesque with many a bizarre notion, and its statements clash cheerfully with the "latest results" of scholarship. Its constant emphasis and frequent extravagance lead to inconsistencies, even in the less militant portions. Yet in the exaggerated statements of a writer (this author, for example) there may be much fruitful arrest of attention, and even valid suggestion, for the reader.

The present is the child of the whole past; yet let it struggle to discard and forget aright, as touching many things which have made it what it none too fortunately is. Mr. Chamberlain's intention is to write always from the standpoint of the living present, that is, the nineteenth century; and his criterion of selection lies in the value which the elements of the past have for our own time. Throughout he loves and hates by races; and for him the past resolves itself into race struggle and race destiny. A brief presentation of our author's views may of itself suggest a sufficient criticism of them. At all events, it will be needless to discuss the frequently questionable historical allusions and minor illustrative statements.

"Our whole civilization and culture of to-day is the work of one definite race of men, the Teutonic" (Introd. lxvii; "Teutonic" here embraces "Celts and genuine Slavs"). And the turning point from which our culture and industrial civilization begin definitely to arise is the year 1200. Before it "the birth of Jesus Christ is the most important date in the whole history of mankind" (I, 5). "Of the peoples of antiquity, Hellas, Rome, Judea alone are historically important for the living consciousness of the men of the nineteenth century" (I, 8).

Mr. Chamberlain's discussion of Hellenism is not particularly edifying; his treatment of Rome, however, is more organic and convincing. He sees the Romans in the light of their chief original creation, to wit, their law; for a proper understanding of which one needs a clear conception of the Roman people and its history. The enduring power of Rome was the work of the whole people, rather than of special individuals, and was rooted in the moral strength of the Roman character. Unconquerable love of home—(*e. g.*, resolution to stay in ruined Rome, rather than migrate to Veii), with the fixed resolve to dare and die, or conquer, for what was theirs, caused the extension of the Roman state. "If Rome wished to enjoy peace, she had to spread the work of organization and administration from one land to the other. Observe the contemporaries of Rome, and see what a failure those small Hellenic states were, owing to the lack of political foresight; Rome, however, had this quality as no people before or after" (I, 105). All this may be sound, though too great stress should not be laid on any chronic Roman desire for peace! The author now sets forth Rome's "struggle against the Semites," and endorses with enthusiasm her *delenda est Carthago*. The praiseworthy destruction of Semitic Carthage was subsequently made perfect in the destruction of Jerusalem:

> Had it not been for this achievement (which we certainly owe as much to the Jews, who have at all times rebelled against every system of government, as to the long-suffering Romans), Christianity would hardly ever have freed itself from Judaism, but would have remained, in the first instance, a sect among sects. The might of the religious idea, however, would have prevailed in the end. . . . We should, therefore, have received a Judaism reformed by Christian influence and ruling the world (I, 118).

"Without Rome," continues the author in his argument, "it is certain that Europe would have remained a mere continuation of the Asiatic chaos. Greece always gravitated towards Asia, till Rome tore it away" (I, 121).

Mr. Chamberlain speaks most reverently of Jesus Christ, and of the effect of his life and teachings. Excellently well he says:

> The human personality is the *mysterium magnum* of life, and the more a great personality is stripped by criticism of all legendary rags and tatters, . . . the more incomprehensible the mystery becomes. This indeed is the final result of the criticism to which the life of Jesus has been submitted in the nineteenth century. . . . The actual earthly life of Jesus Christ has become more and more concrete, and we have been compelled to recognize more and more distinctly that the origin of the Christian religion is fundamentally to be traced to the absolutely unexampled impression which this one personality had made and left upon those who knew Him. So it is that to-day this revelation stands before our eyes more definite, and for that very reason, more unfathomable, than ever (I, 180).

To the present reviewer, these words seem admirable; neither has he any fault to find with the exposition which follows of Christ's teachings, save that he has failed to derive very definite or novel thoughts from it. Moreover, Mr. Chamberlain has much to say about religion, and argues at great length that the Jews, instead of being a religious people, were markedly stunted in their religious growth. Jesus, however, was not a Jew—a proposition for which he adduces arguments the cogency of which may not be apparent to the previously unconvinced.

So much for the ancient elements, Hellenic, Roman, Jewish, which were to make part of the on-moving world after the passing of that unique revealing life which drew neither blood nor inspiration from the Jewish race, and yet delivered its message through the medium of historic Jewish teachings. What next came to pass? Chaos, says Mr. Chamberlain. A chaos of peoples and principles, a hybridizing of races and a debasement of ideals. The chaos through which the Roman world passed in the early Christian centuries was due primarily to the crossing and confusion of races. The Mediterranean provinces, as well as Italy and Rome itself, "no longer were inhabited by a definite people, but by an inextricable confusion of the most different races and peoples" (I, 252). The phrase "no longer" seems questionable; for what assured knowledge has Mr. Chamberlain as to a prior time when purity of race prevailed about the Mediterranean? At all events, he now enters upon an interesting substantiation of the great fact of *Race*, and the actual, visible, energizing differences in capacity between one race and another. Much of the discussion is scarcely scientific; yet it makes strong appeal to our prejudices, perhaps to our profound convictions. The main conclusion—conviction rather—of our author is that the noblest races are the fruit of a limited mingling of excellent and related stocks; while the crossing of disparate and unrelated stocks results in the obliteration of the good qualities previously belonging to either of them. Race can maintain itself, and improve, only when it creates a nation, which means a race politically organized. Denationalization brings chaos. Through nationality racehood intensifies, and this is well: "The sound and normal evolution of man is not from race to racelessness, but, on the contrary, from racelessness to ever clearer distinctness of race." And from the race rises its finest quintessence, the hero, or genius (I, 296, 297). To illustrate the raceless qualities of the Roman Empire, the author gives us several keen pages upon Lucian, the "clever Syrian mestizo, a bastard born of fifty unrecorded crossings," and upon the "African mestizo," Apuleius.

Amid this raceless chaos one race preserved itself, the Jewish, a fact of never-ending portent. And hereupon for a hundred and fifty pages there follows an exposition, or exposure, of the Jewish race, its origins, characteristics, equipment and career, which goes far to account for the large sale of this work in anti-Semitic Germany. We will deny ourselves these pages, and pass on to the final and glorious theme—the Teuton. Only with his entry does history, worthy of the name, begin. From the North, the German forests, flashed a new light on the world. Not that it came with a roar or as a great wave; say, rather, as phosphorescent infiltration. But light it was, and no pall of

ignorance, ushering in any mediæval darkness. For this barbarian light-bringer was "the lawful heir of the Hellene and the Roman, blood of their blood and spirit of their spirit" (I, 494). He came to conquer and destroy and make anew:

> We have only one thing to regret, that the Teuton did not destroy with more thoroughness, wherever his victorious arm penetrated, and that as a consequence of his moderation the so-called "Latinizing," that is the fusion with the chaos of peoples, once more gradually robbed wide districts of the one quickening influence of pure blood and unbroken youthful vigor (I, 495).

There follow pages showing the kinship between the Celt, the German, and the Slav—all noble Teutons. Their fresh creations, their ideal types of heroism are set forth—loyalty, purity, maidenhood, victory in downfall. With enormous emphasis and much confusion, Mr. Chamberlain sketches the state-building qualities, the endeavors, and the fate-thwarted accomplishment of these wonderful Teutons. Snatching illustrations by the way, he flings himself forward and backward through the centuries. Suddenly we are brought up against the Reformation, as to which some excellent things are said:

> Nowhere does the organic unity of Slavonic Germanicism manifest itself more convincingly than in this revolt against Rome. To understand this movement from the standpoint of national psychology, one must, to begin with, pay no attention to any dogmatic disputes concerning creed (I, 512).

Then for a space the author hurls himself on anthropology, upon hair-color and skull-shape, and such matters, and finds all the great men of the Italian Renaissance, from Dante onward, to have been good Germans (I, 538; II, 189-196). Against them the hosts of fell reaction are led by Ignatius Loyola, the perfect anti-Germanic type. This struggle is considered from the dual standpoint of religion and the state.

In the sphere of religion, a sharp distinction is drawn between Christ and Christian theology. The two chief pillars of the latter were the "Jewish historical and chronological faith, and Indo-European symbolical and metaphysical mythology" (II, 19). Naturally, there was strife between such fundamentally different elements. Moreover, in that chaos of peoples which filled the Apostolic and Patristic periods any real understanding of Christ was impossible (II, 21). Meanwhile, against all looser elements the tenaciousness of Judaism told; and so Jewish history became the backbone of early Christianity. At the same time, the Hellenic East entered on a losing struggle against the Roman West, and the Germanic North also entered the religious arena; still Rome, chaos of peoples as it was, triumphed through the power of the imperial idea backed by firm organization and tradition (II, 112 *ss*). "Christianity as an obligatory world-religion is . . . a Roman imperial idea, not a religious one" (II, 118).

In the political and social movements filling the first twelve hundred years of the Christian era, the author perceives a struggle, which is not yet ended, between imperial Roman universalism, represented by Emperor as well as by Pope, and the insistent nationalism of the Northern peoples; he likewise sees a struggle between the papal power and the rights of secular principalities. Passing on through these turbulent matters, he reaches at last the great period from the year 1200 to the opening of the nineteenth century, in which the Teutons become the "creators of a new culture." Through these six hundred years, it is Teutonic blood that everywhere, in Italy as well as in the North, gives power and life:

> The new world is specifically a Teutonic world. . . . What is not Teutonic consists either of alien elements not yet exorcised, . . . or of alien wares sailing under the Teutonic flag, and they will continue to sail thus until we send these pirate ships to the bottom. This work of Teutonism is beyond question the greatest that has hitherto been accomplished by man (II, 228).

The achievement of this mighty race is classified under Knowledge, embracing science and discoveries; Civilization, embracing industry, economics, politics, and church; and Culture, which embraces *Weltanschauung*, or the considered view of life and all its problems, philosophical, ethical, and religious, and also Art. Mr. Chamberlain discusses the reasons for his classification at some length, ending with the genial burst of applause which contemplation of Teutonic traits often draws from him. There is no need to follow his somewhat capricious sketch of "Discovery, from Marco Polo to Galvani," or of "Science, from Roger Bacon to Lavoisier." In his sketch of "Industry, from the Introduction of Paper to Watt's Steam-Engine," he comments forcibly on what the Teutons did with paper, which was introduced from foreign sources in the thirteenth century—the Teutonic use of paper, and its child the printing-press, being so marvellously different from any use to which the Arabs had applied the one or the Chinese the other. "Any one who knows the history of paper and still persists in believing in the equality of the human races is beyond all help" (II, 343).

The last section of the work, on "Art from Giotto to Goethe," may be left to German readers; but the long section (II, 389-495), just before it, on "Philosophy and Religion, from Francis of Assisi to Immanuel Kant," although bristling with odd ideas, is perhaps the best thing in the entire work. It is a living and powerful presentation of the courses of the higher philosophic and religious thought; replete with suggestion, it is also grayed with warning, equipped with sufficient knowledge for the author's purposes, impartial never (perish the thought!), but earnest and quite honestly opinionated. Kant is the final hero, and very well worth reading is the vivid setting forth of this man and his significance. Along with Kant, another all-significant personality is Goethe, but a Goethe inoculated with Bismarck germs.

In closing, let us say, this is an able book, forcibly argumentative, learned, strong through temperament and violent conviction. We have felt obliged to treat it with kindly humor and to criticise much of it; for indeed it is open to all the winds of criticism. We recommend it to the judicious, nay, even to the injudicious, reader, who desires to have his thoughts whetted by the fortunes and achievements of men.

CURRENT FICTION.

The Long Roll. By Mary Johnston. Boston: Houghton Mifflin Co.

Her publishers announce that more than a million copies of Miss Johnston's earlier novels have been sold. No doubt they may look forward with assurance to a large sale for this book, and for any other that Miss Johnston may write. But it is to be questioned whether "The Long Roll" will help her with that romance-loving public which has rallied to her from the first. It is a civil war story, and by no means the best of the many which have been produced during the past few years.

We suppose the chances for a really big romance with this setting are improving steadily. It is beginning to be possible for us to see it all in perspective, to reconstruct a living scene out of the confused memories of the veteran who is still among us, on the one hand, and the maps and figures of the formal chronicler on the other. Miss Johnston has not made an advance in this direction. Her story ill bears comparison with such recent efforts in the same field as Mr. Cable's "Cavalier," or Mrs. Watts's "Nathan Burke." It is evident, rather painfully evident, that she has expended enormous labor upon the setting, the tactics, and the chief personalities involved in the conduct of the war by the South from Bull Run to the Wilderness. But her many elaborate descriptions of marches, skirmishes, and battles are overladen with detail. Her pages are suitably smeared with blood, realistic details are not lacking—such as the vomiting of a coward under fire—but the effect of the whole is of an ingenious collocation of facts rather than of a piece of life.

There are romantic elements both

major and minor in the tale. In the larger sense, Stonewall Jackson is the hero, whose portrait (romantically rendered in an apparently blue uniform with a pink war-cloud in the back ground) has the place of honor as frontispiece; and the events are synchronous with Jackson's military career. Jackson's temper was more like that of the traditional Yankee than that of the traditional Southerner. Miss Johnston, herself a Southerner, represents him as great in spite of certain characteristics upon which New England has always rather prided itself. She solves as nearly as it need be solved the mystery of his emergence from the pious martinet into the military genius. Certain personal traits and details of costume and manner are insisted upon to the point of weariness, but the portrait as a whole is impressive, as nothing else in the book is impressive. The minor romance —the "love interest"—concerns a heroine recognizable as Miss Johnston's, and a Virginian officer of the Stonewall Brigade. The latter suffers great wrong at the hands of a rival in love, and is discharged from the service in disgrace. But the experienced reader does not worry about that, and the event justifies his confidence in the clemency of the novelist.

The writer's style is here, as always, a trifle pretentious and labored. Her little fishes have a habit of talking like whales, and her whales consciously disport themselves under the limelight.

Brother Copas. By A. T. Quiller-Couch. New York: Chas. Scribner's Sons.

The accomplished and prolific "Q" has written many better stories than this. In fact, "Brother Copas" is hardly a story at all. It is, by the author's admission, a companion fable to "Sir John Constantine." In that book, he says,

> I expressed (perhaps extravagantly) my faith in my fellows and in their capacity to treat life as a noble sport. In "Brother Copas" I try to express something of that correlative scorn which must come sooner or later to every man who puts his faith into practice. . . . I can only hope that both the faith and the scorn are sound at the core.

Now "Q" is a born spinner of yarns. If in his maturity he is impelled to moralize, well and good; but he is not a fabulist, and one must prefer his pure yarns to his parables. The story, such as it is, has a novel setting—an English "hospital" in the cathedral city of "Merchester." This is an institution established centuries ago for the maintenance of a certain number of bedesmen; "the Blanchminster brethren in black gowns with a silver cross worn at the breast, the Beauchamp Brethren in gowns of claret colour with a silver rose." The Beauchamp Brethren are "Collegians of Noble Poverty," and socially the superiors of the "Collegians of Christ's Poor." Brother Copas is of the College of Noble Poverty. He is a gentleman and a scholar who has reached old age as a failure in the eye of the world, and has found refuge at "St. Hospital." His spirit is by no means broken: we are to take him for a cheerfully ironic philosopher, a profound Grecian and an ardent fisherman, pleased to observe the game of human life. The difficulty is that one does not feel at all convinced of his years. He seems merely another presentment of that witty and irresponsible young hero just now popular in fiction, invested, for the sake of piquancy, in the trappings of age. The episode in which he is involved is rather slight for so long a story. It involves also a little American-born girl, supposed daughter to one of the brothers. The British novelist's conception of the American child is always amusing, but we do not recall a more impossible little invention than this "Corona" of Mr. Quiller-Couch's. If she were double the age alleged, she might conceivably think some of the thoughts ascribed to her; but she could not conceivably express them as she does. Enough to say that "Q" has captured a few fragments of American slang and strung them upon a thread of British idiom, in the sadly familiar fashion.

Out of Russia. By Crittenden Marriott. Philadelphia: J. B. Lippincott Co.

Not the least of Russia's exports are its extensive contributions to the world's supply of fiction-thrills. Formerly exile and the knout were the leading staples in this industry, but more lately the magic spell is so quickly felt that a "Circle," an "Inner Brotherhood," an insignificant murder or two suffice to start the interest rolling down the well worn grooves. One of the most startling incidents in the book under consideration is the special delivery of a letter at a New York apartment house after midnight. Small wonder that the beautiful maiden who lies in wait for this letter has a breath that "whistles" through lips and nostrils. This is the starting point of the story, and it is an earnest of the marvels to follow. There are lost and stolen damsels, ocean-engulfed gold meant to have saved causes; there are Russian Imperialists and Revolutionists and, in wondrous domesticating contrast, Americans from New York and from Missouri, the latter bringing their sheaves of dialect. The letter in a drifting bottle that discloses where the ship went down with its golden cargo is the first bone of contention. Then the rescued gold itself. Then the missing heiress; and over these quests swings a complicated tissue of lost identities and substituted persons. To put a chorus girl into the rôle of a Russian princess and make a sheep ranchman hold the key to a Russian intrigue is automatically suggestive of comic operetta, "at which we dedicate him."

The Wastrel. By A. D. H. Smith. New York: Duffield & Co.

The setting of this tale shifts, nominally, from Rhode Island to one of those little principalities in the south of Europe to which the modern romancer has now become, it seems, almost hopelessly addicted. Mr. Smith's Rhode Island is as mythical a spot as Shakespeare's Bohemia or Illyria; but what matters the tag one gives his land of fancy? The Wastrel is eminently original in one respect: he does not marry the Princess of No-matter-where, although there is one, and she is willing. This hardly seems good Americanism, but it is explained by the fact that he is himself the Prince, as well as by the girl he has left behind him in the alleged Rhode Island. The Wastrel's father, a gentleman-adventurer of experience, has done the Princess-marrying. Thereafter he has become a smuggler on the savage Rhode Island coast. Romantic absurdities, or impertinences, aside (and what is romance good for without them?), the tale is told with not a little gusto. Readers who have retained something of ingenuousness, to whom "Treasure Island" and "The Prisoner of Zenda" are honestly recalled delights, should follow the adventures of the Wastrel with satisfaction.

AN INTERPRETER OF INDIAN LIFE.

The Soul of the Indian. By Charles Alexander Eastman. Boston: Houghton Mifflin Co. $1 net.

This is a book which only an Indian with an extraordinary mastery of English could have written. Dr. Eastman, as a member of the Dakota or Sioux tribe educated among Caucasians, is able to make a subjective study of his race and give it an objective interpretation. To the rarity of such a combination we may attribute most of our misunderstandings with the Indian.

Because the Indian has not enveloped his religious life in rigid forms, it is too commonly taken for granted that he has none. Against such an assumption Dr. Eastman protests. Having no written language, the Indian is without books of prayer or praise. Even spoken words he deems unworthy of use in approaching a deity who can look into his heart and note its aspirations. With the white teacher's assurance that God is everywhere he agrees, but carries this idea to its logical conclusion, that the divine essence pervades every object in nature—the clouds, the mountains, the forest, the sea, the wind, the animal creation. Even a wild beast whose body will furnish food he does not kill wantonly, but only in response to a need of the hour; and he then supposes it to

yield up its life for his sustenance as one brother is not unwilling to die for another. His so-called worship of the sun is symbolic rather than real: in his conception of the origin of things, the sun is the father and the earth the mother of all life, though each represents only a principle through which the all-pervasive soul of deity reveals itself.

We are reminded, moreover, that the Indian's code of ethics has a great deal to commend it. No race were ever less quarrelsome than his. Till alien invaders of their country had debauched them with exotic vices, self-indulgence was frowned upon, and a temperate life respected as the only sure road to heroism; violence was rare, and, when committed in the heat of anger, was voluntarily atoned; theft and lying were so infrequent as to brand the offender with disgrace; a gentle manner and low voice were the rule in social intercourse; and speech of any sort was sparingly employed, on the theory that silence is the sign of a perfect poise of body, mind, and spirit.

The reader of Dr. Eastman's book must, of course, not lose sight of the fact that an Indian naturally inclines to set forth his people's ideals rather than their practice; and that the great native family from which Dr. Eastman is sprung is only one of several stocks which vary as much in temperament, habits, and modes of thought as do the Corsican and the Dane. Nevertheless, this little volume is of real value as a contribution to the better general understanding of the red race by the white. Not the least of its charms is its brevity, while its missionary usefulness will be much enhanced by the fact that it can be read at a single sitting and digested and assimilated at leisure. In places it is eloquent; and no passage is more characteristic than that in which this civilized and Christianized Indian measures the changes which have come over his own life, and those foreshadowed for his people:

> Long before I ever heard of Christ, or saw a white man, I had learned from an untutored woman the essence of morality. With the help of dear Nature herself, she taught me things simple but of mighty import. I knew God. I perceived what goodness is. I saw and loved what is really beautiful. Civilization has not taught me anything better.
>
> As a child, I understood how to give; I have forgotten that grace since I became civilized. I lived the natural life, whereas I now live the artificial. Any pretty pebble was valuable to me then; every growing tree an object of reverence. Now I worship with the white man before a painted landscape whose value is estimated in dollars! Thus the Indian is reconstructed, as the natural rocks are ground to powder, and made into artificial blocks which may be built into the walls of modern society.

There is a slender strain of Oriental mysticism running through the later pages of the book which will detract somewhat from its claim to authenticity in the minds of many readers. It would have done no harm to omit the concluding chapter on The Border-Land of Spirits.

Plutarch on Education. By Charles William Super, Ph.D., LL.D. Syracuse: C. W. Bardeen. $1.

"The careful student of Greek literature and history," says Dr Super, "can hardly resist the conviction that the Greek people were incapable of taking the world seriously. . . . They lacked moral earnestness. This statement needs some qualification, for Socrates was an earnest man. Yet even he, if he has been correctly reported, constantly indulged in irony." To read Plutarch's miscellaneous essays is to obtain a view of the Greek genius more sympathetic with modern pedagogy. They drip with moral earnestness, and the intentionally amusing does not occur. Yet even with him, Dr. Super is not quite content; for, with all his concern for conduct, Plutarch does not manfully face the fact that "polytheism rests on an entirely erroneous conception of the universe." Similarly Lady Ambrose in "The New Republic," on hearing with surprise that Socrates and his friends were obliged to ask what justice was, reminded herself that they were all heathens. But apart from his theological errors Plutarch is an educator of the new school. He very properly begins the education of the child before his birth, he is as urgent as Rousseau that it shall be nourished by its mother's milk, and when it comes to receive formal instruction he is very strong on questions of method and on the utilitarian end of education, but has almost as little to say as the circular of a training-school for teachers of what is there naïvely termed "subject-matter." It is true that Plutarch's utilitarian end is to make the pupil a good man rather than a money-maker, but that may be considered part of the sentimental view of life that passed away with polytheism. With the mere substitution of "efficiency" for Plutarch's *kalokagathia*, it would be easy to find in him a finely modern disparagement of the merely ornamental, of style and taste, in a word of a classical education. It is but fair to say that Dr. Super does not make this substitution. In his introduction to a translation of three of Plutarch's essays that touch on education, he seems to think, though with many misgivings, that on the whole, the Greeks were right.

The three essays themselves are "On the Education of Boys," "How a Young Man Should Listen to (Read) Poetry," and "How to Listen." The technical meaning of ἀκούειν, as used in the title of the third essay, where it does unquestionably mean to hear lectures, has misled Dr. Super into translating the title of the second essay by "How to Hear Lectures on Poetry." It is well-known that to the ancients reading generally meant reading aloud. Not only in the age of the rhapsodes but in that of the sophists the usual way of making Homer's acquaintance was to hear him recited or read aloud, and if we did not know this otherwise, it would be clear from Plutarch's essay. It is a droll essay, occupied with minimizing the evil results of what cannot be altogether prevented: "As it is perhaps not possible nor profitable to keep young men of the age of my Soclarus or of your Cleander from reading poetry, we should at least recognize the fact that they need a guide in their reading more than they do in their walks." He goes on to develop in a highly diluted form the famous Platonic anti-poetic doctrine, enriching it with many gems of exegesis. The third paper deals chiefly with the function of the auditor in the lecture-room and abounds in pictures of that ancient university life which is so amusingly modern. The author might be discouraged if he entered a classroom to-day to find that after two thousand years there is still need for his remark that "not only a scowling look and forbidding mien, a rolling of the eyes and a swaying to and fro of the body and a crossing of the thighs are in bad taste, but a nod or a whisper to our neighbor, a smile or a sleepy yawn or a dejected look is equally so."

Dr. Super's translation seems to be trustworthy in the main, but it is disfigured by careless slips which make nonsense here and there. The proof-reading also was neglected, so that the father of prose style appears as "Georgias," and the Attic model occurs once as "Lysis" and once as "Lycias." The little list of books suggested stops with Capes instead of including Walden's "Universities of Acient Greece," a work which has superseded its predecessors.

Notes

The Putnams announce: "Aspects of Religious Belief and Practice in Babylonia and Assyria," by Dr. Morris Jastrow, and "The Story of Quamin," by Mary Drummond.

On Saturday Henry Holt & Co. will issue: "The Stability of Truth," by President David Starr Jordan, and the first ten volumes of the Home University Library.

Senator Shelby M. Cullom will publish in the autumn through A. C. McClurg & Co. a volume of recollections.

Little, Brown & Co. have in hand Annie Payson Call's "Brain Power for Business Men."

The libretto written by Brian Hooker for

Professor Parker's new opera, "Mona," will be brought out in June by Dodd, Mead & Co.

"Toy Dogs and Their Ancestors," by Mrs. Neville Lytton, and Gertrude Page's "Winding Paths" are in the list of the Appletons' announcements.

Moffat, Yard & Co. announce for early publication: "The House in the Hedge," by Ralph Henry Barbour; "When Mother Lets Us Play," by Angela M. Keyes; "Philistine and Genius," by Boris Sidis, and "When the Red Gods Call," by Beatrice Grimshaw, a romance of life in savage New Guinea.

"The Miller of Old Church" is the title of Ellen Glasgow's forthcoming novel, which Doubleday, Page & Co. will have ready the last of the month.

"Abe and Mawrus," a new volume of Potash and Perlmutter stories by Montague Glass, will be brought out by the same house in the autumn.

Two of the large national associations of the summer—the National Sunday School Association and the National Educational Association—will meet in San Francisco, the first in late June, the other in early July.

Smith & Elder are adding a new volume to the Historical Series for Bible Students, "Biblical Geography and History."

The advanced state of "The Oxford English Dictionary" has made the publication possible of "The Concise Oxford Dictionary of Current English," adapted by H. W. Fowler and F. G. Fowler from the greater work. Messrs. Fowler are the authors of "The King's English." In this "Concise Dictionary" they have given a large amount of space to common words, making copious use of illustrative sentences; all uncommon words have been treated as briefly as possible, and colloquial, facetious, slang, and vulgar expressions have been admitted with freedom.

The celebration of the centenary of Théophile Gautier's birth has been started in Paris by an exhibition, in the *vestibule d'honneur* of the Bibliothèque Nationale, of original editions of his works, a number of portraits of him, and caricatures.

In the dispatches from Rome, the announcement is made that the Vatican has placed a ban on Antonio Fogazzaro's last book, "Leila," putting it with all of D'Annunzio's books, on the Index Expurgatorius.

Duffield & Co. have published a little volume on "Auction Bridge," compiled by Annie Blanche Shelby.

In the *Nation* of April 6 we printed a letter from Andrew Lang, which discussed the problems raised in Dr. Henry Jackson's "About Edwin Drood." The little book itself, printed at the Cambridge University Press, now comes to us from G. P. Putnam's Sons.

With the spring and early summer come the guide books, not least welcome among them the newly edited Baedeker's. The latest volume to be revised and augmented is "The Eastern Alps," which is now imported by Scribners in the twelfth edition, dated 1911.

Dr. George Kerschensteiner's essay, "Education for Citizenship," which won the prize offered in 1900 by a German educational society for the best essay on "How are our young men, from the time of leaving the elementary school until the time of entering service, to be educated for citizenship," has been translated, and is now issued by the Commercial Club of Chicago.

Macbain's "Etymological Dictionary of the Gaelic Language," which is now out of print, twelve years after its original edition, is to be reissued, with the author's corrections and additions, by Eneas Mackay of Stirling, Scotland.

In her preface to the volume of Stevenson miscellany entitled "Lay Morals" (Scribner), Mrs. Stevenson has a vivid account of the circumstances in which R. L. Stevenson wrote his open letter on Father Damien, one of the papers in the present volume. It was at Apia that Stevenson first heard of the attack on the memory of a man whom he held in reverence as a saint. But it was not till he arrived at Sydney that the full text of the letter came into his hands. "I shall never forget," says Mrs. Stevenson, "my husband's ferocity of indignation, his leaping stride as he paced the room holding the offending papers at arm's length before his eyes, that burned and sparkled with a peculiar flashing light. . . . In another moment he disappeared through the doorway, and I could hear him, in his own room, pulling his chair to the table, and the sound of his inkstand being dragged towards him." That afternoon Stevenson read to his assembled family the defence of Father Damien "while it was still red-hot from his indignant soul." The next day an eminent lawyer was consulted, more from curiosity than for any other reason. The lawyer was at first inclined to be jocular. He began by asking: "Have you called him a hell-hound or an atheist? Otherwise there is no libel." But when he looked over the manuscript his countenance changed. "This is a serious affair," he said. "However, no one will publish it for you." He was right. No one dared touch the pamphlet. Stevenson hired a printer by the day and the work was rushed through. Mrs. Stevenson, her son, and her daughter then set to work addressing the pamphlets, which were scattered far and wide. The paper was published with almost no change or revision. This Stevenson later regarded as a mistake.

In the preface of his "A Poet's Anthology of Poems" (Baker & Taylor), Alfred Noyes eulogizes poetry eloquently. His words take the form of an argument to prove that art alone can reveal to mankind the universal harmony. Tho following passage is typical of his method and manner:

> The poet begins, as it were, from the centre of things, while the philosopher works from the outer circumference along his particular radius towards the centre where all philosophies and sciences will one day meet. The poet's mind, looking outward from that central security, sees the whole world coördinated and linked in harmony, sees that you cannot pluck a flower "without troubling of a star."

Selections are grouped into nine topics, such, for instance, as The Sweet o' the Year, A Joy Forever, etc., and when he desires the compiler does not hesitate to include poems of such considerable length as "Pippa Passes."

Internal evidence suggests that in his newest book, "Mental Efficiency, and Other Hints to Men and Women" (Doran), Arnold Bennett has gathered together early sketches, written—was it for the ladies' weekly of which he has told us that he was once editor? The inference is tempting. It would explain what otherwise might appear to be a certain fussiness of thought. Yet ideas there are from cover to cover, and it is abundantly clear that the author has got his mind to the point (which he recommends for every one) where it works habitually. Moreover, Mr. Bennett is human, has common sense, and is aways sincere. As in "The Human Machine," he appears to be preoccupied with the claims of the mind as opposed to those of the body. At the outset should be stated what is not revealed in so many words until the end of the book—Mr. Bennett is a mental scientist. He may speak for himself:

> I say to my mind: "Mind, concentrate your powers upon the full realization of the facts that I, your master, am immortal and beyond the reach of accidents." And my mind, knowing by this time that I am a hard master, obediently does so. Am I, a portion of the Infinite Force that existed billions of years ago, and which will exist billions of years hence, going to allow myself to be worried by any terrestrial, physical or mental event? I am not. As for the vicissitudes of my body, that servant of my servant, it had better keep its place, and not make too much fuss. Not that any fuss occurring in either of these outward envelopes of the eternal *me* could really disturb me. The eternal is calm; it has the best reason for being so.

A week-end in the country leaves him shocked at the "gigantic debauch of the muscles on every side." "'Poor withering mind!' I thought. 'Cricket, and football, and boating, and golf, and tennis have their seasons, but not thou!'"

Fully aware that irritation is the fruitful mother of prejudice, we nevertheless confess to an intense irritation against Archibald Henderson's "Mark Twain" (Stokes). We are irritated at seeing a slender volume of two hundred odd pages partitioned off ponderously into separate books, such as the Man, the Works, the World-Wide Genius, and the Philosopher and Moralist; not to mention the introduction and the appendix. We are irritated at seeing the opportunities for repetition offered by this method completely utilized by Mr. Henderson. We are irritated at the whole procedure of analyzing the "philosophy" of a man like Mark Twain. At college, of course, we all learned from Friedrich Paulsen's book that every man has his philosophy; but that does not mean that the philosophies of nine hundred and ninety-nine men out of a thousand call for profound investigation. Mark Twain was an eminently simple person, with the honest likes and dislikes of the ordinary simple, honest citizen. Furthermore, he was a humorist; and what profit is there in trying to analyze the *Weltanschauung* of humorists? Since the beginning of time, their outlook and their business have been always the same: to concentrate on the incongruities of life, to administer a fillip to the fool, and a thwack to the hypocrite, and to say aloud under the immunity of the jester's license what most honest people think in their hearts. Gifted with laughter, and crowned with a vast popularity, Mark Twain was in a position to say the manly

and the courageous word of criticism on many subjects of contemporary interest. But that is what the tribe has been doing since Aristophanes, and that is why the "philosophy" of Mark Twain irritates us. Furthermore, we are irritated at the whole business of writing books so soon after the death of a man, who, during his lifetime, was so enormously paragraphed and estimated that virtually no material has been left for the definitive historian. Mr. Henderson's book is a case in point. It adds nothing to what has already been said about Mark Twain, with the possible exception of the story regarding the true origin of the famous nom-de-guerre. Mark Twain's fame abroad is also dwelt upon to an unusual length, and we are supplied with an impressive list of presumably every European publication in which anybody has said anything about the man; but the value of such a compilation is not quite clear.

At his examination after the deed Ravaillac stoutly maintained that he had assassinated Henry IV wholly on his own initiative and for religious reasons. Even under torture and in his last moments, when his hand was about to be plunged into boiling sulphur and oil and his flesh torn with red-hot pincers and seared with molten lead, he refused to reveal the name of any accomplices. "I alone conceived the deed." And yet, shortly afterwards, certain persons swore that he was merely the hired agent in a great plot and that he really had behind him such great accomplices as the Duc d'Epernon and other persons of high rank. Here was an historical problem which long puzzled historians: Did Ravaillac have accomplices or not? Michelet and the older historians before his day were generally inclined to the opinion that he did. In "The Fate of Henry of Navarre" (Lane), John Bloundelle-Burton, who is already known in England for some historical romances in the style of Dumas, has now essayed this problem. His method is one which is always effective with the uninitiated. He represents the opinion of Michelet and older historians which may be nearly half a century or more out of date as the opinion of historians of today. This gives him a man of straw whom he may demolish anew. One would gather from his own self-appreciative remarks that he is the first that ever offered a satisfactory solution to this problem. Nearly forty years ago, however, Jules Loiseleur proved fairly conclusively the curious fact that at the moment when Ravaillac was acting on his own initiative without accomplices there was another conspiracy by persons of rank to have the King murdered. The plots of Ravaillac and of these conspirators moved parallel toward the same end, but did not touch each other at any point. Ravaillac was unconsciously serving the purpose of others of whom he knew nothing. Michelet and the older writers made the mistake of confounding in one two quite separate plots. This is also Mr. Bloundelle-Burton's conclusion, though he makes no allusion to M. Loiseleur's valuable and interesting study. His volume, with many illustrations, may delight the reader of romances, but not the serious historian.

Among the fifteen children of that virtuous royal couple, King George III and Queen Charlotte, the youngest and best beloved was Amelia. But the good morals of the parents did not descend to all the children, and gossip has sometimes sullied the memory of Princess Amelia with scandalous tales which would have been more likely to be true of some of her less innocent brothers and sisters. In "The Romance of the Princess Amelia" (Lane), a sound and interesting volume based on Amelia's letters and other hitherto unpublished contemporary material, W. S. Childe-Pemberton shows it to be quite true that she fell deeply in love with Gen. Charles FitzRoy. He was a handsome, well-meaning, and honorable man some twenty years her senior, whom the King had assigned to her as an attendant. She was secretly betrothed to him, and even signed her letters "Your affectionate wife and darling" and "A. M. F." (Amelia FitzRoy). But as he was beneath her in rank she refrained from marrying him either secretly or openly, for fear of incurring the King's displeasure and augmenting the mental malady with which his later years were clouded. She did hope to marry him after her father's death, but ten years before that event, when she was scarcely twenty-seven, her own frail life was cut short. From her letters it would appear that her attachment to FitzRoy was of a pure, romantic type, like that of Evelina and other heroines of her childhood friend Fanny Burney.

In most studies of present-day criminal procedure in England, the main attention is naturally given to the working of the Assize Courts and the King's Bench. But the administration of justice in the Petty Sessions, though much less prominent, comes more closely in touch with the daily life of the multitude, and equally deserves the notice of the sociologist if not of the professional lawyer. "A Middlesex Magistrate" has just written an unpretentious little book, entitled "The Justice of the Peace and His Functions" (London: J. M. Dent & Sons), which gives a valuable account of the part that these courts of summary jurisdiction play in the English system. Written in order to place at the disposal of new magistrates the results of several years' experience on the local bench, it is of interest to a much larger circle of readers. It makes no attempt to compete with formal legal treatises, but fills a gap in the existing literature of the subject by describing in a graphic, untechnical style the every-day duties of a modern J. P. in a populous district. After reminding us in his introduction that "in England, almost alone among civilized countries, the great bulk of minor judiciary work is done by amateurs, without cost to the state," the writer takes us to a Petty Sessional Court, and sets before us typical samples of the miscellaneous business that comes before the magistrates. We are told that the Home Office is more keenly alive than the magistrates themselves to the importance of using the principle of discrimination to check the spread of criminal tendencies. The local benches, it appears, neglect very largely to recognize their power of separating offenders of "fair" character into a separate division from those labelled "bad." Not the least useful sections of the book are those in which the author, travelling somewhat beyond his main purpose, comments critically on certain of the laws he is required to administer. For example, his experience has left him with grave doubts of the wisdom of the present method of settling matrimonial difficulties by the granting of "separation orders." "No part of a justice's work," he tells us, "gives him greater pain, causes more perplexity, or burdens his mind with sadder misgivings," and "try as he may, he can rarely convince himself that he has done more than a partial good, and that at the cost, very likely, of a fully counterbalancing harm."

Sidney Gillespie Ashmore, for thirty years professor of Latin at Union College, died last Monday, at the age of fifty-nine. He was a member of several learned societies, was the author of "The Classics and Modern Training," and had edited the comedies of Terence.

The death is reported of Prof. William Scharling, aged seventy-three, one of the leading economists of Denmark, and for a number of years finance minister. He was the author of several economic and financial works.

Prof. Hans Reidelbach, whose death in his sixty-fifth year is announced from Munich, wrote on the history of Bavaria and the Wittelsbachs.

Prof. Konrad Varrentrapp, an historian of note, died recently at Marburg, aged sixty-six. He was the author of a number of important works, among them: "Erzbischof Christian I von Mainz," "Hermann von Wied," and "Einleitung zu Sybels Vorträgen und Abhandlungen."

Science

Le Ciel et l'Atmosphère. By L. Houllevigue. Paris: A. Colin. 3.50 francs.

This little book, with a rather general title and without journalistic relief of style, conveys in its seven consecutive essays the substance of some of the most important conclusions of recent science. The author, a professor of physics in the French University, is already favorably known by a work of similar popularization, "L'Evolution des sciences." He chooses questions of actual interest as measured, not by material profits, but by the enlargement of scientific truth. First, the earth in the universe as now known shows the turning of science from the old idea of an "interplanetary void" to that of space filled with unceasing life, in which gravitation alone remains unexplained by any working hypothesis. Next follow the principles of meteorology; weather prevision; the flight of birds; the synthesis of light, explained like magnetism by electricity—*l'éther en acte*—with gravitation still outside the scientific harmony wrought by the labors of Clerk Maxwell and Hertz; wireless telegraphy; polar auroras; comets; shooting stars; and—how a world ends.

These last pages are of intense interest to those who, with Herbert Spencer, have accepted undoubtingly the mathematical conclusions of Clausius concern-

ing the dissipation of energy and the ultimate death of the universe, whole and entire, in a final condensation of its matter in an inert and cold uniformity without movement or difference of temperature or any life-giving electric current. Professor Houllevigne, for whom "doubt gnaws at faith, but nourishes science," claims "a right to distrust somewhat all such generalizations," appealing to the latest epoch-making work, "Thermodynamique et chimie" of Duhem; to Clerk Maxwell's demonstration that thermodynamics leads to absurd results when applied to atoms; and to the corresponding probability that its principles are equally non-applicable to the universe as a whole, for reasons which our minds cannot grasp since all our reasonings deal with more finite things. More germane still to science as now understood are certain newly discovered facts requiring some other theory as a working hypothesis: "The apparition of new stars, no matter what interpretation we give them, is one of these facts; we are forced to acknowledge that, at certain points of the universe, radiating centres of energy come into being; the universe grows old here only to grow young there—and it is possible that it endures so eternally." This conclusion is not vastly different from that of an ancient sage, with a more restricted vision of the universe, who judged from such facts as the "wind whirleth about continually and returneth again according to his circuits," that "the earth abideth for ever," and "the thing that hath been, it is that which shall be."

Little, Brown & Co. are now publishing Lombroso's "Crime, its Causes and Remedies," the third volume in the modern criminal science series.

The Century Co. promises to have ready this month "Principles of Physics," a textbook for elementary classes, by Prof. William Francis Magie.

R. C. Punnett has revised his treatise on "Mendelism," which will be issued this week by Macmillan.

Samuel Scudder, who died suddenly at his home in Cambridge, on Wednesday of last week, was a naturalist of wide reputation. He was born in Boston in 1837; he graduated from Williams College in 1857, later receiving a degree from the Lawrence Scientific School of Harvard. For two years he assisted Louis Agassiz; later he was assistant librarian of Harvard University, and was palæontologist of the United States Geological Survey. Among his most important works are those on butterflies.

Mrs. Williamina P. Fleming, famous astronomer and curator of astronomical records at Harvard, died last Sunday in a Boston hospital. She was born in Dundee, Scotland, in 1857, and gained her reputation through the way in which she handled the astronomical photographs at Harvard. Several years ago she discovered the spectrum of a meteor. It appeared on a plate exposed at Arequipa on June 18, 1897, which was forwarded to Harvard. Mrs. Fleming found a second similar spectrum in 1902. She was an honorary member of the Royal Astronomical Society (London) and an honorary associate in astronomy at Wellesley College.

The death is reported of Robert Service of Dumfries, aged fifty-six one of the best-known ornithologists of Scotland.

Prof. Thomas Rupert Jones, who died recently, was a member of the English Geological Society, and has written nearly two hundred papers on geology and palæontology.

Drama

The multiplication of independent theatrical associations continues, but the sum of their artistic product is not great. The Pioneer Players of London have just given their first performance at the Kingsway Theatre, but do not appear to have achieved anything remarkable. Three pieces were played. In the first, "Jack and Jill and a Friend," by Cicely Hamilton, a husband and a wife, both secret contestants in the same literary competition, are introduced. The wife wins the prize and the husband, in his chagrin, makes a sad exhibition of himself. There is a pretty scene of reconciliation in which, after self-abasement, he is forgiven. In the second, "The First Actress," the author, Christopher St. John, with a fine disregard for dates, assigns the quarrel between Sir Charles Sedley and the actor Kynaston as the cause of the first appearance of an actress upon the English stage. To this actress is revealed a vision of her more or less illustrious successors, from Nell Gwynne to Mrs. Siddons, who, on this occasion, were impersonated by Ellen Terry and other popular actresses, whose appearance, of course, insured the success of the trifle. The third play, "In the Workhouse," by Margaret Wynne Nevinson, was supposed to occur in a maternity ward, where the regulations of the establishment are discussed by the patients who agree, apparently, that the illegitimate mothers have greater privilege than the married women. The dramatic value of all this is not clear.

At the recent annual meeting of the trustees and guardians of Shakespeare's birthplace at Stratford-upon-Avon, Sidney Lee, the chairman, said that the increase of public interest in the birthplace and the other possessions of the trustees in the last thirty years was startling. Thirty years ago 12,000 to 13,000 visitors annually were the utmost hoped for. In 1888 their predecessors thought they were rich beyond the dreams of avarice when the receipts amounted to £700. To-day the visitors numbered almost 50,000, and their fees totalled £2,500. The trustees never were in a better financial position than at present. Space had hitherto been lacking for an improved classification and distribution of their exhibits. They were about to provide in the reconstructed custodian's cottage not only a storehouse for rejected exhibits, but a strong-room for deeds and manuscripts, and a library and working room for students, whom, with due precaution, they wished to encourage to inspect their books and papers. The trustees had already approved plans for greatly enlarging the portions of the New Place premises devoted to public uses, and in due time they hoped to set up there a museum which should be instructive in local history, while satisfying those conditions of Shakespearean interest which their act imposed on them.

Herbert Trench has decided to begin his autumn season at the London Haymarket Theatre with a production of Ibsen's "The Pretenders." Meanwhile Rudolf Besier's comedy, "Lady Patricia," is still running successfully, after passing its fiftieth representation. Mrs. Patrick Campbell is said to be seen to peculiar advantage in this play.

Ethel Irving, who occupies a very high place among the younger English actresses, has started for Australia. She will make her first appearance there in Melbourne in June. Her plays include "The Witness for the Defence," Pinero's "His House in Order," Sir W. S. Gilbert's "Comedy and Tragedy," "Dame Nature," and "Lady Frederick."

There was a crowded audience in His Majesty's Theatre, London, to witness the farewell performance of "Hamlet," given by H. B. Irving on the eve of his departure for Australia. There is a general consensus among the critics that Mr. Irving's impersonation of the Prince is growing steadily in eloquence, variety, subtlety, and power. In a speech from the stage he said that Sir Herbert Tree had asked him to undertake the character of Richard III in the Shakespearean festival at His Majesty's Theatre, but that his engagements had prevented him from availing himself of the offer. F. R. Benson will be his substitute.

It is reported that Giovanni Grasso, the Sicilian actor, is studying English, with a view to the performance of the part of Othello in the language of Shakespeare. He has already in London played the character in Italian, but the critics there seemed to think that his impersonation was more remarkable for its physical prowess than for any subtle or noble quality.

Among the sensational pieces affected by the Grand Guignol in Paris was one called "Dichotomy," which seems to have been as full of malignant libels upon the medical profession as "The Doctor's Dilemma" of George Bernard Shaw. At all events, both surgeons and physicians resented it mightily. It represented physicians as conspiring with surgeons to bring about fatal operations in order to share the fees. A protest was sent to the management of the theatre without effect. Then all the medical men who attended officially the Grand Guignol resigned, and the Society of Theatre Doctors forbade any of its members to take their places. The point of this boycott is that the Paris police regulations will not permit theatrical representations to be given unless a properly certificated doctor is in attendance.

The Italian government has bought up the remainder of the collection of pictures and other objects relating to the history of the theatre, the formation of which was begun by Jules Sambon forty years ago, and which recently was offered for sale. According to the Paris *Temps*, the collection, which includes about 1,600 articles, many of which possess artistic as well as historical interest, is to form the nucleus of a mu-

seum that is to be installed in the Scala Theatre at Milan.

Music

WAGNER'S AUTOBIOGRAPHY.

Mein Leben. Von Richard Wagner Munich: F. Bruckmann; New York: Lemcke & Buechner.

High-tide has set in again in the publication of Wagneriana. Glasenapp, the official biographer, has just completed his sixth and last volume. Of Wagner's letters to his publishers two volumes have been issued recently; a third is to follow; and on top of these comes the most important of all documents relating to him, his autobiography in two volumes, comprising 886 pages. It is by no means the first book in which he has taken the world into his full confidence. The first of the ten volumes of his prose writings and dramatic poems begins with a sketch of his life, written originally for a German magazine, and covering the first twenty-nine years of his life, up to 1842. In 1851 he issued an elaborate "Communication to My Friends" in which he gave further information regarding his career, personal and artistic. Several other papers in these ten volumes it was originally intended to incorporate in the final story of his life; and in addition to these there are about a dozen volumes of his letters to divers friends, in which he nearly always talks about himself and his projects—unlike his principal correspondent, Liszt, who, in his letters, usually (often rather provokingly) talks about other people and their affairs.

The great autobiography, to which the simple title "Mein Leben" has been given, was begun at the suggestion of the King of Bavaria, who wrote to Wagner, in 1865, after reading the autobiographic sketch already referred to:

> You would give men indescribable pleasure if you would prepare a detailed account of your mental development as well as of the external incidents of your life. May I hope that you will do me this favor?

In the following summer Wagner began to dictate the story of his life to his friend Cosima, the daughter of Liszt, who at that time was still married to Hans von Bülow. The divorce came in 1869, and the following year Cosima was married to Wagner. During four years leisure moments were devoted to the autobiography; in 1871 two volumes were printed at Basel; the third was put into type at Bayreuth. The printing of this manuscript was one of those extravagances which Wagner permitted himself at times when he happened to have money—sometimes also when he happened to have none. Only half-a-dozen copies were struck off, and these were given to intimate friends, on the understanding that the pages were strictly for their private perusal only. Republication for the world at large was not to come to pass till years after his death, "in case," as he says in the brief preface, "our descendants should still be interested in those things."

Inasmuch as some queer things have been done in Bayreuth in the way of editing Wagner documents, the fear has been repeatedly expressed that when these memoirs were at last given to the world they would be marred by omissions, or changes made by Wagner's widow; but the existence of the volumes printed forty years ago would have made any tampering easy of detection. It was doubtless at Frau Cosima's desire that little is said about herself. There is a great deal, on the other hand, about her predecessor, Minna Planer, whom Wagner very foolishly married in 1836. It has long been known that this pretty actress was a young woman of far from exemplary moral character, but the revelations made in these pages, with brutal frankness and amazing details, of her persistent misconduct both before and after marriage (she had an illegitimate child at the age of seventeen), make it quite incomprehensible why he ever wedded her, or why he refrained from getting a divorce. That it was hard to get along with him, he does not deny. Quarrels were of daily occurrence, during the courtship period as well as afterward. The most violent of these altercations, in which the two hurled the most offensive epithets at each other, occurred while they were waiting for the parson to tie the knot. Had he come a few minutes later, it would never have been tied, for they were on the point of separating forever. During the three years of starvation and disappointment in Paris they became really attached to each other, and their separation did not come till after her furious and entirely uncalled for outbursts of jealousy in the Wesendonck house—outbursts which now, after one has read the story of her career as an actress, seem the more extraordinary, but which Wagner, in these pages, seeks to palliate on the ground of morbid excitability due to her growing heart-trouble.

There is hardly a phase in his career, up to his departure for Munich to join his royal patron, on which a number of interesting new details are not given in these memoirs. They are fullest, perhaps, in regard to his childhood and youth, and some of the most amusing stories relate to his juvenile attempts to write poetry; an uncle, who at first encouraged him, was finally appalled at the results. His mother was distressed because over such pursuits he neglected his studies—once he did not enter the schoolhouse for six months. No less ludicrous than his poems were his first musical experiments—he gives some amusing instances. Oddly enough, he was the only member of the family who did not have piano lessons; so he tried to learn by himself, chiefly in order to be able to play the overture to the "Freischütz." Weber's romantic opera was the first deep impression of his life—an impression which decided his whole career. With Beethoven's music he first became acquainted on the day of that composer's death. He was urged, since he showed a preference for music, to choose an instrument and become a virtuoso; but he emphatically declared that he desired to be a composer, not a player.

Concerning his student days at the university we learn for the first time a number of surprising details. At one time he was booked for several duels with skilled swordsmen, for whom he was no match; but in each case an accident to his opponent came to his rescue. He took to gambling with the same energy and thoroughness that characterized all his doings. One night he had in his pocket his mother's pension money, all of which he lost; and although, with his own last thaler, he won it all back, the fright cured him, and he never gambled again. Like other students, he had his love affairs; about several of them he gives curious details which indicate that romantic love-making was not one of the arts included in his repertory.

The bulk of "Mein Leben" is devoted to a narrative of the ill-luck which pursued its author, through the greater part of his career, because of his unfortunate determination to be a composer. Spontini warned him against the folly of such an ambition, since he himself had virtually "exhausted all operatic possibilities"; but that was after Wagner had already perpetrated a few trifles like "Rienzi," "The Flying Dutchman," and "Tannhäuser." Some of the most graphic pages in these volumes are devoted to a description of the four weeks' voyage on a sailing vessel from a little Prussian seaport to London. Had it not been for their Newfoundland dog, he and his wife would have taken the stage coach to Paris; so it is to Robber that the world is indebted for the marine color in the "Flying Dutchman," the music of which was at that time germinating in Wagner's mind. The theme of the sailors' chorus was suggested to him by the actual song of the mariners as echoed from the steep granite walls of a Norwegian fjord; and there are many other realistic details that were suggested on this stormy trip, on which shipwreck was more than once narrowly averted.

Vivid details, not a few of them new, are given of the wretched years spent in Paris in the hope of gaining a musical footing. One of the many devices to which Wagner resorted in order to earn money was the writing of arias to be inserted in Italian operas by popular singers. With one of these, intended for

"Norma" (and evidently lost), he called on Lablache, who praised it highly, but declared it would not do to sing it in an opera so familiar to the public. The eminent Pauline Viardot sang some of his own French songs for him—but not for the public. One point which Wagner's biographers have overlooked, but which he himself realized to his embarrassment on several occasions, was that he actually had little worth while to offer till toward the end of his sojourn in Paris, when he completed "Rienzi" and composed the "Flying Dutchman." By that time he had become thoroughly disillusioned, perceiving that the only hope for him lay in a return to Germany. Quite new to the experts in Wagnerian lore is the intimation that, contrary to their belief, Wagner's mind was not greatly influenced by what he heard and saw in the Parisian theatres. "I do not think that during the whole time of our sojourn in Paris I went to the Grand Opéra more than four times," he writes, adding that the Opéra Comique also had repelled him from the beginning; and when tickets were sent him for the Théâtre Français, he returned them, to his wife's great distress.

Sixty years ago, when Wagner went from Paris to Dresden, it took five days to make the trip. Matters operatic were nearly as primitive, and thus it happened that though he won a great triumph with "Rienzi," his subsequent, more Wagnerian, "Flying Dutchman" and "Tannhäuser" were understood by few, partly because of inadequate performance. "Lohengrin" was altogether out of the question. The Dresdeners had no more conception of the greatness of the man they were harboring than the Leipzigers had had of Bach's importance, or the Viennese of Mozart's. The situation is more graphically described in "Mein Leben" than anywhere else, and the pages on the political uprising in which Wagner took part are really exciting, the story of how he escaped arrest and imprisonment being told here for the first time circumstantially and accurately. It was a very narrow escape—a fortunate accident—which his companions did not share.

The autobiography ceases with the year 1864, when King Ludwig became Wagner's generous protector. It is said that its continuation was one of his plans for the year in which he died. Possibly his widow has written about the last eighteen years of his life—the Nibelung treasures stored at Bayreuth seem to be inexhaustible. At all events, "Mein Leben," though a torso, takes its place at once among the world's great autobiographies. There are not a few dull pages in it, with details of no particular value to the world at large, but these are more than counterbalanced by many other pages of absorbing interest; and of one thing the reader may always feel sure—that no fiction is mixed with the truth. The author tells a plain tale, sparing himself no more than others when occasion for censure arrives. He gives glimpses into the workshop of his genius and throws a flood of light on the musical conditions of his time in most European countries; and finally, what many readers will relish most, there are many comments on great musicians who befriended or opposed him—Liszt, Schumann, Mendelssohn, Berlioz, Meyerbeer, Franz, Bülow, Saint-Saëns, and a host of others. Perhaps the most amusing of all the new details is that when he had parts of his "Meistersinger" score written out for a concert to be given in Vienna, one of the copyists was—Johannes Brahms!

MAHLER AND HIS SUCCESSOR.

Anton Seidl was forty-eight years old when he passed away, and on Friday of last week the cable brought the sad news that his pupil and successor, Gustav Mahler, has died only three years older. He was both a creator and a conductor, and it was this dual capacity, combined with his pronounced individuality, that put a special stamp on everything he did. Wagner said of Liszt that when he played he did not simply perform the music, but re-created it. In the same way, Mahler re-created whatever he interpreted. He made a Bach suite a sensation of the musical season; he conducted the "Flying Dutchman" overture so that one could smell the salt breezes of the stormy sea and hear the whistling of the wind in the masts; he made Beethoven's hackneyed symphonics seem new, and was the first conductor who revealed the full grandeur of the funeral march in the "Eroica"; and he brought out all that is best in the works of the contemporary German composers, notably his friend Richard Strauss.

It so happened that on the very day when Mahler died came the official announcement of the engagement of his successor. The situation was a peculiarly difficult one for the directors and sponsors of the Philharmonic Society. Up to the time when Mahler's illness assumed an acute form, it had been hoped that he would return for another year. The differences between him and those at the head of affairs have been grossly exaggerated; there were mistakes on both sides; he had been too much interfered with, but he also had done some very queer things in his nervous excitement; yet all that had been smoothed over and the contract was ready for him to sign. Now it must be remembered that when the Philharmonic was reorganized and made into the semblance of a "permanent" orchestra playing or rehearsing daily, the funds raised for covering the inevitably heavy deficits sufficed for three years only. What will happen after next season no one knows. It is inconceivable that in this wealthy city, where so much is done for music, the oldest and best orchestra should be allowed to disappear; but owing to the uncertainty referred to it was not possible to get one of the "star" conductors.

Under the circumstances, the Philharmonic directors doubtless acted wisely in engaging a young man who, while not yet named among what are facetiously called "prima donna conductors," nevertheless has made an honorable record for himself. Josef Stransky, a Bohemian of not quite forty years, is one of the best-known orchestral and operatic conductors in Berlin, and there are not a few who regard him as the coming conductor—an interpreter of the emotional Seidl-Mahler type. While he is unknown here, it must be borne in mind that Anton Seidl also was known to few when Edmund Stanton engaged him for the Metropolitan. If he has merits, they will be promptly recognized by the public; but he must be prepared to be violently assaulted by a certain journalistic faction—the faction which, in the interest of rival institutions, helped to undermine the health of both Seidl and Mahler by the persistent shooting of those poisoned arrows from which even such burly giants as Wagner and Liszt suffered agonies, and which hastened the death of the invalid Grieg.

Professor Britan of Bates College attempts to show the relation of music to the other arts, and to make a systematic analysis of the principles of musical æstbetics in a book to be published by the Longmans this month, under the title, "The Philosophy of Music."

Boston hopes to receive a visit from Debussy next season, when his "Pelléas et Mélisande" will be produced by Manager Russell. An attempt is being made also to obtain Mme. Carré for the part of Mélisande.

Humperdinck has finished the stage music to Maeterlinck's "Blue Bird." It will have its first hearing in Vienna. In the meantime his "Königskinder" remains the favorite of the day in Germany, and he will soon be able to build himself another castle on the Rhine.

At this summer's Bayreuth Festival "Parsifal" will be performed with an entirely new setting. The decorations for Klingsor's flower garden have been designed by Siegfried Wagner, who, by the way, is the subject of a biography of above four hundred pages, recently written by Glasenapp, the official Bayreuth biographer.

Gustav Mahler, late conductor of the New York Philharmonic Orchestra, died in Vienna last Thursday, after an illness which had prostrated him for the past eight weeks. He was born in 1860 at Kalischt in Bohemia; was educated at the gymnasium at Iglau, at Prague, at the University of Vienna, and at the conservatory of that city. After holding a number of smaller positions, he became Seidl's successor at Prague in 1885. In 1886 he went to Leipzig as Ni-

kisch's assistant; in 1888 he directed the opera at Pesth. For the six years following 1890 he was at Hamburg, going in 1897 to direct the Hofoper in Vienna, and to succeed Hans Richter as conductor of the Philharmonic concerts there. He remained in Vienna until 1907, when he came to New York, first as conductor of the Metropolitan Opera. In 1909-10 he became head of the Philharmonic Society. Gustav Mahler was equally well known as a composer.

Art

THE ROYAL ACADEMY.

LONDON, May 15.

The Royal Academy has opened with the usual ceremony and noise. Royalty has visited it. Society has inaugurated the season officially at its private view. Princes and ministers of state have gravely discoursed of national affairs at its annual banquet. And again one asks the usual "Why?" No event could be of less real importance, no exhibition of less real interest. Far more astonishing even than the seriousness with which it continues to be accepted, is its fidelity to its old standards. Within the last few years many Academicians of the older generation have died; many younger men the Academy long ignored have been elected. And yet there is no perceptible change in the character of the exhibition. One reason, no doubt, is the abominable hanging. Despite the example set by other galleries, the hanging committee persists in piling the pictures one above the other as high as they will go, without an inch of space between, and in grouping them so as to produce the most hopeless discord. But unintelligent hanging alone does not seem sufficient to account for the unvarying mediocrity of the collection and commonplace of the walls.

Since last year, John Lavery, C. H. Shannon, and Mark Fisher have become Associates—painters whose reputations have been made at the International and the New English Art Club, the two societies supposed to be the most "advanced" in the country. But this spring C. H. Shannon does not show at all, and the others, though they do show, succeed so poorly in making themselves felt as a new and fresh influence that, as most people agree, the Academy has seldom been so colorless and seldom contained so little work of distinction, if I except Sargent's Armageddon. Sargent always gives an impression of power and knowledge at the Academy, where rarely is there any one to compete with him, and this huge lunette is designed in heroic proportions and with a boldness and vigor of which the British painter of to-day seems incapable. Exactly where it is to go in the Boston Library I do not know, and before it is set up in the place for which it is intended, I should hesitate to pronounce an opinion. Hung like a picture at the Academy, the composition seems to lose in rhythm and harmony what it gains in force and movement. Men and horses, chariot and tripod, hurling through space, are painted with the mastery, the certainty that make it always a pleasure to turn to Sargent's work from the feeble fumblings and hesitations of most of the exhibitors. But these sprawling figures, violent in action and foreshortening, are without the repose, the serenity, essential in mural decoration; nor do the spots of red in the bloodstains and the crimson in the drapery explain themselves as part of the color scheme, though they may when the design is seen, not isolated as now, but as one of a series. A big exhibition is a test to which no such large decorative work should be submitted, in fairness to itself. Sargent, we have all heard, has decided to paint no more portraits; but this year he has broken away from his decision and sends one portrait, of the Archbishop of Canterbury. It does not, however, suggest enthusiasm as his reason for changing his mind. The archbishop sits in white official robes, a touch of red in the hood of his gown, in the background a few books with passages of gold in the bindings, beautifully indicated. It is almost needless to say, Sargent being the painter, that the head is solidly modelled and the plane of the face well expressed, and that there is at least a semblance of life. But the painter seems to have worked with a curious lack of interest that naturally fails to rouse interest in others. On the same walls Sargent has before now exhibited much more distinguished portraits. He shows, besides, a Waterfall, put down with dash and brilliancy, but little more than a sketch on an unnecessariiy large scale, and a small Loggia, a good study which many painters could have done as well.

After Sargent, Lavery is the most conspicuous exhibitor, chiefly because his Amazon is painted on an immense stretch of canvas and hung at the end of the second room, where the visitor must see it at once on beginning the round of the galleries. The girl in wide-brimmed hat, holding a tall lance, and seated on a white horse, is the sole figure in a large empty landscape under a wide, clouded sky. Horse and rider make a sculpturesque silhouette against this simple background. But to the silhouette everything is sacrificed. Little character is in the figure, and little but paint in sky and landscape. When the world's great equestrian portraits are remembered, it seems merely a sensational bit of scene painting, though, to tell the truth, one which few other Academicians could have dared or accomplished, and it has the sense of design so wanting in Lavery's Pavlova now at the International. It is easy to foresee for it a successful passage through the big exhibitions of Europe, and no doubt America, and the ultimate fate of many more notable "pictures of the year." It enables Lavery to make a striking first appearance as Associate in a more than usually dull Academy.

If this huge picture can hardly be called a portrait, neither can many canvases that do not pretend to be anything else. Portraits of magnificently gowned women by Academicians like the President, Poynter, and Frank Dicksee, seem but tediously elaborated still-lifes. The camera would make as much of the personality of Admiral Lord Fisher or Kitchener of Khartum as Herkomer or John Collier, whose realism rises scarcely above the photographer's. Fashion seems to be gradually blinding J. J. Shannon to character in his sitters. Indeed, the only portraits that interested me at all are two by Orpen and one by G. A. Storey, an elderly Associate whose work does not often call for a second glance. But his small portrait of his father reading, which must have been done many years ago, either was his unexpected masterpiece, or else time has endeavored to turn it into one. Certainly, it has the dignity and tone and breadth for which the work of his generation of Academicians was not famous. Orpen's portraits probably gain from being seen at the Academy; in finer collections they might be passed by more readily. In both, the arrangement has evidently been of most importance to him, the model a mere excuse for it. His Man in Black, a three-quarter length, standing, in long dark overcoat and loose thick gloves, makes an amusing pattern on the canvas to which, rather than to any realization of character, the effect of animation is due. For that matter, in the face, character is exaggerated into caricature. But the amusing pose is the rare exception at the Academy, and so also is any sign of that pleasure in the mere handling of paint which Orpen apparently has taken in modelling the face and the hands in their loose thick gloves. In his other portrait, Claude E. S. Bishop, Esq., the figure, a full-length, is seated, the character is not so exaggerated, and the arrangement is less in line than in color—in the gray-green of coat and trousers against the silver-gray of the curtains. The only other portrait that tells at all on the overladen walls is one of the Abbé Pichot by Frank Craig, and it tells not so much because of its accomplishment as because the painter has fallen too obviously into the danger from which Orpen just escapes. Character in the spare, black-robed figure standing against a low-toned background and in the lean, sharp-featured face is emphasized until it seems nothing but caricature, which draws attention to it by its very exaggerations, and which the

seriousness, almost delicacy, of the treatment does not justify.

The large sentimental and allegorical anecdotes, of which the Academy as a rule is lavish, are in an unlooked-for minority. No "problem picture" this year gathers the crowd. That only the occasional foreigner breaks the British monotony is more in accordance with Academic tradition. Dagnan-Bouveret's Ophelia and a portrait by Laszlo are almost the only foreign contributions. Nor are there any large panels for decoration, such as Abbey sometimes sends, while Brangwyn, whose big designs and splotches of color are usually a brilliant oasis in the Academic desert of dulness, is also among the absent. The landscapes lose in distinction and interest in proportion to the size of the canvas they cover. The panoramic stretch of country by Alfred Parsons, the almost architectural compositions of Alfred East, the busy views of Maggiore by David Murray, seem artificial and labored when compared with smaller and quieter pastorals that have to be sought for in the mosaic of canvases. This, however, does not apply to Bertram Priestman's one landscape. It is on a large scale, but, his eyes opened by the beauty other men have revealed in their impressions of the modern world of work, he has learned that factories and railways may be to the artist to-day what tales of saints and miracles were to the early Italian. In his Outskirts of a Northern City, he gives not only the richness of the English country in the meadows of the foreground where cows are at pasture, but the drama of labor in the city beyond, with its forest of chimneys sending up their clouds of smoke and veiling the distance with mystery. He has never done anything at once so true, so dignified, and so dramatic. Arnesby Brown is another landscape man who has taken a distinct step in advance. On his canvas the procession of The Drove homeward, across the bare flat road under a big open sky, becomes almost epical; and he has managed to look for himself at the works of Battersea from the Chelsea shore on a breezy, brilliant March morning, though this view is one which few painters can look at now and forget Whistler and the night to which he consecrated it. That it is wise for painters to avoid the difficulties which night presents, even if Whistler has pointed out the way to conquer them, is proved by the failure of George Clausen's attempt to record an impression From My Windows in the Small Hours. He simply succeeds in missing the poetry and the mystery. This, a portrait of Harrison Townsend, and the head of a girl suggest that he is trying to break away from his old subjects. But it is when he keeps to them, as in Propping the Rick: a Stormy Day, that he is best. There is repetition in it—in the action of the men at work in the foreground, in the rolling country under a clouded sky, and the play of light and shadow over it—these are things he has done again and again—and repetition may lead to mannerism and barrenness: the reason perhaps for his experiments with other themes. Edward Stott returns to his Scriptural motives of the last few years, and his tranquil landscapes do not gain by it. His laborers and cottagers belonged to the fields and downs, the villages and lanes he loved to paint. But Hagar and Ishmael, as he tells their story, are scarcely more than a concession to public taste. The little figures, subordinated to the landscape, are indifferently realized and break in meaninglessly upon the solemnity of the sad gray wilderness under a sad sky from which the last gold is fading as the evening star rises above the horizon. It is the same with the picture he calls Her Thoughts Were Her Children, the composition borrowed from the old Italian groups of the Blessed Virgin, the Infant Jesus, and the little St. John. The figures in this case are more important than the landscape and fill the foreground, but the interest is really in the beautiful, tender pale sky.

Here and there a few other paintings may be noted. Adrian Stokes has felt, and shown, the color and splendor of the Alps in autumn. It has been left for a woman, Laura Knight, to attempt a big Salon subject on a fairly big Salon scale, and her Daughters of the Sun, nude or semi-nude figures on the seashore, is her tribute to Sorolla and other painters of open-air effects whom she has attentively studied, and a proof of her energy in tackling a large canvas such as the average woman painter cannot boast of. Val Havers, whose name is new to me, endeavors, on the contrary, to escape from exhibition standards and models by showing what he calls frankly Living Room Pictures: a group dancing or a little landscape in flat colors against a flat gray background; in which he seeks the repose that once, before the days of the big exhibition, was thought a desirable quality in a painting. The endeavor is to be commended, even if the achievement it promises is yet to come. A ring of little Cupids dancing around a Crab Apple Tree under a clear, luminous sky, by Charles Sims, is not without fantastic charm, and has also the merit of repose. But for this quality no other picture in the collection appealed to me so directly and delightfully as J. H. Lorimer's Room at Twilight. It is of the simplest: a corner of a room, with nothing in it save a small dinner-table on which one or two plates and two candles burning dimly under dim shades are set, a white parrot on a perch, a vague cat curled up on a window seat, and a window looking out upon an empty green lawn and line of blue water beyond, as dimly lit as the shadowy interior. But the spirit of the hour is in the effect of light, the harmony in gray and white is carried out with rare delicacy and charm, and, above all, the picture has the unity the old Dutch masters understood how to give to just such simple subjects.

In the water-color room at the Academy, I confess my courage deserts me. Small drawings fitted in on the wall as relentlessly, and piled up as high, are more depressing than big paintings, and I would not venture to speak of work which, under the conditions, I cannot see. Masterpieces may abound, but so long as they remain part of this bewildering mosaic, they are lost to the world. The black-and-white room is not so crowded, chiefly because most of the men who are doing the best work have long since ceased to send prints and drawings to an exhibition where they are so little appreciated. Frank Short, the newly elected Engraver Academician, has a mezzotint after Watts's portrait of Tennyson, and Cameron, the newly elected Engraver Associate, has two prints to which the chief centre is devoted. There is little else to say. It is not at Burlington House one learns anything about the movements and developments of the day. The sculpture is as colorless as the painting; it is hard to understand why the shadow of royalty hangs heavily over it and portraits of the late King and the present King and Queen are many. A few busts here and there, more particularly those by Derwent Wood, show a little character. But the large monuments and statues call for no special description and inspire no special enthusiasm. N. N.

Jacques Reich has issued a second etching of Lincoln, which, in our opinion, is not nearly so good as the first one. The head is not so well modelled, and there is less personality in the face. Both appear to be etched from photographs taken at the same time. The remarque in the new etching, formed of sketches of the heads of Lincoln's generals, and of some of his Cabinet, is not an improvement.

Frederick Porter Vinton, the portrait painter, died at his home in Boston last Sunday. He was born in Bangor, Me., sixty-five years ago. His skill as a painter became apparent when he was a mere boy. His first instruction in art was at the Lowell Institute, and in 1875 he went to Paris, where he worked for a year in the painting school of Léon Bonnat. Later he studied at Munich, and then returned again to Paris, where, in 1877, one of his paintings was admitted to the Salon. In 1879 he returned to Boston, where he opened a studio and began his career as a portrait painter. In 1882 Mr. Vinton was elected an associate of the National Academy, and nine years later was chosen academician. He was also a member of the Society of American Artists.

Etienne Joannon, who died recently at the age of fifty-three, was a member of the Société des Artistes Français, and was

a native of Lyons. He won medals at the Salon in 1892 and in 1900.

Finance

AFTER THE STANDARD OIL DECISION.

A wholly impartial witness of the public's reception of last week's news from Washington—the familiar Man from Mars, for instance—would have found some difficulty in piecing together his impressions. If acquainted with the older traditions of our race, he would possibly have assumed that the Standard Oil had been placed as a burnt-offering on the public altar, and that every one thereafter believed the angry god to be appeased.

Something of the perplexity of the Man from Mars has been reflected in the comment of casual observers on the stock market's action since the Supreme Court decision. The Standard Oil Company had been unequivocally declared illegal. The court had unanimously declared that the great industrial combination had been convicted of intended monopoly and restraint of trade. Its dissolution had been ordered. Yet Wall Street hailed the decision with the utmost enthusiasm. Prices advanced 2 to 6 per cent. in the next three days. Transactions on the Stock Exchange, which had fallen to 106,000 shares a day shortly before the court had announced its verdict, expanded to more than a million shares on the day after that announcement. Organs of the mercantile trade declared, at the end of the week, that "the Supreme Court decision has undoubtedly stimulated business confidence." Cable dispatches quoted even J. P. Morgan, the greatest of all promoters of industrial combinations, as saying in London that "the decision is very satisfactory to me." Most remarkable of all, Standard Oil stock itself, after declining 10 points on the market during the first day after the decision, advanced 30 points in the next four days, actually reaching the highest price since the middle of 1909.

For this somewhat curious sequel the Stock Exchange had its explanation ready. The value of a catching phrase was never better demonstrated than by last week's immense popularity of the explanation that the court had "written 'reasonableness' into the Anti-Trust law." It was not wholly clear just what this signified to the mind of those who used the phrase; but that did not seriously matter. Wall Street is not free from a certain amiable weakness of human nature, which consists in saying things which it does not exactly understand, and in saying them with the greater confidence because it believes that no one will ask it what they mean. There is etiquette in matters of this sort, which excludes as bad form the insistence, in the midst of a friendly conversation, on clear explanation of such mysterious phrases. The essential point in this case was that the market was going up.

Among those who endeavored to get beyond mere catch-words, there were some who asserted with great indefiniteness that the Chief Justice's Standard Oil opinion, by using such phrases as "determined by the light of reason" and "right to contract, when not unduly or improperly exercised," had somehow or other reversed all previous decisions. But there were others, not less qualified to judge, who retorted that those declarations merely reaffirmed in simple language what had been previously intimated, in general terms in the earlier Supreme Court judgments under the Act of 1890, and with great definiteness in such enunciations as Justice Brewer's Northern Securities opinion of 1904, the Circuit Court's decision of 1909 against the Standard Oil, and Attorney-General Wickersham's brief in the Tobacco case appeal of 1911. As arguments and counter-arguments were gradually sifted out, this second view of the matter seemed to meet general acceptance.

But if the Standard Oil decision reaffirmed the gist or tendency of previous decisions, then why, it may not improperly be asked, should the press, the Stock Exchange, and the business community at large, have hailed with so great enthusiasm these paragraphs of the court opinion? The answer is that a series of utterly wild and extravagant interpretations of the law—representing Congress and the courts as a sort of Juggernaut, and making out of sober judicial procedure a nightmare for timid souls—had suddenly lost their hold on the community. The corporation lawyer who brandished the statute in the face of the bewildered Philadelphia bankers at their banquet fifteen months ago, with the stentorian prediction that enforcement of the Sherman act as interpreted by the Government, "would cause a panic compared to which the 'Roosevelt panic' of 1907 would be as a zephyr to a cyclone," fairly embodied this sweet reasonableness of philosophic temper.

People of sense took those absurdities at their proper value; but the business community is not wholly made up of people of sense, and part of its membership is subject, quite as truly as any other collection of human beings, to the habit of believing whatever they hear, if it is only shouted at them loudly enough. The great break in prices during 1910 was not caused by those performances; there were a hundred other and better reasons for it; but certainly the extravagant talk about the Anti-Trust Law could not have helped the situation.

On the whole, it seems reasonably certain that the spell was broken by Monday's news and the market's reception of it, and that conclusion need not be impaired either by the fact that the fate of the Tobacco combination is not yet decided or by the entering of suit against the lumber combination or by the absence, thus far, of any perceptible revival in general trade. But such a supposition leaves the question open, whether we are to have a movement of trade activity later on, similar to what has occurred this week on the Stock Exchange. The answer may readily be in the affirmative, but with the reservation that an affirmative answer need not say how soon response will come or how emphatic it will be. The reason why it is hardly safe to be specific, in prediction on these points, is that the movement of general trade has other things to think of than decisions of the Supreme Court at Washington. After the "sentimental influence" on which finance and trade had been depending for reversal of an existing situation—an election, as in 1908; a treaty of peace, as in 1905; a tariff vote, as in 1909; a Supreme Court decision, as in 1911—come the plain and everyday practical influences. It is they which, favorably or unfavorably, determine the staying power of such recovery.

There is certainly this much to be said in the present instance—that the self-restraint which American markets (outside of cotton) have exhibited during the past few months is the most favorable omen which could have been desired. For such financial and industrial revival as has lately been witnessed in England, on the European Continent, and in Canada, there must be some cause, and it is impossible to suppose that the cause does not fundamentally apply to our own situation as to theirs. If, indeed, the American markets were confronted with a disordered international trade position, an inadequate bank reserve, a deadlocked bond market, a scale of commodity prices out of touch with the outside world, and with markets already raised on stilts by extravagant use of credit, it would be easy to see why the forward movement in other communities could not extend to ours. But the mere statement of these qualifications is enough to show what the present American position actually is, and what the legitimate basis is for confidence in the future.

MAX PEMBERTON'S NEW NOVEL

WHITE MOTLEY

The art of flying and the art of love; the dreadful hazards of an Alpine flight, and the dangers of a perilous love-affair;—these are the thrilling themes of this dare-devil tale of adventure in the air and on land.

Cloth, 12mo. Frontispiece. $1.30 *net*

THE SECRET BOOK

By GEORGE WEMYSS

The adventures of a young American abroad who loves a girl known to him only by the chance finding of her diary. The novel tells how he sought her, wooed her, and won her despite Sicilian banditti, and in the teeth of a titled rival. *Cloth, 12mo. Colored frontispiece by Clinton Balmer.* $1.20 *net.*

STURGIS & WALTON CO. 31-33 E. 27 St. New York.

THE PHILOSOPHY OF MUSIC

A Comparative Investigation Into the Principles of Musical Aesthetics.

By HALBERT HAINS BRITAN, Ph.D., Professor of Philosophy in Bates College. Crown 8vo. pp. xiv+252. $1.35 *net; by mail*, $1.48.

In method, it has been the author's purpose to treat the subject (1) from the scientific or psychological point of view, and (2) to bring out as clearly as possible the relation of music to the other arts, that is, to treat the subject comparatively.

LONGMANS, GREEN, & CO., New York

REPUBLICAN TRADITION IN EUROPE

The Lowell Lectures, 1910

By HERBERT A. L. FISHER
Fellow of New College, Oxford, and Fellow of the British Academy.
8vo, $2.50 net.

Mr. Fisher describes the course of Republican ideas in Europe from the fall of the Roman Empire to the foundation of the Republic of Portugal. The mediæval theory of government, the Italian republics, the rise of the Dutch State, the English Commonwealth, the French Revolution and its effects, the Republican movements in Germany, Italy, Spain, and Norway come under review. In the final chapter some explanation is offered of the decline of European Republicanism since 1848.

APPLETON'S NEWEST BOOKS

Dr. G. Stanley Hall's

EDUCATIONAL PROBLEMS

In two large volumes Dr. Hall gives to the public the results of his lifelong study of educational problems. He covers a wide range of topics, and deals with problems not only of the school and intellect, but of the moral, religious and social education of the child into the man. The work deserves as much consideration as the author's monumental book on Adolescence, which is regarded as the great work on the Psychology of Youth.

Uniform with "Adolescence." Two vols. 8vo. Cloth. $7.50 net.

Charles Macomb Flandrau's

Prejudices

The author of "Viva Mexico" and "The Diary of a Harvard Freshman" in this volume records his impressions of a number of things such as Dogs, Servants, Holidays, Parents and Children, Travel, Wanderlust, etc. His point of view is original and his humor delightful.

Uniform with "Viva Mexico." Cloth. $1.25 net.

Prof. William E. Kellicott's

The Social Direction of Human Evolution

An Outline of the Science of Eugenics

The aim of Eugenics is the betterment of the human race—the production of a more healthy, more vigorous, more able humanity. This book outlines briefly, in plain, matter-of-fact terms the present status of Eugenics. Everyone interested in the welfare of the nation should read it.

Illustrated. Cloth. $1.50 net.

Dr. Albert Bushnell Hart's

The Obvious Orient

Dr. Hart's eight months' visit to Japan, China and the Philippines resulted in this interesting new volume, which, notwithstanding its title, records considerably more than surface impressions. His observations of the political and social systems in the Far East are interesting and illuminating. Cloth. $1.50 net.

Dean George Hodges's

The Training of Children in Religion

A wise and practical guide for parents, guardians, and teachers. The author furnishes practical suggestions on such subjects as when religious teaching should begin, church attendance, the influence of example in the adult, the best form of prayers, the use of Sunday, the necessary qualities and duties of the teacher, etc.

Cloth. $1.50 net.

James Creelman's

Diaz

Mr. Creelman's study of the Mexican ruler has been a most timely publication. The book traces the career of Diaz right down to the moment and explains clearly and forcibly the events which have led up to the present crisis.

Profusely illustrated. Cloth. $2.00 net.

Dr. H. J. Mozans's

Along the Andes and Down the Amazon

A companion volume to the author's "Up the Orinoco and Down the Magdalena." Dr. Mozans followed in the footsteps of the old Spanish conquistadores and he compares conditions to-day with those described in the records left by these men. His journey took him through Ecuador, Peru, Bolivia and the Amazon section of Brazil. *Ready June 9.*

Profusely illustrated. Cloth. $3.50 net.

Sterling H. Bunnell's

Cost-Keeping for Manufacturing Plants

A valuable book for those interested in industrial plants. Mr. Bunnell has, through long service, become expert on cost-keeping systems, and the methods and forms given in his book have had their worth proven in practical use.

Illustrated. Cloth. $3.00 net.

The Hon. Mrs. Neville Lytton's

Toy-Dogs and Their Ancestors

An important volume on the history, breeding, and care of toy-dogs by the leading authority of England. The toy-dog is traced from the earliest times down to the present, and much practical advice is given to owners of little pets. The several hundred illustrations are a special feature. *Ready June 9.*

Illustrated. Cloth. $7.50 net.

THE STORY GIRL

By **L. M. MONTGOMERY**

With frontispiece and cover inlay in full color from paintings by George Gibbs. Cloth. 12mo. $1.50.

A book with all the charm and freshness of a Spring morning. As dainty and as entertaining as ever, the witchery of the wonderful "Garden of the Gulf" is with us once more, and Sara Stanley the "Story Girl," is a heroine to whom has come a rare gift—that of weaving the bright thread of romance out of what the world might call "commonplaces."

Eleanor H. Porter's *dainty romance*

Miss Billy

A book for young and old. A sunny story of a bright young girl in whom life, love and hope meet; a "really truly" girl whom it is indeed good to know. *With frontispiece in full color, decorative jacket, cloth, 12mo, net* $1.25.

A Soldier of Valley Forge

By Robert Neilson Stephens, author of *"An Enemy to the King,"* etc., and G. E. Theodore Roberts, author of *"A Cavalier of Virginia," etc.*

"An entertaining tale of war, love and bravery."—*Chicago Inter-Ocean.*

12mo, cloth, decorative, illustrated, $1.50

Abroad with the Fletchers

By Jane Felton Sampson.

"A book which carries the reader with it. A vigorous account of travel in Europe. A dash of fiction and a world of truth." *Cloth, decorative, illustrated, boxed, net* $1.75

Letters and Memorials

OF

Wendell Phillips Garrison

Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

AMERICANS: An Impression

By Alexander Francis.

One Thousand Homeless Men

In this new book, we have for the first time the group usually treated as "tramps and vagrants" so carefully differentiated as to reveal its miscellaneous contents of able-bodied and sick, young and old, sinned against and sinning.

The author, as Alice Willard, later Mrs. E. D. Solenberger of Minneapolis and Philadelphia, had charge of homeless men and boys for the Chicago Bureau of Charities. Out of that rich experience grew this volume, completed just before her death last December and now published by the Russell Sage Foundation.

The book makes just claim to statistical accuracy, but it is none the less full of keen human insight and of whole-hearted endeavor to befriend the hapless. Thoroughly readable from cover to cover.

Ernest P. Bicknell, Director of the National Red Cross, says: "She was unquestionably the best-informed person in a city of two million people in all matters pertaining to homeless men and boys."

No one who has ever tried to help a homeless wanderer should be without it.

ONE THOUSAND HOMELESS MEN

Two Opinions of The Nation

"I am conscious that The Nation has had a decided effect on my opinions and my actions for nearly forty years, and I believe it has had like effect on thousands of educated Americans."—*Dr. Charles W. Eliot.*

"A journal of politics, literature, science, and art. In politics stands as a free lance, a position which allows of unlimited criticism, usually based on careful study of subject, and a knowledge of history and politics of the past. The book reviews are written by specialists, are scholarly, critical—sometimes hypercritical—but never too technical for comprehension of the intelligent reader. No periodical can be compared with it because none other covers just the same ground, and certainly none other is characterized with the same independence of judgment and freedom of utterance—an independence and freedom which give it a certain authority and standing not enjoyed by any American contemporary."—From the *Wisconsin Library Bulletin.*

AMONG THE NEW MACMILLAN SCIENTIFIC BOOKS

Mendelism By R. G. Punnett, *of the University of Cambridge.*

A readable, untechnical account of a new science; exceptionally interesting to every man who has to do with growing new varieties of plants, with breeding any animal, from poultry to thoroughbred horses, or who takes any interest in the problems of heredity and the improvement of the human race.

Just ready. Cloth. $1.25 *net, by mail* $1.35

Physical Optics The long-hoped for revision and enlargement of a standard work. By Robert W. Wood, Professor of Experimental Physics in Johns Hopkins University. Entirely revised, with extensive additions, including over one hundred new illustrations. *Cloth. 8vo.* $5.25 *net, carriage extra*

Characteristics of Existing Glaciers

By William Herbert Hobbs, Professor of Geology and Director of the Geological Laboratory in the University of Mich. Especially notable in that while other writings on glaciers are based on a study of those in the Alps, this work includes in its survey all known glaciers of the world. Its author is thus able to check conclusions heretofore considered final, and to modify them in important particulars.

Cloth. Illustrated. 301 *pages.* $3.25 *net, by mail* $3.47

Applied Electrochemistry

By M. de Kay Thompson, Assistant Professor of Electrochemistry in the Massachusetts Institute of Technology. An account of the most important electrochemical industries, as well as the principal applications of electrochemistry in the laboratory. *Ready next week*

A New Volume of Swenson and Frankenfield's Testing Electro-Magnetic Machinery and Apparatus

Volume II. Alternating Currents. The authors are well known as men of a wide practical experience, invaluable to a student. They have been assisted in preparing this volume by John M. Bryant, Asst. Professor of Electrical Engineering in the University of Illinois. *Cloth. Illustrated.* $2.60 *net*

The Chemistry of Food and Nutrition

By Henry C. Sherman, Professor of Food Analysis in Columbia University. A book which promptly found a place till then unfilled, as is shown by the number of new courses in this branch of chemistry organized since its publication offered an available text book. *Cloth. Illustrated.* 355 *pages.* $1.50 *net*

The Physiology of Plant Production

By B. M. Duggar, Professor of Physiology in Cornell University. A serviceable book for the man who is really studying his crop with a view to best meeting the plant's water requirements, temperature, light and food relations. *To be ready next week*

Dry Farming By John A. Widtsoe, Ph.D.,

President of the Agricultural College of Utah. A recent volume in the Rural Science Series. *Illustrated.* $1.50 *net*

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, JUNE 1, 1911.

The Week

"We took nothing out of this statute by the rule of reason. We gave to it a vivifying potentiality." These words of Chief Justice White, uttered Monday in announcing the decision of the Supreme Court against the Tobacco Trust, are the sufficient answer, taken in connection with the sweeping judgment, to the assertion that the opinion in the Standard Oil case emasculated the Anti-Trust act. This saying of Judge White's ought to be pasted in the hat of every promoter contemplating giant and oppressive mergers and monopolistic combinations, and fondly dreaming that the law and the courts cannot touch him. The Tobacco Trust decision, following that in the Standard Oil case two weeks ago, is both clarifying and invigorating. We now see that the Supreme Court, interpreting the law broadly in its spirit and intent, is able to bring within the scope of its decree many acts and contracts which a narrowly literal construction of the statute would remove from its reach. Those who were foolishly rejoicing in the hope that the word "reasonable" might be made to cover a multitude of corporation sins, must now see their error. The Supreme Court will, indeed, exercise its reason in determining whether there has been a violation of the Sherman law, exactly as a judge and jury will reasonably decide whether the evidence shows that grand larceny has been committed, but in the former case just as truly as in the latter, once the facts are established, the penalties will fall upon the guilty swiftly and surely. In affirming, as the Chief Justice does, that the Supreme Court will apply the Anti-Trust statute rigorously as a matter not only of law but of settled public policy, meeting every shift and device by the spirit and intent of the act, the whole matter has been cleared up and the law of the land shown to have wholesome vigor.

The Tobacco case was in many respects more intricate and difficult than the Standard Oil prosecution. It came before the Supreme Court on appeal from a divided court below, one of whose members did not conceal his opinion that the Sherman law could not be enforced without bringing all business to a standstill. Moreover, it was not an instance merely of a holding company, but of a series of corporations in actual and direct ownership of the property. The evidence, too, was an enormous and complicated mass. But the Supreme Court cut its way through resolutely, in such a manner as to justify the comment of the Attorney-General that "it is scarcely to be conceived that any more comprehensive and effective application of the statute to this vast combination could possibly have been decreed." Some objection has been made to the terms of the decision allowing the companies six months in which to reconstitute their organization lawfully. But when you begin with reason you must go on with reason. The Supreme Court has no power to confiscate property. It cannot outlaw property-rights; it can simply compel them to live within the law. This is what must now be done by the Tobacco corporations, to the satisfaction of the Circuit Court; and the decision adds that, in case of failure to comply with the mandate of the Court, they will be excluded by injunction from foreign and interstate commerce, or a receiver will be appointed to give effect to the requirement of the statute. The force of reason could no further go.

The action taken by the House in the matter of Arizona's Constitution opens the way to a logical solution of the problem. The people of Arizona are to be enabled to vote upon the recall of judges as a measure apart from the rest of the Constitution, and can thus go clearly on record. If it should appear that the people of Arizona still insist on the recall, the only wise thing is to let them have it and learn from experience. As we have said before, Arizona, once admitted into the Union, cannot be prevented from amending the recall into her Constitution if she so desires. There is such a thing as mistaken State pride which will refuse to have things forced down its throat. On the other hand, to leave the matter to the free choice of the people of the new State is all the wiser because we cannot believe that even the ardent natives of the Southwest can remain unaffected by the sharp opposition which the recall for judges has encountered among thoughtful men, from the President of the United States down.

The contrast pointedly drawn by Secretary MacVeagh, in his speech to the bankers at Kansas City last week, between the Aldrich of the banking reform plan and the Aldrich of the tariff bill of 1909, voiced the feelings of many other people. It is a matter of common knowledge that, at the outset, the entire work of the Monetary Commission was looked upon with reserve by the community at large, because of Mr. Aldrich's previous exploits in the field of tariff legislation. This misgiving has been pretty thoroughly removed by the frankness and open-mindedness which Mr. Aldrich has maintained in his attitude toward the banking plan. He has in particular, we believe, disarmed the most obvious and natural of the earlier suspicions, that his banking reorganization plan, like his tariff revision plans, was designed to play into the hands of selfish and unscrupulous capitalists. In no one identified with the controversy has there appeared a more practical judgment of the real nature of the banking problem, or more intelligent recognition of the dangers surrounding a hasty plan of reform, or greater willingness to change his own position when convinced that it had been taken unwisely. This transformation in personal qualities and methods is a very unusual thing in public life. We do not know whether Secretary MacVeagh spoke by the card in saying that he half suspects that Mr. Aldrich "does not entertain with quite his old enthusiasm the tariff views with which his name is so conspicuously associated." It is possible; for the man who approaches one subject open-mindedly and with public spirit will often have his dogmatism and prejudice toward other subjects shaken.

President Butler's explanation at Mohonk of the plans of the Carnegie Peace

Foundation reveals the serious study which has been given to them with the result of laying out a campaign of wide scope and promise. The work is to be divided into three departments. One will concern itself with international law, one with economics, and one with education. At the head of each is to be a recognized authority, who will seek co-operation from leading scholars and philanthropists throughout the world. On the legal side the effort will be to help to a clearer sense of the juristic relations of one country to another, and to hasten the establishment of international tribunals that will pass judicially upon disputes between nations. Prof. John B. Clark is admirably fitted to be in charge of the division of economics and history, and his labors, with those of his associates, will be directed to showing the vast and blundering waste of war purely on the material side. Taken as a whole, the methods proposed to make the Carnegie Peace Endowment practically fruitful seem well devised, and bid fair to do much to transform what has hastily been called a dream into a fact.

It is virtually certain that the United States Senate will not be much longer disgraced by the presence of Lorimer. If the case against him were now to be put to vote exactly as it stood in the last Congress, the strong probability is that his election would be declared void through bribery; and the new evidence that has come out in Illinois will make the decision against him inevitable. Even Senator Bailey is forced t admit that the whole aspect of the affair has changed, and concedes also that the Senate may have before been "grossly deceived" about Lorimer. No one did more to help on the deception than Bailey himself, but it is plain that he has now seen a great light. So universal in Washington is the conviction that Lorimer's seat will be vacated that the rumor of his resignation, in order to avoid expulsion, is not at all incredible. But it is added that one powerful motive with him, in case he does resign, will be the desire to protect from examination by a Senate committee those protectionist friends who put up the money to buy his election. They fear and he fears that too many secrets would be dragged into the light. The plan would be to modify the old phrase and make it read "Addition, division, and resignation."

Gov. Woodrow Wilson's speaking tour in the West, from which he has just returned, has undoubtedly given an impetus to his Presidential candidacy. Political observers in Washington report the keenest interest in Wilson on the part of the Democratic members of Congress. Not long ago, a newspaper correspondent took an informal poll of the Democratic Representatives, and something like four-fifths of those who were willing to express any opinion at all were found to be in favor of Gov. Wilson. Senator Gore of Oklahoma has just come out for him in a public letter. All these things, of course, are to be ranked at present only as political indications. We are still a year away from the national conventions, and meantime the situation may change radically. But the chances are that the causes which have led to Wilson's popularity and given him so great prominence in the counsels and hope of his party, will continue to operate. Much will depend, however, on his future course. His warmest admirers would, we think, be well pleased to see him avoid further stumping travels.

The ways of heresy trials are past finding out. In the Presbyterian General Assembly last week charges of unsound teaching were brought against two professors of theology. They are men who are supposed to choose their language with care, and some of their published words had at least a color of heterodoxy. But they were acquitted of doctrinal error—with good reason, we have no doubt. Harder was the lot of the Pennsylvania clergyman who was accused of heresy in certain sermons and articles contributed to newspapers. His defence was that he had used loose and picturesque and possibly startling expressions for the purpose of gaining attention and interesting his hearers and readers, but that he had no intention of departing from the doctrines of the church, in which he professed the heartiest faith. He, however, was found guilty and suspended from the ministry until he could make his peace with his own presbytery. This seems an extreme penalty for what appears to have been little more than a kind of sensationalism in the pulpit. Of that there is an over-supply just now, but to attack it on the ground of a breach of good taste is evidently harder than upon the score of a breach of orthodoxy.

There is something more than religiosity in the protest of the Presbyterian General Assembly against the presentation to the battleship Utah, by the State of that name, of a set of silver adorned with the head of Brigham Young and a picture of the Mormon Temple. The objection is, to be sure, on the ground of sentiment, but it is a sentiment which is sound. It is one thing to remember an unhappy past, it is another to glorify it. History has to record the deeds of the Mormons, but there is no need of commemorating them in a public way offensive to many. Utah has legally abolished polygamy, and now might well draw a veil over that past blot on her civilization.

National honors were paid on Monday of last week to the memory of Major Pierre L'Enfant, to whose artistic genius the national capital owes the street-design which is the fundamental element in its beauty, and will ultimately make it one of the most impressive as well as most attractive cities in the world. And behind the engineer and artist were the men who chose him as the right instrument for the plan, and gave him both encouragement and help in its execution. Consider the contrast between such a plan of city development and the desolate gridiron system that was inflicted on New York. No doubt the topography of Manhattan offered a great difficulty to such a development as should be pleasing to the eye and conducive to satisfactory ways of human living. The predestined centre of New York's greatest business activities was near one end of a long and narrow island; and the difference between a big city so constituted and one in which the business centre is the geometrical centre is simply appalling. An area of thirty square miles in the form of a strip two miles wide, with the business focus at one end, means a distance of fifteen miles from that focus to the outer margin; a circular city thirty square miles in area would mean a distance of barely more than three miles from centre to circumference. With this fundamental unkindness of nature New York has had to reconcile

itself as best it might; to this must, at bottom, be ascribed that deplorable over-development of the apartment-house mode of living which has so profoundly affected life not only in New York itself, but throughout the Union. Consciously or unconsciously, for better or worse, every city in the country is deeply influenced by the example of New York; and many a defect in American ways of living would have been less marked, many a pleasing feature more developed, if the site of the great Atlantic seaport had not happened to be a long and narrow island.

Lloyd George's workingmen's insurance scheme is, naturally enough, encountering objections from a number of different quarters, and objections highly dissimilar in character. Of these, it seems safe to say that that which would make a grievance of the contributory feature, as such, is bound to be dissipated by the mere logic of the facts. Even though the part contributed by the employers may be made, in many instances, to take the shape of a deduction from wages, the benefits to the workingman of a well-administered scheme of insurance against invalidism are almost sure to become convincingly apparent in the course of a reasonably brief experience of its working. A far more substantial reason for doubt as to the good result of a plan which imposes the duty of prudence from without, is that concerned with the effect of the Government scheme upon the friendly societies. These are looking forward with justified apprehension to the substitution of the paternalist method for that of voluntary provision by each individual for his own protection. It may be that the balance of good will be enormous, even if the friendly societies should be in large measure wiped out; but certainly no confident assertion can be made offhand on the subject. In a man's voluntary sacrifice of a part of his present ease or comfort for the sake of insuring future independence there is a moral element whose value cannot be estimated in any statistical analysis.

That the census of the population of England and Wales "shows the lowest rate of increase since enumeration was established in 1801" ought not to be regarded as surprising, in view of the fact that the density of population ten years ago was already 558 per square mile. It is, on the contrary, noteworthy that the percentage of increase from 1891 to 1901 does not fall very far short of what it was in the two preceding decades. The percentage for the ten years just ended is stated as 10.91, whereas from 1891 to 1901 it was 12.16, and from 1881 to 1891 the increase was only 11.65 per cent. The present density of the population of England and Wales is 619 per square mile, which is more than twenty times that of the United States, and almost exactly four times that of the North Atlantic group of States. Of course, this packing of a great population into the area of England and Wales can go much farther, but the keeping up of a constant ratio of increase is not to be looked for. Even at the latest decennial rate, of 10.91 per cent., the population would double in sixty-seven years, so that into an area only one-fifth greater than that of the State of New York would, at the end of this period, be crowded a population of 72,000,000 souls.

Ireland, of course, affords a very different picture; but the census figures just reported from that island, while again presenting the now familiar phenomenon of an actual decline in the population, show a smaller decrease than has taken place in any decade since the famine of 1846. The Irish population made the terrible drop from 8,175,000 in 1841 to 6,552,000 in 1851; and every decennial enumeration since then has shown a big cut in the numbers. The decline, which was three-quarters of a million from 1851 to 1861, averaged about 350,000 per decade for the four succeeding decades, to 1901, and never fell materially short of a quarter of a million in any one of those decades; so that the showing of a loss of 76,000 in the ten years just ended is a notable improvement, which may confidently be ascribed to the improved conditions in land tenure and otherwise. It may be remarked that the annual number of births (up to 1908, the latest year for which we have figures) in Ireland has been almost exactly constant for the decade, and has shown a good margin—usually about 25,000—above the number of deaths; so that the decline of the population, such as it is, must be ascribed to an excess of emigration—either to England or outside the United Kingdom—above the natural increase.

The outcome of the elections in Portugal was a foregone conclusion. With the machinery of election in the hands of the Republicans, and the army and navy behind them, it was inconceivable that the monarchists would venture to come out into the open. As a matter of fact, it is still to be demonstrated that monarchical sentiment survives among the Portuguese masses. If the Republican régime is to fall, it will be through its own mistakes; and for that there has not been time enough. Undoubtedly the provisional Government has had its difficulties in coping with the thousand and one problems that are let loose in a time of revolution; and the difficulties will persist. But the permanent Government that is about to be installed will have insured its existence if it succeeds in dealing with the one problem that dominates all others—the elimination of that system of non-partisan looting which went by the name of government in Portugal. It is hard to imagine that a nation could have remained quiet under an administration that was largely organized theft. It was a system of plunder by which very few politicians refused to profit, and which, in the end, brought destruction to throne and politicians alike.

The Russian Government has really decided at last to let American Jews enter that country on business errands "under certain restrictions," and the Taft Administration has won a notable triumph. So often have hopes been held out that Russia would do its plain duty in this matter that most Jews, we fancy, will believe this only when it is actually demonstrated. Russia has long excluded men of Hebrew descent, in violation of the comity of nations and of its treaty with the United States under which every Russian citizen has had the hospitality of this country. What Russia chooses to do in her own country about her Jewish citizens is primarily her own affair. It becomes a very different matter when American citizens are discriminated against because of their religious faith, and we have heartily sympathized with those who never let the Government at Washington forget this unworthy discrimination.

THE MORAL OF DIAZ.

On the pathetic and personal aspects of the fall of Porfirio Diaz, it is not necessary to dwell. The proud old man has had to drink a bitter cup of humiliation. There is almost the sound of a groan in his letter of resignation. It was forced from him by a country aflame with revolt; and to the national demand, which he protests that he cannot understand, he bows with an air of stoicism befitting his Indian blood, yet with evident anguish of spirit. He appeals to history for the final verdict on his extraordinary career, and no doubt it will, in the end, do him exact justice. But what we are most concerned about to-day is the immediate effect and the instant moral of the disappearance of the great figure which has bestridden Mexico for more than thirty years.

The sudden and pitiful collapse of his power would have been declared incredible six months ago. That he was disliked and even hated by many Mexicans was well known, but it was confidently believed that he was strong enough to crush any conceivable revolt. It has, indeed, been for at least twenty years a commonplace of comment on Mexican affairs that the completion of the railways and the existence of an efficient Federal army had forever put an end to the old era of revolution. But this theory has fallen in a heap. The Mexican army has proved a vain thing for safety. Made up partly of convicts, and of men whom some *jefe político* had found troublesome and had "put away" by condemning them to military service, it was impossible that it should have a fighting spirit; while the reports are probable which say that the funds nominally devoted to the equipment of the soldiers had been in good part stolen. But, of course, the break-down of the army would not have so much mattered if the mass of the people had been contented and loyal. Obviously, they were not. The thing that finally extorted Diaz's retirement was the fact that revolution became epidemic. In all parts of the country the forces that had so long been held in check burst forth with a roar. Diaz fell not merely because the army failed him, but because the great body of the Mexican people willed that he should fall. In no other way can the surprising and complete success of the movement begun by Madero, despicable as it seemed in its beginnings, be accounted for. Diaz boasted that he had made modern Mexico; but modern Mexico unmade him.

What is the general political significance of this fact? To our mind, it is not obscure. It is the inevitable failure of even benevolent tyranny. It is a solemn warning to all those who think to "impose" stable government. Diaz was of the very type of the "strong man" in whom Carlyle saw the world's only hope. He did in Mexico what Carlyle prayed that somebody might do in Ireland. He kept order. He set the wheels of industry whirring. He found work for the people and made them work. Fine-spun scruples about personal rights and Constitutional forms and guarantees he laughed to scorn and, with a firm grip on the realities, set the nation's feet in the only path to wealth and power. For long he seemed to have great success. No one will deny that in some important respects Mexico made a marked advance under his rule. But to-day all eyes can see that the glittering idol which we were called upon to fall down and worship as the embodiment of political wisdom had feet of clay.

Under republican forms, the government of Porfirio Diaz was in reality a military oligarchy. We need not dispute that it was a well-meaning régime —even patriotic in its way. But it was based on a sham and fraud. Pretending to derive its power from the free choice of the people, it actually forced itself upon Mexico, stifling free speech and denying the right of public discussion. But such a system cannot go on long without a vast amount of subservience and of ignorance on the part of the people. And here comes in the fatal weakness of a benevolent tyranny today. It cannot be indifferent to humane and civilized opinion. It cannot openly avow that it depends upon a slavish and superstitious spirit in the people. It must at least pretend to desire their education and elevation. But even such half-education as has been given the Mexicans comes to make a rule like that of Diaz impossible. When the repressed millions are able to read their own history and laws and to think about them and to know what the democratic movement is in the world outside, their demand for a share in their government can no more be chained than can their intellects. And the new generation which Diaz for very shame could not refuse to help create in Mexico has proved his undoing. Education, as John Morley has said, cannot deny its own children. If in Mexico or India or the Philippines we venture to open closed minds and teach to young men liberty and self-government, we must not be astonished if they apply the lessons, even to our own discomfort. That seems to us the chief moral of Diaz's catastrophe. It is one witness more before all the world to the indestructible instinct for free government.

A DISCORDANT VOICE.

A Boston correspondent has written to express his sense of "the untimeliness and gross impropriety" of Mr. Roosevelt's article in the *Outlook* objecting to the arbitration treaty with Great Britain. It is a slight exaggeration to say that the ex-President stands alone, "when the whole world besides is rejoicing in President Taft's great effort and praising him for it." There are some others in opposition. Certain professional Irishmen, under the aliases of various societies, have protested against the treaty as only one proof more of England's perfidy. And there are always a limited number of men ready to stand at Mr. Roosevelt's side and say with Moloch:

> My sentence is for open war. Of wiles,
> More unexpert, I boast not; them let those
> Contrive who need, or when they need; not now.

In general, however, it is true that Mr. Roosevelt has in this matter taken a position well-nigh of isolation, whether splendid or not. President Taft's announcement that he was ready to negotiate treaties providing for arbitration of all possible questions, including those of national honor, has, as President Butler truly said at the Mohonk Conference, "aroused the greatest enthusiasm on both sides of the Atlantic." The volume of applause, indeed, swells day by day. In London, there were expressions of approval as cordial and almost as impressive as those at the Guildhall meeting when the Archbishop of Canterbury joined Mr. Asquith and Mr. Balfour in making the heartiest response to President Taft's proposal. And the early notion that the intended arbitration agreement was with Great Britain exclusively, has been dissipated. France has already been approached, and shown herself ready to negotiate. Even the Ger-

man Government has assumed a "sympathetic" attitude toward Secretary Knox's plan to make all international disputes justiciable, and the Ambassador of Japan at Washington has stated that the subject is one which his country will carefully consider. There comes also from Tokio an official statement that Japan is ready to join in the movement for arbitration. Such a universal chorus of approval makes the one discordant voice the more notable. It is virtually a case of Roosevelt *contra mundum*.

He will not care a copper for that, conscious as he is that he speaks for righteousness which is better than peace. Nor will it trouble him that he is placing himself in open opposition to the President of his own choosing. He is a friend of Taft and a friend of peace, but a greater friend of the truth. This makes it all the greater pity that the truth is not revealed to Mr. Roosevelt in clearer form. His *Outlook* article is not without his characteristic ambiguities and hedgings. At one point he appears to be uncompromisingly if not ferociously against any treaty that should arbitrate questions involving national honor; yet a little further on he seems to consent to the English treaty provided it stated in a "preamble" that the two nations agree to arbitrate everything "only because certain things have now become unthinkable and impossible." Yet it is precisely these unthinkable and impossible things that Mr. Roosevelt adduces as the reason for never agreeing to arbitrate everything! Suppose, he says, that Great Britain should set up the old right of search "with its incidents of killing peaceful fishermen within the limits of New York harbor"—why, "this country would fight at the drop of the hat." In that case we should show less restraint and common sense than the English did when their peaceful fishermen were killed by the Russian ships at Dogger Bank. That affair was peacefully and honorably arbitrated. But Mr. Roosevelt takes up the killing of Americans by fire across the Mexican border. In ominous language which will make the country glad that he was not President at the time, he says that "we have chosen to submit to such invasions"; but he goes on imagining that "if it happened to be an English or a German or a Japanese fleet which, not once but again and again, fired into our coast towns, killing and wounding citizens"—what then? But why ask what would follow things plainly unthinkable and impossible? As well demand what Dr. Lyman Abbott would do if his contributing editor threw an inkstand at his head.

In spite of all his fierce vagueness, however, Mr. Roosevelt does, in a moment of unguarded frankness, commit himself to the definite proposition: "The United States ought never specifically to bind itself to arbitrate questions respecting its honor, independence, and integrity." That was the flat statement which encouraged the Clan-na-Gael and the physical-violence section among Irish agitators when they read it; which made the secret enemies of the proposed treaty in the Senate take hope, and brought dejection to its friends; and which was recognized on all sides in Washington as arraying Mr. Roosevelt against the President in what may prove to be the capital measure of Mr. Taft's Administration. The Washington correspondents, who at once perceived the *Outlook* article to be a direct blow at the President, sought an expression on it from the White House. They got nothing except the calm remark that President Taft was of the opinion that in this and all other matters every citizen was entitled to his own view. That is really all that there is to say about it. If Mr. Roosevelt likes to put himself out of touch with the best sentiment of his class and his party and his country and his time, then there is nothing for it but to let a wilful man have his way. But if he persists in denouncing what the whole civilized world applauds, he must know that the considerate judgment of mankind will come to feel that there is too much sober truth in what he said of himself jestingly to Ferrero: "Je suis un barbare."

BANK-WRECKING AND CLEMENCY.

No more trying duty confronts a President or a Governor than that which is thrust upon him by the possession of the pardoning power. In such a case as that of the bank-wrecker Walsh of Chicago, or Morse of New York, the pressure brought to bear upon the chief executive is almost overwhelming. In each of these cases, in addition to the number and influence of those who have urged the President to extend clemency to the guilty men, there has been a personal element which, to a man of his kindly and genial nature, must have been extremely hard to set aside—in Walsh's case the advanced age and the doubtful health of the prisoner, in the case of Morse the unwearied and pathetic devotion of his wife. But Mr. Taft has not allowed either those human elements or the specious pleas that have been presented in extenuation of the offences committed, to swerve him from the stern performance of a manifest duty. He has denied both the applications, and has accompanied this refusal with a statement of the principles actuating him, so clear and impressive as to constitute in itself a high public service. It is not too much to say that the banks and other fiduciary institutions of the country are to-day distinctly safer from abuse, and that thousands of men, young and old, throughout the country, are to-day more effectively protected against their own weak impulses, as a consequence of the President's action and of the convincing statement with which it was accompanied.

One of the most specious pleas made in such cases as those of Walsh and Morse is that the methods to which they resorted are common and usually go unpunished. That the first part of this statement is a gross exaggeration of the facts is only one, and not the most important one, of the objections to the plea; but it *is* a gross exaggeration. The unscrupulousness of a Walsh or of a Morse is no more typical of bank heads in general than the doings of the fast set at Newport are typical of the life of wealthy Americans in general. Certainly the abuse of financial trust has not made the faintest approach to being accepted as right or even excusable; and therefore the fact that it usually escapes punishment, if fact it be, is a reason not for abstaining from punishing it when you can, but for making particularly sure that, whenever the culprit does get caught in the meshes of the law, he shall not be permitted to escape. The more frequent his entire immunity, the more indispensable is his exemplary punishment in the rare cases when it can be inflicted. The great object of the punishment of a Morse or a Walsh is the deterrence of others from committing the crimes of which they have been guilty; and what

would the deterrence amount to if, in addition to the punishment being usually escaped by good luck, good nature stepped in to reduce it to insignificance when luck went wrong?

Nor is it possible to ignore a consideration of profound public importance which attaches to any application for clemency in behalf of a man who, having enjoyed wealth and high position, is able to bring to bear in his cause the influence of large numbers of friends prominent in political, business, and social circles. To yield to such appeals would, as the President says, "present a demoralizing difference between the punishment meted out to the ordinary criminal, whose circumstances have naturally led him into crime, and one whose position in society should have made for him the strongest restraint against violation of the law." In his earnest advocacy of a reform of our criminal procedure, so as to rid it of the enormous encumbrance of technicality and delay, Mr. Taft is doubtless moved largely by this consideration, as well as by the inherent merits of the case; for there is certainly a demoralizing contrast between the endless obstructions to the course of justice that can be set up by one who has command of all the resources of the law and the rough-and-ready treatment with which the common run of those charged with crime must rest content.

Of course, all these considerations would break down if the views of crime and punishment entertained by some humanitarians were accepted. If the sole justification of imprisonment were the reform of the criminal—if the only thing that we had a right to take into account in regard to a man confined in a penal institution were the question whether he had been "cured"—it is very possible that both Morse and Walsh ought to have been released within thirty days after their committal. A scientific diagnosis of their state of mind, corresponding to the medical diagnosis made in a hospital, might have resulted in an unhesitating judgment that there was no appreciable danger of their ever sinning again. But it is cases like these that expose the essential error of this theory of punishment. The notion that society and not the individual is responsible for crime, and the notion that reform and not deterrence must be regarded as the object of punishment, are equally discredited when the criminal has every advantage of education and wealth, and when the crime is one in regard to which every deterrence that the criminal law can provide is manifestly needed both for the protection of society and for the strengthening of the individual against temptation.

ENGLAND'S COMMERCIAL SUPREMACY.

"There is no sign of decadence in England. . . . She has bled herself too freely, and the heart now shows some signs of weakness. The rivalry of younger and more daring and strenuous peoples for the trade of the world is a severe test of her seasoned strength." It is thus that Mr. J. D. Whelpley sums up in the *Century* his views on the commercial supremacy of Great Britain. He sees a good many dark clouds on the horizon and he is convinced that the English trading of to-day is "individualism gone mad." The country, he says, has robbed itself of millions of its best citizens and fairly driven them over-sea—replacing them with less desirable immigrants, most of whom live in the slums of London. While these Englishmen have gone to make Australia, South Africa, and other commonwealths great, the home lands have suffered for lack of proper tillage, and because of the high cost of production due to ancient methods and inefficiency, the wages have remained low. Yet for all that, it is evident that Mr. Whelpley does not think that any rival will soon overhaul Britannica. By pluck and industry she is likely to forge ahead. It is, on the whole, a sanguine view that Mr. Whelpley takes.

Nor does he make the mistake of the Joseph Chamberlain tariff reform school of thinking that the way out is a modicum of protection. It is easy enough, we know, for a superficial thinker to walk along the banks of the Tyne and count the closed establishments, some with "moved to Germany" on their walls, and then to say that free trade is doing this. We have frequently heard this, particularly with regard to the chemical industry, in which Germany has won such extraordinary successes. But it is perfectly obvious that there are plenty of other reasons for it than Germany's tariff wall. Thus, every student knows that nowhere else in the world have science and business been so yoked together as in the Kaiser's dominions. The new German chemical factories have also had all the advantages that come with a new business—freedom from harassing traditions, improvements in construction, method, etc. That this has meant much in all such industries, Mr. Whelpley realizes. He cites, moreover, an intelligent Englishman who had discovered that in many mills the difficulty was with the employers. The hard-headed sons of the founders of a business would send the third generation to the universities, and its members would return ill fitted to carry on the mills. As Mr. Whelpley's informant said, these men become protectionists because they do not know where the difficulty lies. As he put it:

> They now fail to see the necessity for capital expenditure; they do not realize that year by year the cost of production is being reduced, not by economy, but by liberal expenditure, and by heroic discarding of plant still apparently useful. The articles they manufacture are still the best in the world as to quality, but they find the Germans, for instance, excelling them in beauty of finish and design, and, what is more serious, they find the manufacturers of several other nations underbidding them in price in, to them, an inexplicable way.

This recalls also the Scottish mill upon whose closed doors during a tariff reform campaign somebody scrawled, "Free trade did this," whereupon a lover of truth wrote, "Whiskey did this." Nowhere in the world is there to-day such an opportunity for the new art of scientific management as in England. One of our own experts who recently returned from there was quite overwhelmed by the appalling need, as it seemed to him, of bringing English manufacturing up to date.

Curiously enough, upon the chief menace to British industry Mr. Whelpley does not touch at all—the domination of the trades-union. Here is the dead hand that paralyzes British enterprise and more than anything else prevents rapid readjustment to new economic conditions. When the time comes for the introduction of scientific management in England it will run against a stone wall of labor-union prejudice, just as it will in this country in a less degree. The old economic fallacy that the more jobs you can create in an industry the better off you are, has come to have the force of Scripture in Great Britain, and none of the mediæval restraints of labor is unknown, not even the old device of limiting the number of apprentices. So

firmly intrenched are the labor-union hosts there that Parliament itself is cowed and politicians and press are muzzled.

Upon one great truth Mr. Whelpley has hit. Anything, he says, which will "leaven the toiling mass of humanity, quicken the pulse and the intelligence, bring hope to the children of the hopeless, will do more to prolong England's hold upon the trade of the world than a hundred Imperial conferences." Her chief problem is "to devise means to keep her money and her men at home, and to give each an equal chance." It is this need which lies behind the reforms of Lloyd George. The demand for the breaking up of the great landed estates which deprive the ordinary Englishman of the opportunity for modern intensive farming or some new form of industrialism, is surely evidence that an awakening is at hand. The danger is that the remedies offered may not be the right ones. For instance, it is the relation of the trades-union to the unemployed that needs to be studied and discussed, as well as the question whether insurance against unemployment will not stimulate malingering and loafing and defeat its very object. If British industrialism is individualism run mad, there are surely signs that the political reaction is in danger of going far too rapidly from the teachings of the Manchester school of individualists to the other extreme. Mr. Whelpley's article shows that there is another way out of England's economic difficulties besides a lurch toward Socialism.

THE COUNTRY THEATRE.

It is not the fault of our great clothing advertisers if there are still young men in our villages who are unaware of their inalienable right to be just as well dressed as the young men on Fifth Avenue. Something of the same fierce belief in equality animates the writer of an article on the status of the "one-night stand," in the last number of the *American Magazine*. He mourns over the thousands of towns and cities which are deprived, by financial considerations, of seeing the best Broadway players in the best Broadway plays. Country audiences will pay nothing higher than $1.50 for a seat, and Mrs. Fiske will not play below the two-dollar standard; so the country theatre is given over to wretched performances by wretched second companies, and the young rural generation is deprived of this most important educational factor in modern life. "You give your children Shakespeare to read," complains the writer, "but never Shakespeare to see and hear on the stage. You have your public library, magazines, lectures, and even your occasional trip to New York, Boston, and Chicago. You insist on having Dickens and Stevenson for your children in the library, but you do not turn a hand to provide them with Barrie and Maeterlinck in the playhouse."

We need not enter into a detailed examination of the author's argument. The subject is too broad, and the writer, safe to say, is not always consistent. Now he thinks of the theatre as educational and now he speaks of it as recreative. Now he wants a plan to help the one-night stands and now he admits that it is impossible to help all the one-night stands. Now he wants the best Broadway company and now he admits that we shall have to get along with good "second" companies. What concerns us is the spirit of the complaint and the remedy. The one-night stand is at present deprived of its inborn right to see what Broadway has seen. It can vindicate that right, first, by paying Broadway prices, and, secondly, by organizing for the defence of its interests. Our author outlines an elaborate system of dramatic censorship and dramatic criticism to be carried out by the woman's clubs, a system which would reduce to subjection the local theatrical manager, the local newspaper reviewer, and the company's advance agent by virtually taking over the functions of all three.

But it is the spirit of the article that is most significant. We may define it as the spirit of the "uplift" manifesting itself in the two familiar ways: first, in the assumption that anything that is good is not too good for every one in the country, and, secondly, that anything we wish to obtain is obtainable through that magic instrument "organization." We organize against graft and tuberculosis, and in favor of subways and internal waterways, and we organize to bring the drama in its highest form to Great Barrington, Mass. It is a fine, unreasoning spirit which refuses to overlook the limitations of nature and circumstance. What a shame to give the village youth Dickens and Stevenson and to deprive him of Maeterlinck and Barrie! But why stop there, we wonder? What a shame to deprive Great Barrington or Kokomo of Caruso's voice, or Beethoven's Ninth Symphony as the Boston Orchestra plays it, or the New York Public Library, or Chicago's Horse Show!

Now, the simple fact is that town is town and country is country, and that each scheme of life has its pleasures and its failings and its compensations. No *à priori* principles of justice and human equality will do away with the fact that Dickens and Stevenson do not need a crowd, and that Shakespeare and Molière, in visible form, do. If men had never learned to build cities, we should never have developed a drama as we know it now. Those in the large cities have learned to do without the simple pleasures of country life and have built up a new system of social bonds. They have learned to do without the strawberry festival and the husking bee; they have lost the art of conversation as it is practised around the stove in the general store; they do not go in as seriously for debate and public oratory as the young men in the small town do. More than anything else, the church has ceased to be the great centre and forum of the social life of the community. Church, lyceum, and books the small town has because they are inherently appropriate to the structure of the community. There is every reason why the people in a town of two or three thousand inhabitants should enjoy the very choicest books as a regular thing. There is no reason why they should expect to see a good play well acted except as a very rare treat.

If only the one-night stands were content with seeing second-class actors in old plays! It is precisely because they are encouraged in the shoddy ideal that they must have Broadway that they get fourth-rate companies in musical comedy. If the theatre is to exercise an educational function in the small town it will not do so by inducing village folk to pay two dollars for an orchestra seat to see Mrs. Fiske in her newest play, but by building up decently-trained stock companies and presenting them on local circuits in the old répertoire, with an occasional addition from the newer stage.

THE NEW BRITANNICA—II.

A little ramble through one of the volumes of the new Britannica, with the ninth edition at our side, will serve to show the nature of the change undergone in the transition from the encyclopædia of 1875-1888 to that of 1911. Let us glance, for example, at the section comprised under the initial *In*. Between the captions Inchbald and Independents in the old Britannica we find just two lines, consisting of cross-references from Incubation to Birds, Reproduction, and Poultry (the last not justified). In the eleventh edition, nineteen pages have been introduced at this place. They include Inclinometer (instrument for measuring the dip of the magnetic needle), Income Tax, Incubation and Incubators (comprising Bird Incubation, Bacteriological Incubation, and Human Incubation), Incunabula, Independence (a small city of Missouri whose history is given in great detail), and Independence (Declaration of), besides several minor biographical, legal, and scientific articles. Index Librorum Prohibitorum has been rewritten and the information brought down to the doings of Pius X. The extensive article on India contributed to the ninth edition by W. W. Hunter, author of the monumental "Imperial Gazetteer of India," has been essentially retained in an abridged form, a section having been added on the costumes of the peoples of India. There is an article of six pages on Indian Architecture, a topic absent in the ninth edition, except in so far as it figures in the general treatise on architecture. Sir William Markby contributes a weighty article (12½ pages) on Indian Law, divided into two sections: Hindu Law and Mahommedan Law. What corresponds to this in the old Britannica is just one page on Hindu Law, under India. In place of the rather brief account of the Sepoy Mutiny given before under India, we have now a separate article, Indian Mutiny (4½ pages). To Indiana, which occupied less than two pages in the ninth edition (where the historical information terminated with the admission of the State into the Union), are accorded five and a half pages in the eleventh edition. Indians (North American) covers three times as much space as it did before, no less than thirty-one pages being devoted to the subject, which is treated in a remarkably comprehensive manner by Professor Chamberlain of Clark University. Among the many new topics that figure in the succeeding fifty pages are Indo-Aryan Languages, Indo-China (French), Induction Coil, Inebriety (Law of), Infallibility, Infancy, and Infantry. The last-named occupies sixteen pages, whereas in the ninth edition there was no such article, the subject having been relegated to the article War, where only three pages were devoted to it. The article Inquisition (9 pages), by P. D. Alphandéry, professor at the Sorbonne, has taken the place of a much shorter one. Prominence is given in the bibliography to the writings of Henry C. Lea, whom Prof. G. E. Woodberry has strangely overlooked among recent historians in his fine article on American Literature. Insanity (21 pages) has a new feature in the section on Hospital Treatment, contributed by Prof. Frederick Peterson of Columbia. Insectivora represents a topic not treated under its own head in the old Britannica. The article Instinct, contributed to the ninth edition by Romanes, has been supplanted by one from the pen of another authority on this baffling subject, Prof. C. L. Morgan, who has also an article on Intelligence in Animals, a new topic in the eleventh edition. Instrumentation (4½ pages) is only one among many new articles in the department of music. The subject of International Law is presented afresh by Sir Thomas Barclay, who asserts that the chief source of such law will "in all probability for the future be that 'Parliament of Mankind, the Hague Conferences.'" This article is followed by one on Private International Law, in regard to which subject the old Britannica was silent. Interpolation (4½ pages) illustrates the expansion of the mathematical department. Close upon this comes a strictly American topic, which did not admit of treatment in the ninth edition, Interstate Commerce, occupying three pages.

To take a single department by itself, a glance at the fresh historical contributions will give an idea of the splendid scale on which the work of remaking the Britannica has been executed. The history of England, France, Germany, and Austria-Hungary from the time where the record closed in the ninth edition occupies collectively seventy pages, which would make a duodecimo volume of about 350 pages. Sixteen pages are devoted to Egypt since the deposition of Ismail Pasha. The eventful past of Bohemia occupies nearly ten pages, where the old Britannica had barely a column. One of the weightiest contributions in this department is Caliphate (31 pages), from the pen of the eminent Arabic scholar, Jan de Goeje.

The editing of the eleventh edition under the conditions that governed its production was a Herculean task, and the undertaking has been successfully accomplished. This does not imply that the manifold problems that confront the editor of a great encyclopædia were everywhere successfully solved. The norms that have to be set in the execution of such a work are so numerous and so hard to establish, and the difficulty of getting contributors to execute their tasks in a way conformable to the system and requirements of the publication is so great, that even where seemingly boundless pecuniary resources have been placed at the command of the editor, the result will still be far from perfection. By the side of the most skilful constructive editorship there is need of a rectifying department, more or less destructive in its functions, that shall guard at every step against defects, incongruities, absurdities, mistakes, and blemishes, and shall not concern itself with anything else. The editors of encyclopædias have been loath to recognize this necessity, having no adequate conception of the pitfalls that beset them at every turn and not being prepared to encounter the delays, vexation, and expenditure entailed by a thorough system of rectification and verification, which indeed it is not an easy matter to install. Such super-editorship, imposed upon the constructive editorship, does not appear to have been part of the apparatus in the production of the magnificent work before us. As a matter of fact, it could hardly have been introduced in the required form under the stress involved in the feature of simultaneous publication. The following are examples of various kinds of shortcomings detected in turning the pages of the volumes before us.

The ninth edition contained under the title Dictionary a list of dictionaries of the principal languages of the world, occupying several closely-printed pages. It was an absurd performance. The place for such information is, of course, in the individual articles on the various languages. It was a great blunder to retain this useless compilation. But the worst of it is that it stands here but slightly altered, with its absurdities and mistakes reproduced. The places where the dictionaries were published are generally given in the form in which they appeared on the title-page or in the books from which this list was compiled, and frequently also in the English form. We have, therefore, Stockholm, Holm, Holmiae; Haag, La Haye, 's Gravenhage; Moskau, Moskva, Mosque; Bucharest, Bucuresci, Boucourest, Boucoureshti. The learned compiler made no effort, of course, to disentangle the names from their inflectional or postpositional endings. Budân (misprint for Budán) is the Magyar for "at Buda," and Kassan for "at Kassa (Kaschau)." The Gipsy and Albanian languages continue to figure here under the Ugrian tongues, although their Indo-European character has been well established. It is evident from the scholarly article on Gipsies by Rabbi Moses Gaster (6 pages) that there is no longer any doubt regarding the Indian (Hindu) origin of the Gipsy dialects. Under Dial we are told that "in the eighteenth century clocks and watches began to supersede sun-dials," a very misleading statement. In close proximity to this profound

treatise on a subject that will appeal to but very few, is the shallow article on Porfirio Diaz, in which the treaty of Guadalupe-Hidalgo is spoken of as having transferred Texas to the United States, in place of New Mexico and California. The article Ink is so largely reproduced from the ninth edition that we have serious doubts as to its being up to date. It is certainly queer to see the following passage in the paragraph on Logwood Ink appear again after an interval of just thirty years: "It is affirmed by Viedt that this drawback may be overcome by the use of soda." The article on Eagle adduces the authority of Pallas for the statement that the *bergut*, a species used by the Kirghiz Tartars for the capture of antelopes, foxes, and wolves [!], is "valued at the price of two camels." The eminent naturalist here quoted as though he had just been writing on the subject died precisely one hundred years ago. Some one of the readers of the galleys who allowed this to pass ought at least to have been bold enough to excise from the article Eskimo the tribute paid to the voracity of this Hyperborean folk (a relic of the old Britannica), to the effect that "two will easily dispose of a seal at a sitting."

The article Aeronautics, occupying ten pages, devotes only a little more than a page to dirigible balloons, the construction of which is not adequately described; nor is the information up to date (although the illustrations are), as any one can tell by glancing over the table giving the performances of such balloons. The page of mathematical formulæ, etc., near the beginning of the article should have been placed under Flight and Flying. In the lengthy article on this latter subject, which is made up of Pettigrew's treatise on Flight in the ninth edition and a full and up-to-date account of what has been achieved in aviation, it is amazing to find entire passages about models of flying machines reproduced from the old article without any change of tense in statements made above thirty years ago—statements utterly valueless now—as, for example: "Pénaud calculates that one horse-power would elevate and support 85 lbs." This article is defective in containing no actual presentation of the theory of the aeroplane. In the table at the end the Wright brothers are not credited with the remarkable flights mentioned in the text as having been performed by them in 1904 and 1905, which made them the first successful aviators. Under the head of Gothic, we are told that it is "the term generally applied to mediæval architecture, and more especially to that in which the pointed arch appears." As though Byzantine architecture and Saracenic architecture were not mediæval. Then we read that some of the Goths "(the East Goths, or Ostrogoths), settled in the eastern portion of Europe, and others (the West Goths, or Visigoths), in the Asturias of Spain." The presence of such an egregious misstatement (tucked away in an unobtrusive little lexicographic article), which ought not to have escaped the eye of any reader of the proof having some knowledge of mediæval history, shows what flaws the editor of an encyclopædia may expect to creep into his work through the lack of ubiquitous oversight.

The spirited sketch of the events of the last thirty years in the article on Ireland takes seven pages. The history of the preceding eighty years, from the rebellion of 1798 to the establishment of the Irish Land League, reproduced from the ninth edition, occupies only about a page, so that the proportions of the article are badly distorted. A considerable section of the old article should, of course, have been recast and expanded from a very brief recital—in which, for example, the name of Gladstone does not occur—into a narrative sufficiently detailed not to be altogether incompatible with the section that has been appended. This subject opens up a broad vista in the intricacies of encyclopædia-editing. Bolgari, the capital of the northern Bulgarians, was not captured by Tamerlane early in the fourteenth century, but at its close. The Black Sea is not bounded on the east by Asia Minor, but by Transcaucasia. The biographer of Bismarck speaks of Hesse-Cassel and Hesse-Nassau as having been taken by Prussia after the war of 1866, where he should have said Hesse-Cassel and Nassau. In the article Electors, one of those contributions that evince the fulness with which mediæval institutions are treated in the Britannica, some mention should have been made of the fact that the ruler of Bohemia, one of the seven electors recognized in the Golden Bull of 1356, exercised his right to vote only for a short time after the publication of that instrument, so that the number of princes who participated in the election of the Holy Roman Emperor was actually reduced to six. There is no article on Embargo in United States history. In the biography of W. S. Hancock the electoral vote at the Presidential election should have been given.

The article Iceberg is too meagre, nothing being said about the dimensions of some of the huge floating islands of ice, the possibility (or impossibility) of detecting the presence of icebergs in a fog, etc. Again, under Glacier no mention is made of the size of such vast glaciers as the Muir or Humboldt. Ice-yachting, which is described in an article well up to date, and naturally devoted largely to the United States, contains an explanation of the paradox of sailing faster than the wind (taken from an article in the Badminton Library) which sounds strange to any one familiar with the first principles of dynamics. Having touched upon the subject of sport, in which field the new Britannica is as exhaustive as in every other, we cannot refrain from saying that in the article Golf the long list of successful British champions, male and female (brought down to 1910), is not in keeping with the dignity of this encyclopædia. Much more undignified still is the reproduction of some of our college yells in the article Cheering. In the excellent article on Lake Erie there is no mention made of Perry's victory in the naval encounter which has passed into history under the name of the Battle of Lake Erie. We fail to see why such thoroughly Austrian literary personages as Grillparzer (who has, however, a very good biography) and Gindely should be called German. The designation of Ebner-Eschenbach as an Austrian novelist shows in any case a lack of consistency. It is regrettable that the subject of Insectivorous Plants has been virtually eliminated as a separate topic, the reader being referred to the articles on the various plants to whose diet insects contribute. This interesting theme called emphatically for collective treatment, admitting of a general discussion, even at the cost of considerable repetition. In the biography of Gustavus Adolphus the date of the battle of Breitenfeld (Leipzig), in which the Swedish monarch vanquished Tilly (September 17, 1631), is given according to the new style (Gregorian calendar), and that of the battle of Lützen, in which he fell fighting Wallenstein (November 6, 1632), according to the old style.

The Spanish philosopher Balmes figures under the French form of his name, a grave accent, which does not exist in Spanish, being placed over the *e*. The article Giraffe, whose up-to-date character is attested by the mention of that recently discovered relative, the okapi, is singularly brief, even the height of this tallest of mammals not being stated. In the section of the article Hydraulics dealing with frictional resistance (Vol. XIV, pp. 58, 59), whole strings of figures are made a hundredfold too large through the displacement of the decimal point, an error brought over from the ninth edition. The subject of the homing instinct of animals, briefly discussed in the ninth edition in the article Instinct, does not appear to be dealt with anywhere in the work before us. A serious omission in the geographical department is that of the town of Cobalt, the centre of the rich silver-producing district of Canada. Amarillo, the metropolis of the Texan Panhandle, and the bustling town of Globe, in the copper district of Arizona, have likewise been overlooked. There is no such caption as Colosseum (Coliseum).

The proof-sheets of the Britannica

have not been subjected to a sufficient scrutiny with reference to the elimination of ordinary misprints. The publication, therefore, lacks that distinguished character of being a monument of the printer's craft which belonged to the American Cyclopædia, whose pages were read and reread until every typographical blemish, it may almost be said, had been removed. Under Glass (stained), we find Toldeo for Toledo; under Granaries (in the topographical plan), Victorio Docks; under Indians, Alonkian for Algonkian; under Inquisition, Gius for Pius; under Gundulich (bibliography), "last cantos" for "lost cantos." Under Ireland, we find Poynings's Act (p. 773), and Poyning's law (pp. 779, 780). The titles of books in foreign languages, it must be said, are very correctly printed.

A singular exhibition of lack of judgment has introduced a blemish into the new Britannica which, to some of its readers, will be very irritating. An editorial ordinance appears to have gone forth to the effect that whenever reference is made in an article to a writer or a scientist his initials must be prefixed to his surname. Thus in the article Dynamics, Helmholtz has to figure as H. F. L. Helmholtz, and Lagrange as J. L. Lagrange. Under Hydrogen, we have to read of H. Cavendish and A. L. Lavoisier; under Entomology, of C. Darwin; under Huxley, of J. W. Goethe. Such introduction of the initials is calculated to have the effect of misleading the reader, who is apt to imagine that the person mentioned is other than the famous individual of the name. But what makes the whole thing vicious, in addition to its being ridiculous, is the fact that in the case of a great many European celebrities who have several Christian names, there is one particular name by which the personage is known and which alone usually accompanies the surname.

The ample bibliographies constitute a prominent feature of the new Britannica, but one which in our opinion is altogether overdone. The references, for example, appended to the biographies of mediæval rulers are largely of little practical value. Take, for example, the German sovereigns who bore the name of Conrad. Their history is the history of Germany, and the student in quest of authorities ought to know enough to consult the list of books on mediæval German history given in the article Germany.

The illustrations and maps in these volumes vary greatly in merit. It appears to us that the half-tone process might have been made to yield much better results.

It is an easy matter to pick flaws in a vast encyclopædic publication, however great may be its merits. Such pointing out of defects in the new Britannica is not meant to be taken as a serious disparagement of the character of the work. The Encyclopædia Britannica, in its latest form, is a monument to the learning of the Anglo-Saxon race such as no other people has ever reared to itself.

LOUIS HEILPRIN.

Correspondence

GERMANY AND THE PEACE OF EUROPE

TO THE EDITOR OF THE NATION:

SIR: *Audiatur et altera pars.* The German Chancellor's explanations about the practicability of a general disarmament and arbitration at the present time, which have met with general approval in Germany, except in the Social Democratic party, have been severely criticised in the *Nation*. Notwithstanding your own objections and those of your correspondent, Mr. Bernadotte E. Schmitt, I fail to find in Bethmann-Hollweg's speech any disregard for the realities of idealism or a word indicating that a proposition for a reduction of armaments, made by another government, would be declined by Germany. He simply called the attention of the Reichstag to the following points:

(1.) The times when wars were made by Cabinets are a matter of the past. In our times wars are caused by sentiments and animosities of the masses, who are sometimes easily influenced by an irresponsible press. (Consider the Boer war and our war with Spain.).

(2.) A statesman who makes proposals, not absolutely perspicuous, is likely to arouse discordance, and to create hostility instead of peace. If the leading Powers would make arrangements for a general international disarmament, they must first come to an agreement about their relative position. For instance, if Germany would reduce her army by 100,000 men, in what proportion should the armies of France, Russia, Austria, and Italy be reduced? At present the German army contains less than 1 per cent. of her population, whereas, the French army comes up to about 1½ per cent. Each nation would claim that position in the world which represents the total sum of all her strength present and prospective.

(3.) Suppose such a reduction at a certain proportion should be agreed upon, who is to control the various governments in order to ensure that none of them secretly increase its allotted strength?

Your Paris correspondent, "J.," states the real cause of all the trouble in these words: "The rebirth of the German empire in 1871, and its subsequent vigorous growth, have created a new weight for which no counterpoise has yet appeared." If the Germans were satisfied with the conditions of the early nineteenth century, so highly recommended by Mr. Bernadotte E. Schmitt they might be tolerated. But they refuse to be the footstool and the laughing-stock of the world (*cf.* Thackeray's description of the Dukedom of Pumpernickel), and insolently claim the same rights as other nations.

For forty years now Germany has proved to be the bulwark of peace, in spite of many provocations. If Germany had not been prepared for war the peace of Europe would have been shattered to splinters more than once. When republican France made an alliance with the most reactionary of Russian Czars, Alexander III, it was not done principally to get an ally for defensive purposes, but for a combined attack against Germany. Alexander III represented the pan-Slavonian element of Russia, which is not only the most reactionary and intolerant element of Russia, but also the greatest enemy of everything German. His heart was set on this war, but the fear of being defeated at the last moment induced him to keep the peace. Some years ago the same consideration caused the French to come to terms about Morocco, which they had set out to reduce to a French colony by virtue of an agreement with England as a compensation for England's occupation of Egypt. The same consideration of the German army brought about the peaceful solution of the Herzegovina trouble.

Thus the German army has done more than anything else to preserve peace in Europe. The Germans know it, and they know, too, that year by year they gain in strength more than their rivals and enemies. That Germany has few friends, but many enemies, is a hornbook story. That Germany cannot expect to be fairly criticised is a reality. The unpardonable and only crime of Germany and the German people is that they are alive and vigorous, and their so-called brutality consists in their readiness to apply a heavy blow to anybody who would attack them.

To argue against misrepresentations seems to be superfluous, but *le superflu est chose très nécessaire.* Why Mr. Schmitt fixes the date of Bismarck's atrocities from 1862-1871 is a conundrum. He probably means 1864-1871, for in 1864 the political status of Schleswig-Holstein was settled by war with Denmark. If Mr. Schmitt cares to call this act a spoliation of Denmark, he is welcome to his opinion. So much is certain, that Germany could not exist with a foreign Power controlling the mouth of the River Elbe.

As to the events of 1866, it is to be admitted that Prussia's war against Austria for German supremacy was a revolutionary act. It was absolutely necessary and wholesome for both parties. Never was a conquered enemy treated with greater generosity than was Austria. Never was such a revolution accomplished with less bloodshed. Austria had lost Venetia to Italy, but not a foot of her territory was taken from her by Prussia. Since that time Austria attends to her own affairs with better success than ever before, and the "brutality" displayed by Prussia in 1866 was the foundation of the solid alliance between those two Powers, which is so much regretted by all parties wishing to destroy Germany.

As to the war of 1870, it is useless to waste words. The real cause of this war was the attempt of France to prevent the unity of Germany. Had not Germany the right to defend herself?

The Kruger telegram has been played out so often that it becomes monotonous. What are the facts? The Boer republic, an independent state, had been attacked by a gang of misguided filibusters. They failed and were captured. If the Boer government had shot or hanged every one of those men, they would not have transgressed international law. The British government protested vigorously that they had nothing to do with this ruthless breach of international law. Why, under these circumstances, a telegram congratulating the Boer government on their successful suppression of

this filibustering expedition should be an insult to England is inconceivable.

France's colonial adventures at Fashoda, according to Mr. Schmitt, had been encouraged by Bismack. Since when have French statesmen consulted Bismarck or the German Foreign Office? I will not urge the point that at that time Bismarck lived in retirement at Friedrichsruhe as a private citizen, whose sole *divertissement* was to denounce everything undertaken by the Emperor and his Chancellor.

Now about Morocco. This sovereign state bordering on the French colony Algiers is inhabited by more or less fanatical Mohammedans, who decline to be Christianized or civilized. King Edward, the Peacemaker, was anxious to do away with every cause of rivalry between Great Britain and France, certainly a laudable desire. The principal difficulty was the British occupation of Egypt, where formerly French influence had been paramount. As a compensation Morocco was promised to the French, to be annexed by a so-called peaceful penetration. Of course, when England and France dispose of a country which is not theirs, it is well done. With Spain and Italy the French government made suitable arrangements. Germany, which enjoyed commercial treaty rights in Morocco equal to those of any other nation, was to be ousted without even a notice. That this meant war is evident, and for this very purpose the French-English agreement had been made. France and Russia were to do the fighting on land, while the noble task of destroying the German navy and merchant marine was left to England. But when it came to the test, the French concluded that the bigger risk was theirs, and the result was that Morocco has not been absorbed, and will be open to the commerce of all the world on equal terms, which is not the case in French colonies.

While people have so little consideration for Germany's rights as to denounce, for instance, the Bagdad Railway as an attack upon the legitimate interests of Great Britain, the advice given to Germany to disarm is an absurdity. The Bagdad Railway is an enterprise of Turkey to reopen a vast territory, which has been the cradle of civilization and is waiting for a resurrection. The task was first offered to British capitalists, but they refused. Then a new company was formed under the efficient leadership of the German Bank, largely supported by Swiss and French capital. The road has been under construction for more than twenty years. All along the line of the road immense improvements have been made, and land, which was a desert before, returns now great crops. It has afforded the Turkish government the means to keep order where formerly the outlaw was in control. Moreover, it has added to the military strength of Turkey. Both in Asia Minor and on the Balkan peninsula many foreign companies, Russian, British, American, and French, have acquired numerous charters for railways and other enterprises from the Turkish Government. The French are building as many railways in Turkey as the Germans. Nobody finds fault with them. But when Germans do the same thing, it is not to be tolerated.

To resume: Forty years have passed since the rebirth of political Germany. Of all the great Powers, Germany alone has kept peace and never interfered with the rights of other nations. As a result, Germans are the object of more envy, bitterness, vituperation, and insolence than ever before. Who can blame them if they rely only upon their own strength and wait for further developments.

AMERICAN SCHOLARSHIP.

TO THE EDITOR OF THE NATION:

SIR: May I trespass on your space to the extent of a few paragraphs of explanation, in reply to the courteous, if severe, letter of your correspondent "V"? It is disconcerting to have one's truisms received as paradoxes. Apparently we can never know what we have said, but only what we tried to say. I certainly never intended to plead for an "insulated national culture," or a "tariff wall against foreign scholarship." I was expressing the hope that our great universities would make it timely and possible for us henceforth in these matters to assume the attitude of Germany, France, and England, rather than that of Greece, Russia, or the South American states. It is not the normal thing for professors of French, German, and English universities to receive their higher degrees abroad. And some time—why not now?—we must outgrow this provincial dependence. Much that I said may be matter of opinion. But it is a simple and easily verifiable fact that the doctorate of our leading universities is now for Americans harder to win than a German degree. It is not the stay-at-home who exhibits a "preference of shoddy to wool," but the man who returns from a minor German university to flourish an eighteen months' diploma in the face of his naïve classmates still struggling toward the goal.

By a national education, I meant an education given by American universities. A national culture must of course mean for us a culture associated with the language and literature that we share with England. It is surely permissible to repeat of Germany what so many of her own greatest writers have said, that her preponderant erudition has never known the control and check which the long traditions of literary culture in France and England impose on the slighter scholarship of those countries. That is a part of the price which Germany has paid for her scholastic and scientific leadership.

My concrete examples were, of course, merely illustrations. In themselves they prove nothing, unless they are, as I believe them to be, typical. I do not propose to add to my offence by extending the list here. But it is not from lack of material that I refrain. The word "inaccuracy," as the context showed, was used perhaps arbitrarily of a specific type of almost wilful error. Nothing can be more petty than to cavil on misprints, slips of the pen, lapses of memory, and other inadvertences "quas aut incuria fudit aut humana parum cavet natura." But it is another matter when error in the main line of the argument is systematically propagated by the elaboration of unverifiable hypothesis and the predetermined resolve to prove something. To err is human. To err through haste or levity may be French. But, *l'art de s'égarer avec méthode* is not metaphysics but the Germanized philology of the nineteenth century. This is not a question of personalities, but of two opposing schools and tendencies in philological and historical study. As Leslie Stephen somewhere says (I quote from memory), "Many people fancy that a sufficiently skilful logician might distill truth out of the most unsatisfactory materials; they measure his skill by the length of the chain of reasoning, and fail to see that the best logician is often the man who pronounces the material to be insufficient." That is the text from which I should discourse if this were the place to continue the discussion.

THE TRAGEDY AT CYRENE.

TO THE EDITOR OF THE NATION:

SIR: Meagre advices by cable brought the shocking news that on March 11 Herbert Fletcher DeCou was shot at Cyrene by Arabs and instantly killed. Full particulars of the tragedy have now been received by belated mail.

The staff in charge of the excavation consisted of the director, Richard Norton, Mr. DeCou, and Dr. Joseph Clark Hoppin. With these were associated a recent member of the American School of Classical Studies in Rome, Mr. C. Densmore Curtis, and an English physician, Dr. Sladden; there was also an English camp servant. The work commenced in the latter part of October, 1910, and though greatly hindered by the difficulty of finding competent workmen and by stormy weather, had made good progress.

The attitude of the natives was at first hostile. They feared that the coming of the foreigner would hinder their free access to the spring which furnished water to the ancient city and still flows with a copious stream, and that they should be disturbed in their "squatter rights" to land on which excavations were to be conducted. It was also evident that false reports had been spread about the character and purpose of the expedition. Nevertheless, fair dealing and the exercise of forbearance won over the local sheikhs; by the end of February friendly relations had been established with all of them, and a satisfactory understanding had been reached in respect to the supply of laborers and their compensation. The attitude of the Ottoman authorities was from the beginning friendly. The resident commissioner sent to represent the Government in the inspection of the excavations was courteous and took an interest in the work. Of the guard of Turkish soldiers detailed to protect the staff and the camp, varying in number at times from a dozen to half a hundred, there seemed no occasion to complain except that they were tardy in going up from camp to the excavations in the morning, and were sometimes lax in other matters; the officers were men of good spirit and intentions.

For several nights Mr. Norton had slept but little, because he was taking care of Dr. Sladden, who was seriously ill with fever. In the evening of March 10 he talked with Mr. DeCou about the work and plans. They agreed that, as the staff were now on good terms with the sheikhs of the region, and the problem of labor was being rapidly solved, the work would hereafter go on more smoothly. It was arranged that Mr. Norton should rest the next morning, and that Mr. DeCou should start the workmen.

Just before eight o'clock in the morning

Mr. Norton was aroused and informed that shots had been heard in the direction of the Acropolis, above the camp. Proceeding hastily thither, he found his friend already dead. Mr. DeCou had started for the place of digging on the Acropolis, the workmen straggling along after him. About halfway up the slope he fell, pierced by two bullets fired by Arabs concealed behind a wall barely seventy feet away. The assassins, three in number, mounted horse and rode swiftly inland. Owing to the inaccessibility of the site, arrangements were made for burial near the camp. The rude coffin was wrapped in an American flag. The service was read by Mr. Norton. The grave looks out from the face of the Plateau of Cyrene westward, toward the home land.

The motives for the crime were not personal; the assassins were from a distant tribe. There is reason to suppose that the purpose was to thwart the undertaking by driving the Americans from the country. The Turkish government acted promptly in ordering the arrest of the assassins, who, according to the latest reports, are still at large. The results of certain investigations must be awaited before further statement can be made.

Mr. Norton and his associates showed great courage and steadiness of judgment. Conference was had with the local sheikhs, as well as the military authorities. After full deliberation, the staff were unanimous in the decision that the digging should be immediately resumed. From the archæological point of view, the results of the season's work amply justify the excavation, but of these no account can be given here. The Turkish guard has been increased, strict military regulations are enforced, and hereafter the danger will be reduced to a minimum.

Herbert Fletcher DeCou was born at Good Harbor in northern Michigan, June 10, 1868. He was taught by his mother until he was twelve years of age; the family then moved to Kendall, Mich., afterward to Detroit. In the Detroit Central High School young DeCou came under the instruction of H. J. Sherrard, who, as a teacher of preparatory Greek, has had few equals. Entering the University of Michigan he soon distinguished himself in classics. After graduation, in 1889, he was appointed to the Elisha Jones classical fellowship.

From the autumn of 1890 until his death Mr. DeCou spent the greater part of his time abroad, first as a student, upon fellowships at Athens, or in Germany, then as secretary and lecturer in the American schools in Athens and Rome. He twice returned to the University of Michigan to fill vacancies in the classical department; an offer of a permanent position, starting with the rank of junior professor, he declined because of his devotion to the school in Rome. The year 1909-10 he spent in Munich, working upon collections for Mr. James Loeb. He was eagerly sought for the staff at Cyrene, because of the accuracy of his observation and working methods, and the range of his knowledge of archæological detail, in which he was surpassed by no living scholar of his years. Of his contributions to scholarship the best known is his monograph upon the bronzes found in the excavation of the Argive Heræum; yet unpublished is an extensive manuscript upon the collection from Boscoreale in the Field Museum of Chicago, which was prepared while he was in this country for a time on account of ill health.

FRANCIS W. KELSEY.

PROTECTION AND THE CONSTITUTION.

To the Editor of The Nation:

Sir: Among the comments on the recent decision of the New York Court of Appeals involving the Workmen's Compensation Law, no mention appears to be made of the light that this decision throws upon the legal status of protection. The opinion of the court declares that a law which substitutes a system of compensation for a system of liability is unconstitutional, on the ground that it involves the taking of property without due process of law. Is there not here a significant suggestion of analogy between the principle of compensation and the principle of protection? About the constitutionality of law which embodies a system of revenue as such, there is no more doubt than about that of a law which embodies a system of liability; but when we come to laws the deliberate purposes of which are to compensate one class of citizens and to protect another—these are horses of quite a different color. If the taking of money from the coffer of an employer in order to put it into the pocket of an employee be without process of law, what is to be said of the process of law which extorts money from an importer for the purpose of thereby lining the wallet of a manufacturer?

Were the protective tariff not hallowed by American birth and a long line of American ancestors—if it had just arrived on our shores by way of the old World—there is no room for doubt that our courts would be quick to relegate it, together with the foreign-born idea of compensation, to the limbo of unconstitutionality.

S. R. TABER.

Bellagio, Italy, May 8.

THE NEW YORK LIBRARY.

To the Editor of The Nation:

Sir: I note in your issue of yesterday your remarks on the "opening of the New York Public Library." Evidently recalling the old saw, *De Gustibus*, etc., and discreetly avoiding "artistic controversy" as to the "architecture of the library," you nevertheless make the most, in behalf of the stately edifice, of the effect on it of "varying conditions of light and weather." You are justified in considering the "softening effect of time" on the library, as on all huge buildings. But as for me, I do not find an apologetic attitude in behalf of the library's façades at all necessary. To my mind, the ensemble of the structure's main lines, masses, and salient features redounds greatly to the credit of the designer, and in due degree to such others as, by honest cooperation, indoors and outdoors, have helped him.

But nothing in your observations should more interest art lovers and enlist civic pride than your calling attention to the fact, obvious to all old New Yorkers familiar with past real estate dealings, "that nearly all the buildings adjoining the library east and west and north will soon give way to new structures, making for it a more harmonious approach and setting." Leaving the east and west approaches out of the question for the nonce, I should like, as a member of the architectural staff of the Central Park in its earlier years, to recall to the current generation the fact that it was a subject of not infrequent discussion in that staff, whether provision should not be made to reserve the whole eastern line of the park bordering on Fifth Avenue for public buildings devoted to municipal functions and to art and science, and all of the highest architectural character. This possibility had a certain influence in the selection and assignment of its site to the Metropolitan Museum of Art. A line of such buildings on the west side of Fifth Avenue from the museum to Fifty-ninth Street would go a long way toward a "harmonious approach" to the library from the north. I have been connected more or less with several societies of public import which might well have claimed a place in such a series of notable structures, and the National Academy of Design, as every art lover knows, has for years been seeking a standing place for native art output in the first and richest city of this hemisphere and the third in the world. A year or two ago it had to find hanging space for its current exhibition in a small town never before heard of outside of its neighborhood.

A. J. BLOOR.

Stonington, Conn., May 26.

BAUDELAIRE AND LONGFELLOW.

To the Editor of The Nation:

Sir: That Baudelaire was familiar with English literature, and more especially with English poetry, is well known from his interest in Poe. But that such poets as Longfellow and Gray should interest him may be surprising to those who have accepted the current estimate of him as an immoral searcher for strange sensations. Yet, in addition to the translation from "Hiawatha" (page 208 of Calmann-Lévy's *édition définitive* of "Les Fleurs du Mal"), which doubtless attracted Baudelaire as an experiment in metre, there appears in the early part of "Spleen et Idéal" a little poem, "Le Guignon," which is merely an adaptation of parts of two English poems, one by Longfellow and one by Gray. "Le Guignon" reads:

> Pour soulever un poids si lourd,
> Sisyphe, il faudrait ton courage!
> Bien qu'on ait du cœur à l'ouvrage,
> L'Art est long et le Temps est court.
>
> Loin des sépultures célèbres,
> Vers un cimitière isolé,
> Mon coeur, comme un tambour voilé,
> Va battant des marches funèbres.
>
> Maint joyau dort enseveli
> Dans les ténèbres et l'oubli,
> Bien loin des pioches et des sondes;
>
> Mainte fleur épanche à regret
> Son parfum doux comme un secret
> Dans les solitudes profondes.

Compare the above with Longfellow's stanza,

> Art is long and time is fleeting, . . .

and with Gray's,

> Full many a gem of purest ray serene.

A comparison of the metres of the originals and the French translation, and a study of what might be called the embroidery

added by Baudelaire, might serve as the starting-point for a dissertation on the different intellectual processes of the Englishman, the American, and the Frenchman.

D. R. BATTLES.

Quincy, Mass., May 25.

Literature

SOURCES OF ELIZABETHAN LITERATURE.

The French Renaissance in England. An Account of the Literary Relations of England and France in the Sixteenth Century. By Sidney Lee. New York: Charles Scribner's Sons. $2.50 net.

It was pretty certain that the appearance of this book would be something of an event in scholarship. Mr. Lee's long, expert acquaintance with the period made one look forward to his first large generalizations with eagerness. He has not betrayed the expectation. To his special qualifications, he has added certain bigger capacities which turn his work into a study not merely of literature, but of culture, too. He has, for one thing, a graphic feeling for the man behind the book—an interest quickened no doubt by his editorship of the Dictionary of National Biography. He knows the philosophy, the architecture, the science of the century; and has sharpened his survey by a definite thesis. He himself terms his work "a tentative contribution to a comparative study of literature," with a proper dread of the excesses in which this sort of study may involve one. From them he is not entirely free; but in general the book is a praiseworthy example of what devotion to comparative literature should produce—there is a splendid union of scholarly precision and revolutionary deduction.

Those to whom the Elizabethan period in England has stood out as one of the most amazing in the whole range of human expression, will be somewhat aghast at the amount of indebtedness to France which has here been gathered. It has been known that lines and themes and whole plots were imported, from France and elsewhere, but it was supposed that in assimilating the borrowings England showed a rare, compensating originality. The lead of France has never before been worked out so thoroughly and so subtly. The ins and outs of literary fashions in France, the processes by which metrical and typal variety was achieved, the control of literature by larger movements of thought, are seen to anticipate and almost to cover all the stages of literary consciousness in England. Even in many instances where England was thought to have turned for suggestion directly to Italy, it was France, it seems, which passed the impulse on to her, and, in general, Englishmen looked at Italy through France to almost as great an extent as the early Renaissance saw Greece through Rome. Mr. Lee's studies require of the student a readjusted attitude. Englishmen of the first rank in the period and of nearly the first rank—Shakespeare, Bacon, Spenser, Marlowe—remain, for the most part, with originality still transcendent; but among the rest, though there was much excellent workmanship, it was highly imitative.

A portion of Mr. Lee's results—that dealing with the shorter poems—he had fully foreshadowed in his "William Shakespeare" and in the introduction to the two-volume edition of the Elizabethan sonnets. Yet in the present book, it is not merely rehashed; his conclusions have broadened and taken on interest. Most striking is his treatment of lyric echoes in English verse; of the manner in which French cadences and shades of meaning and color have passed into some of our most cherished English lines. The genius of Ronsard—which was moulded largely by his intense love of Greek verse—in giving the proper instant's poise to many an overdone theme of contemporary Italians, his pagan sensitiveness to a moment's spell of beauty, and his true grasp of the power of metre gave incalculable hints to English writers. Ronsard knew the secret of emphasis and of suggestion, which are everything to the lyric. Just those prettinesses of a lady's pout or momentary rebellion; of a nosegay seen through lovers' eyes; of amorous pantheism, which have made the lighter verse of Elizabethan England seem instinctive, Ronsard was expert in. Such poems as Lyly's Anacreontics, and such passages as Spenser's floral pageant, beginning,

> Bring hither the pink and purple columbine,

and Shakepeare's sweet picture:

> When daisies pied and violets blue,
> And lady-smocks all silver-white,
> And cuckoo-buds of yellow hue
> Do paint the meadows with delight,

are shown to be precisely in the French manner, without which they would scarcely be what they are. That the vocabulary of the Pléiade and its methods of epithet-building also enriched English poetry, Mr. Lee makes equally clear. The lark "that tirra-lirra chants" learned to do so from the lark of Ronsard.

There never has been doubt in any one's mind that French prose of the sixteenth century was far superior to contemporary prose in England, nor that English owed much to it. Mr. Lee summarizes reasonably:

> From Calvin the Elizabethans drew precision in expounding theological doctrine, and the habit of discussing the dark mysteries of the faith in domestic language. From Amyot came the briskly balanced period, and the enthusiasm for biographical detail. From Montaigne came pointed fluency and a cheerful habit of reflecting detachedly on life. . . . If Elizabethan fiction sought sustenance further afield in Italy or Spain, France taught Elizabethan prose most of that bold vivacity and freedom which Elizabethans acknowledged to be a distinguishing trait of the French language.

To this portion of his subject Mr. Lee contributes few new facts, yet lends it freshness by wide reading in treatises even remotely connected with it. Bibliographical notes reveal the close interrelations of English and French publishers, and the latters' scholarly prestige. In Paris the first French press was set up by the professors of the Sorbonne early in 1470, and the craft was practised within the precincts of the university; this was more than a century before printing was begun at Oxford, and, in any systematic way, at Cambridge. Of the great quartet of French prose writers, Calvin and Amyot exerted the greatest effect upon England. Before the end of the century "The Institution of Christian Religion" went through at least five English editions. Other scholars had worked out North's debt to Amyot, but English readers will be glad for the estimate of Amyot's bequest to Montaigne, and thence indirectly to England. Rabelais did not take, in England, until late in the century, when Thomas Nashe made use of comical scurrility in pamphlets and admitted discipleship to the Frenchman formally. Mr. Lee is wise not to press Shakespeare's alleged indebtedness to Montaigne, and to leave the point to emerge from skilful parallels. These, together with his sketch of Montaigne's outlook, reveal in the two writers attitudes which at times are strikingly alike, especially their high regard, in searching a situation, for "modest doubt the beacon of the wise." In these chapters the author gives prominence to two recent discoveries. He prints for the first time the letter in which Montaigne's neighbor, Pierre de Brach, announced the essayist's death to Anthony Bacon, Francis Bacon's brother; and he works out the suggestion made by Professor Lefranc that Rabelais adapted a part of More's "Utopia."

One of the best parts of the book summarizes the impression made upon English thought by certain Huguenot scientists and philosophers. The method may be illustrated by the author's treatment of the tragic figure, Pierre de la Ramée. There is a lively account of Ramée's struggle in France to put philosophy upon new foundations, of his versatility, of his heroic comfort from learning; within the compass of a few pages his career is vividly caught. What it meant to England is then en-

forced with a splendid variety of examples: the use of his grammar and geometry in English schools and colleges, and of his philosophical treatises at Cambridge; how Roger Ascham corresponded with him on educational methods; how Gabriel Harvey, Sidney, and Spenser were fired by his genius; the impulse he gave to Bacon's attack on Aristotelian logic; Richard Hakluyt's desire that a public lectureship in mathematics be founded at Oxford after the manner of that established by "Petrus Ramus, one of the most famous clerks of Europe"; and finally, Marlowe's picture of his death in "The Massacre at Paris."

The last section of the book deals with the drama. Mr. Lee makes it abundantly clear that here also literature in the two countries was amazingly parallel. He shows by many examples, what students of the English side have not taken sufficiently into account, that romantic tragedy and tragi-comedy had almost as great a run in France as in England, and that the classical form of French tragedy, like that of Racine, gained supremacy only after a huge struggle with the less formal sort. Shakespeare, he points out, might easily have taken his description of the mixture of dramatic types from theatrical programmes of Paris, where he could have read: "Tragédies morales, tragédies allégoriques, tragi-comédies, pastorales, tragi-pastorales, fables bocagères, bergeries, histoires tragiques, journées en tragédie, tragédies sans distinction d'actes ni de scènes, martyres de saints et saintes." In particular, plays like "Bradamante," whose plot was drawn from Ariosto, "Le Guysien," "La Soltane," plays on the subject of adultery, especially that of a man-servant with his mistress, are shown upon analysis to resemble closely and to anticipate that mass of spectacular, romantic plays which were so popular in England. The general thesis in respect to the drama Mr. Lee has well established, but in pressing special points, he does not escape pitfalls. Thus in urging Shakespeare's acquaintance with Larivey's expansive adaptation of Pasqualigo's "Il Fedele," he ignores the fact that no printed edition of Larivey's version is recorded which Shakespeare could have used. This naturally vitiates the force of the really striking verbal resemblances. In short, the individual cases of indebtedness which Mr. Lee attempts to confirm are not wholly convincing; on the other hand, he has created such an enormous general similarity of dramatic stuff and development as to make a very considerable amount of French guidance—much more than had been supposed—perfectly certain.

CURRENT FICTION.

Members of the Family. By Owen Wister. New York: The Macmillan Co.

In his pleasant Preface to this collection of tales, Mr. Wister recounts the fact that his first story of the West was written some twenty years ago—a fact which leads him to indulge himself in this "preamble of gossip, of retrospection." His memory of the Wyoming of twenty years ago has become tinged with elegiac sentiment. He frankly regrets the old days and the old ways, the life of the cowboy and the atmosphere of the real frontier. This series, as a series, is an after-gleaning from that period. It has the relative thinness of most after-gleanings. Mr. Wister has, he tells us, ample notes and ideas for another volume. We shall be glad to see it when it appears, but shall open it with no lively expectation of finding anything as good as the original stories about the Virginian and his cronies.

By "the family" Mr. Wister means precisely that group of notables. The Virginian himself makes an appearance from time to time in these pages, but not in the foreground. The hero of most of them is Scipio Le Moyne, that cheerful and casual gentleman of fortune, a person of distinction according to the code of his place and time. The author figures as the Tenderfoot, without whom no ranch tale would be complete. Nor is the Eastern school-marm absent from the scene. On the whole, the stories strengthen an old impression. It seems to be true that a life which shifts and vanishes so rapidly as that of our rough West is best painted in a few bold strokes. Added touches only tend to dim the outline. Bret Harte spent vain years trying to improve upon his first marvellous Californian sketches. Hamlin Garland has had no better fortune with the Middle West: and there is small chance that Mr. Wister will produce another "Virginian" or even another "Em'ly."

The End of a Song. By Jeannette Marks. Boston: Houghton Mifflin Co.

Charmingly related and infallibly genuine, this little tale conveys the color of life in a diminutive Welsh village, not as the tourist glimpses it, but as it looks to a friendly and accustomed eye. The lighting is very tender, so mild we should call it sentiment if that term did not imply a lack of clarity. The writer's powers of observation and narration are of the peculiar kind that, even when highly cultivated, retain the virtue of spontaneity and so are bound to be praised as natural gifts, rather than attainments. One realizes how much the present volume owes to this "free grace" of the story-teller's instinct: without that there would have been merely the all too usual literary portfolio of desultory sketches to acquaint us with the tiny hamlet perched on the slopes about the junction of two precipitous mountain streamlets; its periodic inundations, momentary in fury and disastrous in domestic consequences; its community burden of twelve little Morrises, motherless, and stupidly fathered; its love of songs and singing; its sweet-natured little old lady, whose voice at sixty-five was still "the finest in all those hills"; its rich man whose natural kindliness had been sadly constricted by life-long habits of petty thrift; its "Mrs. Jenkins, the Inn," who ruled the village "as a potentate might have done, the men running before her and the women behind," and many another episode and character of fine local flavor.

Half Loaves. By Helen Mackay. New York: Duffield & Co.

That talent for omission which Stevenson tells us might make Iliads of daily newspapers is most detrimentally absent from this novel. Unfortunately, and unfairly, as it happens, the lack of it takes possession of the perceptions, the feelings, and at last of the nerves. Nature itself cannot endure so many flowers, groves, hills, and atmospheric effects. It is the same with word, epithet, and phrase; with moods and intensities. Wearisome is the number of times that Florida, the heroine, is called by Mary, "You poor little thing"; wearisome the number of times that Mary is on and off with fainting attacks, always calling upon Florida not to care about her, always adding that she was so glad Florida did. Exasperating are the reiterations of Florida's woes, and particularly of her feelings about them, and the ceaseless change of focus in the ever-recurring phrases, "She was later to remember this moment," "She was afterwards to look back to this," and so on, in an artificial way of serving cold chills. It is only patches that are not purple in this vast welter of words.

And all this pother does real injustice to a forcible and interesting story. It concerns chiefly two women who, after trials and tribulations with their husbands, assert the hackneyed doctrine of "their right to happiness"; the one by disappearing into temporary bliss with the man Illsboro, who "came"; the other by retiring to a childhood's haunt in Italy and playing good genius to a hill-town under the guidance of an Italian ministering angel (male). The moral law being inflexible, the experiments end in failure—irretrievable in one case, in the other not too late for a return to the "half loaves" which are humanity's portion. There is an absence of exaggeration in the substance of the story which is curiously opposed to its magnified and multiplied manner. In the Italian chapters there survives from the general plethora of scenery and emo-

tions a quite extraordinarily vivid picture of life in a town of the Ligurian hills. The Italian note is sounded with marvellous clarity—its tendernesses, violences, and, beneath all, its superstitions, which are an integral element in the story. In characterization, too, the author has the genuinely personifying touch. All the figures stand forth in the round, even those which are neither prominent in the story nor probable in themselves. We must think that among the three principal men of the story, for all their shortcomings, there was a remarkable absence of malice and self-assertiveness and of the brutal qualities which might still further have complicated affairs. Whereas the women, though generous and capable of long-enduring affection, were sad self-analysts and were greatly pampered in that respect by the author.

Prince or Chauffeur? By Lawrence Perry. Chicago: A. C. McClurg & Co.

A story of Newport with a Russian prince and an American naval officer, plus society, would be sure to win readers even if the characters only motored, dined, and danced. But there is much more. The prince has diplomatic, not to say burglarious, designs on a torpedo newly invented by the lieutenant. The lieutenant knows it and acts accordingly, with the brain, brawn, and accomplishments that belong to young fiction heroes. He can motor, invent, teach jiu-jitsu, and probably play on the grand piano. And the girl whom both adore is sufficiently torn between her European habits and American blood to play in both yards alternately until the decisive moment is reached. There are exciting scenes at sea when the torpedo is tested, and on land when the lost magnetic control is passing secretly from hand to hand. There are character scenes when arrived social climbers are manipulating their forces and reasoning with their offspring. And Mr. Perry has a knack of making a live person out of his each least important actor. A spirit-level might profitably have been applied to the wording of the book. The girl who says "You'd better believe you may come here" does not seem the girl of whom with her partner the author affirms that their "bodies and minds were one in the interpretation of the science of rhythmic motion." Out of a brisk United States style there rises with a choking effect this cloud of words: "Temperamental proclivities are better for their absence among the component elements of a diplomat's mental equipment." The four illustrations in color by J. V. McFall are pleasing in themselves and bear witness to the happily growing tendency on the part of illustrators to read the text.

GETTYSBURG.

Gettysburg: The Pivotal Battle of the Civil War. By Capt. R. K. Beecham of the First Brigade, First Division, First Corps, Army of the Potomac. With illustrations and map. Chicago: A. C. McClurg & Co. $1.75 net.

Mr. Beecham's book is a combination of personal views acquired on the scene of action by a minor officer, and the inadequate consideration of the evidence now open to all students of military history. On page 20 the author says that the powder used by the Union infantry was of the poorest quality, dirty, and void of strength, while the Confederate powder invariably had a high explosive power. The fact is, of course, well known that the Whitworth shells supplied to the Confederates by England often failed to explode, and were found to be filled with sand. The story that Longstreet's scout, Harrison, brought the first news to Lee of Hooker's crossing of the Potomac is repeated, though that fiction had been exposed by Confederate authority. Of the concentration at Gettysburg July 1, the author says: "Hancock has reported to Meade his approval of the position then being held for the continuation of the battle; Meade has accepted Hancock's report as final; has ordered his whole army to concentrate at Gettysburg." This is one of the author's many misconceptions of the battle. Hancock's report to Meade was as follows: "I think we can retire; if not, we can fight here, as the ground appears not unfavorable." Hancock also said that the troops then held a position at the cemetery which could not well be taken, but which could easily be turned, and that when night came they could tell better what had best be done. But Meade did not wait for Hancock's report. At half-past four he sent orders to Sedgwick to march. The other corps were ordered up by him, and Hancock was informed by Meade that a battle at Gettysburg was now a necessity. Nothing, therefore, could be more inaccurate than the author's assertion, on page 131, that Meade delegated to Hancock the authority of commander-in-chief, leaving it to him to say whether or not to retreat from Gettysburg to Pipe Creek. Again the author is hopelessly in error in saying that Hancock was not in command when Meade sent him to the field. After Reynolds's death, Meade sent Hancock to the front to take command. Halleck had told Meade he would be supported in any changes made among his subordinates. The author has apparently never read Gen. Hancock's articles printed many years ago in the *Galaxy Magazine*, in which Gen. Howard's claims are finally disposed of. The placing of Howard under Hancock's orders was only one of several instances during the battle in which Meade advanced junior officers, and it is to be said that Meade's personal selections were amply justified. The best soldiers in the army, Hancock, Reynolds, Warren, Humphreys, Sedgwick, were the men on whom Meade placed special responsibility then and afterwards.

The author errs, too, in stating that Howard commanded Slocum's Corps when it arrived on the field. When Slocum reached Gettysburg, it was he who was in temporary command. The statement concerning the salient position occupied by Sickles is befogged with misapprehension. The facts bearing on the extension of Meade's line from the cemetery southward to Little Round Top are plainly set forth in the official reports. When Slocum's corps arrived at Gettysburg about sunset of July 1, two brigades of Geary's division were by Hancock's orders sent to the extreme left, and Geary posted two regiments on Little Round Top. The reports of Col. Candy, commanding Geary's First Brigade, and Col. Patrick, commanding the Fifty-fifth Ohio and One Hundred and Forty-seventh Pennsylvania Regiments, show that these regiments held the hill during the night of July 1. The report of Gen. Birney, commanding the First Division of Sickles's corps, says that, at 7 A. M. of July 2, he relieved Geary's troops and formed a line resting its left on Little Round Top, and the right thrown in a direct line towards the cemetery, connecting on the right, with the second division of Sickles's corps.

This early occupation in force of the final battle line was done in pursuance of Meade's morning instructions to Sickles that the Third Corps was to hold the line from Hancock's left to Little Round Top, relieving Geary, who had orders from Meade to rejoin his corps when Sickles relieved him. Furthermore, Geary sent to Sickles a staff officer with instructions to explain the position and its importance. Twice before seven o'clock in the morning Meade had sent staff officers to Sickles, urging him to get into position. Again at eleven o'clock Meade told Sickles that his right was to be Hancock's left and his left on Round Top, which Meade pointed out to him. In the light of such an array of facts easily ascertainable, Mr. Beecham's treatment of the matter can only be attributed to wilful perversity.

The numerous illustrations usually have the merit of fidelity, though the picture of Gen. Hancock is a caricature.

The Broad Stone of Empire: Problems of Crown Colony Administration. By Sir Charles Bruce. Two volumes. With maps. New York: The Macmillan Co. $9 net.

The literature on British colonies easily groups itself into three classes—books by students who have had no ac-

tive connection with any of the British over-sea possessions; autobiographies and memoirs of politicians and statesmen of the Dominions, with representative and responsible government; and books by governors and administrators of colonies, chiefly of the class now described as crown colonies. Since Sir Francis Bond Head, who was Lieutenant-Governor of Upper Canada during the disturbed period from 1835 to 1837, published the narrative of his experiences in what is now the Province of Ontario, there has been a gradually accumulating library of books of this third class. All of them are of more or less value to students of British colonial history; but from this point of view Sir Charles Bruce's work outranks them all by reason of its carefulness and comprehensiveness, and also the statesmanlike spirit in which it is written. It is one of the most considerable contributions of recent years to this phase of British history. There is an actuality about it that is mostly lacking in books written by students who have not had colonial experience; and it is much broader in its conception and scope, more systematic in the presentation of its data, more characterized by detail that is worth while than most of the other contributions to the literature of colonial economy written by men in service in over-sea possessions.

All Sir Charles Bruce's experience was concerned with the crown colonies —with such outlying possessions as Ceylon, Mauritius, and British Guiana; for since representative and responsible government began to be conceded to what are now the Dominions—Canada, Australia, New Zealand, and South Africa —men with whom colonial service is a life-long career have seldom served as governors-general in the Dominions. These highly paid officials, who at most do little more than serve as links between the Dominions and Great Britain, and who need social tact rather than trained capacity as administrators, have now for many years been drawn from peers who have established some claim on either the Conservative or the Liberal party, but who are not in the front rank at Westminster; while the men of the permanent colonial service have had their sphere of usefulness pretty rigidly confined to the crown colonies, for which the Colonial Office in London is in the final resort responsible. Such has been the experience of Sir Charles Bruce; and it naturally follows that in "The Broad Stone of Empire" he has mainly confined himself to the crown colonies—to their political and civil administration, their material development, and their value to the British Empire.

While Sir Charles Bruce thus confines himself as to detail to the crown colonies, at least one-third of the first volume is devoted to a survey of the policies of Great Britain toward colonial possessions in general from the Treaty of Paris of 1815 to the development of the present-day attitude, which he dates from the establishment of the Royal Colonial Institute in 1868. The three stages of British colonial policy are described as (1) the stage when the possessions were held to be politically and commercially necessary; (2) the stage at which colonies were held to be politically mischievous and commercially useless; and (3) the present stage, at which they are again held to be of first importance to Great Britain in politics and commerce. The second of these stages extended from the Treaty of Paris of 1815 to 1868—the period during which the Whig and Liberal cry of peace, retrenchment, and reform dominated popular interest in English politics; and in which for the first time the condition of England began to get the attention of the governing classes and of Parliament. For generations before 1832, when the governing classes were absolutely supreme, social conditions were worse than at any time in the history of England. They were so appallingly bad that Disraeli in 1837 asserted that there was then more serfdom in England than at any time since the conquest.

There are students of British colonial history who date the present-day Imperialism from the first jubilee of Queen Victoria in 1887. There are others who date it from the time when larger over-sea dominions—in particular Canada and Australia—demonstrated to England and the world at large that with responsible and representative government they had succeeded, and were developing a nationality of their own. Sir Charles Bruce goes further back than either of these demonstrations, and dates the new Imperialism from the establishment of the Colonial Institute in 1868, which latter was largely prompted by the territorial expansion of the United States that came with the purchase of Alaska, and the overtures from Washington for the purchase of the Danish West Indies. The aim of the founders of the Colonial Institute was to arouse England from the indifference with which in the sixties it was still treating colonial subjects, and by spreading a knowledge of the value and importance of the Colonial Empire to the United Kingdom to "dispel the erroneous notion that pervaded some minds that England would be as great without her colonies as with them." The new Imperialism gradually came into being, and with it a need for a new colonial policy. The logical consequence of Lord John Russell's policy of preparation for a time when the colonies might with propriety be severed from England and formed into separate and distinct states in alliance offensive and defensive with England—the policy that was first embodied in the Act for the United Provinces of Ontario and Quebec in 1840—was that it was the duty of the Colonial Office to provide each of the colonies with an adequate political equipment, and to help to train them to a capacity for self-government. The new Imperialism required, however, a modification of this policy. A distinction had to be drawn and maintained between colonies with representative and responsible government, and the crown colonies where representative and responsible government of the types in service in the Dominions was for the present impracticable. This distinction made needful a complete reorganization of the Colonial Office—first in its relations to the self-governing colonies as virtually independent states, and, secondly, in its relations to the crown colonies, for each of which an appropriate political, social, and industrial equipment had to be provided.

It is with this second part of the newer colonial policy that Sir Charles Bruce is exclusively concerned in the latter half of his first volume and in the whole of the second volume; and he has so exhaustively accomplished his task that it is not possible to name a phase of crown colony economy which has escaped his attention. The general policy of the Colonial Office toward the crown colonies, the local administrations and local legislatures, the laws in force, the position of the various churches, the fiscal systems and educational systems, labor and transport problems, are all treated by a man who has learned by doing.

Notes

The list of the Putnams' announcements includes: "Mystics of the Renaissance," by Dr. Rudolph Steiner, translated by Bertram Keightly; "Fifteen Thousand Miles by Stage," by Carrie Adell Strahorn, a narrative of Western life; Federico Garlanda's "The New Italy," translated by Miss M. E. Wood.

As agents for the Cambridge University Press, the Putnams announce: "Hamlet," edited by A. W. Verity; "The Ground Plan of the English Parish Church," by A. Hamilton Thompson, and "The Method of Teaching Modern Languages in Germany," by Mary Brebner.

"The Two Apaches of Paris," by Alice and Claude Askew, and "Penillion," a book of poems by Harold Emery Jones, will soon be published by William Rickey & Co. of New York.

For June 3 Henry Holt & Co. promise "The Empresses of Rome," by Dr. Joseph McCabe; "Introduction to German," a grammar by Prof. Eduard Prokosch; "Gramatica Castellana," by Profs. E. W. Olmsted and Arthur Gordon, and "Life of Vasari," by Robert W. Carden.

Houghton Mifflin Company issues the following books this week: "My First Sum-

mer in the Sierra," by John Muir; "California Under Spain and Mexico," by Irving B. Richman; "The Origin and Growth of the American Constitution," by Hannis Taylor; "The Life and Letters of Martin Luther," by Preserved Smith; "The Corner of Harley Street," a volume of anonymous letters of a genial physician; "The Hope of Immortality," by the Rev. Charles F. Dole, and "The Constitution of the United States of America," in a Riverside Press edition, limited to 440 copies.

"Thorpe's Way" is the title of a new novel by Morley Roberts, which is announced by the Century Company.

"The Immigration Problem," by Jeremiah W. Jenks and W. Jett Lauck, chief examiner of the United States Tariff Board, will be brought out in the autumn by Funk & Wagnalls.

The same house has in hand: "The Bible and Modern Life," by Clayton Sedgwick Cooper, and "The Teacher's Practical Philosophy," by Prof. George Trumbull Ladd.

W. L. Griffith, secretary to the office of the high commissioner for Canada, is publishing through Isaac Pitman & Sons "The Dominion of Canada." It is included in the All Red series.

Frederic Harrison contributes to the *Positivist Review*, beginning with the June number, a series of papers on the social aspects of various forms of religion.

A. S. Barnes & Co. of New York have in preparation "Tom L. Johnson—A Man of the People," by Carl Lorenz.

So far there have been very few subscriptions to the fund providing a permanent home for the club for young men and women established by Dr. Furnivall. As the club was one of Dr. Furnivall's main interests for many years, and the object of his deepest solicitude as he approached his end, a second appeal has been made on both sides of the water, in the hope that the relatively small sum (£800) may be speedily provided. To Americans the appeal is signed by Professors Kittredge and Manly, to either of whom subscriptions may be sent, and, however small they may be, we are assured that they will be welcome. Or they may be sent to L. A. Magnus, esq., No. 9 Gray's Inn Square, London, W. C.

The proposal to commemorate the promised visit of the King-Emperor to India this year by the foundation of a Mohammedan university at Aligarh is a significant fact in the educational history of the country. The suggestion was made at the Nagpur Education Conference some months ago by the Aga Khan, the recognized political leader of the great Mohammedan community. A considerable sum was pledged at that time, and since then a large part of the necessary funds has been raised. The university will be modelled on those at Oxford and Berlin, and so will differ materially from the other five Indian universities, which are almost exclusively examining and not teaching bodies. The scheme, it is interesting to note, is the natural development of the opening thirty-six years ago at Aligarh of the Mohammedan Anglo-Oriental College on Queen Victoria's birthday.

The most interesting fact recorded in the fifty-ninth annual report of the Boston Public Library, just issued, is that there is no part of the city "where the hunger for books is so keen and so universal as among the crowded tenements of the North End, where the children of twenty different nations are being made into American men and women." The library, including its twenty-eight branches, now contains 987,268 volumes, and the home circulation for the year was 1,671,327 volumes. Considerable space is given to the consideration of the retirement on pensions of aged employees.

On any standard of sheer usefulness Baedeker's "Mediterranean," the new English version of which is imported by Charles Scribner's Sons, deserves to be called the book of the season. Many of the routes are more fully covered in Baedeker's handbooks for Spain, Southern France, Italy, Greece, and Egypt, but the material for Turkey and the Holy Land is new in English, while much of the African section is wholly new. The book has more than the usual plenitude of maps, city plans, etc., and the geographical sketch of the Mediterranean basin by the late Prof. Theobald Fischer is an interesting feature. We may note that the editor favors independent travel, rather than the conventional steamship tour. For linguists the former course is preferable. For people of one tongue the excursion *de luxe* has its obvious advantages.

A new edition, somewhat revised and enlarged, of J. H. A. Günther's "English Synonyms" has been issued by J. B. Wolters of Groningen.

The location of the Royal Historical Society, in Gray's Inn, once the legal home of Sir Francis Bacon, furnished the text for the presidential address which Dr. William Cunningham delivered before that body in February, 1910. This address, with other papers, is now published in the Transactions of the society for that year. It is an attempt to discuss the aims with which historical study is now pursued, and to consider how far those aims accord with Bacon's views on the writing of history. Stating that Bacon's idea was to know as fully as possible what the past was like and to follow the course of events, confining its range to public life and affairs of state, Dr. Cunningham shows that present-day writers, though adhering to Bacon's dictum in principle, have a wider human interest, and do not deem the humbler activities of men beneath the dignity of history. He quotes from Bacon's "Advancement of Learning" the further dictum that it is no part of the historian's duty to comment on the story of the past, and demonstrates that Bacon was not always true to his own principle. Yet Dr. Cunningham accounts Bacon a good historical writer, having a perfectly clear idea as to the purpose and function of history and presenting an extraordinarily vivid picture of the reign of Henry VII. He concludes by showing that Bacon, though the founder of a great system of empirical philosophy, had no sympathy with an attempt, such as that of Comte, to formulate laws of human development or to trace the influence of social and economic forces. Though not approving of the narrow interpretation which Bacon put upon history, Dr. Cunningham is inclined to find in his attitude a corrective of overmuch generalization such as characterizes some of the historical writing of the present day.

Timed nicely to the season, "The Book of Love" (Macmillan) has now appeared. It is an ingathering of nearly one hundred and fifty moments of love, expressed in verse and prose and ranging from the writings of Anacreon to scarce-heard-of moderns. Love is grouped in twelve moods or situations, including love-letters; but so as not to give the impression that here is an attempt by sheer division to solve love's secret. Madison Cawein in an introduction says many things: that "Love is a mystery," and "What subject is more intimate to the soul? . . . only Religion—and what is Religion but love?" and "The overworked girl, the hollow-eyed clerk, in the intervals of labor, may 'loaf and invite their souls' to a place apart, . . . a world more real than that of looms and ledgers." If there had to be an introduction, we suppose that there was little else to say. Although the selection offers a great variety and shows a certain system, it omits at times criminally. Why, for instance, is there nothing from Sappho, Propertius, Petrarch? The drawings by Wladyslaw T. Benda are uneven, but are always decorative.

The history of the Congo Free State is still to be written. Its most recent summary—that in the new edition of the Encyclopædia Britannica—is no more free from partiality than was Frederick Starr's "Truth About the Congo." Nor will it be easy for the future historian to measure the extent of the atrocities in equatorial Africa committed in the name of humanity, and to fix the degree of blame that must attach to Leopold II, King of the Belgians—that astute founder of the Free State, whose statesmanship was eulogized by both Disraeli and Gladstone, as well as by so fair-minded a historiographer of colonization as Paul Leroy-Beaulieu. Meauwhile it was to be expected that the unsavory private life of that monarch would be considered legitimate prey by some purveyor of those now fashionable revelations concerning the follies and vices and martyrdoms of kings and queens. "Leopold the Second, King of the Belgians" (Sturgis & Walton), in spite of the historical information which it furnishes—ill-written and ill-digested—rises but little above the level of books of this class. It has, however, at least the negative merit of not being anonymous or pseudonymous. Dr. Angelo S. Rappoport is willing to stand sponsor for the trash dished up in the *pièces de résistance* of the volume—the chapters devoted to Leopold's love affairs and his treatment of wife and children. Evidently the time has not yet come when such appeals to low intelligence and lower taste meet with a deaf ear on the part of publishers.

"The New Dictionary of Statistics," edited by Augustus D. Webb, and published in this country by E. P. Dutton & Co., is intended as a complement to the fourth edition of Mulhall's standard work. Within the compass of 680 quarto pages a great mass of figures can naturally be included; but access to details has been made easy by the alphabetical arrangement of topics in conjunction with a very complete index. Furthermore, such broad topics as Agriculture, Commerce, etc., lead off with a topical analysis, which permits of almost instantaneous reference to any desired set of figures. But what the non-specialist in statistics will most appreciate, perhaps, is

the plentiful notes attached to almost every table in the nature of an intepretation, or, better still, a warning against misinterpretation. The science of statistics is a perilous one to the innocent; as under Accidents, where a table giving the number of accidents among factory men, miners, quarry men, seamen, railway men, etc. is supplemented by this caution:

The numbers given in this table for one class of workers are not comparable with the numbers for other classes, owing to differences in the requirements of the statutes respecting the notification of accidents in the various industries affected.

Interest in Emanuel Swedenborg has been revived during the last few years; it was particularly manifest on the occasion of the two hundredth anniversary of the founding of Kungl. Vetenskapssocieteten in Upsala, of which he was one of the most active members. The memorial volume issued by the society on that occasion contains, besides an historical discourse by N. Dunér, a facsimile of Swedenborg's "Dædalus Hyperboræus," and in the volume dedicated to the society by the University of Upsala is found a study by Martin Ramström, entitled "Emanuel Swedenborg's investigations in natural science and the basis for his statements concerning the functions of the brain." The university issued also, to celebrate the one hundredth anniversary of the founding of the Swedenborg Society of London, a collection called "Emanuelis Swedenborgii Opera Poetica," and containing fourteen pieces, two of which are printed from manuscripts in the Linköping library, while the others are here reprinted from the original pamphlet issues. "The mortal remains of Emanuel Swedenborg" is the title of a monograph by J. V. Hultkrantz, issued as a part of the Upsala Society's Nova Acta, in which the author gives an account of historical and anatomical investigations made by a committee of which he was a member. Swedenborg's skull was stolen in 1816 from his coffin in the Swedish church in London, but restored in 1823. When Swedenborg's remains, in 1908, were removed from London to the Cathedral in Upsala, it was thought well to have the question settled as to whether the skull which was placed in Swedenborg's coffin in 1823 was genuine. Professor Hultkrantz comes to the conclusion that

as to the question whether the cranium placed in the coffin in 1823 was the genuine one or a substitute, the historical statements are insufficient to render a decision. The possibility of an exchange—intentional or unintentional—cannot with certainty be excluded by means of the recorded facts, but these seem rather to argue that the genuine skull was restored than that the opposite is true. The skull which now lies in Emanuel Swedenborg's coffin may, with the greatest degree of probability, be regarded as genuine.

"Agnes Bernauer" is unquestionably that one of Hebbel's dramas which ought to be read first, and it is perhaps the one in which Hebbel's view of the essential tragedy of human life appears most distinctly. The edition (Frowde) by Prof. Camillo von Klenze is excellently adapted to the purpose of arousing interest in Hebbel and of facilitating comprehension of the play in hand. In not more than half a dozen places does it appear that the editor might have been more generous in his Notes. These, and his Introduction, are distinguished for wise restraint on the part of a scholar with a broad outlook. We should mention the essay on Körner and Kleist among the documents of fundamental importance for an understanding of Hebbel's theory of the drama, and we should have been tempted to adduce more illustrative material from the diaries and letters than Von Klenze has cited. Moreover, we think Zinkernagel a better guide than Scheunert for the beginner in the study of Hebbel. But this is a matter of opinion. Wütschke's convenient "Hebbel-Bibliographie" (Berlin, 1910) probably reached the editor too late to be referred to in this work.

Dr. Edward O. Sisson, professor of education in the University of Washington, has published through the Macmillan Company a book on "The Essentials of Character," which aims to help parents and teachers in the training of youth. Although the author is clearly acquainted with the latter-day fads in child education, he wisely avoids them; and although he divides his subject with strict regard for psychology, he frankly admits that the study of a human being is no exact science with simple definite laws; he frequently enlivens his book with such sheer common sense as the following:

Make way, then, for child joy; let the house and garden, and all who encompass the little one, conspire and labor to brighten every moment, for every bright moment adds fibre to the tissue, happy and healthy disposition. Take a lesson from the mother cat rolling and scuffling with her delighted kittens, and then see how far the child, even of a year old, surpasses the lower creatures in his rich comprehension and exuberant joy in play.

This, it should be added, is not a plea for pampering or for withholding needful truths from children for fear of clouding for a single instant their sunshine. Readers will find several perplexing matters ingeniously and helpfully discussed.

The Oxford University Press has issued a half-dozen new texts: An unattractively bound "Midsummer Night's Dream," "As You Like It," and "Tempest," in one volume; pleasant editions of "Robinson Crusoe," Macaulay's "Clive," Carlyle's "Heroes," Tennyson's "Princess," and Kinglake's "Eothen." In the Lake English Classics, Scott, Foresman & Co. have published three more volumes: Lamb's "Elia," Mrs. Gaskell's "Cranford," and Stevenson's "Inland Voyage and Travels with a Donkey."

In "A Practical Guide to Accurate German Pronunciation" (New York, published by the author), E. A. Grossmann has deftly described the sounds of German and developed a system of transliteration in our current alphabet. Only the sound of guttural *ch* seems insufficiently described as that of *ch* in the Scotch pronunciation of *loch*. By whispering *coo* we can easily produce this sound. The little book can be used to advantage by teachers, and an intelligent person could probably learn from it without a teacher how to pronounce German correctly.

Mrs. Mary Platt Parmele, widow of Theodore W. Parmele, died last Friday of injuries received when she was struck by a motorcycle as she was crossing Sixth Avenue. She was born in 1843, and had been an extensive contributor to reviews and magazines since 1892. She was the author of a series of short histories of France, England, United States, Germany, Spain, Russia, Rome, and Italy; "The Kingdom of the Invisible," and "Answered in the Negative."

Richard Henry Clarke, who died last week in his eighty-fourth year, was one of the oldest members of the New York bar and the author of the following books: "Illustrated History of the Catholic Church in the United States," "Lives of the American Catholic Bishops," "Old and New Lights on Columbus," "Life of Pope Leo XIII," and "France's Aid to America in the War of Independence."

The death is reported from Paris of Roger Allou, aged fifty-five, who was a lawyer and mayor of the eighth arrondissement, and the author of several books. In collaboration with M. Chenu, he wrote "Grands Avocats du siècle," which was crowned by the Academy. He was also an artist.

Science

Incidents of My Life, Professional, Literary, Social, with Services in the Cause of Ireland. By Thomas Addis Emmet, M.D., LL.D. New York: G. P. Putnam's Sons. $6 net.

Dr. Emmet has been one of the busiest of Americans in the best sense of that much abused word. He began as a poor man, and yet during his busy life as a surgeon many hours of whose day were taken up with his hospital patients, he spent nearly half a million of dollars on a collection of documents relating to American history, so that he is counted among the great autograph collectors of the modern time. In the midst of his busy life he wrote a textbook on "Women's Diseases," that became a standard, was translated into three languages, and made his name known throughout the medical world. He was one of the first of our American surgeons whose merit came to be acknowledged in Europe. That should seem to be enough for one lifetime, yet in addition Dr. Emmet, as befitted the grandnephew of the martyred Robert Emmet, occupied himself much with Irish affairs in America, was looked upon as prominently connected with the secession movement, and was a believer in States' rights, ready to fight for the cause. Dr. Emmet was born in the South, but he has lived in the heart of New York life, and has been in long and close contact with all classes, the poor and the rich; he spent his summers in Narragansett for many years, when "the Pier" was one of the first and most prominent of our summering places—probably no one has touched American life at so many points; and here he tells the story of it. And he writes well. As he might say himself, if Henry Grady had not said it before him, he comes naturally by a power of expression, for his father

was an Irishman and his mother was—a woman.

Perhaps the most striking feature of the book is the power of the man to do work. He himself tells the story of how he succeeded with his textbook. Friends had been urging him to write it. Many a distinguished professor in Europe had inquired when he was to embody his experience in book form. He tried to write, but constantly fell asleep on his chair from fatigue, and, being naturally a good sleeper, would not wake up until the milkman came in the morning. Such sleep was unrefreshing, and he was about to give up his writing in despair when a great foreign medical visitor, to whom he confided his difficulty, told him of a particular kind of writing-bench invented for this very purpose. Dr. Emmet made one according to his directions. It was only some twenty inches long and some twelve inches wide; it had neither back nor arms; to go to sleep on it meant surely to fall off. By the help of it, Dr. Emmet finished his textbook. The bench is still with him, and even in these later years he might often be seen hard at work on it. He is now in his eighty-fourth year, a living proof that it is not work that kills.

There were serious incidents that might have been expected to wear out his vitality early. In the early fifties he nursed the immigrants to this country through two epidemics of typhus or ship fever, catching the disease himself each time. He was the visiting physician at the immigrants' hospital on Ward's Island during the awful epidemic of cholera in 1854, and twice when he went to his ward he found that since his visit of the day before every patient and nurse had died. There are many of these incidents of his medical life told with a vivid realism. The same style is applied to other events in his life. On the last train that went South before the war Dr. Emmet was a passenger. He had procured his passage on the last steamer that was to have sailed, but within an hour of sailing the vessel was held up by the government. He thought he owed his services to his State, and he went to Virginia to offer them. When he found that Virginia had seceded, he offered his services to President Davis, who advised him to go back to his wife and family, as the Confederates had more doctors than they knew what to do with. It was months before he got back, and he was a marked man. His story of the draft riots in New York and of the dangers which he himself went through during these perilous times makes scenes live that present New Yorkers can scarcely realize.

Houghton Mifflin Co. brings out this week "Trees and Shrubs," Vol. II, part iii, by Prof. Charles S. Sargent.

C. Ainsworth Mitchell, a Scotland Yard expert, is the author of "Science and the Criminal," which is announced for immediate publication by Little, Brown & Co.

Holt will shortly issue Prof. J. Arthur Thomson's "Biology of the Seasons."

Petermann's Mittheilungen has notably increased its usefulness since its recent absorption of the *Globus* and two other geographical publications. The monthly record of events is fuller, and much more space is given to the reviews of books and notices of articles in the journals and of the proceedings of societies. In the March number there is an abstract of the United States census with four original charts, two of which show the increase since 1900 of the urban and rural population. The principal subject treated in the military department is the proposed railways of Persia. The facts, together with a very useful map, were contributed by the head of the Persian Post Office.

"Mentally Deficient Children, Their Treatment and Training" (T. Blakiston's Son & Co.) is the third edition of a small book which first appeared about fifteen years ago. In this last revision the original editor, Dr. G. E. Shuttleworth, has the coöperation of Dr. W. A. Potts, another English physician of considerable experience in dealing with the feeble-minded. The text has grown a good deal, that of the last edition containing rather more than half again as much as that of the second edition of ten years ago. This is in part due to the addition of a new chapter on the examination of children requiring special instruction, as it may be conducted under the British regulations. There are also many other less extensive additions, and the illustrations are more than doubled. The most interesting of the new plates shows the later progress of two sporadic cretins now under continuous treatment with thyroid extracts for a period of over ten years. Taken altogether, the book continues to be an exceedingly good, brief presentation of the subject, with many special references to British conditions, a circumstance which does not detract in any serious degree from its general usefulness. The language is simple and easily understood by intelligent laymen interested in the questions under discussion, although the authors have primarily the physician in mind.

Solomon Woolf, formerly professor of drawing and descriptive geometry in the College of the City of New York, and since 1901 professor emeritus, died on Saturday of last week, aged seventy.

Dr. Stanford Emerson Chaillé, for more than fifty years connected with the faculty of Tulane University, died at his house in New Orleans on Saturday in his eighty-first year. For more than twenty-five years he had been dean of the Medical School of Tulane. He was born at Natchez, Miss. He became one of the best-known physicians in the South, and he attended Jefferson Davis in his last illness. Dr. Chaillé held many important positions. He was a member of the International Medical Congress, which met in Philadelphia in 1876, and his address on medical jurisprudence was highly complimented by the president and his fellow-members. He was appointed by Congress one of the twelve experts to investigate the great yellow fever epidemic of 1878, and was chosen secretary of the board, 1878-1879; and he was later appointed by the National Board of Health to be one of four members of the Havana Yellow Fever Commission, and its president in 1879. He was selected by the National Board of Health its "executive agent" at New Orleans with the title of supervising inspector of the National Board of Health, March, 1881, to October, 1882; was commissioned by President Arthur one of the seven civilian members of the National Board of Health in January, 1885, and so continued until the board was abolished in 1893.

Drama and Music

"The Droeshout Portrait of William Shakespeare," an experiment in identification with 31 illustrations, by William Stone Booth, is in the hands of W. A. Butterfield, Boston.

There are some interesting and significant facts in a study of the commercial recreations in New York city prepared by Michael M. Davis, jr., secretary of the committee on recreation and amusements of the New York Child Welfare Committee, and published by the department of child hygiene of the Russell Sage Foundation. Mr. Davis was assisted in his investigations by a number of persons well known in literary, theatrical, charitable, and social reform work. According to this report:

The weekly audiences at the low-priced theatres and moving-picture shows of Manhattan include, during the winter season, an average of about half a million children under sixteen, constituting 20 to 25 per cent. of the total attendance. The boys outnumber the girls two to one, and, among the adults, the men exceed the women by about the same ratio. Contrasting these figures with those of the high-priced theatres, we find that the weekly attendance of children, at the latter, is about 8,000, or only 5 per cent. of the total.

Of all the forms of entertainment in the lower-priced theatres, the report denounces the "burlesques" as the most pernicious. Five-sixths of these performances are described as "demoralizing," and the remaining one-sixth as "lowering." Of current vaudeville shows, one-fifth are said to be "lowering" in their tendency, while only 5 per cent. of them are allowed to have any positive value. Three-fourths of them are rated as "not objectionable." It is rather surprising to find that the moving-picture shows are placed in a much higher category. One-half of these are said to possess some positive value, while the other half are "not objectionable." The burlesque comes in for wholesale condemnation, and it is noted that it is very largely supported by boys of from sixteen to eighteen years.

Vaudeville, it seems, has proved a fatal rival to the various foreign national theatres in this city. The report says:

Jew and Italian, Bohemian and Chinese, have each had, or have, their play-houses where the foreign tongue, instead of English, is the stage language, and at which the plays keep alive the sense of national or race unity. The vigorous Bohemian colony is making earnest effort to preserve in a worthy way the elements of its traditions, and the "National Hall," on East Seventy-third Street, is the most distinctive and interesting place of its kind in the city. The Jewish East Side has developed its dis-

tinctive drama, its playwrights, its actors; products of its conditions and reflectors of its spiritual life. Alas! vaudeville (to a less extent the moving-picture) in recent years has almost driven the serious Yiddish drama from the boards. Three years ago one might enjoy three Italian marionette-shows, two downtown, the third in the up-town Italian quarter. Nothing more replete with local color, more naïvely mediæval, or more sincere as an expression of folk-life, could be seen in New York. Now only one remains, and it is time to make haste to see it. The Chinese Theatre of Doyers Street, that Bedlam of smoke and sing-song, costumes and cacophonies, was finally swallowed by the ogre of vaudeville.

Signor Grasso has been playing Othello again in London, in specially selected scenes from the tragedy. The London *Times* says:

Signor Grasso's Othello has been seen and warmly admired in London already. It is an intensely emotional performance. The great speech which ends "Othello's occupation's gone" is given in a voice broken and shrill with tears. Signor Grasso, to use a schoolboy term, fairly "blubs" over it. And this is typical of the whole performance. One feels inclined to speak of it as Otello, not Othello—in the Italian form, not the English. For deeply as we are moved by the tremendous passions of the man—passions which no English actor in our remembrance has expressed so forcibly—we still miss something of that sheer greatness which Shakespeare's character never loses, a kind of immense simplicity which makes the torture he endures at once more tragic and more pitiful. Signor Grasso is tragic enough; he scarcely moves our pity.

Evidently the critics who have mentioned Salvini in connection with Grasso never saw the former in his altogether matchless impersonation of the Moor.

The following is the programme, as finally approved by King George of the coronation gala performance to be given on Tuesday, June 27, at His Majesty's Theatre, in London: Prologue, written by Owen Seaman, spoken by Forbes Robertson; scene from "The Merry Wives of Windsor," with Mrs. Kendal, Ellen Terry, and Mrs. Charles Calvert; the second act of "David Garrick," with Sir Charles Wyndham, Edward Terry, Weedon Grossmith, and Mary Moore; the forum scene from "Julius Cæsar," with Sir Herbert Tree and E. S. Willard; "The Critic," with George Alexander, Arthur Bourchier, Cyril Maude, Charles Hawtrey, Oscar Asche, Gerald du Maurier, Laurence Irving, Lady Tree, Winifred Emery, Marie Tempest, Gertie Millar, Lily Elsie, and Violet Vanbrugh; Ben Jonson's Masque, "The Vision of Delight," with Mrs. Langtry, Mrs. Patrick Campbell, Lena Ashwell, Ellis Jeffreys, Evelyn Millard, Gertrude Kingston, Marie Löhr, Eva Moore, Lillian Braithwaite, Evelyn D'Alroy, Lillah McCarthy, Mabel Hackney, and Constance Collier. The national anthem will be sung by Clara Butt.

A writer in London *Truth* says, very pertinently:

The modern tendency is to try to make people natural on the stage at the expense of acting, and those who do so wilfully blind themselves to the fact that to seem natural on the stage is not to be natural, but is the highest art requiring the most skilled acting. In fact, the more natural an actor or actress may appear the greater is his or her art, and yet modern producers will urge people to be just themselves and talk as they would in a drawing room.

The association between Sir Herbert Tree and Mr. Arthur Bourchier, begun in "Henry VIII" at His Majesty's Theatre, London, is to continue until the end of the present year. Mr. Bourchier will play Brutus in "Julius Cæsar," Sir Toby Belch in "Twelfth Night," and Ford in "The Merry Wives of Windsor." When, in September next, Sir Herbert gives "Macbeth," Mr. Bourchier will be the Macduff; he is also to have a strong part in Israel Zangwill's new play, "The God of War," which follows Shakespeare's tragedy. Early in the new year he will resume management at the Garrick, where he will present plays by English, American, and French authors.

Sir Charles Wyndham and Miss Mary Moore have abandoned their intention of appearing in a revival of "Rosemary" at the London Criterion Theatre during the present season.

Lillah McCarthy has revived Mr. Masefield's tragic play "Nan" at the Little Theatre in London, and has renewed her former success in the character of the heroine.

At the close of the run of "Master of Mrs. Chilvers" at the London Royalty Theatre, Messrs. Vedrenne and Eadie will produce a three-act farce entitled "Half-a-Crown," by Frank Howel Evans. With this will also be played "The Cat and the Cherub," by C. B. Fernald, which has not been seen in London for more than a decade.

London is to have a Yiddish Theatre. This is the result of a movement started by Zigmund Feinman, a well-known Yiddish artist. The institution will have its home in a new house now rising in the Commercial Road, and will be run by the Yiddish People's Theatre Company.

Sir William Schwenck Gilbert, playwright and librettist, died suddenly of heart disease on Monday last, while swimming in the lake on his grounds at Harrow, England. He was born in London, November 18, 1836; was educated privately at Great Ealing and at King's College, London. He obtained, by competitive examination, an assistant clerkship in the Education Department of the Privy Council Office, where he spent four years. Coming unexpectedly into possession of £300, he sent in his resignation. With £100 he obtained his call to the bar; with another £100 he obtained access to a conveyancer's chambers, and with the third £100 furnished a set of chambers and began life afresh as a barrister-at-law. In 1861 *Fun* was started, and he began his career as a writer. He contributed hundreds of columns to this periodical, and incidentally laid the foundation of his future fame in the "Bab" ballads, which quickly attained an extraordinary popularity. It was Tom Robertson who suggested that he should write for the stage, and Miss Herbert gave him his first chance. This resulted in a burlesque on "L'Elisir d'Amore," called "Dulcamara, or The Little Duck and the Great Quack." "Dulcamara" was followed by a burlesque on "La Figlia del Reggimento," called "La Vivandière," which was produced at what was then the Queen's Theatre, in Long Acre, and played by J. L. Toole, Lionel Brough, Miss Hodson, Miss M. Simpson, Miss Everard (the original Little Buttercup of "H. M. S. Pinafore"), and Miss Fanny Addison. "La Vivandière" ran for 120 nights, and was followed at the Royalty Theatre by the "Merry Zingara," a burlesque on the "Bohemian Girl," in which Miss M. Oliver, Miss Charlotte Saunders, and F. Dewar appeared. This also ran 120 nights, but it suffered from comparison with F. C. Burnand's "Black-Eyed Susan," which it immediately followed, and which had achieved the most remarkable success recorded in the annals of burlesque. Next he wrote "The Palace of Truth," "Pygmalion and Galatea," and "The Happy Land," for the London Haymarket, and these and other dramatic successes led to his coöperation with Arthur Sullivan in those immortal operettas which made the Gaiety Theatre famous, and himself and partner vastly rich. These began with "Trial by Jury," which was followed by "The Sorcerer," "Pinafore," "The Pirates of Penzance," "Patience," "Ruddigore," "The Yeomen of the Guard," and many others. He was also the author of "Dan'l Druce," "Engaged," "Tom Cobb," "Broken Hearts," "Tragedy and Comedy," and other comedies and dramas. He was one of the brightest ornaments of the Victorian stage, and was still writing at the time of his death.

The Kneisel Quartet announces that its regular subscription series of Tuesday evening concerts will be given during the season of 1911-1912 at the Hotel Astor, in the large hall. This news will be of interest to many who have been unable to obtain seats, owing to the limited capacity of Mendelssohn Hall, where the concerts have been given for years. Mr. Kneisel, feeling that the acoustics would suffer, would never permit the doors to be opened into a room adjoining the hall. In a larger hall, with increased floor capacity and boxes, the growing audience will find room. The dates are; October 31, December 12, January 16, February 13, March 12, April 9.

The New York Philharmonic Society, the oldest orchestral organization in the country, and the one which has had the most interesting career, will begin its seventieth season on the second of November next, the subscription sale beginning on October 15. There will be sixteen Thursday night concerts (an innovation, in place of the Tuesday nights), sixteen Friday afternoon concerts, and eight on Sunday afternoons. Each of these series covers the whole season up to March, and each can be subscribed for separately. There are the most sweeping reductions to subscribers, the usual seats in the parquet, *e. g.*, costing only $1.25, while balcony seats are as low as 63 and 38 cents.

The International Musical Congress is now in session in the buildings of the University of London, South Kensington.

"An epoch-making work" is the title given by some enthusiasts to Debussy's music for D'Annunzio's "Martyrdom of St. Sebastian." What makes it so, it seems, is that the composer has changed the equilibrium of the orchestra, in that the wind instruments and harp predominate, while there is a total absence of leading motives. How extraordinarily revolutionary, progressive, and original! This remarkable work is to be done in concert form next season in Boston.

Rafael Joseffy's knowledge of the world's treasures of piano music is probably unexcelled; one may doubt if there are a dozen pieces in Eschmann's "Wegweiser durch die Klavierliteratur" (383 pp.) which he does not know. He is particularly at home among Liszt's compositions, and the edition of them which he is preparing for G. Schirmer is one of the greatest achievements of modern musical scholarship. As a pupil of Carl Tausig, who had the real

Liszt traditions, he is a trustworthy guide in all doubtful points.

Art

SCHOOL DECORATION BY ART STUDENTS.

CHICAGO, May 18, 1911.

I was taken vast distances in an automobile the other day, to see the decorative paintings which have been placed in some of the public school buildings here by the advanced students of the Art Institute. These paintings cost the city no money, and it is asked to give nothing but its permission. I understand that even this was difficult to obtain at first, but that it is gladly granted now. The pupils in each school are allowed to give one entertainment a year and to use the proceeds for any purpose they think advantageous to the school, and it is becoming more and more common to use them for the decoration of the building with mural paintings. The paintings are executed for little more than the actual cost of the work, the students of the institute expecting to make their profit in experience and study rather than in cash. The work is done under the general direction of one of the teachers of the institute, but each painting is the work of an individual student, from the first sketch to the finally completed picture. The subjects are sometimes dictated by the school officials, sometimes chosen by the artists, but there is, of course, a tendency to choose historical or modern themes, and to make the work pictorial rather than strictly decorative in character. Thus in the Technical High School the principal panel represents a sort of primitive bronze foundry, while the other decorations deal with modern industrial subjects, the building of a sky-scraper, the loading of a steamboat, etc. The member of the institute's staff who has the work in charge is a pupil of Brangyn, and the influence of that artist is perceptible in the treatment of these themes. In a primary school, where among fifteen hundred pupils all but some twenty are Russian or Polish Jews, there is a series of historical paintings dealing with subjects from the history of America, and especially of the Northwest Territory, from the days of Columbus to those of Abraham Lincoln, the best of them being, perhaps, the Landing at Jamestown. The presence in Jackson Park of the caravels from the World's Fair has made the sailing from Palos a favorite subject, which has been treated more than once.

As for the paintings themselves, while they are not masterpieces, or even accomplished and thorough pieces of workmanship, they are, I confess, much better than I expected or should have thought possible. They are rather of the nature of great sketches than of finished pictures, their authors having neither the knowledge nor the opportunity for sufficient study to carry them out with all desirable completeness. But as sketches they are often surprisingly good, being effective in arrangement and color and in the presentation of the story. By their sheer audacity and by the light-hearted enthusiasm with which tasks of vast difficulty are undertaken and carried through somehow, well or ill, they take one's breath away. It is perhaps because these young men and women do not know how difficult their tasks are that nothing seems to frighten them and that they dash at obstacles like hurdle riders, attempting with their slender equipment what the genius and knowledge of a Veronese might suffice to bring to a really happy conclusion. At the present moment one of these students is beginning a composition twenty-six feet long and containing about thirty figures, representing the Canterbury pilgrims, while half a dozen other canvases of smaller dimensions are nearing completion.

But I am less interested in the faults and merits of the paintings themselves than in the results of the experiment in the schools where the paintings are placed, and in the effect of the work as a part of the training afforded the students of the Institute. I gather that the result in the schools is excellent. Both teachers and pupils become interested in the decorations and take great pride in them, and for many of these children such paintings must be the only manifestation of art that has any place in their experience. It is doubtful if photographic reproductions of the greatest masterpieces could ever have the same effect upon them, or ever give them the same sense of art as a thing actually existing and related to themselves. These are not documents concerning pictures which exist somewhere else, under conditions and in surroundings only vaguely surmised—these are actual pictures, existing for them, a part of their daily lives, and they have helped to pay for them. And the teachers find these pictures an invaluable aid in the teaching of history. They hang their lessons, as much as possible, upon the peg of these paintings, and one can imagine how greatly such paintings must aid the swarming Jewish children on the South Side to realize the meaning of the history and the institutions of their adopted country. The architecture of the school-houses is extremely utilitarian, and the pictures, though more illustrative than decorative, certainly relieve the baldness and ugliness of the rooms, while their very illustrative nature renders them more interesting to the small public for which they are created.

Any one who knows what the education of an artist is in our time must be aware how little the student ever learns in the schools that concerns the actual production of a work of art. His whole time and strength are concentrated on the problem of imitation—of making as good a copy as he can, in form and color, of an object or a model posed before him—and many a young artist leaves the school entirely bewildered as to what to do next, and with no notion how he is to go to work to produce anything but more studies, differing but little from those he has already made. He has had no training in self-expression and has often no idea that there is anything other to express than the appearance of nature. He knows and cares little about composition, has no notion of how to translate a sketch or to make a study for a particular purpose, and, often enough, does not even know how to "square up" a drawing. When the painting of these decorations was first attempted in the Institute it was found that the students themselves were apt to think such work a waste of time, as taking from the hours which might be given to their regular tasks. It was only when it was seen that the students who had thus "wasted time" were very apt to take the highest prizes for their regular school work, that the student body became really interested.

For counteracting this tendency to look upon art as no more than imitation, nothing better could be devised than the production of mural paintings. Students might and not infrequently do produce something that passes for a picture and is even accepted as such by our exhibitions, without getting far from this student point of view. But in the production of a mural painting they must get away from it. Here is a piece of real work which must be undertaken under the conditions of real work and in the spirit of real work. Here are a given space which must be filled and given surroundings which must be considered. Here is either a given subject or the necessity of finding one that shall satisfy those whose interest is mainly in the subject and not in the drawing and the painting of the details. One is confronted at once with the necessity of telling one's story clearly and intelligibly; with the necessity of composing interestingly and elegantly; with the necessity of drawing expressively, not merely accurately, and coloring beautifully, not merely truthfully. The mere change from the making of a study of the posed model in the life class to the making of a study in which one must find the attitude that will express one's thought, is a revolution. To go back to the life class, after such a study, is to go back with an entirely new sense of the meaning of one's task there. It is to work, perhaps for the first time, with one's brains as well as with one's hands and eyes, and to attempt to master the figure, not merely to copy it.

It is impossible to imagine one of the students who has gone through this work coming out into the world with that lack of any conception of the purpose of his education or of any precise notion of what he is to do with it which characterizes the first years of independent effort of so many young artists. He has found out what art is for, and he has probably found out some of the gaps in his education and some of the limitations of his knowledge, and knows where effort must be applied to fill the gaps and push back the limitations.

But will he sufficiently realize his limitations? Is there not some danger that, finding he can produce a certain effect with his small knowledge—that he can actually paint a decoration regarded as worthy of a place in a public building—he will be content to go on producing without trying very hard to amend his faults? Is there not some danger that both the public and the young artist will be too easily satisfied? For there is no disguising the fact that these decorative paintings, though they are showy and even pleasing, are built upon very insecure foundations; that the education of the students who have painted them is far from complete; that their general effect is much better than their actual drawing and painting.

There is good and bad in everything, and this danger is perhaps to be feared. But I am inclined to think that the good, in this case, outweighs the bad. As regards the public the evil will tend to cure itself. The presence in the public schools of works of art of any sort will lead surely to the demand for better works of art, just as the buying of poor pictures leads the individual to the buying of better ones, until a great collection is formed and the collector has educated himself by his own blunders. Better and better decorations will be asked for, until the work of masters takes the place of the work of students. When that time comes, perhaps the masters will have so much need of assistance that the students can gain necessary experience without the premature exploitation of their crude invention. In the meantime, I doubt if the young men and women who are doing this work will be more conceited or more self-satisfied than are other art students. Their experience of real work can hardly fail to open their eyes to the qualities of better work than their own, and they are, perhaps, less likely to be contented with what they can do than are those students who have not even attained to any conception of the purpose of art. It will be the business of their master, while encouraging their efforts, to see that they do not take themselves too seriously.

It is, at any rate, a very interesting experiment which is being tried, and it has had at least one very definite result: In the competitions for the scholarship in mural painting given by the American Academy in Rome, the Art Institute has furnished by far the largest number of properly equipped contestants; while, of late years, New York has furnished scarcely any.

KENYON COX.

The board of directors of the Pennsylvania Academy of Fine Arts announces the award of prizes to the following persons: John Storrs, Mary Steen, Mary Gable, Blum H. Rosenbaum, Gertrude Monaghan, David Finkelgreen, Charles Weishaupt, Gertrude Lambert, Ed. Ulreich, Earl L. Poole, Nancy M. Ferguson, Fred. N. Donaldson, Juliet M. White, and Edward Trego.

In the winter of 1909 the editors of the Russian art magazine, *Starye Gody*, brought together at St. Petersburg some four hundred unexhibited paintings by old masters. By an inexplicable bit of administrative tyranny, permission to light the galleries was refused, and the pictures were visible only for a few hours of the day during a single week. Some compensation for this undeserved fiasco is obtained in the fine quarto, "Les Anciennes Ecoles de peinture dans les palais et collections privées Russes représentées à St. Pétersbourg en 1909 par la Revue d'Art Ancien 'Starye Gody'" (Brussels: G. van Oest & Cie). In this volume are presented more than one hundred reproductions of pictures, mostly inedited, with a critical text by such scholars as P. P. Weiner, E. de Liphart, James Schmidt, and others. All schools, including the Russian, are exemplified, and we can mention only pictures of exceptional interest. The Italian list includes an admirable predella fragment by Filippo Lippi, a fine Cima, a Titian portrait, besides enigmatic and charming pieces ascribed to Leonardo da Vinci and Piero di Cosimo. We may note at this point that the inscription ANTON. LAET. on the fanciful portrait attributed to Lotto is the signature, possibly forged, of Antonio Allegri, better known as Correggio. Gothic painting of the North presents little of moment. The Dutch school of the seventeenth century is the strongest class with two magnificent de Hooghes, several Maeses, a whole group of rare Rembrandt followers, and four canvases ascribed to Rembrandt himself. Of these the two splendid portraits in the Youssoupoff collection belong to a type in which Hals and Rembrandt are almost indistinguishable. Unless we are misled by the cuts, these should be not Rembrandts, but very fine Halses of the latest period. Among the many curiosities in the exhibition may be noted only the portrait group of a Polish family, dated 1659, by Daniel Schulz, an imitator of Rembrandt. The types are Mongolian, and the picture is both of documentary and artistic importance. Three Claudes and two Watteaus are the most attractive features of the French group. The editors and publisher of this book deserve gratitude for making so many interesting works for the first time accessible.

Henri E. A. E. Haro, whose death, in his fifty-seventh year, is reported from Paris, was an expert under whom important sales have been held, and was an artist, having exhibited portraits and flower pictures at the Salon.

Finance

DISAPPOINTED EXPECTATIONS.

It has not needed any very long time to show that one prediction of the past few weeks has gone amiss. In all the more or less condescending counsel, proffered to the Supreme Court by Wall Street brokers and kindred philosophers, none was more pointed than the assurance that only delay in the anti-Trust decision stood in the way of an instantaneous trade boom. It was not exactly that Trade had burrowed into some obscure retreat through fear of the thunderbolt. The picture was rather that of a high-strung athlete, ready to be off at a dash—on the drop of the hat, as Mr. Roosevelt would say.

It is now more than two weeks since the Supreme Court dropped the hat, and here is Trade still lingering in front of the spectators' bench, apparently without the slightest interest in the proceedings. One cannot be surprised that the stock market, having led the way in its vigorous rise of a fortnight ago, should have halted and begun to retrace its steps when it found that industrial markets were not following.

Yet, even supposing Chief Justice White's opinion to have been the single necessary stimulus for prosperity—and there are obstinate souls who refuse to concede even that—nobody seriously imagined that Mr. Borden would rush to Fall River by the early train to buy up all the print cloth on the market, or that the 20,000 tons of unsold copper, piled up since December 31, would be instantly taken by the mills, or that the Union Pacific, the Erie, and the Southern Railway would be jostling each other to arrive first at the booking-office of the rail mills. What every such potential buyer would do would be to watch, first his own customers and next his competitors, in order to discover their frame of mind. Then he would feel the market—all the more cautiously, if he thought it likely to run away from him at his initial bids. Then he would probably visit his bank, make some conditional arrangements, do a little figuring with his cashier, and read very carefully the harvest dispatches in the afternoon paper. It is in such a way as this that trade revival begins, and it is necessarily a slow way.

All this the financial markets might have come to recognize; but when, toward the close of last week, the announcement suddenly came that one of the most powerful competitors of the United States Steel Corporation had suddenly cut the price of steel three or four dollars per ton, that an "open market" in the trade was impending, in which prices might go to any basis, and that even steel rails, unchanged in price since 1901, might share in the re-

adjustment, a feeling of consternation began to prevail. This was a direct assault on a policy which has been promulgated by the Steel Corporation's management ever since 1907—that steel prices must not go down because of trade depression. "The mere fact that the demand is greater than the supply," the chairman of that company's board declared in April, 1908, "does not justify an increase in price, nor does the fact that the demand is less than the supply, furnish an argument for lowering the price." And this position has ever since been resolutely maintained by the management, except in the brief period of 1909 when the Steel Corporation lost control of things. It is the doctrine which has been repeatedly impressed on independent steel manufacturers, at the dinners and conferences to which they have frequently been summoned at New York.

Whatever, therefore, is to be the longer result of this new outbreak of price reductions in the steel trade; at all events, the episode forces into fresh consideration the economic theories of which the Steel Corporation has become the exponent. This is the day, if not of new economic theories, at least of new interpretation of the old ones. When principles of government which had been accepted as immutable are uprooted by constitutional experiments in as widely-separate fields as England and Arizona, when science and philosophy are daily discovering new axioms, and when even medical and religious controversy is largely given up to questioning whether the world has not been completely mistaken in all its fundamental assumptions, it is not in the spirit of the time to toss aside arguments which reject supply and demand as legitimate influences on prices. If the Steel Corporation's theories are right, their correctness is not in the least impaired by the fact that guerillas in the outside trade refuse to recognize them. The real question is, are they right?

Economists who have looked on them with a friendly eye, have presented two sets of arguments in their favor. Reduction of prices at a time of industrial depression is futile, because no one who is not buying now will be induced to buy because of lower prices. Either he has not the purchase money, even at the lower price; or else the opportunity for profitable and immediate use of his purchased steel is too small to make concessions in price an object; or else (this is a very familiar argument) the saving to the purchaser, through a cut of two or three dollars a ton on structural material, for instance, is so slight as to be negligible in a ten or twenty-story building. That is the first line of reasoning. The second is that a cut in prices, at a time of trade reaction, is not fair to consumers who bought before the cut—that it will upset the business plans of such purchasers, will probably induce them to withhold further intended purchases until they are sure that prices have touched bottom, and will thus defeat its own purpose.

Now the obvious comment on these two arguments is, that they are mutually destructive. If nobody will buy more on such occasions with prices low than with prices high, and if there is no advantage in buying at the reduction, and if the margin between the higher and lower prices is in any case a matter of indifference—then how is the purchaser wronged who bought at the higher price, and why should he wait for the lower? The stand-pat theorist impales himself on the horns of his own dilemma.

The truth is, all past experience of every trade proves that new buyers will be attracted by a cut in prices; that foresighted business men do find inducement to accumulate supplies on a falling market, and that nothing is more absolutely characteristic of successful enterprise in the twentieth century than careful observance of economies in cost. Since the beginning of commerce, every trader in possession of the senses has been aware that the way to stimulate a reluctant market is to mark down the price of goods. That a dominant influence in any trade, which should be used to restrain the excesses of rising prices in a "boom" and the sometimes equally mischievous excesses of "cut-throat competition," is a most useful and salutary thing, is a principle recognized a thousand years before the Steel Corporation.

But the industrial machinery which undertakes to go very far beyond those laudable achievements will be wiser in reconstructing human nature first. No doubt it is familiarity with these aspects of human nature which has suggested, to some impartial observers of the industrial situation, that the collapse of the "standpat policy" in the steel trade may remove the most formidable of all obstacles to trade revival. It certainly seemed to perform exactly that useful function in the revival of 1909.

JUST PUBLISHED—A BOOK OF AUTHORITY

THE AEROPLANE

Past, Present and Future

By C. GRAHAME-WHITE and HARRY HARPER.

With 93 illustrations. Over 300 pages. Octavo. Handsome cloth, $3.50 net.

This book, written by Claude Grahame-White (the winner of the Gordon-Bennett Aviation Cup, 1910) and Harry Harper, with contributions from a number of well-known constructors of machines and aerial pilots, will undoubtedly be the standard reference work on all that has been done, or attempted, or is in progress for the advancement of aviation, for some time to come.

The work of pioneers is first described by one who actually witnessed the early flights of Captain Ferber, Santos Dumont, Wilbur Wright and Henry Farman. The story of the application of the petrol motor to aeroplanes is told—how it was that a suitable propulsive force made flying possible. This leads to the fascination of men's first flights, and it is explained how the duration of aerial journeys was lengthened from seconds to minutes, and minutes to hours. From this the reader is taken to the feats of the present day. All the most notable flights of the world's famous airmen are described. Records in high-flying, speed, cross-country, and over-sea flights are concisely tabulated. It is made possible to ascertain, at a glance, what the most remarkable feats have been. A special section of the book is devoted to an analysis of the aeroplane accidents that have happened. Each disaster is described, and, where possible, an explanation is given. A specially compiled list, alphabetically arranged, gives the Aviators of the World with the aeroplanes they pilot, and notes concerning their flights. The building of aeroplanes is exhaustively dealt with, and finally come important articles supplied by the most famous authorities upon aviation.

SHE BUILDETH HER HOUSE

By WILL LEVINGTON COMFORT.

Who wrote "Routledge Rides Alone."

(Eight Editions Sold)

"Will Levington Comfort brings to his new novel, 'She Buildeth Her House,' the same vigor of style and pregnant phrasing that distinguished 'Routledge Rides Alone' as one of the ablest of modern American novels. . . . The theme of the story is one that surely would have received the commendation of Balzac's mystic nature. Likewise, the treatment has the relentless freedom of Balzac in facing facts of life. . . . By the boldness of its design its virile frankness, and its imaginative and dramatic qualities, 'She Buildeth Her House' is a novel that must command attention."—*Philadelphia Press.*

Colored Frontispiece by Martin Justice.
Decorated Cloth, $1.25 net.

IN HER OWN RIGHT

By JOHN REED SCOTT.

Author of "The Colonel of the Red Huzzars," "The Impostor," etc.

Mr. Scott's new novel, unlike some of his recent works, is set in and around Annapolis of to-day, and deals with the life of the present time. There is mystery and action a-plenty concerning hidden treasure and an abducted heroine, and a charming love interest throughout adds greatly to an already brilliant and exciting romance.

Illustrations in Color by Clarence F. Underwood.
Decorated Cloth, $1.25 net.

20 Vesey St., New York City

Our Own Religion in Ancient Persia

By Dr. LAWRENCE H. MILLS, *Professor of Zend (Avesta) Philology*

Being a Third Edition of a Lecture twice delivered in Oxford, partly printed in the *Nineteenth Century Review, January*, 1894, translated with consent of the Editor and Author into Gujarati (Trustees of the Sir J. J. Fund), and into Italian, 1911, by an accomplished translator upon his own initiative.

Soon to be had of leading booksellers in Oxford, or of Broekhaus, Leipzig, Two Shillings (fuller edition soon with "the Avesta and the Veda," 3d ed., from East and West, Bombay, 1st ed. Open Court, 2d ed.). Italian version, seventy-seven pages, now ready, gratis, on behalf of Mr. J. Bahemen, upon application to Author, to Students of the Universities of Rome and Naples; Italian bound up with Oriental and English text of Yasna I., six plates, pages 168, three lire paper, and eloth, seven lire.

The Anthor strenuously negatives the opinion that the Post-Exilie orthodoxy owed its origin wholly to the vastly prevalent Persian system by whieh it was surrounded during the eenturies when the Jews were Persian subjeets, but he holds it to be reprehensible, as also fatal to Bible study, to eoneeal the existenee of a system where the details of the Theology, Angelogy, Soteriology, Esehatology and Subjeetivity of reeompense largely eoineide with those of the Exilie pre-Christian ereed, notwithstanding extensive aceretions of fabulous matter.

He reealls the dominant faet that a form in whieh the Persian Religion reaehed Greeee, at least B.C. 350, exclusively reports the supreme interior elements; and he does not deny that this influenee eontributed, with politieal motives, toward the Restoration of the Jews, nor that the Persian deerees and other religious eommunications partly reported in the Bible eneouraged the orthodox Pharisaism, as against the negative Sadduecees. Persian intereourse with the Jews immense; Bible intimations, full as they are, give little idea of it; "Paradise," a Persian word.

Librarians who may desire to receive, earriage paid, duty free, Author's YASNA I. with Avesta, Pahlavi, Sanskrit and Persian texts, trls., plates, ete., with Author's Sanskrit version, from Mr. Bahemen, of Teheran, or from Trustees, Sir J. J. Fund, may eommunieate with the Author, Oxford.

See *Nation*, Aug. 30, '06: "Beyond question our leading authority now living on the Gathas." See *Nation*, Mareh 23, 1911; Rast Goftar, Bombay, April 18, 1909.

Just Published **PHILOSOPHY** *New Edition*

By NICHOLAS MURRAY BUTLER, President of Columbia University
Member of the American Academy of Arts and Letters
Cloth, 12mo. Third Thousand. Price, $1.00; by mail, $1.07

A profound and brilliant exposition of philosophy, its method and its problems, with special reference to the distinction between philosophy and science.

"In my opinion it marks an epoch in the history of higher education. It sounds philosophy with the clear and inspiring tones of a trumpet."—*The late William T. Harris, U. S. Commissioner of Education.*

"I know of no book in which the relations of science and philosophy are expressed so lucidly, and as I venture to think convincingly, in so short a compass. It is delightful when one comes across philosophic thought in such literary form."—*The late S. H. Butcher, Esq., M.P.*

"Sie entwerfen in grossen Zügen ein so ausgezeichnetes Bild von der Philosophie und ihren Aufgaben dass es jeden dem die Philosophie den innersten Kern des Lebens bedeutet, mit herzlicher und dankbarer Freude erfüllen wird."—*Professor Rudolf Eucken, University of Jena.*

"Most illuminating and instructive."—*Rt. Rev. Thomas F. Gailor, Bishop of Tennessee.*

"It will be for the rejuvenation of the study, and also for our saving as a people, if this exalted conception of philosophy can prevail."—*Professor Edwin D. Starbuck, State University of Iowa.*

"Mit lebhafter innerer Theilnahme habe ich diese schöne und gedankenvolle Rede gelesen."—*Professor Dr. E. Hüsserl, University of Göttingen.*

King Edward VII. as a Sportsman

By ALFRED E. T. WATSON, with contributions by Captain Sir SEYMOUR FORTESCUE, the MARQUESS OF RIPON, LORD WALSINGHAM, LORD RIBBLESDALE, and others.

With 10 plates in color and 92 other illustrations. Large 8vo. $6.00 net. *Large Paper Edition*, Extra Imperial 8vo. (11⅜x8 in.), limited to 250 copies for sale, $40.00 net.

FROM THE ENGLISH PRESS:

WORLD.—"It is the endearing personality of King Edward which lends the book its abiding charm, and the many little anecdotes in which he figures as either host or guest, always taking a boyish enjoyment in his day's sport, yet ever considerate for others and anxious that they also should have a good time, will be read with pleasure by many who never even saw him. . . . Mr. Watson and those who have come to his assistance have acquitted themselves well, and the publishers have turned the book out with a rich simplicity worthy of its illustrious theme."

DAILY TELEGRAPH.—"As an historical record of the outdoor life of a great King it possesses a permanent value that cannot be too strongly emphasized."

COUNTRY LIFE.—"A book that will be cordially welcomed. . . . As we read this book we come to see that King Edward's fitting epitaph is 'A good King and a good sportsman.' To say that is to say all."

STANDARD.—"Many pages have the peculiar charm which can only be given by personal knowledge. The touch of intimacy is the more suitable since it was in sport that the King and his people came into the closest contact."

SPORTING LIFE.—"Mr. Watson, the author, as a sporting writer has no superior, and the task of compiling the work could not have been in better hands. . . . Not only does the book contain the records of the King in sport, but the various chapters show His Majesty as he appeared to those who were honored with his personal friendship."

Marriage, Totemism and Religion

By LORD AVEBURY, F.R.S., D.C.L., LL.D. Crown 8vo. $1.25 net.

A reply to the arguments brought forward against the author's conclusions respecting the origin of civilization and the primitive condition of man, as expressed in his earlier work, a cheaper re-issue of which, with a new preface, has recently appeared at $2.50. In that work Lord Avebury endeavored to show that the institutions of man develop with considerable uniformity all over the globe. Some fresh evidence is presented in the present book which comprises chapters on THE ABSENCE OF MARRIAGE AMONGST THE LOWEST RACES OF MAN. THE ORIGIN AND EVOLUTION OF MARRIAGE. TOTEMISM. WITCHCRAFT AND MAGIC. RELIGION.

Some Problems of Philosophy

A BEGINNING OF AN INTRODUCTION TO PHILOSOPHY

By WILLIAM JAMES. 8vo. $1.25 net; by mail $1.38.

The book begins with a defence of philosophy against its critics and an exposition of its problems. It then analyzes in turn the problems of the relation of percept to concept, of the one and the many, of novelty, of the infinite and of causation, and concludes with a discussion of "Faith and the right to believe." It develops still further the author's great pragmatistic program of furnishing "a platform on which empiricism and rationalism may join hands in a concrete view of life."

THIRD EDITION NOW READY

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

First Edition, October 1st; Second Edition, November 21st; Third Edition, March 1st

Fully illustrated with portraits and other illustrations. With copious notes and bibliography. $5.00 net. Postage 26 cents.

The Nation

NEW YORK, THURSDAY, JUNE 8, 1911.

The Week

"Bitter resentment" is said to be now filling the breasts of anti-reciprocity Senators at Washington in consequence of President Taft's speech on Saturday at Chicago. But it is not hard to create what already exists. The Senators referred to have all along been angry with Taft. It is true that their wrath may be a degree or two hotter after the President's frank statements at Chicago, but that fact does not essentially alter either their attitude or the prospects of the reciprocity bill when the vote comes finally to be taken. What interests the country is not the question whether there is rage in the celestial minds of Senators, but whether they are able to break the force of Mr. Taft's presentation of the case. He made the broad assertion that opposition to the agreement with Canada, except for certain misunderstandings and unfounded fears about it, was due to the activities of the Lumber Trust and of the manufacturers of print paper. The whole speech was weighty, and, it is already apparent, has made a deep impression upon public opinion. For Senators simply to make faces at it is of no use. Unless they can challenge its facts and answer its arguments, their fuming and railing will only bring ridicule upon them.

To the Spartan band of anti-reciprocity Senators, the American Woollen Company, and other defenders of hearth and home we offer a bit of cheering news from across the seas. In Berlin they have been hissing American opera singers because of the sharp foreign competition to which the domestic artist has been subjected. At the same time, the German spirit is greatly vexed because foreign opera is to be boycotted at Covent Garden during the Coronation season. In Paris, there has been a great deal of grumbling about the favoritism shown to foreign plays. Who was it that first propounded the dogma that Art knows no frontiers? Bosh! The instinct to Protect is implanted in the heart of every patriot, and no self-respecting nation will allow the importation of alien pauper art to be carried beyond a certain point. Here we have been awaiting American grand opera for years and are only beginning to get it, whereas the sensible thing would have been thirty years ago to clap a whacking *ad valorem* duty on Wagner, Bizet, and Puccini. This lesson from Europe Mr. Cannon should be able to use with terrific effect in Congress, provided it is compatible with Protection principles to use a lesson from Europe.

The Senate in the Lorimer case has voted not for a reinvestigation, but a real investigation, and this fact gives the accused Senator and his friends their forebodings. No one thought a few weeks ago, when Senator La Follette denounced his colleagues for their action in refusing to unseat the Illinois Senator, that even the new Senate would be unanimous in ordering a reopening of the matter, but its differences have been merely over the method of procedure. It is now settled that the Committee on Privileges and Elections shall name a special committee of eight, equally divided between Republicans and Democrats, and also between those previously favoring the seating of Lorimer and those opposing it, with all the power and authority of the Senate itself for compelling the attendance and testifying of witnesses. The most impressive element in the change is the revelation that the Senate itself is not so immune to public opinion as men, both within and without it, were inclined to believe.

Senator O'Gorman's statement of the case against the recall of judges, in his address to the New York Legislature last week, was compact but forcible. He showed how the recall would strike at the very highest qualities in a judge—independence and courage. Learning and industry are essential on the bench, but the great thing to be desired there is a high sense of duty, impelling a judge to make decisions which he believes to be just even if he knows that they are unpopular. It would be a calamity, indeed, if a system were set up under which a judge in an important case would have to consider seriously the effect on his own position of a righteous judgment against which a popular clamor could be raised. Senator O'Gorman was well within the truth in declaring that such a state of affairs in the judiciary would be "intolerable," and that the recall would be "absolutely destructive of a stable judicial system."

In its closing hours the Ohio Legislature did all it could to add to the prestige of the Governor whom so many of its members cordially hate. The Senate led in opposition to keeping party pledges, and the House joined it in overriding the Governor's veto of a bill providing for the immediate payment of the legislators' salaries for next year. Seemingly they are uncertain how many of them will be left when the bribery investigation is over. This is the first veto of Gov. Harmon to be so treated. In other matters the House, fearing lest the Senate should defeat the proposed legislation entirely, accepted amendments weakening it. Thus the municipal initiative and referendum bill is rendered of doubtful value by the doubling of the percentages required on petitions. Attempts in the same direction were made by amendments to the corrupt-practices measure, but, as they are in the form of separate bills, Gov. Harmon can veto them individually. Such action, it is thought, will leave one of the strongest laws of the kind in the country, and certainly one that Ohio much needs. The Senate salved its pride if not its conscience by adopting the report of its investigating committee exonerating Senators from the bribery charges, but was finally induced to vote $5,000 for the expenses of the grand-jury investigation. The disgraceful scenes marking the conclusion of the session were a fit accompaniment to the threats of political death for the man who alone had made a Democratic Legislature possible.

A letter to the New York *Tribune* deals with the recent atrocious case of wholesale lynching in northern Florida. It reinforces the point made in these columns recently concerning the premeditated and cold-blooded design that really underlies most outrages of the sort. Passion is no legal excuse for

murder, yet even the passions of a mob may bear some shadow of palliation. But what shall be said of lynching bees that are entered upon in the spirit of a huge picnic or else carried out as an ordinary bit of business? In Alabama the mob, after parleying with the sheriff, retired to a restaurant for refreshments. In Florida the murder was carried out by a party of men in three automobiles. This is mob-murder modernized and made more horrible. We can easily see how all that is decent in the public life of the State of Florida should have risen in protest against this latest atrocity. The Legislature has voted a reward of $5,000 for the punishment of the murderers. No community could let such a hideous act go unpunished without giving a pledge to its own infamy.

Even the business of saving souls cannot afford to dispense with business methods. Appropriately enough, it is a gentleman from Pittsburgh who is to preside over the committee that has for its slogan, "A million dollars for foreign missions and 25,000 souls saved." From Pittsburgh we thus learn that the standard quotation on souls is forty dollars, a bit of information which is sure to fire the flagging zeal of every contributor to foreign missions. No playing here with vague generalities, no allusion to the countless millions of the East, or the heathen sitting in darkness and unenumerated by the census-man. After this, every man knows what he gets; he pays down his forty dollars and he gets one soul saved. That the contributions will now pour in there can be no doubt.

In the latest addition to the list of prohibited books, we get an interesting glimpse into the workings of the mind of the Sacred Congregation of the Index. As the cable dispatches recently informed us, the last novel of Fogazzaro, together with "all the dramatic works" of D'Annunzio, as well as his collected prose-writings and romances, has been put upon the Index. Some people hastily inferred that this decree was broad enough to cover D'Annunzio's forthcoming play, "San Sebastiano," about which there has been much protesting outcry in advance. But even infallibility is unequal to condemning what it has not seen: all that the Congregation is ready as yet to say about that work is that it is "looked upon with suspicion." More surprise has been caused by the inclusion of "Leila," Fogazzaro's last book. His submission to the Church in the case of "Il Santo," and his general profession of hearty belief in Catholic doctrine, had led his friends to hope that his final romance would escape an adverse verdict. In explaining this, a high ecclesiastic is quoted by the Vatican correspondent of the *Corriere della Sera* to the following effect: "As is well known, a decree of the Index does not necessarily imply that a book is heterodox; it may signify merely that it is suspected. In Fogazzaro's book there is not a trace of Modernist doctrine, but in its characterization of churchly persons there is a certain latent hostility to the hierarchy; while the characters that avow liberal ideas are presented more sympathetically. This is enough to account for the condemnation of 'Leila.'" Evidently, Pascal's Monsieur Distinguo has left successors.

President Taft says of the endorsement written by Col. Garrard upon the application for examination as an officer made by an enlisted man who is a Jew and whose father is a tailor, that it is difficult for him to refer to it "with patience and without condemnatory words that had better not be written." In this feeling, right-minded persons generally will share. The objection made by Col. Garrard to young Bloom seems to be about equally compounded of the fact that his family is Jewish, that his and their associations "have been with enlisted men and their families," and that his father makes his living as a tailor. It would be interesting to know the precise state of mind in which this colonel was when he was writing his singular statement of position. Not to speak of the matter of religious connection, would it be the idea of Col. Garrard that only such enlisted men should be admitted to examinations for promotion as had eschewed the society of their comrades and had had social intercourse with the families of officers or men in high civil station? And would he further require a certificate on the part of the candidate that, while he was receiving the pay of a private, his father was engaged in some pursuit of unexceptionable elegance? Incidentally, it may be mentioned that Andrew Johnson, who, as President of the United States, was commander-in-chief of the army, had himself been a tailor—the Constitution of the United States being lamentably deficient in providing against such contingencies.

Chicago is rejoicing over the signal honor that has come to that city in connection with the Coronation. The mother country may be able to furnish its own monarchs, and New York may swell with gratification over the rows of peeresses that will represent her in the Abbey, but the man who is to render it safe to attempt such a ceremony at all has been found in the Western metropolis. Winston Churchill, rendered wise by his brief but memorable experience at the siege of Stepney, has determined to reinforce Scotland Yard by the addition of a Chicago man who knows American thieves like a book, and whose acquaintance with the "aristocracy of the world of crime" will be a powerful deterrent to their ambitious designs. It is said that the invitation to the famous detective came from the recommendation of no less a personage than the head of the London Metropolitan Police, and is the result of such exploits as the recovery of the stolen Gainsborough, after it had been lost for a quarter of a century. Thus, if we take rare paintings and books with one hand, we guard for England what is left with the other.

It is pleasing to note that a movement is on foot in Philadelphia to commemorate in a fitting manner the life and work of the late Prof. Angelo Heilprin. The project has taken the form of an endowed lectureship, to be known as the "Heilprin Memorial Lectures of the Geographical Society of Philadelphia." Professor Heilprin was the founder of that society, and it was at Philadelphia that he carried on his labors, apart from those of geological and geographical exploration, during nearly the whole of his scientific career. It is not only as a scientist that his memory is cherished, but equally as a man of rare and high qualities of character, and of exceptional traits of personal attractiveness. To the general public he was chiefly known through his daring ascent and study of Mont Pelée immediately after the great Martinique disaster, and for his activities in connection with

Arctic exploration, in reference to which Admiral Peary has said: "To him was due primarily the renewal of interest in Arctic work in this country." These, however, were but incidents in a life of ideal devotion to science.

To awaken universal interest in the æsthetic side of parks is one of the many functions of the school gardens which are everywhere multiplying. In this country the practice of having gardens attached to schools dates back little more than a decade. In England, France, Russia, Germany, Austria, and Switzerland the custom is much older, and it is largely for this reason that in those countries one sees so many of the window gardens which do much to beautify the cities. In New York one may walk a dozen blocks in the arid residence sections without seeing a single flower pot. To add gardening to the already overcrowded curriculum will seem to many a hardship, but it in reality is a recreation. "When gardens come to be a part of the school curriculum, a very large percentage of the nature study now done indoors will be done outdoors," writes Dr. M. L. Greene, in her valuable book, "Among School Gardens." "Everywhere that the garden has been introduced in connection with the school, the universal testimony is that it stimulates the child to better intellectual grasp of his studies."

The moral gain is equally great. Once the interest of the children in flowers and vegetables is aroused, they will devote to them hours that would otherwise be spent on the streets, often amid demoralizing surroundings. Observers have noted that there are fewer failures among men who, as boys, had to do garden or farm "chores" than among others. In Carleton County, Canada, we are informed, 71 per cent. of the children from schools with gardens passed their high-school examinations, while from the schools without gardens only 49 per cent. passed. American teachers also report "growth in mental alertness, in the sense of responsibility for school property and appearance, and less disorder and naughtiness from the exuberance of animal spirits which now find a safe vent in gardening." For the forming of character it is of the utmost importance that as much of the work as possible, from the spading and raking of the soil to the planting of the seeds and the gathering of the flowers or vegetables, should be done by the children themselves. This not only enhances their pleasure and their eagerness to do the work, but gives them a sense of personal responsibility which toughens the moral fibre. It also develops the sense of private ownership.

With the approval of the Declaration of London by the Imperial Conference there comes to an end all danger of a failure of its ratification by Parliament. The adoption by England of the principles of maritime international law embraced in it will go far toward placing that country in the position for which the United States has steadily contended as to the immunity of private property from capture at sea in time of war. Under the Declaration, this protection is secured under all circumstances for large classes of goods, while other most important classes—foodstuffs, clothing, fuel, etc.—are to be regarded as contraband only when intended for the direct use of the enemy's forces. Although this does not go the full length of the historic contention of this country, our representatives felt it to be sufficiently near that position to justify their assent, and the British Ministry has thoroughly committed itself to the agreement. But it is a marked departure from British policy in the past, and has met with strong opposition, especially from representatives of the extreme navy spirit. Postponement of Parliamentary action until the views of the colonial premiers could be obtained, at their meeting in the Imperial Conference, has proved a happy stroke on the part of the Government, which now has on its side not only the daily growing weight of sentiment in favor of all humane projects bearing on the question of war, but also the express support of the authorized representatives of colonial sentiment.

United Italy will signalize the beginning of the second half-century of her national existence with a sweeping change in her electoral system. It is assumed that the government's suffrage bill will become law without serious modification. In that event universal suffrage will be substituted for the present system based on an educational and property qualification. Secondly, voting will be made obligatory, and the electorate will thus be swelled by the entire mass of Catholic voters who now boycott the polls. Out of nearly nine million males over the age of twenty-one, less than three million are now inscribed on the electoral lists. Under the new law, it is estimated that in the next parliamentary elections nearly nine million votes will be cast—an enormous increase on the face of it. Out of the nine millions, nearly three and a half millions will be illiterates, and a million and three-quarters semi-illiterates—voters, that is, who are able to read only. Furthermore, it is estimated that in northern Italy the vote will be doubled, in central Italy trebled, in Rome and Naples increased fourfold, and in Sicily and Sardinia increased fivefold, thus emphasizing the present predominance of the south Italians. The consequences must be far-reaching. The total enfranchisement of women in the United States or Great Britain would not work so great a change in the political complexion of the respective countries.

Victor Emmanuel II, to whom United Italy has just dedicated the imposing and extraordinary monument on the slope of the Capitoline, is a victim of the injustice that history deals out to constitutional kings. The maxim that a constitutional king reigns but does not govern is pressed to the illogical conclusion that a constitutional king by definition can have nothing to do with events that shape themselves under his reign. The welding together of Italy, for instance, history assigns primarily to Cavour; and correctly. But for some years before Cavour came into power, Victor Emmanuel had given evidences of a capacity to reign. He was a rough-hewn, soldierly figure, with no taste for intellectual pursuits. He fought with splendid courage against the Austrians, and, when his father's abdication after the disaster at Novara made him King (in March, 1849), he succeeded in saving something from the ruins. It was one of Austria's demands that the constitution of the Kingdom of Sardinia should be done away with. Victor Emmanuel refused, and gained his point, winning for himself the title of *re-galantuomo* and the confidence of all Italy.

THE TOBACCO DECISION.

Naturally, the Supreme Court decision against the American Tobacco Company was received with less intensity of interest by Congress, the public, the corporations, and the markets, than was the Standard Oil decision of May 15. That earlier decision, in the large principles of law and judicial interpretation laid down by it, pointed out broadly the lines on which other cases under the Anti-Trust act would be decided. The question whether these principles would apply to the Tobacco company was doubtless made more interesting by the lower court's decision. Mr. Justice Lacombe's opinion of 1908, in deciding the case against the company in the Circuit Court, had held that the Sherman Act prohibited, to the minutest particular, all contracts, including partnerships, which restrained an existing trade or competition. But it also held, as summarized in the Government's statement on appeal, that in the Tobacco case "the evidence fails to show that defendants have practised unfair, wicked, or oppressive trade methods," and it intimated that "they have not in fact injured commerce." From this followed the lately prevalent idea that the law of 1890 forbade pretty much all trade contracts and agreements, large or small.

The Standard Oil decision swept away the lower court's construction of the law; the Tobacco decision reverses its interpretation of the facts. The Supreme Court finds the Tobacco Trust unlawful, "not alone because of the dominion and control over the tobacco trade which actually exists," but because "the conclusion of wrongful purposes and illegal combination is overwhelmingly established" by the undisputed facts of the testimony.

The chief expectation, however, in this second opinion, touched the court's further elucidation of what has been popularly styled its "theory of reasonableness." And this expectation has not been disappointed. It should be observed, to begin with, that neither the Standard Oil nor the Tobacco opinion uses or defines the expression "reasonable restraint of trade." The keynote of the Standard Oil decision was the Chief Justice's declaration that the application of the Anti-Trust Act, in the intention of its authors, was "to be determined by the light of reason, guided by the principles of law." The keynote of the Tobacco decision is its declaration that although—giving to the statute a reasonable construction—"the words restraint of trade did not embrace all those normal and usual contracts essential to individual freedom," nevertheless the real purpose of the law is so plain that it cannot be frustrated or evaded "by resorting to any disguise or subterfuge of form."

"Determining in the light of reason" and "resort to reason" have been widely described as an innovation in Supreme Court procedure, or as "writing something into the law." It is highly important that this misconception (for such we regard it) should be removed from the popular mind. The current number of *Bench and Bar* adduces some illuminating instances of previous and habitual application of this rule by courts. A famous case under the Bolognian law, providing that "whoever drew blood in the streets should be punished with the utmost severity," was promptly limited by the courts to exclude a surgeon who opened the veins of a person fallen in a fit, and the judgment was concurred in by the commentators. The analogy is not so remote from the present controversy as might be supposed. To come down from old to recent law, in the very next year after the Trans-Missouri decision, a Supreme Court opinion, written by the very judge (Mr. Justice Peckham) who wrote the Trans-Missouri decision, and involving, as did that decision also, the Anti-Trust law of 1890, declared that "the act of Congress *must have a reasonable construction*, or else there would be scarcely left an agreement or contract among business men that could not be said to have, indirectly or remotely, some bearing on interstate commerce and possibly to restrain it." "We have no idea," pursued the opinion in that case of Hopkins vs. United States (concurred in by the majority of the court), "that the act covers or was intended to cover such kinds of agreements."

In yet another case the court excluded from the scope of the contract labor law of 1885 the case of a clergyman engaged in England for the service of an American congregation. "The act of the corporation," Justice Brewer wrote in his opinion, "is within the letter of this section." But he went on:

> It is a familiar rule that a thing may be within the letter of the statute and yet not within the statute, because not within the spirit nor within the intention of its makers. . . . This is not the substitution of the will of a judge for that of the legislator, for frequently words of general meaning are used in a statute—words broad enough to include an act in question—and yet a consideration of the whole legislation, or of the circumstances surrounding its enactment, or of the absurd results which follow from giving such broad meaning to the words, makes it unreasonable to believe that the legislators intended to include the particular act.

An interesting fact about that opinion is that the court was unanimous in the decision, and that Justice Harlan concurred.

In other words, the so-called "rule of reason" is not only not an innovation, but is merely the application of the rule of common sense which must guide alike the conclusions of the private individual and of the court of last appeal. If great stress has been laid upon the rule in the Chief Justice's Anti-Trust Law opinions, and if people at large have generally received the rule as something new, this, to our mind, is the obvious result of a lower-court opinion which failed to recognize the time-honored principle of jurisprudence, and of the public's mental confusion as a consequence of that opinion. As for the argument that "resort to reason," in future application of the law, will throw all business undertakings into uncertainty and confusion, we see nothing in this at all. The court has already laid down principles so broad and clear that it will not be easy hereafter for the right-minded business man to misunderstand their scope. To assume that this, with such leading cases as will follow, is an unsettling alternative as compared with the sweeping and rigid application of the purposely broad and indefinite declaration against "contracts in restraint of trade," is beyond our power of imagination.

GOVERNMENT-FIXED PRICES.

Judge Gary of the Steel Corporation and Mr. Roosevelt are again in agreement. They were of consenting minds in 1907, when Judge Gary went to the President to ask permission to absorb the Tennessee Coal and Iron Company. The fortunate (for the Steel Corporation) outcome of that visit seems to be in Judge Gary's mind when he now says: "I wish we could go to some re-

sponsible governmental source and say: 'Here are our facts, here is our business, here is our property and our cost of production,' and could be told just what prices we could charge and just what we could do." This is virtually the position taken by Mr. Roosevelt in his Osawatomie speech, and in his article in last week's *Outlook* on "The Standard Oil Decision—And After." He has as small patience as Judge Gary with "intermittent law-suits" and the archaic Anti-Trust act, and would have the Government regulate all corporations doing an interstate business just as completely as it does railways. That means, of course, fixing the prices they may charge.

It will be observed that, in this particular instance, the proposal is to lock the stable door after the horse is stolen. The corporation begging the Government to tell it how much it may charge is one that has already effected its combinations and watered its stock. That capital stock it now doubtless regards as the "property" to which Judge Gary referred, and upon which a benevolent Government would not deny it a reasonable return. We can hardly imagine him or any of the promoters of the original Steel Corporation anxious to go to some "responsible" government official, even if it were one as easily misled as President Roosevelt was in 1907, and ask how much stock might be issued on the merged properties. That kind of Government regulation would be awkward; but it is a very different affair if you can go to Washington as a combination that is an accomplished fact, a fact which the responsible governmental source will not question, and get help in maintaining prices at a given level.

What Judge Gary chooses to forget is that independent manufacturers of iron and steel—indeed, the great body of industrial corporations—are not in the peculiar situation of his company. That is, they are not haunted by the fear that they have violated the Sherman law, they are—to say the least—more conservatively capitalized, they are not in mortal terror of competition, they are anxious to take advantage of skill and invention and natural opportunity and to try their powers against their rivals, and would never think of asking the Government to determine upon a uniform, or a maximum and minimum, price for their product. The point we make is that in the original organization of a manufacturing concern, where capital has to be sought and the hope of profits appealed to, this theory of government-fixed prices would not be invoked at all; and if it were compulsorily put into operation, it would have the inevitable effect of discouraging investment and chilling enterprise. Money simply would not be forthcoming under those circumstances. The case is naturally different after you have once got your money and inflated your stock and would like to have a "reasonable" rate of profit on the vast total guaranteed by the Government.

Judge Gary's statement leaves one thing very much to seek: who is to guarantee the guarantors? Who is to furnish that governmental omniscience in which Judge Gary so trustingly confides? Again go back to 1907. At that time we had in office a President who admitted his own infallibility. Yet he was egregiously deceived by the men who came to him as a fountain of justice to get him to decide on the legality of buying up a competitor. On this point it is enough to refer to the report of the Senate Judiciary Committee in 1909. "The President was misled," stated a Senator of his own party, Mr. Nelson. But if Judge Gary's responsible governmental source could go wrong in so comparatively simple a matter as that, what assurance could we have of justice or finality in the immensely more complicated and difficult task of deciding by government fiat what should be the price of steel products and—very soon after—all other products entering into interstate commerce? To say nothing of the Socialism which lurks in the whole scheme, it would heap up an administrative burden greater than any back could bear.

A marked fellowship of kindred minds appears in Mr. Roosevelt and Judge Gary as respects the recent decisions of the Supreme Court. These have been accepted by the country as a mighty contribution to the problem of dealing with monopolies. Two great combinations have been dissolved. But to Mr. Roosevelt the law thus declared by the Supreme Court is "radically and vitally defective"; while Judge Gary calls it "unable to deal with the modern situation" because "we do not know just what we have a right to do." But it is something to know what we have *not* the right to do. The Supreme Court decisions did not, indeed, write, as some foolishly expected them to do, the "Ten Commandments of the Trusts," but they did sharply indicate some things which cannot be done. Espionage upon a competitor's business through the corruption of his employees; the deliberate cutting under of market prices in order to ruin an independent company; the purchase of properties for the direct purpose of dismantling them and preventing competition; the attempt to obtain a monopoly—these are all forbidden and are plain sign-posts showing the road in which the wayfaring Trust magnate, though a fool, need not any longer err. Far from having left the whole matter "up in the air," as Judge Gary intimates, the Supreme Court has put it firmly on solid ground, as President Taft said in Chicago Saturday of last week; and the big corporation managers would do much better to conform to the law as it is now interpreted than to begin to talk about getting the Government to fix the price of commodities.

THE DEMOCRATS AND THE WOOL SCHEDULE.

The House Democratic caucus on Thursday of last week administered to Mr. Bryan the sharpest and most conspicuous defeat that he has yet experienced at the hands of any representative body of the country's Democrats. He had thrown down the gauntlet, and the challenge was accepted with a cheerful readiness that has been more than justified by the event. In response to his assumption of the right to declare any Democrat differing with him on a special, though important, question of tariff policy a traitor to the principles of the party, the caucus unanimously adopted the proposition branded by him as traitorous, although, prior to his pronunciamento, it had been opposed by a considerable minority. Mr. Underwood had counted on a two-thirds majority in favor of his bill; Mr. Bryan's arrogation of the right of dictatorial censorship converted the two-thirds vote into a unanimous one. The dissenting Democrats, unable to work themselves into that frenzy over free wool which had so suddenly taken possession of Mr. Bryan, felt it more important to make it clear to the country

that the party was not under the Nebraska man's domination than to protest against the deliberate judgment of the majority on the particular question whether the duty on raw wool should be cut in half or abolished altogether.

Apart from its bearing on the political status of Mr. Bryan, the result of the caucus is of great political significance as one more manifestation of the ability of the Democrats at Washington to stand together on a well-considered line of action. There was much to be said on both sides of the free-wool question as a matter of party policy; Mr. Underwood and those siding with him may or may not have been right in holding that the revenue aspect of the case should decide the question in favor of a moderate duty. But there is no ground whatever for questioning his sincerity. The general principles which he laid down several months ago, and long before the present Congress assembled, as expressing his views of a proper revision of the tariff, would call for just such a bill as he has drawn. The retention of a 20 per cent. duty on raw wool provides an estimated revenue almost sufficient to balance the loss of revenue produced by the cutting down of the duties on manufactures of wool. As a whole, one of the greatest recommendations of the bill as part of a programme of party policy is that, while affording a large measure of relief to consumers, it will be a difficult one for the Republicans to make capital out of. A tariff that leaves a 20 per cent. duty on wool, and gives to the manufacturers a protective tax ranging from 25 to 45 per cent., may give rise to a great howl among the tariff-fed interests, but will hardly be looked upon by the people at large as a cruel injustice to anybody.

Like the Wilson tariff bill of 1894, the Underwood bill puts all the duties on woollen goods upon an *ad valorem* basis. It is in the woollen schedule that the iniquities of protectionism have reached their highest point of perfection; it was the woollen schedule of the Payne-Aldrich act, taken over from the Dingley act, that President Taft stigmatized as utterly unjustifiable, even when he was most anxious to defend the tariff record of the Congress which he had convened in extra session at the beginning of his Administration, and to whose tariff bill he had given the sanction of his official approval. "No part of the tariff," says Professor Taussig in his Tariff History of the United States, speaking of the task undertaken by William L. Wilson, "was more intricate; in none was it more difficult to ascertain the real degree of net protection finally given to manufacturers; in none were the duties higher." The same state of things exists to-day; but the statement given out by Chairman Underwood, comparing the proposed straight *ad valorem* duties with the existing duties reduced to an *ad valorem* basis ought to do something to enlighten the public on the subject.

Most people will experience little difficulty, for instance, in deciding that a penalty of 103 per cent. on the importation of "women's and children's dress goods and similar goods" is too great a price to exact from the people of the country for the privilege of maintaining the home manufacturers of those commodities, and that the 45 per cent. which the Underwood bill proposes is as much as can reasonably be demanded. Not many persons, we venture to think, would have the face deliberately to defend a tax of 95 per cent. on woollen blankets, especially when they reflect that real woollen blankets, one of the genuine comforts of life and safeguards of health, are as scarce as hens' teeth among the masses of the people. Few persons other than carpet manufacturers could, with a straight face, insist that the cost of carpets ought to be increased by two-thirds at the custom house, or could cry out against the fearful injustice of giving the home manufacturer of these things an advantage of only 30 or 35 per cent. in the shape of a penalty on importation. And so we might go on through the list—it tells just what the woollens tariff has really been doing, and what it is proposed that it shall do in the future.

On this exhibit the Democratic party can well afford to go before the country, and demand its verdict. No vague and general profession of readiness to amend the tariff in such particular features as may be unjust will serve as an answer. Neither will it do to attempt to smother the whole question by an appeal to the comfortable doctrine of "difference of cost of production," which for a time was welcomed by Republican spokesmen as a universal solvent for all tariff difficulties. If the principle of difference of cost of production calls for a 100 per cent. tax on clothing or blankets, so much the worse for the principle. The people may be willing enough to accept that principle as setting an upper limit beyond which protective taxes must not be allowed to go; but they will not accept it as a command to submit to the taxes it would prescribe, however exorbitant and oppressive these may prove to be. Not the least of the benefits to be looked for from the declaration of the Democratic programme at this time is the clean-cut and specific basis it will furnish for the challenging of the latest protectionist formula in the next Presidential campaign.

THE IMPERIAL CONFERENCE.

Although the Imperial Conference in London is to continue its sittings until the Coronation, the largest matters to come before it have now been considered. These are the question of Imperial Preference in fiscal legislation; Imperial Defence; and some sort of Grand Council or Federation to pass upon all great issues affecting the Empire. In none of these affairs has any advance been made. Resolutions concerning them have been discussed, but nothing has been determined. Imperial Preference is dead—or, at least, in a state of suspended animation from which nobody but another Joseph Chamberlain could rouse it, and no such man is in sight. The Colonies know that England has three times voted decisively against protection within the past five years, and without protection there can be no Imperial Preference. Nor has any progress been made in the matter of an Imperial army and navy. The general position of the Colonies remains unchanged, and is very much as Sir Wilfrid Laurier defined it less than a year ago: "It is not advisable for Canada to mix in the armaments of the Empire. We should stand on our own policy of being masters in our own house." This does not, of course, exclude coöperation in case of war, but it rules out the ambitious schemes of those who have been preaching about a truly Imperial Defence. And Imperial Federation appears even further away than it seemed in 1902, when even Mr. Chamberlain was nearly hopeless about that "dream," which he held to be merely "within the limits of possibility."

From all this it would be hasty to

conclude that the Imperial Conference has been a failure. Its action on the questions which we have mentioned was fully discounted in advance. Their discussion, it was known, would be purely tentative. But there is much else that has been and will be laid before the Conference which is of great interest and usefulness. Indeed, the very change of name given to the gathering is significant of the spirit of helpful consultation and coöperation which animates it. Formerly it was called the Colonial Conference. That implied a certain dependence which the self-governing nations that prefer to call themselves Dominions rather than Colonies are no longer asked to admit. What they enter now is a true conference where matters concerning the Empire are freely debated as between equals. The mother invites her children to come to the old home once in four years to talk over the large interests of the family. There is a new considerateness in this attitude which is worth more, we are sure, in promoting loyalty among the Colonies than any number of "preferential" taxes on Colonial wheat or mutton. The action of the Government in laying the Declaration of London before the Conference was a fine example at once of thoughtful deference and political tact. By it the strong opposition to the Declaration got a setback, the Colonial Premiers were complimented, and Mr. Asquith's Ministry strengthened—all at the same time.

Included in the detailed work to be attended to by the Conference—work which is not sensational but highly important—is discussion of the means by which cable communication between England and the Dominions may be cheapened. Several resolutions on this subject will come up for debate. Another question, Imperial in every sense of the word, which the home Government will raise, relates to the treatment of Hindus throughout the British Dominions. This is a delicate matter, as the indifference, not to say dislike, shown to India by Australia and South Africa, has long been a reproach, sometimes, as at the time of the Boer war, amounting to a scandal. It has been suggested that the Colonies be asked to furnish a few regiments of the garrison in India, as a means of stimulating their pride in that great possession. Such a step, however, appears improbable. The colonials will presumably fall back on their plea that the troops which they raise and equip must be for their own use, except in the event of a war endangering the Empire.

Looking at the Imperial Conference all round, its course must be said to be reassuring and gratifying. Begun as a grandiose and somewhat unsettling Imperial project, the Conference has settled down to a useful and steadying rôle. There is no longer any fear of English domination over the Colonies. Their sense of nationality is becoming more intense every year. The Premier of Canada has no more surely than the Premier of New Zealand the air of a representative of a proud and self-governing nation which will not acquiesce in coercion of any kind on the part of England. The spirit of "colonial nationalism" is making its way into foreign affairs, Canada asserting or receiving the right to a much freer hand in treaties. So, too, South Africa has entered into a treaty with Portugal, relating to Delagoa Bay, and though the British Government assented to this, it was not a party to it. This illustrates the way in which British Imperialism seeks to bind the colonies to the empire by ever larger grants of self-government.

PROBLEMS OF THE AIR.

The great aeroplane flights from Paris to Madrid and to Rome have been replete with incidents that justify nearly every adjective in the late P. T. Barnum's advertising vocabulary. Thrilling, stupendous, marvellous, unrivalled, epoch-making, adventurous, dramatic, romantic—every one of these terms can be used in almost a literal sense of the achievements of Vedrine, Conneau-Beaumont, and Garros. People's minds have been seized by the picture of the Pyrenean eagle giving battle to this enormous new invader of the air. Others have discerned a certain dramatic significance in the fact that the successor of the Pope who warred with Galileo should be scanning the horizon through one of Galileo's telescopes for the advent of the first aerial passenger out of the north. But one incident as impressive as any derives its effect from the very business of flight itself. It is reported that as one of the competitors was passing over Lyons without being aware of the fact, two aviators at the checking station jumped upon their machines, soared into the air, and overtaking the errant airman, brought him back to the judge's stand. In that instantaneous saddling of the machine for a leap into the air is most strikingly exemplified the point of development attained by the aeroplane.

One of the gratifying features of both international flights has been their freedom from fatal accident. Vicissitudes there have been in plenty. Aviators have fallen repeatedly, but in nearly every case only to rise again. This shows once more that most of the fatalities for which the aeroplane is responsible have been occasioned by the recklessness of aviators in the course of public exhibitions. In a way, of course, every daring circus feat serves its purpose in advancing the solution of one of the thousand problems that the science of aerial navigation has still to cope with. But lives might be saved without hindering the progress of the flying art, if such problems were dealt with as they came up in the course of actual long-distance flying. In any case, it is to be noted that only two or three years ago cross-country flying was much more hazardous than aerodrome flying. To-day, the situation would seem to be completely reversed; and the reason is apparently in the greater amount of care and forethought exercised by the long-distance performer.

It is in its ready ability to rise after falling that the aeroplane demonstrates its steady approach toward practicability. In this, too, consists its great superiority to the dirigible balloon. To-day the aviator is no longer in need of great flat spaces of ground to soar from and land upon. This would be shown by the experiences of nearly all the men in the Madrid and Rome competitions. They were compelled to descend in out-of-the-way places, but, provided fuel and repair facilities were at hand, they seem to have had no difficulty in taking the air again. What are the rules for a successful long-distance flight? In the first place, the aviator prefers to travel at a high altitude, not only for the purpose of avoiding hostile air currents, but for greater safety. Waldemar Kaempffert, in his book "The New Art of Flying," points out that in case of motor stoppage the airman is safer two

thousand feet up in the air than fifty feet. In the first situation, he can almost invariably come to earth on a long glide. In the second case, a crash is unavoidable. In case of total motor collapse like that experienced by two French army aviators a few weeks ago, there is little choice between a fifty-foot fall and one from two thousand feet. Flying, then, at a safe height, and sure of a landing on the first piece of meadow, the aviator has only to be assured of a ready supply of fuel and substitute machine-parts in order to cover distances that may now be estimated in thousands of miles.

The wonder is that the aeroplane should have accomplished as much as it has by methods largely empirical. Something has been done, of course, by pioneers of the Langley and Lilienthal type in laying down scientific principles of stability and equilibrium in the air. Something has been done in the gathering of meteorological statistics for the use of airmen. But in neither field have sufficient data been accumulated to constitute the basis for rigid scientific deduction. Before aerial navigation can become a well-established art, three basic problems will have to be dealt with: (1) a thorough investigation of the behavior of moving "planes" in the air, whether flat or curved; (2) the mapping of the air regions over the principal countries of the world or at least along the principal air-lines; and (3) the perfecting of automatic control within the aeroplane itself. At present the aviator ascends into the air on a machine that he has built largely by rule of thumb, and controls almost entirely by muscular agility, and he travels through a medium that he must traverse much after the fashion of a man making his way through a dark room. The mapping of the air is a tremendous but a most necessary undertaking. Mr. Kaempffert emphasizes the difficult geography of the atmosphere, its currents and counter-currents, its air-walls and air-precipices. Glenn Curtiss encountered them all on his flight down the Hudson Valley. "The men who crossed the English Channel," says Mr. Kaempffert, "found that against the chalk cliffs of Dover a vast invisible surf of air beats as furiously as the roaring visible surf in the Channel below."

Toward the solution of these problems, France is doing more to-day than any other nation. This is not due to the fact merely that she was one of the earliest in the field. Nor need we say that mastery of the air is a task that appeals to French bravura. The fact is that natural conditions are more favorable to air-flight in France than in any other European country. Her more equable climate, her greater amount of sunlight as compared with Germany or England, must be taken into consideration. In the rather random speculation regarding the possibilities of war in the air, little attention has been paid to this advantage which one country may enjoy over another. In England, with its rain and fog, the military air-ship of the future can count only so many days' activity during the year. In Germany the range is probably wider. In France it is wider still.

THE WESTERN ECONOMIC SOCIETY.

CHICAGO, June 4.

The Society, recently organized by university and business men of Chicago to promote intelligent discussion of the economic issues of the day, held its first conference in that city on June 3, and devoted a full day to consideration of the proposed reciprocity agreement with Canada.

Popular interest on this occasion centred in the appearance of President Taft, who made the trip from Washington in order to state, at the final evening meeting, his reasons for urging the passage of the reciprocity legislation now before the Senate. The substance of the President's speech has been made known through the daily press, and may be studied at leisure. Its immediate effect was to create a most favorable impression on the large audience which heard it. Mr. Taft showed himself an earnest and outspoken advocate without a suggestion of disingenuousness, and was able in large measure to combine a reasonable analysis of his problem with an appealing presentation of his case.

But the Western Economic Society was not devised primarily to provide a rostrum for distinguished figures in political life; and its purpose in arranging the conference is best indicated by the programmes of the earlier meetings. "Canadian Reciprocity and the Farmer" was the central topic of the first session. Prof. E. V. Robinson of the University of Minnesota approached this subject from the standpoint of an economist interested in agricultural problems and favorable to the proposed reciprocity. Rodney B. Swift, an Illinois farmer, earnestly opposed reciprocity, though he failed to bring the decline of farming which he pictured into convincing connection with conditions of international trade. Further opposition was voiced by George C. White of Nevada, Ia., and by the representative of the American Protective Tariff League, P. V. Collins of Minneapolis, editor of the *Northwestern Agriculturist*, and an organizer of anti-reciprocity sentiment among the farmers of the Northwest. Ex-Gov. Hoard of Wisconsin, who enjoys high authority as a farmer and farmers' advocate, was represented by a letter in which he favored reciprocity, to the manifest discomfiture of the agricultural partisans present. In the afternoon other aspects of reciprocity were emphasized. Robert Fullerton of Des Moines read a temperate paper on "Reciprocity and the Lumber Trade." Prof. W. A. Scott of the University of Wisconsin endeavored within the limits of a brief address to explain the bearing of reciprocity upon the cost of living. Prof. F. W. Taussig of Harvard University interpreted the proposed treaty as a means of introducing neighborly common-sense into border relations, and deprecated the credulity which anticipates in consequence of the treaty either wholesale loss or universal benefit. Prof. David Kinley of the University of Illinois opened a spirited general discussion. At the evening meeting, previous to Mr. Taft's speech, short addresses were made by Prof. Shailer Mathews, president of the Society; Prof. L. Laurence Laughlin of the University of Chicago, and H. A. Wheeler, president of the Chicago Association of Commerce.

A significant feature of the proceedings was the prevalent opinion that reciprocal tariff concessions in the case of Canada would lead logically to a general readjustment of our tariff relations, with the effect of freer trade. The first speaker of the day, Prof. H. P. Willis of George Washington University, pointed out that the most-favored-nation clauses appearing in our several commercial treaties would, if this Government maintains its established though anomalous position on the interpretation of such provisions, almost inevitably operate to extend to all the nations concerned the same reciprocal privileges which we propose granting to Canada. In Professor Willis's estimate this promise of a larger liberation of trade is the chief merit of the proposed Canadian treaty. Speakers who opposed reciprocity in the interest of agriculture repeatedly implied, or even directly stated, that the farmer protests, not against thoroughgoing free trade, but against the specific reduction of duties on agricultural products, while for other products a high protective system is maintained. In fact, despite the efforts of some participants in the debate to accredit themselves as protectionists in good and regular standing, there were many evi-

dences during the day of the strength of sentiment in favor of systematic tariff reduction.

In arranging for its conferences the Western Economic Society has hoped that by bringing together men of academic training and men experienced in affairs it may furnish occasion for such give-and-take of opinions as shall both broaden and clarify public thinking on economic questions. This first conference attested alike the importance and the difficulty of accomplishing such a result. For the papers that were read fell unmistakably into two groups: those which favored reciprocity on general economic principles, and those which protested on account of a special interest or privilege conceived to be put in jeopardy. Between these two points of view is a gulf difficult to bridge. However much the manufacturer may have exploited the farmer under the protective system, the attempt of the farmer in his turn to procure a parasitic benefit at the sacrifice of the community at large is repugnant to all who judge our trade relations with Canada by their effects on the general welfare. The trained economist, moreover, cares little for arguments which ignore the fact that high-priced land is by implication highly advantageous land, and which appeal to a scale of protective duties based on the inane principle of a precise offset of differences in production-cost—a principle which, rigorously applied, would put an end to all trade.

But, on the other hand, the economist has difficulty in commending his scientific method to the bare self-interest of the man of affairs. His very effort to rise above narrow issues makes him seem amusingly remote from the motives of business. For such reasons as these it remains to be seen whether any revision of judgments already formed is to result from this discussion of reciprocity. But at least new attention has been aroused; and a beginning has been made in establishing in the Middle West a forum to which the public in search of economic information may regularly turn, with confidence that all sides are to have a hearing, and with increasing hope of enlightenment.

JAMES A. FIELD.

LIBRARIANS IN CALIFORNIA.

PASADENA, May 27.

Twenty years after its first visit to California, when Pasadena was but sage-brush and a village, and had collected scarcely one of the thirty-five thousand volumes in its library, the American Library Association opened its thirty-third annual convention here, with five hundred delegates, one-fourth of whom came from the far-away East. A week was devoted to addresses, reports, and discussions which elicited many opinions in regard to library extension and usefulness, but which gave the usual evidence also of those who emphasize the details of library administration, approaching the numbering of a book, for example, with a mystery and awe quite inexplicable to the more benighted but practical layman. This painful diligence challenged the attention of one speaker in particular, Dr. Benjamin Ide Wheeler, president of the University of California, who, while paying a high tribute to the profession generally, told the convention how differently he regarded the ideal librarian. He had fond memories, he said, of a librarian who used to arrange his books according to the colors of their covers and the size of the labels on their backs; for whatever else his merits or demerits, that librarian loved his books, and caressed and fondled them. Doubtless Dr. Wheeler's amusing logic convinced a few of his auditors, but it certainly sent others away in a temper. President Wheeler was not the only one who dared to criticise. Dr. James A. B. Scherer, president of the Throop Institute (who has recently waged a spirited contest against the Leland Stanford and the California Universities for a third university charter), Lincoln Steffens, and George Wharton James, all spoke their mind plainly. Dr. Scherer set out to speak on "Books and the Efficient Life," and made a strong plea for more standard selection in libraries, and for reading "just for fun." "Everybody is in favor of efficiency except Gilbert K. Chesterton, that strange quadrangular contemporary reincarnation of Samuel Johnson, Thomas Carlyle, Protagoras, and Thomas à Kempis," he said; "for this Jovian sophist preaches that nothing so fails as success." We democrats are a nervous people, never satisfied to leave ourselves alone, and the librarian partakes of the public nervousness, and does not sufficiently serve to correct it. Dr. Scherer admitted he was old-fashioned enough to believe that a man should make friends with Shakespeare, Goethe, and others who used to do a deal of the world's thinking, and also to read and study the Bible; he held that this was a matter no longer set forth with emphasis by many libraries in the land. Lincoln Steffens rubbed his hands together characteristically as he told the convention that their business was merely to serve—to give the public anything it wanted, and certainly not to lose sleep as to whether the books were good or not.

Among the leading papers presented at the convention may be mentioned those of the president, J. I. Wyer, jr., of the New York State Library (who was most unfortunately detained at Albany by the recent fire), A. E. Bostwick, the new librarian at St. Louis, and Demarchus C. Brown of the Indiana State Library. President Wyer took for granted that the place of the public library in the social order is now pretty definitely fixed, but thought the public did not yet realize that it owes to the library carefully-chosen and sympathetic trustees, open-mindedness, a modicum of patience, reasonable pecuniary support, and better understanding of its work and requirements. Mr. Bostwick said that the idea of the public library as a force in the community is gradually but surely gaining ground; but along with it there are tendencies to exploit it for purposes not always legitimate. He drew a distinction, therefore, between the proper and improper use of the public library in giving publicity to various matters. President Brown of the National Association of State Libraries contended that the State library should not be a mere law library, as in some cases known in America; that it should be the centre for historical research and preservation, and that it should become the workshop and storehouse for any voluntary historical society. All public documents, reports, manuscripts, and records no longer in current use, ought to be organized, catalogued, and stored there. One of the suggestive addresses was made by Miss Harriet G. Eddy, county library-organizer of the California State Library, who argued for the county free library as the only means of serving the remote and scattered regions of the extreme West: the municipal library could never render the same service, nor would the travelling library, good as it is, meet the needs.

In connection with the general convention, a meeting of the American Association of Law Librarians was also held here, at which addresses were made by the president, G. S. Godard; A. J. Small of the Iowa State Library; O. J. Field of the Department of Justice, of Washington; C. H. Hastings of the Library of Congress; E. A. Feazel of the Cleveland Law Library, and G. E. Wire of Worcester, Mass. The two themes most frequently touched upon in this meeting were the necessity of preventing such disasters as those of the fires at Jefferson, Mo., and Albany, N. Y., and the independence from politics and all political interference with such libraries. The Carnegie Institute of Pittsburgh made an exhibit, pleading for the exclusion of the colored comic supplements of Sunday newspapers from public libraries.

The officers chosen for the ensuing year are as follows: President, Mrs. H. L. Elmendorf (the first woman ever chosen by the convention to this office) of the Buffalo Public Library; first vice-president, Henry E. Legler of Chicago; second vice-president, Mary E. Plummer of the Pratt Institute, New York.

W.

AN ASSOCIATION FOR SCANDINAVIAN STUDIES.

CHICAGO, May 28.

This occasion is unique in that it brings together for the first time in America men of various nationalities who are drawn together by their common interest in Scandinavian culture. It is unique also in that those who are engaged in this field of educational pursuit in our colleges and universities here for the first time meet together in the interests of the cause which they represent.

With these appropriate words Prof. G. T. Flom opened his address on "Scandinavian Studies in American Universities" at a meeting held in Hitchcock Hall of the University of Chicago on May 26. The twofold purpose of the new association is to further the study of Scandinavian languages and literatures in American universities, colleges, and schools, and to be, as one speaker expressed it, an intermediary between the American public and Scandinavian culture. As long ago as in 1858 a professorship in Scandinavian languages and literatures was founded at New York University, Paul G. Sinding being the incumbent; but this seems to have been the result of personal effort rather than of a really felt or existing demand, for when Sinding, in 1861, returned to Denmark the courses were discontinued. Permanent professorships in these studies were established in 1869 both at the University of Wisconsin and at Cornell University, but it was not until the eighties that they were followed by others. At present there are Scandinavian professorships or lectureships at upwards of a score of higher institutions of learning in this country, in many cases held by men of non-Scandinavian descent.

The meeting at Chicago lasted two days, Friday and Saturday, the 26th and 27th of May, and on the first day the following papers were read, besides the one by Professor Flom already mentioned: "Försoningen i Tegnér's 'Frithiofs Saga,'" by A. M. Sturtevant; "The Chronology of the 'Fornaldarsogur,'" by L. M. Hollander; "Traces of Old Norse Paganism in Swedish Christmas Customs of To-day," by Jules Mauritzon; "Recent Attacks on the Historical Reliability of the Vinland Sagas," by Julius E. Olson; and "The Geats in 'Beowulf,'" by Prof. Gudmund Schuette of the University of Copenhagen. The last-named paper, which is the first chapter of a new work on "Beowulf," was read by Dr. H. G. Leach of Harvard, to whom it had been sent by the author to be presented on this occasion. In it he considers the epical horizon of the poem, the geography of the countries described in it, the ethnical significance of the names of persons, and reaches the conclusion that the Geats were not Swedes or "Götar," but inhabitants of Jutland. The personal names of the Geats, for instance, show the same elements as those of the Anglo-Danish zone, which are, on the other hand, quite different from the names of the Swedes and the "Götar," which, in their turn, show elements in common with the Saxon and the German names. Professor Olson was particularly concerned with Frithiof Nansen's criticism of the sagas, as presented in a series of lectures before Videnskabs-Selskabet in Christiania, which are now being printed in Nansen's new book, "I Taakeheimen." "When this man of action," Mr. Olson said, "this practical explorer, this modern investigator in the realm of natural and applied science, undertakes to enlighten the world on saga literature, to pass unerring opinion on what is good history and what is fictional therein, undertakes, in a word, to play the rôle of a P. A. Munch or a Gustav Storm in this very difficult field, then he goes too far." The speaker was quite willing, however, to concede to Nansen the right and ability, based on wide and varied experience, to make some "clever and original observations" on the subject.

On Friday evening the members of the new society were the guests of the University of Chicago at a dinner and smoker. Prof. John M. Manly greeted the assemblage on behalf of President Judson; in his capacity of representative of the English studies at the university he expressed his appreciation of the influence which the Scandinavian literatures, especially the older literature, had exercised on the literature of mediæval and modern Europe; the same sentiment was voiced by Prof. Starr W. Cutting, representing the German studies, and Prof. W. A. Nitze for the Romance. W. N. C. Carlton, the Newberry librarian, in his genial "smoke-talk," voiced the wish of many who are deeply interested in Scandinavian literature and culture, but lay no claim to being specialists, that a name might be selected that would be inclusive of all the interests concerned. He also pointed out the possibilities that were open to the new organization as a unifier of many warring interests. At the Saturday session the meeting was given up to a discussion of the need of translations from the sagas and of modern masterpieces; and it was voted that the executive council should appoint a committee to make plans for a series of such translations. The discussion over the best name for the new organization was particularly lively. The meeting had been called to form "The Scandinavian Philological Society," and while the claims of the spokesmen for that name were conceded, namely, that the word philology might well be used in its widest and original meaning, many felt that such a name would not be understood by all those whom the new society wished to reach, and suggested as an alternative "Association for the Advancement of Scandinavian Studies," which may be somewhat long, but which seems to express exactly what the society stands for. The choice between these two names was left to the executive council. This council was afterwards elected as follows: President, Julius E. Olson; vice-president, Jules Mauritzon; secretary-treasurer, G. T. Flom; members of the advisory committee, A. L. Elmquist, W. H. Schofield, G. Gothne, E. W. Olson, A. A. Stomberg, C. N. Gould. The society has already more than seventy members.

AKSEL G. S. JOSEPHSON.

NEWS FOR BIBLIOPHILES.

The privately printed "Catalogue of Some of the more important Books, Manuscripts, and Drawings in the library of Harry Elkins Widener" is one of the most interesting and instructive volumes of this kind ever issued. In style and make-up it can be compared only with the larger catalogues of the Morgan and Church collections in this country, and Thomas J. Wise's Catalogue in England. The Widener Catalogue is a quarto of two hundred and thirty-three pages besides inserted reproductions. One hundred copies have been printed on Whatman paper and two copies on vellum.

A selection only, a little more than two hundred titles, is included, ranging from the pamphlet of a few pages to the great Daly extra-illustrated "Story of Nell Gwyn" in four volumes, large folio. Every lot is a notable one, and, as the library is constantly receiving additions, the catalogue by no means exhibits the wealth of the collection. Indeed, Mr. Widener's library is, perhaps, for its size, the richest in "association copies" and collector's rarities generally ever brought together in the short time which he has spent upon it.

The set of Four Folios of Shakespeare is one of the best in existence, the First being the Locker-Van Antwerp copy, one of the finest to come upon the market in recent years. The Second Folio is the rare form with the Smethwick imprint, and the Fourth is an exceedingly tall copy in the original calf binding. The "Poems" of 1640 is an unusually fine copy in the original binding.

Among other early English books described in the catalogue are Holinshed's "Chronicles" (1577); Ben Jonson's "Works" (1616-1640); Spenser's "Faerie Queene" (1590-96)), and "Colin Clout's Come Home Again" (1595); Beaumont and Fletcher (1647); Phineas Fletcher's "Purple Island" (1633), the dedication copy on large paper; Montaigne's "Essayes" (1603); and Anne Killigrew's "Poems" (1686), on large paper. In this class also belongs the choicest association volume in a library remarkable for its association books. This is no less than the Countess of Pembroke's own copy of the "Areadia." It is the edition of 1613 in an elaborate binding of the period, the sides bearing the entwined arms of the houses of Sidney and Montgomery. The book's *provenance* is shown by the inscription on the title-page in the autograph of Sir Robert Ker, the first Earl of Ancrum: "This was ye Countess of Pembrokes owne booke given

me by ye Countesse of Montgomery her daughter, 1625." The signature in the facsimile seems to be plainly "Ancram" and it is so given in the text, but it should be "Ancrum," according to the Dictionary of National Biography.

But the Widener library is, perhaps, most notable for the large number of presentation copies and association books of the nineteenth century English authors. Dickens is represented in this catalogue by thirty-two items, including "Pickwick" in parts, with the correct covers for the first three parts (that of part iii being particularly rare), as well as a presentation copy to William Harrison Ainsworth. We may remark also that since the catalogue was printed a second and more important presentation copy has been added to the library, being the "dedication copy," the identical book given by Dickens to Thomas Noon Talfourd, to whom "Pickwick" was dedicated.

Among Thackeray items described in the catalogue we may note "Vanity Fair" in parts, with one of the drawings by Thackeray, a portion (36 pages) of the autograph manuscript of "Pendennis," and "The Second Funeral of Napoleon," all being from the collection of the late George C. Thomas.

Although Mr. Widener's Stevenson collection is, without much doubt, the finest ever brought together, only one Stevenson item is described in this catalogue. This is the autograph manuscript, "Memoirs of Himself by Robert Louis Stevenson, Book I, Childhood," written in San Francisco in 1880. This interesting history of his own childhood by the author of "A Child's Garden of Verses" has never been published, though a few short extracts appear in Balfour's "Life of Stevenson."

The great extra-illustrated books in the Widener library, such as Cunningham's "Story of Nell Gwyn," Genest's "Some Account of the English Stage," Larwood's "Old London Illustrated," and Timb's "Club Life in London," are the famous sets made up by Augustin Daly and afterwards in the library of Clarence S. Bement.

Correspondence

ELLIS ISLAND.

To the Editor of The Nation:

Sir: On the editorial page of the New York *Evening Journal* for May 24 there appears an article headed "Brutality at Ellis Island," which contains a most virulent attack on the administration of the New York Immigrant Station, and in particular on Mr. Williams, the present commissioner. This is typical of a class of newspaper articles which appear at intervals. One of them, a signed letter on the editorial page of a recent issue of the New York *Times*, was answered in the next day's issue by Mr. Williams. The distinguishing feature of these contributions is the shocking ignorance of the writers.

I have very little personal knowledge of Mr. Williams or his individual character, having met him only once. That single occasion, however, was sufficient to convince me of the utter falsity of the charges which accuse him of carelessness or superficiality in his handling of cases. I sat for nearly an hour in his private office listening to his judgment upon a series of cases which had proved too hard for the regular inspectors. No one who has not had a similar experience can have any conception of the extreme complexity and difficulty of some of these cases; and the painstaking care with which Mr. Williams individualized each case, and sought to determine its real merits, is something which I shall not forget.

However little I know of Mr. Williams personally, I nevertheless know enough of the administration of the immigration laws to realize how misleading such an article as that in the *Journal* is. A single sentence, quoted verbatim, will suffice to illustrate its careless or malicious inaccuracy: "What right have pinhead officials to decide without appeal or a fair hearing that such and such an immigrant may become a charge upon the community?" In the process of inspection, those immigrants who are not clearly and beyond a doubt entitled to enter are turned aside for examination by a board of special inquiry. But the decision of this board is final only when based upon a certificate of the examining medical officer that the alien is diseased, or is suffering from some mental or physical disability. In all other cases, including those likely to become a public charge (unless because of mental or physical disability), there is the right of appeal through the commissioner of immigration of the port, and the commissioner-general of immigration, to the secretary of commerce and labor. Such appeals are constantly being made. Furthermore, it is not only the right of the inspectors to decide whether an alien may become a public charge, but it is their duty, imposed upon them by the legislative representatives of the people of the United States. One of the chief fallacies which beset the critics of Mr. Williams is the assumption that he has a free hand to do as he likes with the immigrants. This is far from the case. The commissioners in charge of the various immigrant stations in this country are public servants, charged with executing one of the most complex and delicate sets of laws on our statute books. These laws, and the regulations which accompany them, are very definite and explicit, and make up a good-sized pamphlet of 87 pages. It would be interesting to know how many of the assailants of the administration have ever taken the trouble to read this document.

Now such articles, however misleading, malicious, and inaccurate they may be, have, nevertheless, the power to mould public opinion to a certain extent. Ellis Island is a public institution. Any citizen of the United States may visit and see for himself how affairs are administered. Looking back over a number of visits to the station, I cannot recall that I have seen a single case of cruelty. But most people prefer to get their information from the newspapers, rather than by personal inspection. It is one of the serious indictments against our "free press" that ignorant, careless, or vicious writers can successfully defame the character, and perhaps accomplish the ruin, of conscientious officials, who are doing their best to fill faithfully, difficult positions of public trust.

THE ILLITERACY OF ACADEMICIANS.

To the Editor of The Nation:

Sir: A correspondent of the *Nation* (May 4) recently brought forward two citations from an educational review, one crudely ungrammatical, the other uncoiling one of those labyrinthine and interminable periods which were once handed from textbook to textbook as proofs of the benightedness of our forefathers. The offender in these cases was a university professor, and the fact is symptomatic of a widespread lowering of the standards of correctness in the speech of the authorized defenders of these standards. By a paradoxical or ironic nemesis, bad English cleaves to its nominal prosecutors, like unchastity to monks, or disregard of health to physicians. There is a successful head of the department of rhetoric in a great university whose invariable substitution of "will" for "shall" in certain oft-recurring collocations is received with calmness by his unconscious or despairing associates. Not long since a noted magazine published a number of attestations on the part of teachers of English to its effectiveness in the classroom. The exhibit was decisive on two points: the usefulness of the magazine and the incapacity of its endorsers to write English. A publishing house recently drew upon the same sources for testimonies to the merits of a new history of English literature. The want of ease, of resourcefulness, of natural vigor, in these comments would have been noteworthy if it had not been eclipsed by the abundance of syntactical errors.

It is not hard to explain, at least in part, the existence of these unfortunate conditions. The cheapness and the prevalence of education in America have opened the path of academic preferment to the children of the alien and the toiler, and, under the convoy of energy and ability, inherited or implanted solecisms may traverse every step of the long but unobstructed road which conducts to the university professorship. The very thoroughness of the candidate's studies often conspires with ancestral or infantine habit to corrupt the soundness of his English. As theology sometimes disintegrates faith, philology may likewise be subversive of grammar. The scholar thinks, with some justice, that good English is merely the preference of a minority, often a baseless, often a hesitating, often a temporary preference, and the stanch old-fashioned right and wrong appear as insubstantial shadows. This influence is seconded by the fact that relaxation in every field, from religion to posture, is the order of the day, and the professor of English shares the universal anxiety to throw off the signs of an antiquated rigor. An abstinence from slang would be little short of unprofessional. The social premium upon informality more than outweighs the social stigma upon incorrectness, and men hasten to renounce dignity in their eagerness to discard pretension. The teacher of English finds himself in the midst of an easy-going, brotherly, indulgent world whose laxities it is easier to imitate than to combat.

These things would count for little if bad English were a barrier to success; but it may be doubted if the practice of solecism is often visited by the only effectual rebuke—the retrenchment or refusal of rank and pay. The English of an instructor in English is naturally the last thing to be

tested. That sound English is the last thing in the world to be viewed as a tag or adjunct to other gifts, that it is quite separable not only from teaching ability and executive force, from scholarship and intellectual power, but even from other merits in language itself, from abundance, ease, emphasis, and grace, are facts that have not yet penetrated the committees and administrators who pass on candidates for academic posts. For this phase of the difficulty, the remedy is manifest. The ascertainment of the candidate's mastery of the language he desires to teach should be made the ground of a specific and separate inquiry, and should precede and control the examination of other credentials. Such a course might involve for the moment the appearance of disaster, exacting perhaps the temporary sacrifice of the wiser, shrewder, brisker man; but let the rejection of power in favor of equipment once make it clear that want of equipment is an economic blunder, and power will make haste to conform to requirements.

The true difficulty, however, lies in the apathy of the community. Between the social trunk and its members, between the practice of specialists and the appetites of the public, there is an inevitable and significant correspondence; and no society can get itself efficiently taught in subjects that it does not honestly value. We do not possess in America a defined, compact, and powerful social class which makes correctness in language a qualification for membership. The reverence for language has shared the fate of our other dissolving venerations, and the priests are negligent, because the people are unbelievers. Nothing can shape or save a language but a people, and the hope of English in America lies in its reëstablishment as a national ideal.

O. W. Firkins.

SUMMER SCHOOL AT FLORENCE.

To the Editor of The Nation:

Sir: This year, when an unusually large number of Americans are going to Italy to attend the expositions at Rome and Turin, some of your readers may be glad to know that there will be a Summer University at Florence from August 1 to September 15. This summer session, which will be held for the fifth year, is open to *all foreigners*. The courses offered include thirteen lectures each on Dante, Italian literature from Dante to the nineteenth century, and on contemporary writers; eight lectures on Florentine history, and eighteen on the Risorgimento; a course in Italian grammar and style; another in pronunciation; three courses in the fine arts; and a special course in seismology, a subject which recent earthquakes have made timely.

In addition to the regular instruction there will be visits to the monuments and galleries of Florence, excursions to the environs, trips to S. Gimignano and to Siena—that to Siena being timed for the Palio—and to Prato, Pistoja, and Pisa. A longer trip, at reduced rates, to Rome is also promised. The lectures will be held every morning on week days, and at the end of the session there will be examinations, for those who desire to take them. The courses will be conducted by Professors Gargano, Caprin, Perini, Sorani, Traversari, Tarchiani, and Padre Alfani.

The fee for matriculation, with right to attend lectures and participate in excursions, is only 45 lire ($9), with a special fee of 6 lire for the course in seismology. The Marchesa Adele Alfieri di Sostegno, Cavour's grandniece, and patroness of the Summer University, offers four prizes of 200 lire each for the students who pass with greatest credit the courses in literature, grammar, history, and fine arts. By consent of the Ministry of Public Instruction, all members of this university will enjoy free admission to the galleries and museums of Florence. For further information the Segretario della Università Estiva, Via Tornabuoni, 4, Florence, Italy, should be addressed.

Foreign travellers have never before had such an opportunity to combine sightseeing with profitable instruction during the summer at Florence.

William Roscoe Thayer.

Cambridge, Mass., May 26.

THE ANNUAL REGISTER AND WEEMS'S LIFE OF WASHINGTON.

To the Editor of The Nation:

Sir: The indebtedness of Weems's Life of Washington to Dodsley's Annual Register has never been commented on, I believe, and is complicated by the fact that such early American historians as William Gordon and David Ramsay—as well as a round dozen of their English brethren—used the Annual Register as a great storehouse from which they thought material might be taken without acknowledgment. Their extensive plagiarisms have been discussed by Professor Libby in the Report of the American Historical Association for 1899 and in other places, but without mentioning the smaller debt incurred by Weems himself.

Considerable remains of the Register, however, are to be found in Weems's curious work, although, as its author was familiar with both Gordon's and Ramsay's accounts, as well as with perhaps some other books where the Register had been a source, it is often hard to say whether he was drawing his material through them or directly from the Register. In such accounts as he gives, however, of the battle of Lexington, the death of Col. Ferguson at King's Mountain, and the details of the supplies sent to the British army during the siege of Boston, there are similarities between his work and the Register which are not to be found in either Gordon or Ramsay.

The difficulty of making positive statements in regard to these accounts is illustrated by the narrative of the conduct of the Americans at the battle of Monmouth. Here the Annual Register used as its chief source the letter from Washington to the President of Congress, and made due acknowledgment. The later historians give a very similar account, but, as they mention no sources of their information, it is impossible to say whether they drew from Washington directly or through the Register.

Some parts of Weems's book are so similar to Gordon's that it is clear he knew and used Gordon. This is evident, for instance, in his rendering of Franklin's advice to the Americans to light the candles of Industry and Economy and to marry and raise up children as fast as they can, thus securing men enough to oppose with force a repetition of such measures as the Stamp Act.

Considering the wandering life Weems led and the miscellaneous reading which his work as a travelling bookseller made possible, it is probable that he at one time used an odd volume of Gordon, supplementing it with such volumes of the Register as he found at hand, and filling in gaps with whatever was available.

In conclusion, I wish to call attention to the passage in his book which recounts Washington's first fight—and first defeat—at Fort Necessity. This, which in style and method sounds surprisingly like the Annual Register, is really from the sketch of the life of Washington prefixed to "A Poetical Epistle to his Excellency General Washington, Esq., Commander-in-Chief of the Armies of the United States of America, from an inhabitant of Maryland." Both John Bell, the writer of the sketch, and Charles Henry Wharton, the author of the "Poetical Epistle," were Marylanders, like Weems, and distantly related to him, and at other places in his biography he shows traces of having seen and used their work. In spite of the similarity of the passage to the Annual Register, I have been unable to find it in any of the volumes of that work.

Walter B. Norris.

Literature

SEWARD AND DOUGLAS.

William H. Seward. By Edward Everett Hale, jr. American Crisis Biographies. Philadelphia: George W. Jacobs & Co. $1.25 net.

Stephen A. Douglas. By Henry Parker Willis. The same.

"The faults of great men drop out in history," said Seward. And he and his filial assistant and Boswell so made up the record. After the end of Seward's political and even physical activities he dictated an autobiography to the end of his State Senatorship, 1834. This fragment was used by Frederick W. Seward in his three-volume "Life and Letters." Baker's "Biography of Seward" was prepared for the expected demands of the campaign of 1860, which Lincoln's nomination disappointed. Mr. Lothrop, who wrote the "Seward" in the American Statesmen Series, followed the lead of the Sewards, and was unsuspecting and uncritical.

Nicolay and Hay's "Lincoln" disclosed many startling facts in Seward's career and did his fame irreparable damage. Unlike Gideon Welles much earlier, in magazine articles and in "Lincoln and Seward," Nicolay and Hay supplied the needed documentary evidence. The fourth volume of Pierce's "Life of Sumner" still further damaged Seward's prestige, for Sumner was strongest where Seward was weakest—in sincer-

ity, in consistent opposition to slavery, and in knowledge of international law. It is understood that Mr. Bancroft was an enthusiastic admirer of Seward when he began his biography, but he found much to criticise before he finished it. Gen. Charles Francis Adams's biography of his father almost cruelly disappointed the expectation that he would agree with the elder Charles Francis Adams's eulogy of Seward, which was a return compliment to Seward's eulogy of John Quincy Adams.

Thus there are two antagonistic schools of writers about Seward: one displaying the virtues, leaving out the faults and largely ignoring those who describe them; the other insisting all the more on the faults, and consequently having less room to do full justice to the virtues. This condition offered an excellent opportunity to review Seward's whole career in a concise and vivid manner, and to give a puzzling great man his true setting. Instead of doing this, Professor Hale has written a rather plain and disproportionate tale of Seward's career, omitting most of the faults. The difference between his hero and that of the other school is almost as great as the difference between the well-known early portrait of Seward with smiling, regular features, in full dress, ruffled shirt, velvet waistcoat, white gloves and shining beaver, and the realistic photograph of the veteran Secretary with wrinkled face, scrawny hair, large ears, careless cravat, and loose every-day coat. Unable either to accept or to refute the conclusions of the critical school, Professor Hale passes by on the other side. He is a rather timid closet-historian, unacquainted with the tricks, trades, and equivocations of politics. To him a Governor or a Secretary seems too sacred a personage to be capable of such things. Consequently, Seward's poses, martyrdoms, and self-illusions, so common in his letters to Mrs. Seward, are all taken seriously.

But let us be concrete. Seward may be said to have begun his political career by a scathing attack upon the caucus and the spoils systems of the Albany Regency. Was he sincere? Are the unanimous written opinions of the members of the political firm of Weed, Seward, and Greeley, in its palmiest days, worth considering when they mention spoils? In three months Gov. Seward cut off 1,500 political heads and filled offices, as he himself said, at the rate of "one hundred a week, and fifty each executive day"; Weed confessed that, but for the Presidential question, "the appointments would tear us to pieces"; and Greeley wished that "Seward might begin his life as Governor once more," and "deal frankly with all men, and never give a promise or encouragement of office until he had resolved to fulfil the expectation." (Bancroft, I, 81-84). What says Professor Hale about these and kindred matters? Nothing.

To win the foreign, especially the Irish, vote and gain a political advantage, Seward also, when Governor, proposed that children in public schools should be taught by teachers speaking their languages and having their creeds. The plan, if adopted, would have undermined, if it did not destroy, the still inchoate public school system. But it was a fiasco and became an indelible stain on his record. Professor Hale can neither overlook these facts nor successfully explain them. Yet he protests against the criticisms, and seems to think he has made a point when he assures us that Seward "saw that an educated workman was the great need of the country as a whole" (p. 372), and that "his general principles in education are now taken for granted" (p. 154). No one has ever denied either that there was need of an educated workman or that Seward's general principles were sufficiently proper. The criticism was and must continue to be—for the record stands—that Seward's special aims and means were unsuitable and would have been gravely injurious. Seward was searching for some magic scheme that would outwit the opposition leaders. Possibly he believed that he could create a new and better system. It is certain that he elicited no support and that others remedied the evils in a logical and proper manner.

During the first year of the war Seward had charge of the political prisoners and did some things that were inexcusably tyrannical. Mr. Bancroft devotes a chapter of twenty-five pages to the subject. The words *political prisoners* are not in the index of Professor Hale's volume; if they occur even once in the text, they have escaped our notice in two readings of this volume.

Even Professor Hale admits that it was a little strange for Seward to propose, as he did on April 1, 1861, that Lincoln should make him dictator; that a foreign war should be sought in order to compel union at home; that debates should cease and Lincoln and all the Cabinet should "agree and abide" by the dictator's lead. Professor Hale makes this suggestion:

> Perhaps Seward, who had seen several weak Presidents and strong Secretaries of State, thought it really was his duty to take up the reins of government and to direct affairs as he himself had begun to direct them under Taylor (p. 276).

Of course Seward thought it his duty, but does anybody now hold that the thought was wise? "Granted the idea of a united South and North," Professor Hale observes, "it is doubtful if a defensive war against these two foreign countries [France and Spain] would have been worse than a war between the States." But no one can grant that idea, for it was absurd. And how would a foreign war in any way have settled the slavery question, the main cause of all the trouble?

All who have read closely either Nicolay and Hay's "Lincoln" or Bancroft's "Seward" will recollect how Seward, by placing before Lincoln orders which he signed in a perfunctory manner, because he had ten thousand cares and was new to nearly all of them, secretly organized part of the Fort Pickens expedition. When the Fort Sumter and the Fort Pickens expeditions were ready to start, and Mercer, by the orders of the Secretary of the Navy, was in command of the Powhatan as the flagship of the Fort Sumter expedition, Porter appeared and presented the orders prepared by Seward and signed by Lincoln, directing him to take the Powhatan as the flagship of the Fort Pickens expedition. When it was suggested that the orders of the President took precedence of those of the Secretary of the Navy, Mercer gave way to Porter. When Secretary Welles appealed to Lincoln, Lincoln requested Seward immediately to telegraph to Porter to restore the Powhatan to Mercer. This Seward did, but instead of signing the President's name—which was obviously necessary to correct the error—he signed "Seward." Consequently, Porter, properly reasoning as before, held that an order signed "Seward" could not override the previous order signed "Lincoln"; and so he proceeded on his way, precisely as Seward had all along intended. Yet why bother with facts or details if they damage your hero? Thus Professor Hale:

> But there was some confusion, arising from Lincoln's and Seward's doing things very much by themselves, often without consulting the Navy Department and sometimes without consulting each other. The plans were not entirely carried out, and much of the aid meant for Sumter went to Pickens (p. 277).

There are many other serious blemishes, but these should suffice to show the risks of letting "the faults of great men drop out in history."

Just the desirable qualities, so lacking in Professor Hale's "Seward," are conspicuously present in Mr. Willis's "Douglas." There was not much room for originality with either subject, but Mr. Willis, with true insight, equalled only by his skill in execution, saw what was needed—an incisive study of a great American politician in action. He cares no more whether his hero goes up or down than Douglas himself cared whether slavery was "voted up or voted down." We see the bold, raw youth pulling hard with the political flood-tide, foreseeing opportunities and difficulties, and consequently advancing with surprising rapidity. Mr. Willis uses to good advantage his knowledge of politics in Washington. Again and again he enlivens his

pages with a contrast or an appropriate illustration, a modern instance, from real life and actual conditions. Instead of fancying, as children and closet-historians do, that politics in the past tense is a field where patriots satisfy their burning desires to do something for their country's good, he knows that it is a most exciting game whose stakes are notoriety, applause, office, and power. To attain these, politicians usually prefer to employ good means, when these are helpful, but otherwise they do not hesitate to use bad means, and try to conceal the difference by sophistry and cant.

Douglas played the game as audaciously as any except a few in our history; he was a political soldier of fortune—an opportunist who picked his way toward the goal of personal advancement, according to the changing conditions in his constituency, and the more difficult and uncertain conditions in the larger field, where he often used political grand strategy. Even the word *moral* was not in his political lexicon. The conditions involved in each of the eight or ten critical games of which his political career was composed are carefully set forth by Mr. Willis. In each contest we are enabled to follow Douglas step by step to what is either a dramatic success or a dramatic failure. The good and the bad motives and methods are described with equal composure and without waste of words. Nowhere is there any sentimentalizing, not even near the end, where it is so common to use the last few months of political virtue as a cloak to cover a multitude of political sins in former years. Nor is there any desire to send Douglas to everlasting historical punishment, but only to let the facts show his real qualities.

Mainly for these reasons this book is an exceedingly valuable contribution to an important, but much neglected field of American history—realistic historical politics and political psychology. Whoever will compare Mr. Willis's account of the Lincoln and Douglas debates with any other that has been written and will reread those debates, will at once see the value of his method. He gives the important faults as conspicuous a place as the important virtues, because they are as important. This makes a correct impression and leaves out the traditions, sentimentalities, and special pleas which are the curse of our historical writing as well as of our politics.

Not the least of our author's pleasing qualities is his free use and generous acknowledgment of previous biographies of Douglas. It is altogether fitting; and it also gives the reader much desirable information that could not well be put in the brief but excellent bibliography at the end of the volume.

CURRENT FICTION.

Queed. By Henry Sydnor Harrison. Boston: Houghton Mifflin Co.

"Born with an impulse for isolation and work" and "a deep instinct for the printed word," suckled on a stray copy of the New York *Evening Post*, nourished through his growing years upon the juiceless tomes of the Astor Library, Queed, at twenty-five, had developed into a confirmed evolutionary sociologist of the most abstruse literary type, and was reduced to a mere walking schedule. His social life had never been robust. At the opening of our story, four weeks after his arrival in Richmond, it hung by the slenderest thread—consisting, specifically, of three cryptic communications from an anonymous father and one unpaid board-bill. How few men date their usefulness from an unpaid board-bill! Yet at the instant when the business agent of the unappeased landlady faced him, "a faintly heightened color in her cheeks," hope dawned for Queed. This collector's eyes "were the clearest lapis lazuli, heavily fringed with lashes which were blacker than Egypt's night. Her chin was finely and strongly cut; almost a masculine chin, but unmasculinely softened by the sweetness of her mouth." Noting his symptoms with a practised lapis lazuli eye, Miss Sharlee Weyland (such was the collector's lovely name) prescribed employment in the shape of editorial writing. Queed tried it, obtained instant pecuniary relief, and, straightway, at the advice of all and sundry, submitted to a thorough course of popular therapeutics, including "Klinker's exercises for all parts of the body"; adhesive applications of unsought friendship for the stimulation of altruistic impulses, put upon him by the wistful, consumptive schoolgirl Fifi, and crabbed Professor Nicolovius; caustic home truths to burn some of the "ego" out of his "cosmos," administered by the firm, white hand of Miss Sharlee; and large doses from the complete editorial writings of Col. Cowles, the "military political economist," for the correction of journalistic inaptitude. Under treatment he expanded physically from "a little, small, dried young man" to the proportions of a demi-god ("Never he moved but muscle flowed and rippled under the shining skin; he raised his right hand to scratch his left ear and the hard blue bicep leaped out like a live thing"), and became an expert editorial performer. And as for proof of his spiritual development, is he not bound firmly hand and foot by the wiles of a Mephistophelean father and subjected to severe tests for professional bravery, filial duty, financial honor, and emotional capacity? Behold him, then, emerging from the toils, completely socialized—a reconstructed man even to his name, thrice happy heir to Col. Cowles's editorial mantle, founder of a philanthropic joint institution, and affianced lord of Miss Sharlee.

Readers of "Captivating Mary Carstairs," published earlier in the season under a different surname, will have little hesitation in attributing that fiasco and "Queed" to the same pen. At least if the two novels are not by the same writer, they show a remarkable coincidence in style and design. But "Queed" itself is far from being a fiasco. In spite of an incorrigibly knowing air in regard to matters sartorial, social, and journalistic, and notwithstanding a superabundance of those qualities that make the patent medicine testimonial and the hygiene monthly such pleasant reading, it is not only an incomparable advance on the first tale, but a distinct "arrival." By a method of portrayal exceptionally individual and strong, the author has put a real city and a host of real people between the covers of this book. His comprehension of the Southern city as a growing organism, not merely a decorative background, is admirable; his apotheosis of the newspaper as the mainspring of civic life is at least arresting. Not since Mark Twain has there arisen a novelist so racily indigenous, so animated by the sense of joyous participation, one whose style, even in its bad qualities, is so eloquent of its origin in the life with which it deals. When he shall have relinquished the unreasonable wish to see the harmless necessary American father in the villain's part, we may expect from him such a picture of American community life as we have long hoped to see.

An Old Maid's Vengeance. By Frances Powell. New York: Chas. Scribner's Sons.

Doubtless a sillier book might be written, but doubtless it seldom has been. An ancient and wealthy American spinster living in Southern France, half-sought for her money, then scorned, by a captivating Hungarian, summons a poor but beguiling kinswoman to fascinate the renegade and then to disclose her prohibitive poverty, all in return for board and lodging. The girl, recently impoverished and more recently jilted, joins her relative, ignorant of the services required, and finds herself in a pretty tangle. Rapacious Hungarians and admiring English now swarm, and the scene is enriched by the meanderings of a ghostly monk and by motiveless echoes in a ghostly apartment. The gambling rooms at Monte Carlo, carnival-time at Ville-de-Plaisir, are the background for dark and sinister Hungarian attempts. Elinor is rescued at the carnival by masks, and in her continued scrapes in the monastery gardens by timely black monks. The rascal's power over the old maid and his habits of staring and of playing the flute are

explained by his turning out to be a gypsy. The American jilt reappears in monk's clothes, only to be slain. The excellent American lawyer arrives at the right moment; some unutterably unreal menials and children perform their parts, and the hodge-podge concludes with greed foiled and the prospect of a wedding. Let us hope that the old maid and the ghost may there dance merrily.

Princess Katharine. By Katharine Tynan. New York: Duffield & Co.

The title suggests uncrowned royalty with youth of the period to the rescue. The book turns out to be a gently ambling, rambling Irish tale. Not even several death-beds, an attempt at self-drowning, nor an old lady with a leaning to drink can make it lurid. An Irish take-it-easy divinity presides over its destinies and sheds upon its shudders a cheering ray. Miss Tynan's Irish folk have a humor quite distinct from the familiar caricature. They differ totally from that and from one another. Both her pictures and her portraits testify to a real Ireland which is neither of the shillelah nor of the fairy folk. Her story carries one along among rich and poor, kindly and only occasionally slightly less kindly, among lost and found relations, diverted fortunes, filial devotion, true love, rescues from rampagious cattle. There is a time when one almost believes that the lost will is not going to be found. But the shock of so daring an innovation is averted at the end, the very end. One might easily spend a worse hour than in this amicably Celtic atmosphere.

The Man With an Honest Face. By Paul Wells. New York: D. Appleton & Co.

A young man living in bachelor quarters in Washington Square receives a package with instructions to guard it with his life and surrender it only to one who shall pronounce the countersign, "Vive Olivia." There follows a series of mysterious assaults and strange adventures, ending with the return of the fateful package—along with the young man's heart, of course—to the lovely and much persecuted owner. An audacious Wall Street financier and an exiled European queen furnish much of the malice and mystery. The story is tolerably interesting, and would be more interesting, if it were not for the gradual change, under our very eyes, so to speak, of the roaring financial villain into a kind of toothless lion, of the strong-arm man into a genial Irishman, and of the seductive foreign queen into a disguised benefactress. In a detective, or semi-detective, story one likes to feel that the crime is real and potent.

ROSSETTI'S CIRCLE.

Memories and Impressions: A Study in Atmospheres. By Ford Madox Hueffer. New York: Harper & Bros. $1.60 net.

Mr. Hueffer makes no boast of accuracy, and even prints in one of his chapters a good story which, in the Dedication, he cheerfully acknowledges to be false. He has no objection to contradicting himself flatly; his geography is sometimes queer, and such little slips as "venial" for "venal" worry him not at all. "But," he says to the "kids" to whom the book is addressed, "if one of you can discover in it any single impression that can be demonstrably proved not sincere on my part, I will draw a check, etc." It is, in fact, a book of impressions and anecdotes, and reproduces the very atmosphere of the Pre-Raphaelite days more vividly than any other of the many books on that subject which the present reviewer, at least, has read.

The author is the grandson of the artist, Ford Madox Brown, who, corporeally, dwelt in the great, melancholy house in Fitzroy Square which Thackeray made the scene of so much joy and sorrow for Colonel and Clive Newcome, and who, spiritually, stood at the very heart of the Pre-Raphaelite movement. The author's father was a German exile of enormous learning, who for a number of years was musical critic of the *Times*. The author himself, whose literary works are too popular to need enumeration, was born in 1873, although he writes as if a whole world had passed between his youth and his present. And much, indeed, from a literary point of view has changed. He was brought up in the shadow of the great Victorians, Ruskin and Rossetti and Carlyle and Browning, whose greatness he was expected to emulate, and whose overshadowing genius made life for lesser men scarcely worth living. That was for London the great Bohemian time and society of the nineteenth century, a circle that radiated in every direction from Rossetti and that might be said to have had its Vatican at Rossetti's large Tudor mansion in Cheyne Walk. Is not Whistler reported to have said on his death-bed: "You must not say anything against Rossetti; Rossetti was a king"? Of the life in Cheyne Walk, Mr. Hueffer has nothing very significant or important to say, though he tells one rather amusing story of Meredith and a pair of boots, which recalls the poverty of Dr. Johnsou at Oxford. But, away from Cheyne Walk, the stories grow thick and furious—so numerous that we are embarrassed in selecting examples. Perhaps the account of the meetings in Fitzroy Square, when all Grub Street gathered to hear some minor poet or poetess read, is most characteristic of the high Bohemian enthusiasm of the day; but it is too long to quote. Another page on Henley gives some notion of the gusto and bravado of the men:

> Henley, who presented the appearance of a huge, mountainous, scaly, rough-clothed individual, with his pipe always in his hand and his drink always at his elbow, once damned my eyes up hill and down dale for half an hour because I sustained the argument that "Il Principe" was written, not by Aretino, but by Machiavelli. Henley had suffered from some slip of the tongue, and, although he must have been perfectly aware of it in the next second, he chose to stand to his guns, and, as I have said, swore at me for quite a long time.

Another page gives a pathetic picture of Oscar Wilde in Paris, now broken down and maudlin. "On the afternoon when the sentence against Wilde had been pronounced," says Mr. Hueffer, "I met Dr. Garnett on the steps of the British Museum. He said gravely: 'This is the death-blow to English poetry.' I looked at him in amazement, and he continued: 'The only poets we have are the Pre-Raphaelites, and this will cast so much odium upon them that the habit of reading poetry will die out in England.'" Mr. Hueffer, quite properly, does not acknowledge Wilde as belonging to the true fold, and thinks the great change came with the Boer war. Before that time the bourgeoisie admired art, though they may have despised the artist. Since then art and artist have been swallowed in the great wave of political reform and in the spread of a raucous commercialism—so, at least, holds our annalist. Curiously enough, Mr. Hueffer began apparently with the intention of showing the gloom that surrounded the days of Rossetti in comparison with the light and freedom of the present, but he ends in a kind of wail for the rough, imperious Bohemianism of his youth.

Interpreters of Life and the Modern Spirit. By Archibald Henderson. New York: Mitchell Kennerley. $1.50 net.

Mr. Henderson chooses as representatives of the modern spirit three Celts, Meredith, Wilde, and Shaw; a Belgian, Maeterlinck; and a Dane, Ibsen. His attitude is friendly and admirative toward them all—the subtle-fibred optimist, the idle æsthete of an empty day, the jesting fanatic, the will-o'-the-wisp of the romantic twilight, and the sullen social doctor. George Meredith, in an interesting photogravure, has the place of honor before this group united in the strict and brotherly bond of modernity—how beautifully Ibsen and Oscar Wilde would have hit it off on a desert island! Mr. Henderson's treatment of his five "interpreters" is in general bright and shallow. It is bright because he has been in clever company and has learned the clever language of wits. It is shallow because, apparently, he cares for no

other company; has learned no other language; and has no points of comparison.

Speaking, for example, of Oscar Wilde, he ripples brightly along from sentence to sentence in this plausible fashion:

> Art was an ivory tower in which dwelt the long-haired seraph of the sunflower The drama was merely a platform for the *flair* of the *flaneur*. All the world was a stage for the wearer of the green carnation.

But presently he shows the sandy bottom of his criticism in his comment on Wilde's "Duchess of Padua," "a play laid in the *sixteenth century* [correct]—century of Paolo and Francesca, of Dante and Malatesta—century of tears and terror, of poetry and passion, of madness and blood. *Though of the age of Dante, it is far from being written in the Dantesque style*" (our italics). Having thus timely warned us against the natural error of supposing that a prose drama of the nineteenth century laid in the sixteenth was written in the style of a fourteenth-century religious epic, Mr. Henderson proceeds to inform us in what style it *was* written. Wilde, it seems, was "in his cowl *à la* Balzac," and he was "studying Victor Hugo instead [of Dante]." Besides, he put into his play "not a little" of the "bombast, fustian, and balderdash of Webster and Tourneur." Moreover, it "reeks with souvenirs of Shakespeare." These the reader will detect in "its mechanical, conversational by-play, its lines from the 'Merchant of Venice' and 'Macbeth,' its rhetoric, exaggeration, and top-loftical strain." The total effect, barring the "strong" curtain, Mr. Henderson assures us, is "in every other respect . . . in pure externals . . . so faithful in its reproduction of the Elizabethan style as to seem but one remove from refined caricature."

This, we submit, is funny without being vulgar—as Oscar Wilde once remarked of a famous actor's representation of Hamlet. After this really superb confusion of the styles and ages of Dante, Wilde, and Shakespeare, we know how much weight to attach to the declaration that "Salomé" is "unapproached as an individual and unique creation in the literature of the world"; that Maeterlinck "heralds the dawn of a spiritual renascence"; that "through and beyond" the framework of Maeterlinck's dramas "we gaze into the depths of the human soul"; that "the nineteenth century brought forth a man [Ibsen] who boldly declared that we are no longer living in the time of Shakespeare"; that "we no longer boast, with Shakespeare, of Man: 'noble in reason, infinite in faculty, in form and moving express and admirable, in action like an angel, in apprehension like a god,' for we realize the sad botch he has made of the actual affairs of life"! This last declaration strikes us as perhaps the most impudent piece of misrepresentation with which we have met. Has Mr. Henderson ever chanced to look into the once popular play from which he misquotes? Or has he been misled by G. B. Shaw and other distinguished modernists into the supposition that Shakespeare is not merely obsolete but out of print and inaccessible?

Journals of the House of Burgesses of Virginia, 1727-1734, 1736-1740. Edited by H. R. McIlwaine. Richmond: Virginia State Library.

The first session of the Assembly of 1727-34, the first since Gooch became Lieutenant-Governor of the Colony, lasted from February 1, 1727, to March 30, 1728, and was occupied chiefly with measures to repair the battery of Point Comfort, to erect a lighthouse on Cape Henry, and to discover means for the prevention of delays in the courts of justice. In the second session, May 21 to July 9, 1730; the Governor announced that, peace having been made between Great Britain and Spain, "the time was propitious for enacting wise laws regulating the trade of the colony, especially the tobacco trade." It was decided that an appointment to the office of sheriff terminated for the time being one's membership of the House, and similarly an act was passed exempting members from appointment as sheriffs. German Protestants in the county of Stafford were relieved from the payment of parish levies, since they maintained a minister of their own nationality; this measure of toleration was not extended to other dissenters until the Revolutionary War. The last two sessions of this Assembly (May 18-July 1, 1732, and August 22-October 4, 1734) both tinkered with the tobacco law, and the second disclosed some irregularities in the accounts of John Halloway, speaker and treasurer, who, having given up his entire fortune, was not prosecuted; he was succeeded by Sir John Randolph. An act was passed offering better support and encouragement to William and Mary College.

The following Assembly convened on August 5, 1736, and lasted until August 28, 1740. The first session closed on September 22, 1736, with Sir John Randolph, Speaker. The Governor announced that the King had given his assent to the "Act for the better support and encouragement of the College of William and Mary," and to an "Act for amending the act entitled, An act for settling the titles and bounds of lands." There was discussion over the condition of the militia, and the practice of importing liquors by land from Maryland and North Carolina, on which no duty could be collected. An act was passed for laying a duty on liquors imported by land, and one for the better obtaining of the duty upon slaves. The perennial tinkering with the tobacco law was renewed, and a law was passed for preventing frauds in His Majesty's customs, and one for preventing fraudulent conveyances of land, in order to multiply votes at elections. Also, a tobacco inspector was charged with refusing to pass certain tobacco, unless its owner voted as he wished. Lord Fairfax would not recede from certain claims set up by him in reference to land, hence the Assembly took the settlement of the question into its own hands, and the King allowed this law. The Assembly admitted, at its second session (November 1-December 21, 1738) the newly elected burgess from the borough of Norfolk, which brought the number of burgesses up to seventy-two. Sir John Randolph having died the preceding year, John Robinson was elected Speaker, and later treasurer also. The Governor favored the continuance of the tobacco law. Laws were passed to ensure the safety of the inhabitants on the frontiers, and to encourage settlements; also to erect new counties and parishes, as a result of which Frederick and Augusta Counties were established. Some twenty-five acts in all, public and private, were passed at this session. The thanks of the House were returned on November 13 to Rev. Chicheley Tucker for his "excellent sermon," preached the day before, and one thousand copies were ordered printed. Also, the attempt was made to change the seat of government, but no agreement was reached as to a new place.

During the third session of this Assembly, which lasted from May 22 through June 11, 1740, England was engaged in the war with Spain, and most of the time was spent in concerting measures for putting the colony in a better position for defence should an attack be made on it, and for enlisting soldiers to serve from Virginia in the expedition contemplated against the Spanish possessions in America. The magistrates of the counties impressed "able-bodied persons fit to serve his Majesty, who follow no lawful calling or employment," but no one "who had a vote in the election of a member of the House of Burgesses, and no indentured or bought servant, might be thus impressed." The act for making more effectual provision against invasions and insurrections, first made in 1727 and revived in 1738, would expire in 1741, hence it was continued for three years. The money was to be raised by laying an additional duty on slaves for four years. An act was passed by the House to dissolve the vestries and elect new ones, but it was defeated in the Council.

The fourth session was prorogued from June 16 to August 21, 1740, and the following session lasted but eight days; the bill granting the supply was the sole one offered, the only reason for the Assembly's convening being for payment of the expenses of the col-

ony's quota of troops for the expedition fitting out against the Spanish possessions. The supply was quickly granted, and the bill was entitled, "An act for giving to his Majesty the sum of five thousand pounds, towards defraying the expense of victualling and transporting the soldiers, raised in this Colony, to serve his Majesty on an intended expedition against the Spaniards in the West Indies." These expenses were to be borne only until the troops assembled at Port Royal in Jamaica, after which all expenses were to be met by the crown. The money appropriated was to be borrowed on the security of the revenues arising from the taxes laid by the General Assembly at the preceding session on the liquors and slaves imported. The Assembly was prorogued to the last Thursday in December. On the death of Gov. Spotswood, Gov. Gooch succeeded to the command, and soon left for Port Royal. On his return he called a new Assembly.

World Literature and Its Place in General Culture. By Richard G. Moulton. New York: The Macmillan Co. $1.75 net.

It is very natural and to many it may seem proper for one to treat the subject of world literature in something like a cosmic style. Even a single world figure, like Shakespeare or Homer, has tempted critics into language not to be understood by most mortals. What must be the temptation when one decides to write of all world figures of literature together!

Not that certain dangers of his subject were not seen in advance by Professor Moulton. He has narrowed its range by viewing it in the perspective created by a national standpoint—that of America in the twentieth century—and has confined himself to a few masterpieces which are supposed to reflect and typify concretely what he calls "the unity of all literature.'" For the main body of the book five "Literary Bibles" suffice him: The Holy Bible; Classical Epic and Tragedy; Shakespeare; Dante and Milton; and Versions of the Story of Faust. The selection in itself is happy. Each topic embraces examples of literature of sufficient compass to illustrate the chief tendencies of an age, and if rightly treated to reveal the manifold dependence of one age upon another. The fault, to our mind, is that the topics are not further divided, and that the comparative point of view is largely abandoned. Except for ideas sketched in introductory chapters and for a few instances to the contrary in the main text, a topic is discussed in general terms and with reference to those nations only which it directly concerns. The study of literature that results is not comparative, but multiple. To illustrate: When the author turns to the second part of the second topic, he says, "All I can do at this point is to offer some remarks upon Greek tragedy in general." Considering the great impulse which this drama gave to succeeding ages in Europe, the statement seems to admit the futility of the comparative method. We must surmise that Professor Moulton has aimed in his book at a popular audience in whom he desires to create right general notions concerning the growth of literature and for the rest to stimulate them to a love of works that are truly great.

Certain instances, as we have hinted, show that the author was momentarily capable of a more scholarly, significant method. He is both precise and suggestive in touching upon the literary echoes in "Paradise Lost" and, in an outlying chapter, upon the similarities between Bacon's "Essays" and the "Book of Ecclesiasticus." Comparative literature, if it is not to fall into ill-repute, must in the first place be truly comparative, and above all must divide a subject in such a way that its meaning shall not be clouded by the great sweeps of time which are often involved. We are led into these remarks not only by "World Literature," but by a "History of Comparative Literature," by Frédéric Loliée, the only other work of such compass which has come out in recent years. The proper plan and devices for study of this nature have yet to be thoroughly applied. Severe scholars will scoff just so long as books of comparative studies on a large scale are chiefly "inspirational" in tone.

What is needed at present is not so much broad cross-sections of a given age, that is, so-called summaries of the spirit of the time, as narrow, perpendicular sections—the following of an idea, where it is easily recognizable, from Greek and Hebrew days down. In part, the plan has been employed in specialized treatises, as, for instance, in histories of the novel, of the pastoral, of the epic. But it is a question of still further narrowing the subject by skilful selection. Instead of attempting to give a full account of a European type one might study instructively a certain theme or situation within the type, as treated by men in various periods: the plight of Phædra at the hands of Euripides, Seneca, and Racine; the lower world as pictured by Homer, Virgil, Dante, Spenser, Milton; the treatment, by representative poets, of the few subjects which are common to the lyric of all ages. Or, again, an idea might be followed without reference to the literary types which embody it: Plato's conception of love and Aristotle's theory of imitation, and what they meant to the great literary times of subsequent Europe. These are only suggestions, but we are convinced that not until they or similar devices are adopted will a history of comparative literature become wieldy; strictly speaking, it will not be a history at all, but a series of exact illustrative studies.

Notes

The Putnams will soon publish "An Artillery Officer in the Mexican War," being the letters of Robert Anderson, captain Third Artillery, U. S. A., with a prefatory note by his daughter, Eba Anderson Lawton.

Mark A. DeWolfe Howe is engaged upon a life of Bishop Hare, apostle to the Sioux, which will be issued in the autumn by Sturgis & Walton.

The same house announces "The Likable Chap," a story of preparatory school life, by Henry McHarg Davenport.

Prof. Hartmann Grisar's "History of Rome and the Popes during the Middle Ages" will be brought out in an English translation by Kegan Paul.

In "The Principles of Scientific Management," Frederick W. Taylor has embodied the substance of his articles on the subject recently published in the *American Magazine*, and already commented upon on different occasions in the *Nation*.

Baedeker's "London and Its Environs" comes to us from Scribners in the sixteenth revised edition.

The Oxford University Press has brought out a new edition of Cary's "Vision of Dante," with the biography of Dante and the notes, and with clear impressions of Flaxman's illustrations. The book is printed in two styles, on ordinary and on India paper. A good plea might be made for this as still the most readable of all the English versions of the "Divina Commedia."

Henry Holt & Co. have added two new volumes to their attractive series of anthologies. One is a "Garland of Childhood," a collection of poems and prose extracts, compiled by Percy Withers, "for all lovers of children." The arrangement is by subjects, and the principle of selection is wide enough to include the solemnity of Wordsworth's "Intimations" and the jingle of Jane Taylor's "Dirty Jim." The other anthology is called "Letters That Live," and is compiled by Laura E. Lockwood and Amy R. Kelly. The selection seems to us extraordinarily incompetent. There are five letters from George Eliot, and not one from Byron or Thomas Carlyle or Horace Walpole. And in case of the authors included, for instance Huxley, some of the letters chosen are utterly trivial and dull.

The English version of Fogazzaro's last novel, "Leila" (Doran) is by Mrs. Mary P. Agnetti, who translated "The Saint" and its predecessors. Mrs. Agnetti succeeds in making a readable translation, but there is in Fogazzaro's prose a vibrant quality which eludes her and other translators. As "Leila" has been placed on the "Index" its circle of readers will probably widen.

The *New International Year Book* for 1910 is the fourth volume in the new annual series put forth by Dodd, Mead & Co. In the matter of scope, comprehensiveness of treatment, attractiveness of make-up, and

adaptation for ready reference, the *International* is, without doubt, the best publication of its class in this country. The editors and publishers are to be commended for their courage in marketing a 1910 annual five months into 1911, instead of appearing on December 31 with a good portion of the year 1910 left hanging in the air. We still find the most valuable feature of the book in its summaries of the political and legislative history of the different States, a class of information that is as difficult to get at as it is useful.

The Connecticut Historical Society has recently published in its Collections the second volume of the Law papers, the first of which was issued in 1908, and noticed in the *Nation* for February 20 of that year. The present instalment is largely made up of correspondence regarding the defence of Louisburg, the proposed expedition against Crown Point, and the frontier war against the Indians. We see the end of the Intestacy case, and meet with but few references to the counterfeiting of the colony's bills. Indications show that the Mohegan controversy was still a live issue, and that the colony was greatly agitated lest Parliament should pass an act forbidding bills of credit. A hint in one of the letters suggests that the colony had not entirely lost apprehension of an attack on its charter, a fear that was not dispelled before 1750. The letters of chief interest from without the colony are those of Clinton, Shirley, Pepperrell, and Warren; from within the colony, those of Law, Wolcott, and Saltonstall. Even among the leaders the contrast in literacy is markedly in favor of the outside correspondents, while the letters of the lesser lights within the colony are not only badly written and badly spelled, but betray great limitations in knowledge and interest. As showing with exactness the part played by Connecticut in the military activities of the time, this volume is invaluable. After the military correspondence, the most important single paper is the "Short Hints" sent to the agent, Eliakim Palmer, in London, defining the attitude of the colony toward paper currency. The publication of subsidiary papers of this character is of particular importance for the history of Connecticut, since the regular proceedings of council and assembly seem to be entirely missing from this time to the Revolution.

The idea underlying "Ethical Obligations of the Lawyer" (Little, Brown & Co.), by Gleason L. Archer, insists that there is a broad distinction between the ethical obligations of lawyers and of other classes of the community:

> The old custom of leaving professional ethics to the untutored ethical instincts of the individual lawyer must now give place to a definite and positive codification of ethics. Legal ethics include not only an intelligent watchfulness to do right, but also a knowledge of long-established customs and traditions of the profession. Hence, good intentions and high moral ideas do not always safeguard the lawyer against violation of legal ethics.

To put such a gulf between the lawyer and layman seems to us unnecessary and false. The lawyer's duty "to keep locked in his own bosom a secret confided to him by a client" is the duty, likewise, of every decent business man. And on what ground can it be said that this obligation exists because he is "no longer the irresponsible layman who can betray a secret at will or gossip away the reputation of some unfortunate individual who has confided in him"? The violation of such a duty may meet with more severe punishment when it is committed by a lawyer, but from an ethical point of view the offence is the same, no matter by whom it is committed. The same reasoning applies when a lawyer's relation with clients, with his opponents, and with the courts is discussed. He must be fair and honest toward them, not because he is a lawyer, but because he is a man. And any attempt to put these fundamental duties in the same class with purely artificial and conventional restraints, varying according to the social organization of each community, as is done in many of the codifications which the author refers to, must result in a confusion of ideas and defeat the very objects it is sought to attain. A lawyer in Oklahoma or Nevada is, humanly speaking, under the same obligations toward his client and the courts as a barrister of Lincoln Inn; but their conduct will vary according to their education and in spite of the "long-established customs and traditions of the bar." Under our system of legal education, by which thousands of young men from the comparatively uneducated classes are admitted to the bar after two years' study, often without any liberal education whatever, it is impossible to expect from the profession, as a whole, that same fine sense of decorum, of professional etiquette, which exists in England, which existed here when the law was a learned profession, and was not commercialized. In our democratic society the lawyer is nearer to the people than he ever was in aristocratic England, but we cannot close our eyes to the fact that such an advantage is necessarily purchased by a loss in professional prestige and decorum, and that this cannot be repaired by the adoption of any artificial code of ethics.

In their preface to a "Cyclopedia of Illustrations for Public Speakers" (Funk & Wagnalls), Robert Scott and William C. Stiles quote the judgment of "a well-known clergyman" that "A book of fresh illustrations should be made as often, at least, as once in ten years." Rather these ministerial mother goose books should never be made at all. We find in fact in the present collection a choice rhyme in the style of the kindergarten classic to illustrate the duty of sending missionaries. Little Jack Horner finds ingredients from all the missionary countries in his pie, and thus moralizes:

> "Now," thought little Jack,
> "What shall I send back,
> To these lands for their presents to me?
> The Bible, indeed,
> Is what they all need,
> So that shall go over the sea."

Bishop Greer will doubtless cull this gem for one of the missionary sermons to be preached in the Cathedral of St. John the Divine. Or possibly Dr. Jowett, when he preaches on the Judgment Day, will be pleased to find in this Cyclopedia the narrative of the ancient African who thus explained the report that some citizens of the metropolis favored the practice of cremation: "I kinder calculate they is a lot of them New York people that doan' wanter be found on that mornin'." Inclusion of this volume among the best ministerial sellers would justify the most alarming reports as to diminishing church attendance. Imagine the intellectual poverty of a clergyman who should turn to such a hodgepodge of anecdotes for material to fill up his thirty minutes a week!

That pleasantly garrulous octogenarian, Lady Dorothy Nevill, has brought out a sequel to her Recollections, entitled "Under Five Reigns" (John Lane). It is full of stories, rather mildly interesting, of English high life from the days of William the Fourth. Read consecutively, it confirms the impression made by other similar work, that the English Victorian aristocracy were, collectively, rather dull; that is, though many of them, as individuals, were men of mark, when they came together socially they instinctively shut themselves up in their several shells. They had pheasants and horses and consols and the last drawing-room or scandal for topics—what more did they need? No wonder that Dizzy amazed such a *milieu* by his wit and effrontery and disregard of conventions! Happily, the charmed circle was being constantly replenished by commoners who had made their way, and some of the most entertaining of Lady Dorothy's pages are devoted to the literary men, artists, and successful civilians who never were even knighted. Among her unexpected acquaintances are persons as far apart as Darwin, Cobden, Ouida, and Joseph Chamberlain. Besides its gossip and store of opinions the book has value as a social document, being saturated, without the author's suspecting it, with the prepossessions of caste. You perceive that she felt that when she asked Darwin to sign his name in her birthday book she supposed she was conferring a favor upon him, or that when Lord X invited Thackeray to dinner, his lordship was really displaying astonishing condescension. This gives the book a true flavor, and Lady Dorothy's wide range of acquaintance, not less than her worldly wisdom, free from cynicism, makes it readable. There are several entertaining illustrations, including drawings by Doyle, an early portrait of Disraeli, and a photograph of Lady Dorothy herself and Mr. John Burns at the opening of the Victoria and Albert Museum.

Two publications of the Historical Manuscripts Commission of Great Britain have recently appeared, the sixth volume of the "Calendar of the Manuscripts of the Marquess of Ormond preserved at Kilkenny Castle," and the first volume of the "Report on the Manuscripts of Lord Polwarth preserved at Mertoun House, Berwickshire." In the earlier instalments of the Ormond correspondence, the calendar had been brought forward to the spring of 1681, with Ormond still lord-lieutenant of Ireland. In the present volume, the great duke, having remained for a time in Ireland, returns to London to recover, after much slighting and affront from the Ministry, his place of influence at the Court of Charles II. The intrigues to supplant him fail of effect, and the old man, now seventy-one years of age, bears down his opponents with the weight of his popularity with the people of England, and by means of lavish display and entertainment in his capacity as the Lord Steward rises again on the flood tide of royal favor. He maintained a princely establishment, as the records of the controller of the household attest, and probably sapped his own great resources, if we

may judge from his proposal to borrow £9,000 from Sir Stephen Fox, the paymaster of the forces. Politically, the period was characterized by the Tory reaction that set in after Oates's plot, and the letters abound, almost to weariness, with accounts of plots and counterplots, and of conspirators and informers. Much admirable material is furnished for a study of the leading personalities of the day, and an occasional reference is given to matters of Colonial interest. The volume closes with March, 1683. The Polwarth volume concerns almost entirely the diplomatic mission of Lord Polwarth to Denmark, 1716-1725, and contains the text of many original letters and papers dealing with the mission and with the general European situation, which was a complicated one. Among the letters are many from the grandson of the Duke of Ormond, the second Duke, who, though an able man, never succeeded in achieving the greatness of his grandfather.

In "Heroines of Genoa and the Rivieras" (Scribner), Edgcumbe Staley, who has recently made several books on Florence and Venice, has the advantage of exploring a comparatively new field. Although Genoa was once a rival of Venice for control of the Mediterranean, she never has taken hold of the imagination of travellers or of historians. She produced no great literature, and no great art; and yet she played a conspicuous part in European affairs, and her merchant princes accumulated paintings of rare value. Mr. Staley essays to tell the story of her doges and conspiracies, of her fair women and haughty men, of her superstitions, customs, and daily life. He has collected much miscellaneous material, which he presents in a style which resembles that of the "Duchess"—if any one still remembers the fiction of that rhetorically bedizened writer. He is not always accurate, his Italian is often barbarous, and his flamboyance is amazing; but those who can discount these defects will find compensation in much of his information, which is not easily accessible in English.

In Volume II of Traube's "Vorlesungen und Abhandlungen" (Munich: Beck), we find the same rare quality as in Volume I, already reviewed in these columns. The subject, "Einleitung in die lateinische Philologie des Mittelalters," is treated in Traube's way, not with what is called system, but with the intent of arousing the learner's interest and concentrating it on typical aspects; it is a *liber protrepticus*, not a manual, and shows at every turn its author's genius and his universality. But further, as the editor, Dr. Lehmann, has brought up to date the bibliographical notes with which well-nigh every page is provided, the book performs an important function of the manual as well. The topics into which "mediæval Latin philology" falls, according to the subdivisions of the book, are literature, palæography, language, grammar, metric and rhythmic in both verse and prose, textual criticism, and transmission of ancient texts, though there are incidental references to other matters. Comparing this undertaking with the current formulation of classical philology, we find certain subjects omitted to which, in Müller's "Handbuch der klassischen Altertumswissenschaft," separate volumes are devoted. But it is too soon to expect an elaborated science of mediæval philology, nor did Traube intend such. Though master of a definite and searching method, he approached his subject less as a science than as an art.

Students of Virgil have long felt the lack of a special lexicon or index from which they could learn the exact facts with regard to any Virgilian usage. This lack has now been supplied in an "Index Verborum Vergilianus," by Prof. M. N. Wetmore of Williams College (Yale University Press). Professor Wetmore had originally intended to prepare a Lexicon Vergilianum, but, owing to the recent announcement of a similar work by Merguet, he has contented himself with this index. In preparing it he has used the edition of Ribbeck as a basis, but has added not merely manuscript variations, but also the readings of the chief modern editions, except the Oxford text. The value of the book has been greatly enhanced by subdivisions according to usage under the conjunctions, but more could have been done in this direction without serious labor. Thus, under the conjunction *cum* we might have been informed how many of the examples were those of *cum inversum*, and under *si* it would have been worth while to state how many of the past subjunctive tenses were contrary to fact. It would not have been difficult to subdivide the usages of the prepositions and to add information with regard to the different pronominal uses. As it is, however, the book is of great value. We now have complete indices of all the Latin authors to the close of the Augustan age, except Livy, Ovid, and Plautus, and it is thus possible to determine with great precision the development of the Latin language during this period.

Prof. Mark Bailey, who, up to 1905, was an instructor in elocution at Yale, a position he had occupied for fifty years, died last Sunday at New Haven, aged eighty-four years. Professor Bailey coached Lincoln during his debates with Stephen A. Douglas. He rode in Lincoln's carriage, and usually preceded Lincoln and Douglas with a preliminary speech.

Dr. Arthur Tappan Pierson, Presbyterian clergyman, and one of the leading authorities on foreign missions, died on Saturday of last week at the age of seventy-four. He was editor of the *Missionary Review of the World*, and was the author of many books on religious subjects.

The Rev. Lawrence Henry Schwab, canon of the Cathedral of St. John the Divine in New York, died suddenly last week at the age of fifty-three. Among his published works are: "The Kingdom of God," ten Bohlen Lectures for 1897, and translations and condensations of "Nippold's History of the Papacy." For some months before his death he had been engaged on a biography of the late Bishop Henry C. Potter.

Gen. Roeliff B. Brinkerhoff, statesman and prison reformer, who died last Sunday at his home in Mansfield, O., aged eighty-four, was the author of "The Volunteer Quartermaster," and "Recollections of a Lifetime."

The death is reported from Rome, in his fifty-first year, of Dr. Albert Zacher, the Rome correspondent of the *Frankfurter-Zeitung*, and an authority on the political and intellectual life of modern Italy, and on questions connected with the Vatican. His works include: "Römische Augenblicksbilder," "Aus Quirinal und Vatican," "Was die Campagna erzählt," and "Rom als Kunststätte."

Dr. Francesco Bonatelli, who died recently at Padua, was professor of theoretic philosophy at the university of that town, and for a while co-editor with Professor Mariani of the journal *La Filosofia delle scuole italiane*.

Science

The volume of the "Astronomischer Jahresbericht," for 1910, will be published shortly.

Ernest Ingersoll has placed his "Animal Competitors: Profit and Loss from the Wild Four-footed Creatures of the Farm," with Sturgis & Walton Co.

The zoölogical division of the Bureau of Animal Industry and the veterinary department of the Alabama Polytechnic Institute have conducted a series of investigations upon the life history of the tick, its habits, and the manner in which it is affected by climatic and other environmental conditions; and the data which they have gathered have just been published by the Department of Agriculture as Bureau of Animal Industry Bulletin No. 130.

Louis Durand's "Book of Roses," published in the series of Handbooks of Practical Gardening (Lane), contains in small space the gist of rose culture. The little volume may be recommended to our readers with the usual warning that the English cultural directions must be adapted to our climate. To dwellers in the Northern States they will be entirely misleading.

A useful book, meant for a definite circle of readers, is "The Practical Country Gentleman" (McClurg), by Edward K. Parkinson. By explaining, perhaps too briefly, modern methods of equipment, cropping, and stock-raising, it aims to rescue the owner of a country estate from the usual carelessness and waste. We hope that the book will find its public. When our men of means, neglecting a little their money-getting in the city, make their country places examples of thrift as well as of beauty, they will do a great service not merely to themselves, but also to their neighborhoods and the country at large.

"Hygiene for Mother and Child" (Harper), by Dr. Francis H. MacCarthy, is a good book of nearly three hundred pages. The advice needed by a prospective mother is given in simple language without any attempt to encourage futile activity when the doctor is really needed. In many matters relating to the training of little children, the directions are particularly sane and helpful. The title page notes the author as of the service of a homœopathic hospital, but the book has no other indication of peculiar doctrines.

"Woman and Marriage" (Stokes), by Margaret Stephens, is a book of moderate size, containing a good deal of advice to others of her sex. Except in a couple of chapters about the general health and the causes of disease, the advice deals with various problems of the matrimonial state and the care of very young children. Mrs. Stephens avoids the extreme position of some writers on these topics, and has rational opinions. In some parts there is

almost too much embellishment with poetical quotations, and also perhaps a too liberal use of other quotations of little value as a reinforcement of the views presented. The doctrine of the prenatal influence of states of mind seems to be accepted with great liberalness, and its practical application quite freely advocated. The book has a brief and rather reserved commendation from Dr. Mary Scharlieb and an introduction by Mrs. S. A. Barnett.

"Bibliographie géographique annuelle—1909" (Paris: A. Colin—5 francs) appears, for the nineteenth year, in the *Annales de Géographie*, under the direction of Louis Raveneau. It seems very complete and satisfactory in its methods and classifications. The general part takes separately the history of geography and historical geography; mathematical geography and terrestrial physics; natural geography (meteorology, geology, orography, oceans, lakes, rivers, botany, zoology); human geography (political, economic, colonization); miscellaneous (congresses, bibliographies, methods, etc.). The regional part, besides the particular divisions of the earth's continents, deals separately with the polar regions. The number of publications noted may be gathered from the index of authors, printed three columns to a page and occupying seventeen of the octavo pages. This represents 1,153 separate publications in different languages; and these, besides the bibliographical indications, are analyzed according to their relative importance by specialists, sixty-three in number.

"Géographie—la France" (Paris: A. Colin. 500 pages, 18mo, 3.75 francs), by P. Vidal de La Blache and P. Camena d'Almeida, while intended for students, is an excellent compendium for reference and for the general reader. M. Vidal de La Blache, who is a veteran geographer of worldwide renown, gives an interesting introduction on the fundamental divisions of the French soil; and its formation, relief, climate, and hydrography are treated before the separate regions. The means of communication; military organization; agriculture, industry, and commerce; and population have their sections. French colonies (Africa, Indian Ocean, Asia, Oceanica, America) have 100 pages. Where occasion offers there are "readings" from writers of authority. The book is handy, very readable, scientific, and excellent in typography.

Judging from the immense number of books now appearing on the subject of food, there was never a time when people concentrated their attention so exclusively on their digestive apparatus. Most of these books are written in advocacy of some food fad from which the author believes himself to have benefited, and of those which assume a more objective position and profess to be scientific but few are based upon the best experimental evidence available. We still hear too much about Alexis St. Martin, and too little about Pavlov. But the Canadian voyageur has dictated the digestion of two generations, and it is time that his stomach had a rest. Prof. Henry C. Sherman's "Chemistry of Food and Nutrition" (Macmillan) is distinguished from the multitude of its contemporaries in this field by being neither partisan, antiquated, nor superficial. It is a compact compendium of information based upon the most recent researches. How completely the subject has been revolutionized is shown by the fact that in the bibliographies appended to each chapter almost all the references bear a twentieth century date. Though intended as a college text-book, it may be consulted with profit by any one who is interested in the subject, and that seems to include a large proportion of our population. We are often told, for example, that some new mode of cooking, mastication, or selection will greatly increase the digestibility of food, but a glance at the table on page 76 shows that ordinarily we digest 92 per cent. of the protein, 95 per cent. of the fat, and 98 per cent. of the carbohydrates that we eat, so that there is not much to be gained on that point. And on page 145 we learn that Mr. "H. F," the most eloquent and enticing of the advocates of less eating, was found on being put into the calorimeter for three days to use as much food as the ordinary man of his age.

The extent to which specialization in chemical research is now carried is shown by N. V. Sidgwick's "Organic Chemistry of Nitrogen" (Frowde). This large volume is devoted to a single element, nitrogen, and of all its compounds, considers only those which contain in the molecule also the element, carbon. Still its 400 pages are inadequate, even to specify all of the known compounds of these two elements, and the author is obliged to confine his attention to a few representatives of each class and to the most important reactions. These are discussed in admirable style, and with thorough mastery of the vast literature of the subject. The many disputed questions are presented fairly, and the author seems to have escaped the faults, to which nitrogen chemists are peculiarly prone, of making a hobby of some theory, and so trying to unlock all doors with one key. The advanced student who wishes to take a comprehensive survey of the field will find no other volume or volumes so useful to him as this. Even the layman may think it worth while to dip into it. He may be interested, for example, in the recent progress toward that yet far distant goal, the preparation of the proteins which form the physical basis of life. Here is the high-water mark of organic synthesis, a molecule whose weight is 1213, and whose name is l-leucyl-triglycyl-l-leucyl - triglycyl-l-leucyl-octoglycyl-glycine. Really, of course, such names are not words, but verbal formulas, like a-square-minus-two-a-b-plus-b-square. The constitution of this compound is known, because it has been built up from eighteen smaller molecules. But, complex as it is, it is simply one of the decomposition products of the protein molecule which is more than ten times its size.

A recent volume within the field of applied geography, and one which for some time has been awaited with interest, is Prof. Edward Van Dyke Robinson's "Commercial Geography" (Rand, McNally & Co.). The purpose of commercial geography, the author asserts, is to explain, in terms of all the factors involved, the geographic division of labor. To some, this announcement of the limitation of the field may seem to be a considerable departure from the beaten path; while to others who probably constitute the greater majority the real nature of commercial or economic geography is too vague a conception for delineation. It certainly is a matter of regret that writers on commercial geography are not better agreed as to their exact field; but, in all probability, the comparative newness of the subject is largely accountable for this unfortunate situation. A commendable feature of the more recent books which makes for advancement, and one which has been followed by the writer of the present volume, is an earnest and consistent attempt to interpret, wherever possible, the leading data presented, rather than to give a mere statement of more or less related facts. The book bears evidence of having been designed primarily for high school, rather than for college, use; the numerous maps, diagrams, and pictures give undisputed evidence on this point. The volume is well written; the text is largely free from statistical data, which, happily, have been relegated to an appendix; and in many respects the work, as a whole, is a distinct advance over previous elementary works in commercial geography.

William Russell Dudley, sixty-two years old, emeritus professor of systematic botany in Leland Stanford Junior University, has died at Palo Alto. For sixteen years he was a member of the Cornell faculty.

The death is reported in his eighty-eighth year of Nevil Story-Maskelyne, who was for many years keeper of minerals at the British Museum, and professor of mineralogy at Oxford. He wrote a "Treatise on the Morphology of Crystals."

Drama

THE WORK OF W. S. GILBERT.

The death of William S. Gilbert removes a notable figure from the theatrical world and puts a dramatic end to a singularly full, successful, and beneficent career. His renown had been so closely associated with that of his musical associate, Arthur Sullivan, that comparatively few persons, perhaps, realize the full scope of his ability, the breadth of his ideals, or the steadfastness of his purpose. The immense popularity of the operettas of which he was the inventor and the librettist, diverted general attention—in recent years at all events—from the wide variety and uncommon excellence of his other theatrical work. It is useless, of course, to speculate to what heights he might have risen as a dramatist pure and simple, if fate had not prepared for him that ideal musical partnership which brought him fortune while virtually confining him to one line of endeavor; but it should not be forgotten that the librettos, by which he is most widely known, formed only about one-fourth of his whole dramatic and literary output.

He was not a great dramatist, but he possessed many of the essential qualifications of one. No man had a quicker sense of theatrical situation, either comic or serious. He had the construc-

tive faculty, plenty of imagination and invention, experience of life and knowledge of human nature, both kindly and caustic wit, quick and humorous perception, and a mastery of language which manifested itself in sound and pregnant pose and fluent, musical verse. There are in his writings many pretty strokes of poetic fancy and bits of genuine pathos and passion, while some of his lightest productions are freighted with a pointed moral and philosophic observation. The delicious "Bab Ballads" are not all nonsense. Such works as "The Palace of Truth" and "The Wicked World," with their mingled delicacy of fancy and sharp satire; "Pygmalion and Galatea," with its pathos and humor; "Charity," with its vigorous assault on social hypocrisies; "Broken Hearts," with its pathetic study of the dwarf Mousta, and such exhilarating comedies as "Tom Cobb" and "Engaged" exhibit a very wide range of power and versatility. None of them is quite so perfect a work of art in its way as is "Pinafore," or "Patience," or "The Mikado," but in bulk they represent a capacity of an exceedingly high order.

And although in one form or another he dealt with life in many phases, and often in robust fashion, he never condescended to pander to low tastes by the use of vulgar or demoralizing methods. There is not an objectionable line to be found in all his publications. Beginning to write at a time when the British stage was largely abandoned to crude sensation or the veiled improprieties of adaptations from the French, he set himself to prove that audiences could be attracted without any sacrifice of decency, and that it was possible even to handle pitch without defilement. When he entered into his partnership with Sullivan—to quote his own words—"we resolved that our plots, however ridiculous, should be coherent, that our dialogue should be void of offence, that, on artistic principles, no man should play a woman's part, and no woman a man's. Finally, we agreed that no lady of the company should be required to wear a dress that she could not wear with absolute propriety at a private fancy ball." To this agreement they faithfully adhered, with results that are known to the whole civilized world. What becomes of our modern "musical comedy" when judged by this standard?

Of course, Gilbert, who was the more potent spirit in the illustrious firm, did not win the public and fortune by the mere exclusion of vulgarity and nudity from his stage. He furnished better and more certain attractions instead of them. He took care also that every performer in his company should be able not only to sing, but to act. A consummate stage manager, he drilled the members of his company until he was assured that every line of the text and bar of the music should have their legitimate effect. The consequence was that the representations at the Savoy assumed an artistic dignity worthy of grand opera itself, and were attended by a prosperity undreamed of before in London, for operetta, and never attained since.

Neither Sullivans nor Gilberts, unfortunately, are to be found every day. But the lesson which they taught is plain enough for such of their successors as choose to profit by it. Empty, vulgar, glittering frivolity may draw the crowd for a brief season, but only the entertainment that appeals to intelligence and good taste is sure of lasting public support. Gilbert and Sullivan died full of riches and honor. Of modern musical comedies a very small proportion, it is said, are profitable. There is ground for hope in that reflection.

"Rust," a play in four acts, by Algernon Tassin (Broadway Publishing Co.), is a somewhat ambitious and not altogether incapable effort to illustrate the perils that beset the modern society woman debarred by custom and prejudice from the legitimate exercise of her best faculties. It exhibits some knowledge of human nature, a sense of theatrical situation, and a capacity for writing entertaining dialogue, but is extravagant in its details and inconclusive in its outcome. There is considerable truth in the drawing of the group of rich and idle women who figure in the story, but the conduct of the heroine, the wife of a doting multi-millionaire, who is willing to indulge her every wish except her desire to engage in business, is in a high degree selfish, dishonorable, and inconsistent. In order to gratify her business instincts, she enters into secret speculation with a most unlikely confederate, and not only stoops on his account to rob a personal friend, under peculiarly outrageous circumstances, but narrowly escapes the sacrifice of her conjugal honor. At the last, she makes full confession to her husband—who magnanimously admits his responsibility for a great part of the mischief—and is forgiven. Thus the usual happy ending is contrived, by an utter disregard of probability and the professed object of the fiction. Good dramatic material is wasted by insincere and unskilful treatment.

Liebler & Company have taken possession of what was formerly the New Theatre, and is hereafter to be known as the Century. They announce that a brief revival of "The Blue Bird" will precede their production of "The Garden of Allah."

The Shakespearean season of Robert Arthur at the London Coronet Theatre was so successful that he will continue his representations at the Savoy, where he proposes also to make some Dickens revivals, beginning probably with "Dombey & Son."

The American rights of Cosmo Hamilton's comedy, "Mrs. Skeffington," which has been renamed "The Indiscreet Mrs. Thynne," have been acquired by Miss Rose Dupree.

John Galsworthy is writing a society play for Lillah McCarthy, one of the most prominent of the younger English actresses. Granville Barker (her husband) is also at work upon a piece in which she will play the leading feminine part.

It seems doubtful whether good fortune will attend Laurence Irving's attempt to revive early Victorian melodrama in his production of "Margaret Catchpole," at the Duke of York's Theatre, in London. Margaret was an actual personage, who was chosen as the heroine of a story by the Rev. Richard Cobbold, which was widely read in its day, and this is not the first time that she has made her appearance on the stage. She was a servant girl who stole a horse to rejoin her smuggler lover, and was condemned to death, but escaped execution, to make a happy marriage afterward in Australia. This tale Mr. Irving presents in old-fashioned form, with story-book smugglers, a villain of the old transpontine order, and scenes of lurid coloring. The play seems to be somewhat childish stuff, but is worth notice, on account of its introduction of the kinematograph as a dramatic accessory. Thus Margaret's desperate night ride and other adventures are exhibited in living pictures between the acted scenes. Laurence Irving appears to have made a most picturesque villain of the antique type, while Mabel Hackney, sometimes in male disguise, was seen in all manner of strange experiences as Margaret. Critics of the advanced school treat the piece with contumely. Whether the public will take to it remains to be seen. It does not necessarily follow, of course, that a piece of old-fashioned melodrama must be destitute of all artistic value.

Liverpool is to have the first repertory theatre in England owned by the public. This is the Star Theatre, an excellent building, in a good situation, which has just been acquired by the promoters of the repertory movement. It will be known hereafter as the Liverpool Repertory Theatre, and the prospectus of the limited liability company will be issued immediately. Eight hundred persons have already applied for shares, which are $5 each. Mr. Basil Dean, a manager of approved experience and good fortune, is to be in control of the institution. A number of well-known men are on the board of directors. This appears to be an experiment from which practical results of real value may be looked for.

Art

WHISTLER AND GREAVES.

London, May 25.

Nothing more extraordinary has happened in London for a long while than the sensation over the show of pictures and prints by Walter Greaves, "Pupil of Whistler," at the Goupil Gallery. By chance, I went to the exhibition on Private View day at the usually crowded hour, that is, if there is a crowd at all. Eight people were in the gallery, and one of these eight was Greaves, one an art critic. The next morning, Friday, the *Times* came out with a long article in large type, pro-

claiming Greaves a master, comparing his naïveté to Whistler's "cosmopolitan cleverness," and calling upon the Chantrey Bequest to secure one of the masterpieces. That afternoon the gallery was so crowded it was almost impossible to see anything; many of the pictures were sold, disputed for by collectors, artists, and critics; the whole town was talking of the "unknown master"; the authorities were tumbling over each other in their haste to praise the long neglected genius and to belittle Whistler in the process.

At first, the whole affair seemed to me too preposterous to be taken seriously. But the very rumor to which I have just referred shows that it must be taken seriously, and that the facts must be made plain. Everybody knows how difficult it is for the most scientific of scientific critics to decide upon the authorship of pictures painted two or three centuries ago. If the statement that Whistler owed everything to Greaves, that many Whistlers were painted by Greaves, is allowed to go uncontradicted while contemporaries of Whistler are still living, the hopeless confusion in the present, to say nothing of the future, can scarcely be imagined. The critic of the *Morning Post*—who, with the critics of the *Westminster Gazette* and the *Globe*, has managed to keep his head in the midst of the mad hubbub—gave as heading to his notice of the show, "The New Amico of Sandro"; and it was appropriate.

What are the facts? The fabric of nonsense is based largely on a letter from Greaves to the director of the gallery, published in the catalogue. It is full of ignorance or misstatements, and the only charitable explanation is that the old man's memory is completely gone. The most important of the misstatements relates to a picture called Passing Under Old Battersea Bridge, obviously derived from Whistler, though the distant sky and water were undoubtedly painted by him, as any one can see, but at a much later date, and some of the reflections in the river were also put in by Whistler. Of this picture Greaves writes:

> It was exhibited during the great Exhibition of 1862 in Alan Cole's room in the Cromwell Road building—the room containing Whistler's pictures.

"W. Greaves, 62," in very staring letters and figures, is written at the top of the canvas, and it is almost the only picture in the exhibition that is dated. Upon this date the critics have jumped as proof that Greaves is the originator of Whistler's nocturnes, since Whistler did not show a nocturne until several years later. But the statement in the catalogue is absolutely false. Government documents at South Kensington have been supplied to me proving that Walter Greaves did not show this picture, or any other pictures, in the International ("great") Exhibition of 1862; that Whistler showed no pictures there, either; that it was not until 1873 that Walter Greaves exhibited a picture in an exhibition at South Kensington, while Alan Cole, C.B., could have had no room in 1862, as he was then a boy of fourteen. The foundation thus gone, the elaborate structure of misstatements and misrepresentations tumbles to pieces, and nobody of sense can again believe implicitly any statements made by Greaves in his letters or on his pictures, however prepared British critics may be to swallow them wholesale.

And the obscurity of Walter Greaves is purely a myth. From 1873, he exhibited publicly. He has for years been a conspicuous figure in Chelsea, where his work has been shown and sold. In 1890, he and his brother had the sort of chance that made the fame of the old Italian masters, and that most British artists seek to-day in vain: they were commissioned to decorate Streatham Town Hall, and they worked three solid years on the decoration, producing about a hundred pictures, dated 1891, 1892, and 1893, and signed "H. and W. Greaves. Pupils of Whistler." The pictures which remain are pure Greaves, the uttermost rubbish and banality, though several are copied from Whistler, the designs of whose frames even are stolen. Critics who have been down to Streatham to see them, appalled by this further "discovery," have got out of the difficulty by attributing the worst of the series to Harry Greaves, who is dead and cannot deny it. That the brothers should have signed themselves "Pupils of Whistler" in any of their work is made a reproach against Whistler. But they were his pupils, and he had been trained in France where the younger man holds it a privilege to exhibit as the pupil. Even in England, there have been artists who gloried in calling themselves pupils of Whistler and in the position they knew it gave them.

But it seems useless to go into these details in the face of the paintings and prints now on the walls of the Goupil Gallery. They are the complete refutation of critics bent, as of old, upon the downfall of Whistler. The work done by Greaves when not under Whistler's influence is commonplace, clumsy, undistinguished. It is impossible that the man who did it could, of himself, have developed the methods and manner of the nocturnes. The work done under Whistler's influence is an echo of Whistler, and in certain instances it is evident that the master worked on the pupil's canvas or copper, as Greaves says. There is one plate that is at least half done by Whistler and must be added to his work. And among the paintings there are a portrait of Greaves and a nocturne from Whistler's window that look like canvases which Whistler, dissatisfied, had thrown away, only that their fate should be to have Greaves take them up and ruin them. It must be explained, however, that Greaves is no fool. In some ways he was an apt pupil. A painting, published as the frontispiece of the Metropolitan Museum catalogue of the Whistler Exhibition last year, owned by Charles L. Freer, and one day possibly to pass into the Washington National Gallery, has every appearance, to judge from the reproduction, of being by Walter Greaves.

I know that already the *Times* has, positively and without giving any reason, refused to publish a letter exposing Greaves's misstatements, though the *Times* is responsible for the sensation based upon them. The worst of it is, the *Times* is but one of a large number of London and provincial papers more or less under the same control. Besides, it is said that the proprietor has purchased one of the pictures; a critic on a large London daily has bought a second; and a third has been acquired by a notorious dealer, who has hung a repudiated Whistler in the Dublin National Gallery which he started. It really seems as if the old enmity against which Whistler struggled had sprung up again. He used to say that the British critics hated him because he was an American, and that, if he had not had the constitution of a government mule, they would have killed him long ago. Whistler was a man to whom nothing happened as to other men, but of the extraordinary incidents that filled his career this is the most extraordinary of all. N. N.

The Book of Decorative Furniture: Its Form, Colour, and History. By Edwin Foley. In two volumes. Volume I. New York: G. P. Putnam's Sons. $7.50.

A number of finely illustrated quartos and folios on the furniture of other days have appeared in the past dozen years, by Molinier, Macquoid, Lady Dilke, Guy Laking, Luke Vincent Lockwood, Frederick Roe, Esther Singleton, and others. These are devoted more especially to the furniture of a particular nation or period, or to a particular article of furniture. The present work is a general survey of the whole field, and in that comprehensiveness lies its chief value. It is a suggestive review, an introductory survey, intended for the general reader and amateur rather than for the specializing connoisseur or for the student in search of a structural or decorative detail of a special period. The style is straightforward, with only occasional lapses into fine writing. A certain lightness of treatment may add to the effectiveness of such a book, but the author's humorous and other sallies, discursions and divagations, aimed, possibly, at a particular brand of connois-

seur indigenous to the "tight little island," are not always the "pardonable diversions" which he accounts them to be. They usually take up space that might have been utilized to better effect, particularly as Mr. Foley himself speaks of the difficulty of compressing so much history within the limits allowed. He executes some figures also on the alluring but slippery skating ground of analogy. Wendel Dietterlin is "a Poe in ornament" on page 81, and "the Du Cerceau of the German Renaissance" on page 78, while Grinling Gibbon (whose work is appreciatively and understandingly characterized) is labelled "that Paganini in pear-tree and other soft woods." On the other hand, the author interestingly describes the influence of surroundings, as evidenced, say, in the indebtedness of woodwork to architecture, the encouragement of the use of walnut (more easily worked than oak) through the vogue of barocco with its curves, the "response to the time-spirit," as in the "sturdy national growth traceable through . . . Britain's crude but vigorous adaptation of the ornament of the Italian Renaissance." Or he notes the development of certain forms, as the result of particular needs; for instance, the use of the trestle table as an outcome of the life of the mediæval hall, or the change of form of the hearth brought about through the introduction of coal, which necessitated the use of narrow flues and of grates. The emphasis on the dignity and worth of the arts of which he writes, as compared with the attitude which finds "high art" only in painting and sculpture, is refreshing, and as noteworthy as his references to the necessity of recognizing the limits of the material in which a work of art is to be produced.

The author's drawings (there are to be 100 color plates and 1,000 text illustrations in the completed work) are helpful in a general way; details, particularly in the small text-illustrations, are not always clear. The color plates usually show examples "with contemporary accessories and environment," a plan remarkably well illustrated in the exhibition on the occasion of the opening of the new wing of the Metropolitan Museum, which included rooms decorated and furnished each with examples of a particular period. Another useful feature is the color reproduction of the characteristic grain markings of 36 constructional and decorative woods. Errors appear to be surprisingly few. On p. 27 is found Sevigué, on p. 27 Leuchterweibschen, p. 116 Del Andrea Sarto; the reference to p. 49 on p. 54 should be to 59. It is to be hoped that the usefulness of this work will be increased by an index, covering both text and illustrations, in the forthcoming second volume.

Constant Mayer, who died recently in Paris, won a name for himself at the Salon forty years ago by his two pictures, La Reneontre; épisode de la guerre d'Amérique en 1863, and Femme iroquoise de l'Amérique du Nord.

Lars Gustaf Sellstedt, the artist, died at his home in Buffalo on Sunday last, at the age of ninety-two. He was born in Sweden and came to this country as a boy. The Albright Art Gallery, in Buffalo, contains several of his works, among them being a portrait of himself. He painted Grover Cleveland and other prominent men. He was the author of "From Forecastle to Academy," an autobiography.

Finance

RETROSPECT.

The so-called "Steel Trust inquiry committee" of the House of Representatives has been variously classed as an effort to complete the Culberson committee's inquiry into the Tennessee Coal affair of 1907; as an attempt to force the Department of Justice's hand in prosecution under the Sherman law; as a counter-movement against the "standpat" policy on prices; as a Machiavellian intrigue by Wall Street "bears." Nobody described it as a disinterested project to delve into financial history. Yet this is the principal office which it is probably destined to perform.

When the committee was appointed, the principal comment on the market was, that nothing was left to be found out about the Steel Trust or about the chapters of Wall Street history surrounding it. But facts may be known about an historical event, without knowledge of what the facts really signify. Lapse of time will often change the perspective. Some of these new points of view are being elicited at Washington.

John W. Gates, who opened the testimony, retold some episodes of the Steel Trust's organization in 1901. Mr. Carnegie got that year, for his interest in the Carnegie properties, just twice what he had offered to take for it in 1899—$320,000,000, as against $160,000,000. The "billion-dollar merger" was a recourse, not to stop ruinous conditions in the trade—for steel prices had risen rapidly after the summer of 1900—but solely to prevent the building of competitive steel tube works. Yet Carnegie had tried just such competition in the wire trade, and had sold out for half a million dollars a plant which cost him a full million. One experimental steel combination, whose own common stock had lately been down to 20, was valued at 125 for exchange in the merger, and $50,000,000 was thereupon added to the holding company's obligations. Thus Mr. Gates.

Some time the question will be more vigorously discussed, what made Carnegie's property worth $160,000,000 more in 1901 than it was worth in 1899? When such discussion comes, there will be various theories. Mr. Carnegie may have undervalued it on the one occasion. Mr. Morgan may have overvalued it on the other. Its actual earning capacity may have doubled. The promoters may have hit on a moment when all values were imaginary. Within its first two years of history, the Stock Exchange valuation of the Steel Corporation's stock fell from $785,000,000 to $350,000,000. Therefore, even in Wall Street, the matter is in the realm of theory.

The one sure inference from the history of the period is, that what Wall Street still remembers as the "big time" of 1901 resulted from the coincidence of plans of previously unimaginable scope with a psychological moment in the world's finance. The Steel Trust flotation was the typical exploit of that interesting period. It could not have succeeded a few months before April, 1901, or a few months afterward. A billion-dollar steel merger was openly proposed in the spring of 1899; its only effect was to bring about frightened liquidation in the rest of the market. The much less extensive shipping merger, which the same promoters undertook in immediate sequel to the Steel promotion, was a still-born failure.

The fact was, that experienced and observant financiers saw by instinct, at the start, what was the situation in the spring of 1901, and saw it coolly and correctly. It was the general public which then indulged in wild delusions. But a very few weeks sufficed to bring into public view a different state of things. The great promoters, capitalists, and bankers, who had begun by trading shrewdly on the frenzy of the public, presently found their own ideas departing from the habitual balance. A little longer, and the maddest of all the groups concerned in American finance was the group of great financial leaders. Bankers previously noted for conservatism seized on the belief that they had discovered some sort of philosopher's stone, which turned things of no intrinsic worth into things of enormous actual value. The craziest of financial principles were openly professed by eminent financiers. Credit which was supposed to be raised only on expectation of the commercial movement of the year, was made the absolute basis for the rashest promoting speculations. The exploits of the Steel Corporation's president at Monte Carlo were nothing more or less than a picturesque epitome of the Wall Street exploits of that whole group of financiers. A few months more, and the episode was over.

As in all such periods, however, the financial organizations constructed in the excitement of the day, remained; and the question of their final position in the financial world is not yet settled. Sometimes, in the aftermath of a

South Sea Bubble or an 1836 or an 1856, the courts of insolvency take charge of them. It was the country's good fortune, rather than the good judgment of the promoting community of 1901, which prevented this from happening in sequel to that period. Some great combinations have gone to wreck since 1901, and so have many great private fortunes and great financial reputations. What seems chiefly to be happening now, as an immediate consequence of a decade ago, is firm and relentless progress in the work of limiting the power for mischief of the huge industrial combinations constructed in those crazy days.

The task was begun, it is true, rather late in the day and after the mischief of overcapitalization, overspeculation, and overdisturbance of the economic equilibrium had been largely done. This fact has emphasized public interest and curiosity in the question, what the eventual upshot of the opposing policies of expansion and restriction in the field of capital exploitation is hereafter to be. In this direction also, the House committee inquiry has elicited some new and startling points of view. That the chairman of the Steel Corporation should have coolly proposed that prices in the trade be fixed at Washington is hardly a sequel to have been expected from the events of 1901. Yet Judge Gary's profession of economic faith is in reality less surprising than people may imagine. When any one begins by repudiating economic principles whose foundation rests on all previous trade experience, it is never possible to say at what position he will eventually arrive. But it is none the less an extraordinary thing, and a novelty even in this era of surprises, that the management of the so-called "billion-dollar Steel Trust"—itself the consummation of the ambitions and activities of the period's most inveterate individualists—should be hinting broadly that a paternal government should take the job off their hands. But Judge Gary did not couple his suggestion with the proposal that the government, after looking into cost of production and basis of capitalization, should also dictate dividends.

Yerkes's Introduction to Psychology

By **Robert M. Yerkes,** Professor in Harvard University. XII+417 pp. 12mo. $1.60.

This introduces students to the subject by giving a clear and concise discussion of the chief characteristics of the subject-matter, aim, methods, and value of the science. The author plans to make his book an outline of the subject, not a manual, and to deal with the groundwork of psychology, without special reference to physiological, genetic, or comparative psychology.

NOW READY

THE SUFFRAGETTE

A History of the Women's Militant Suffrage Movement.

By E. SYLVIA PANKHURST

To fully understand the aims, methods, and achievements of the Suffragettes this book is indispensable. The author is a part of the movement of which it is a vivid, dramatic, and accurate history. It shows how militant tactics have brought the Votes-for-Women Movement into practical politics. The illustrations are from snapshots of arrests, raids, forced feeding, and other typical incidents of the Militant campaign. (Cloth. 12mo. Fully illustrated. $1.50 net.)

THE BOOK OF THE YEAR

What Eight Million Women Want

By RHETA CHILDE DORR.

Illustrated, $2.00 net; postage 20 cents.

Unique in every way. A complete survey of the ideals and accomplishments of the effective, thinking women of our time. Not a woman's suffrage book, but far broader. Essentially constructive. No one who wants to know exactly what women are *doing* can afford to miss this notable volume.

SMALL, MAYNARD & COMPANY, Boston

CRIMINAL MAN

ACCORDING TO THE CLASSIFICATION OF CESARE LOMBROSO.

Briefly summarized by his daughter, GINA LOMBROSO FERRERO. With 36 Illustrations and a Bibliography of Lombroso's Publications on the Subject. 8vo, $2.00 net. By mail, $2.20.

Signora Guglielmo Ferrero's résumé of her father's work on criminal anthropology is specially dedicated to all those whose office it is to correct, reform, and punish the criminal, with a view to diminishing the injury caused to society by his anti-social acts; also to superintendents, teachers, and those engaged in rescuing orphans and children of vicious habits, as a guide in checking the development of evil germs and eliminating incorrigible subjects whose example is a source of corruption to others.

The Nation

VOL. XCII.—NO. 2398 THURSDAY, JUNE 15, 1911 Reg. U. S. Pat. Office. PRICE TEN CENTS

Our Own Religion in Ancient Persia

By Dr. LAWRENCE H. MILLS, *Professor of Zend (Avesta) Philology*

Being a Third Edition of a Lecture twice delivered in Oxford, partly printed in the *Nineteenth Century Review, January*, 1894, translated with consent of the Editor and Author into Gujarati (Trustees of the Sir J. J. Fund), and into Italian, 1911, by an accomplished translator upon his own initiative.

Soon to be had of leading booksellers in Oxford, or of Brockhaus, Leipzig, Two Shillings (fuller edition soon with "the Avesta and the Veda," 3d ed., from East and West, Bombay, 1st ed. Open Court, 2d ed.). Italian version, seventy-seven pages, now ready, gratis, on behalf of Mr. J. Bahemen, upon application to Author, to Students of the Universities of Rome and Naples; Italian bound up with Oriental and English text of Yasna I., six plates, pages 168, three lire paper, and cloth, seven lire.

The Author strenuously negatives the opinion that the Post-Exilic orthodoxy owed its origin wholly to the vastly prevalent Persian system by which it was surrounded during the centuries when the Jews were Persian subjects, but he holds it to be reprehensible, as also fatal to Bible study, to conceal the existence of a system where the details of the Theology, Angelogy, Soteriology, Eschatology and Subjectivity of recompense largely coincide with those of the Exilic pre-Christian creed, notwithstanding extensive accretions of fabulous matter.

He recalls the dominant fact that a form in which the Persian Religion reached Greece, at least B.C. 350, exclusively reports the supreme interior elements; and he does not deny that this influence contributed, with political motives, toward the Restoration of the Jews, nor that the Persian decrees and other religious communications partly reported in the Bible encouraged the orthodox Pharisaism, as against the negative Sadducees. Persian intercourse with the Jews immense; Bible intimations, full as they are, give little idea of it; "Paradise," a Persian word.

Librarians who may desire to receive, carriage paid, duty free, Author's YASNA I. with Avesta, Pahlavi, Sanskrit and Persian texts, trls., plates, etc., with Author's Sanskrit version, from Mr. Bahemen, of Teheran, or from Trustees, Sir J. J. Fund, may communicate with the Author, Oxford.

See *Nation*, Aug. 30, '06: "Beyond question our leading authority now living on the Gathas." See *Nation*, March 23, 1911; Rast Goftar, Bombay, April 18, 1909.

THE JUDGMENT OF
The New York Times Literary Review
ON
Beecham's GETTYSBURG
(From issue June 4, 1911.)

GETTYSBURG AGAIN

Capt. Beecham's Capital Description of the Battle in Untechnical Terms

THE battle of Gettysburg was undoubtedly a pivotal, and it can scarcely be disputed that it was the decisive, battle of the Civil War. It has been described in history and in romance; it has been argued about illimitably; yet we do not recall in any other book so clear and easily comprehensible a description of the events of tbose three days of tremendous figbting as Capt. R. K. Beecham gives in "Gettysburg" (McClurg, $1.75). Tbe order of engagements and tbeir relative bearing are admirably set fortb.

Examining it before reading, one deplores the absence of tbe usual plans, showing the forces engaged, etc., but one does not miss them, after all. There is a very well drawn relief map of the battlefield, by the aid of whicb one can follow every manœuvre and see the advantages and disadvantages of every position.

There is nothing quite so hard to follow as military manœuvres. "For every battle of the warrior," as Scripture says, "is with confused noise and garments rolled in blood"; and most of tbe descriptions are likewise. Not so Capt. Beecham's account. He has a concise, lucid style, and bis presentation abounds with quaint anecdotes and comments sbrewd and naïve. One may not quite agree with his criticisms upon the strategy, and especially the tactics, of the various commanders. Lee migbt be apportioned a little less blame, and Meade accorded a little more praise; and yet, in the main, what Capt. Beecham says about Lee's singular tactics and Meade's lack of initiative is largely justified.

In the battle of Chancellorsville the transcendent genius of Lee and of Jackson was at its full flood. For at least a part of that campaign, Hooker proved no unworthy antagonist for the other two. Contrasted with that marvelous campaign the battle of Gettysburg was a rather blundering, pitiable sort of contest, full of bloody and most desperate fighting, but not illuminated by that fine intellectual play of gigantic war fencing, which makes Chancellorsville, though less important, much more memorable. If Lee had had Jackson at Gettysburg, the fight would not have been prolonged for three days, and Meade would probably have been beaten. Certainly Pickett's spectacular but utterly futile and wasteful charge would not have been attempted. On the other hand, had Hooker been left in command instead of Meade, and had Lee been without Jackson as he was, we believe that Lee would have had great difficulty in getting back to Virginia; for Hooker, in spite of his temperamental defects, was a much better offensive fighter than Meade, and would almost certainly have prevented Lee's retiring down the Hagerstown Road to Virginia, after the defeat.

Capt. Beecham's book is a delight. Every one who visits the famous field ought first to possess himself of this volume and master its contents. Being non-technical, a layman unfamiliar with the art of war can understand it, if he will. The portraits are quaint and interesting.

With many illustrations and a map. $1.75 net.

The Nation

NEW YORK, THURSDAY, JUNE 15, 1911

The Week

Despite the more than two-thirds majority by which the Constitutional amendment providing for the direct election of Senators was adopted by the Senate on Monday, all is not clear sailing before that important measure. As passed, the bill contains a clause, carried only by the casting vote of the Vice-President, retaining for the Federal government the power to supervise Senatorial elections. A similar provision was voted down in the House when the amendment was before it. The result will be to send the bill to conference, with the possibility that it may fail for this session entirely. So powerful, however, is the popular movement in favor of the measure that the chances are for some form of agreement. One would say that the House, in view of its own previous action and the tie vote in the Senate, would be disposed to insist upon the form of the bill which it had accepted. The Senate may eventually recede. Or a satisfactory compromise may be hit upon in conference. It ought to be possible to work one out.

There is no reason for being bitter in criticism of the Senate for its long resistance. That is what a second chamber is for: to refuse to be swept away by what may be only a temporary gust of passion; to scrutinize closely every proposed measure of organic change in order to discover whether it truly is, as it professes to be, within the great democratic tradition and movement. This the Senate has properly done in connection with the plan to elect Senators directly. And it is evident now that the opposition was quietly crumbling long before we saw it collapse. The delay was not wholly time wasted. Senators began to see that they must yield. More and more of their number arrived at the conviction that the innovation was desirable. Doubtless, too, the final decision was helped on by the powerful argument of fact. The scandals of deadlocked Legislatures and elections tainted with bribery had their effect. It is true also that the Senate seemed to come to a feeling that it was, in a way, on trial, and that something had to be done to recover a fuller degree of popular confidence. Wiser than the House of Lords, it conceded something in order not to be compelled to surrender more. Far from having weakened the two-chamber principle, we think the action of the Senate will be found to have strengthened it. This is irrespective of what the future may show as to the wisdom or unwisdom of the change in the method of electing Senators. The particular cause for satisfaction just now is the demonstration that the Senate, too, is eventually responsive to public opinion. A Second Chamber that is cautious, that insists upon due consideration and upon looking before and after, yet which will not oppose itself to the deliberate will of the people—such is the kind of Senate which the framers of the Constitution intended to give this country.

A laugh has often been raised by the story of the professor of theology who said to his students: "This Biblical text is almost certainly spurious, but we must not give it up without a hard fight." Yet do we not see the same principle, if such it can be called, exemplified in politics? There, too, men will say: "Well, we are going to be beaten, but we'll fight to the last ditch." Just now in Washington, for example, the battle against reciprocity is declared by all to be absolutely hopeless. Even those who are waging it are conscious that defeat awaits them. But are they willing to shorten the dilatory proceedings by a day, to leave one speech undelivered, one hostile motion unoffered? Not at all. These hard-headed and intensely practical statesmen say they are going to hold Congress in session far into the summer heats and spin out every thread of verbose debating to its thinnest—all to be overwhelmed in the end. The theological professor was a miracle of wisdom compared with this.

The speech of Representative Redfield of Brooklyn in the House on Monday was a really effective assault upon the high-protection system. It derives unusual weight from the circumstance that Mr. Redfield is himself a manufacturer of machinery on a large scale, and, besides knowing the situation here and abroad through his experience in the export trade in his own line of production, has studied foreign conditions in the course of extensive travel. Upon the question of difference of cost of production, he boldly declared that it is impossible to determine such difference, and that the results obtained by the tariff board will be worthless for this purpose unless the board is empowered to call for the cost sheets of the factories engaged in the line of manufacture it is studying. He asserted, what has been declared before by many economists and practical men, that, per unit of product, American labor is the cheapest in the world; and, while this is of course not true in all lines, there can be no doubt of its truth in many important fields. In a recent interview Mr. Redfield had made an extremely interesting statement on this head. In visiting Japan, he had been struck by the fact that American locomotives were sold in that country, in competition with big Japanese locomotive works at which the workmen got only one-fifth of the wages that are paid in the United States. Upon investigation his conclusion was that the actual labor cost in the Japanese locomotive works was three times that in the American, in spite of the low wages.

From Washington we are promised a bill for publicity of campaign expenditure much wider in scope than we have had reason to expect; but we are asked to be patient. It is true that the wide diversity of primary systems, which are to be included as well as election campaigns, makes it extremely difficult to frame a general rule of procedure; yet just here is where the layman would wish to see applied to legislation something of the light of reason which courts find it so necessary to employ afterward. It should be easy enough to prescribe that no man shall be allowed to take his seat in Congress who shall not supply an accounting of every cent he has expended from the moment he set out to achieve office. The English law is even stricter than this. It counts a man's expenditure from the time popular opinion accepts

him as a candidate. That may be some time before the candidate himself has made up his mind to run, but the responsibility is his nevertheless. And the law includes the most indirect forms of influencing the voter's mind by undue means. Only a few days ago a Conservative M.P. was deprived of his seat on the ground that a lavish entertainment given to his constituents shortly before the election constituted bribery.

Brought at this particular juncture, the suit entered against the American Tobacco Company and others by the members of a firm of tobacco brokers which gave up business a few weeks ago, has unusual public interest. The plaintiffs claim damages of $500,000 under the Sherman Anti-Trust act, their charge being that they were driven out of a business which they had been conducting successfully for twenty-five years, by practices on the part of the defendants which are obnoxious to the prohibitions of the act. It is through the settlement, by the highest judicial tribunal, not only of cases instituted by the Government but also of cases arising out of the specific grievances of injured competitors, that the metes and bounds of the practical operation of the Anti-Trust act will, it may now be hoped, become more and more distinctly and effectively defined. It is not the friends, but the enemies, of anti-monopoly legislation who have insisted that the Sherman act forbids the most ordinary arrangements of modern business; under cover of that extreme interpretation, which carries with it its own destruction, they have claimed immunity for all the devices by which monopoly has built itself up. Whatever else the recent decisions have done, they have stripped away that defence, for good and all.

The partial report submitted to Gov. Dix by Messrs. Osborn and Van Kennen, whom he had appointed to investigate the Prison Department of New York State, makes it easy to understand why Superintendent Collins resigned. That able politician, who was Mr. Roosevelt's "right-hand man" in the great fight for reform at Saratoga last year, at first announced that he would never give up his position "under fire," and defied the investigators to do their worst. Later, however, he seemed to become aware that removal from office for cause would surely follow, and placed his resignation in the Governor's hands. That act probably saved him from more detailed condemnation than he gets in this first report on his conduct of the prisons, but enough that is damaging is brought out. In addition to finding that unbusinesslike methods and great laxity on the part of the Superintendent have prevailed, the commission reports that there has been direct violation of the law in the matter of the purchase of supplies. Indeed, so serious are the irregularities disclosed in the supply of coal to the prisons, that the commissioners request that the evidence relating thereto be laid before the Attorney-General. This means that there is believed to be ground for prosecution by the State. Officials grow careless even when they are not corrupt; and it is a wholesome thing for them to know that at any moment an authorized visitation may be made upon them, and a full account of their stewardship required.

In a somewhat different way we are seeing the same process illustrated at Washington as in Albany. The House has ordered a number of investigations into the work of various branches of the government, and into other matters. Some of them have already justified their existence. No one can deny, for example, that the inquiry into the Steel Corporation is serving a useful public purpose. But the main thing in all this business is, after all, not so much the definite results that may be reached—not the minor scandals and the petty graft, the official incompetence, or the insolence of office—as the restraining power exerted by the very knowledge that whatever is done may be one day investigated. What grand juries do, not only in sifting the evidence of crime and running down criminals, but in standing before the public as bodies vested with large inquisitorial powers to look into crooked transactions of all sorts, has its analogy in the work of committees of investigation armed with the authority of Congress.

The polo victory is another demonstration of what we can do when we try. To many of those who saw it, and to many of those who read about it, the match must have been a great tumult in which they knew only what the experts pointed out, but, for all that, it is a famous victory. In England the event has been watched with greater knowledge if less satisfaction, but it is the people of a more ancient civilization still that should have had the first draught from the cup. From India to America by way of England the game has proceeded its exotic way, to find in the least Oriental of all its surroundings a quartet of players worthy of its best exponents. It is in this very fact, however, that the danger lies for the future of American polo. Where would one look for another four capable of making even a respectable fight against this one or any first-class foreign group? If polo were merely a millionaire's game, we might confidently expect a long series of victories, but, as things are, the holders of the present trophy may go down in the annals of the sport as representative not so much of our interest in the game as of the American love of success.

The remorseless northward march of New York's business development is shown again in the loss of Madison Square Garden. Upon its narrow island, and with its almost unbroken gridiron street-system, the pressure of rapidly growing land values, which would in any case be tremendous in such a city as New York, becomes almost irresistible. Nevertheless, there might have been a possibility of saving this great asset for the community life of the metropolis were it not for that other characteristic of New York life, the enormous difficulty of arousing sentiment, upon matters of this kind, to the point of real effectiveness. For, after all, to say that in New York such a plot of land as that on which Madison Square Garden stands is tremendously costly is to present only one side of the case. To match the extraordinary cost of such a site, New York has command of wealth even more extraordinary, both as to the aggregate, and as to the number and the opulence of its wealthy inhabitants. The value of the Garden property per square foot presents no greater contrast to the notions of land value that were familiar half a century ago than does the existing scale of wealth and luxurious expenditure to what in those days seemed reasonable or possible.

Francisco I. Madero's triumphal progress from Juarez had its fitting culmination in what is described as an unprecedented outburst of popular enthusiasm in the Mexican capital. It would be idle to deny that many difficulties and perils still beset the work of reconstruction and pacification in Mexico. But at the same time we cannot overlook the solid basis of hope that is to be found in the zeal with which the body of the Mexican people has rallied to the support of Madero. Undoubtedly, a system like that built up by Diaz cannot be overthrown without leaving capacities for mischief behind it. Nor can a successful revolution be carried out without letting loose many rival personal ambitions, such as Mexico has suffered from before this. But the prestige of Francisco Madero towers so conspicuously above that of any other revolutionary leader that there can be no doubt of his making good his claims against all rivals if only the people of Mexico be left to work out their own destinies. That is what Mexico has a right to expect from our own government and people—that same forbearance which we displayed in the course of the fighting on our Southern frontier and which will constitute one of the most admirable achievements in the record of President Taft and of the American people during his Administration.

Just before the second reading of the Veto bill was voted in the House of Lords, the Archbishop of Canterbury made a plea for conciliation. He said that he would not think of intervening in any question of mere politics, but that when great Constitutional changes were imminent, and party divisions concerning them were violent, it seemed a fitting thing for the spokesmen of the Church to ask for a reasonable adjustment of the controversy through a meeting of the leaders in a spirit of compromise. The Lord Chancellor, however, replied to the Archbishop, and said that his appeal came too late. The Conservatives had their chance in 1909 with the budget, but deliberately threw it away. This response by the Chancellor was later described by Lord Rosebery as "a mailed fist shot out straight from the Woolsack to level the Primate and all his aspirations to the ground." But even Rosebery, in the course of his stirring speech, was able to suggest no way out for the Lords. He virtually advised them to submit to the bitter necessity forced upon them. They talked of appealing again to the electorate, but Lord Rosebery said, "to speak quite plainly," that he must tell them there was no possible hope of success in that. The rather lame conclusion of his vigorous oration was as follows: "We have muddled through worse situations than this. I think we shall muddle through this, even though we shall be compelled to bow the neck to the yoke and be prepared to see for the second time the Second Chamber depart out of our Constitutional arrangements."

One of the first steps in the formulation of a law of the air has been taken in Great Britain, where Mr. Churchill has introduced a bill "for the protection of the public against dangers arising from the navigation of air craft." The entrance of the airship within the domain of law has already been foreseen and discussed. But while the attention of legists has been directed toward the property aspects of the question, primarily in connection with the maxim that the owner of real estate holds title to the air above his lands, the police aspect of the matter has come rapidly to the front. Before the aeroplane has received consideration as a pleasure-vehicle or a common carrier, it claims our attention as a nuisance. Mr. Churchill's bill penalizes reckless or negligent driving in a flying machine. The maximum penalty is £500 or two years' imprisonment, or both. It also provides that in determining the question of danger to the public the amount of damage to persons or property likely to occur in case of a mishap is to be taken into consideration. The bill is admittedly a temporary measure. It is aimed at reckless performances by airmen at public exhibitions and spectacular navigation over great crowds, such, for instance, as now fill London for the coronation.

French opposition to the latest Spanish advance in Morocco has slight legal basis. In occupying Tetuan and preparing to occupy El-Arish or Larache, Spain is well within her rights under the Act of Algeciras. That compact, in providing for the maintenance of order in the Moroccan ports by an international police, assigned Tetuan and Larache to Spain. That the organization of the police force would remain a dead letter until it suited France or Spain to make use of its rights was probably well understood at Algeciras. Spain has decided that now is the time. Though her rights in the matter would seem to be plain, the wisdom of Spanish policy at this juncture can be seriously questioned. In the first place, little profit can come from antagonizing the French government at the present critical juncture. Spain's international situation is certainly not improved thereby, unless the country is prepared for a diplomatic revolution and is ready to make friends with Germany. But the internal situation in Spain would seem to be even more discouraging to a policy of adventure. The military reverses at Melilla two years ago nearly cost Alfonso XIII his throne. Since that day the republican movement in Spain has lost little of its strength, and another ill-managed campaign in Morocco might easily have still more alarming consequences.

Berlin, June 2.—The new zoölogical garden restaurant was opened in the presence of representatives of the government, the municipality, and a distinguished assembly of leading Berliners. Ten thousand persons can sit down simultaneously beneath its roof. Open-air terraces for use in summer will accommodate another 10,000 diners, and thus 20,000 will be able to take a meal at the same time.

That 20,000 persons can eat simultaneously at one restaurant may not at first seem to be a momentous matter, but there is an importance not easily exaggerated in the principle that underlies this opening of a vast and attractive resort where multitudes of people of moderate means in Berlin can at any time find rational and tranquil recreation. Our American failure to understand it is one of the standing puzzles of international psychology. With twice the population of Berlin, how many places are there in New York where not twenty thousand, nor ten thousand, but one thousand or one hundred persons can find similar satisfaction? Where can a man go with his wife and children, and spend an evening in the open air, with refreshment at prices to fit a modest purse, with good music, and without noise, garishness, or vulgarity? And New York in this is typical of our American cities.

THE "TENNESSEE COAL DEAL" AND THE PANIC OF 1907.

The testimony elicited by the House committee's inquiry into the Steel Corporation's origin and career will serve, we do not doubt, as an important part of the raw material for future histories of the period. But on one point people who are reading the testimony are already beginning to get perplexed. The part which the purchase of the Tennessee Coal and Iron Company by the United States Steel Corporation played in the panic of 1907 appears to be involved in deeper mystery with the progress of the testimony at Washington and with the newspaper comment on that testimony.

The Tennessee Coal and Iron Company was a competitor of the Steel Corporation in some branches of its trade. It was capitalized for $50,000,000, and in 1907 it had been paying 4 per cent. annual dividends. Its control had been acquired, and its stock manipulated in glaring fashion, by a group of capitalists identified rather more closely with the Stock Exchange than with the iron industry. They had run up this 4 per cent. stock to 162, and in doing so had virtually cornered it in the hands of a syndicate, made up chiefly of the company's directors. The Stock Exchange firm which had borrowed the money for the operation, and which held the Tennessee Coal and Iron stock as collateral, got into serious trouble when the panic came. It would probably have failed if it could not have realized somehow on its cornered stock.

The harassed stock-brokers, as one of the firm declared to the Culberson committee, applied to the Steel Corporation to take the stock off their hands. Ten days after the outbreak of the panic on the Stock Exchange, the offer was made of Steel Corporation second mortgage bonds in exchange for the Tennessee Coal and Iron shares, on the valuation of 96 for the surrendered stock. The Steel Corporation officers, before closing the deal, went to Washington to submit the question to President Roosevelt, and the President, after hearing their report of what would happen if the deal should not go through, replied, according to Judge Gary's testimony, "that while he would not and could not legally make any binding promise or agreement, he did not hesitate to say, from all the circumstances as presented, that he certainly would not advise against the proposed purchase." The exchange of securities thereupon was made, and the brokers were able to raise, on collateral of the Steel Corporation bonds, the money which they had not been able to obtain or to retain on the security of the Tennessee Coal and Iron shares.

The Stanley committee apparently began its investigation, as did the Culberson committee of 1909, with a view to questioning the legality, under the Anti-Trust law, of this purchase of a competing property. But the inquiry has taken very much wider scope. The first point of controversy seems to be whether the terms on which the Steel Corporation bought were fair, or whether wicked advantage was taken of the necessities of the owners. That question is complicated by the known fact that the Tennessee stock was cornered and was apparently ruling at a fictitious price.

Mr. John W. Gates, who was one of the Tennessee Coal syndicate, described it two weeks ago as a "forced sale"; his "surmise" being that "the finding of a large amount of Tennessee Coal and Iron as collateral in one of the banks or trust companies" was the cause. Judge Gary, on the contrary, has testified that the counsel of the embarrassed brokers came personally to the Steel Corporation officers and told them that the banks "had called these loans, or insisted upon Moore & Schley taking up the Tennessee Coal and Iron stock, for the reason that it was not salable."

The second explanation is at least plausible, since the Stock Exchange records of the day show that the stock had no market at ruling prices, and since every one knows what banks were at that time compelled to do in self-protection. But the further question is pressed whether the granting of loans on Steel boud collateral, which were being refused on the Tennessee stock, may not have represented a Wall Street "hold-up." Judge Gary has testified that the Steel Corporation, which had $75,000,000 cash on deposit in banks throughout the country, would have preferred to pay in cash, but could not do so "without disturbing the financial conditions of these banks where our money was deposited." Here, too, is a plausible answer. The inference, to be sure, is left that the interests identified with the Steel bonds could and did command supplies of credit which the interests identified with the Tennessee shares could not. Yet such situations always exist in panic times, when personal confidence counts for more than confidence in values.

The other question, whether the "Tennessee deal" was or was not an absolutely necessary expedient to check the panic, is more difficult to answer. It is a matter of opinion; proof is, in the nature of the case, impossible. On the one hand, it is certain that the purchase did not stop the panic; the run on the trust companies was ended only by the banding together of the affiliated institutions to guarantee their payments. But, on the other hand, the failure of Moore & Schley would undoubtedly have precipitated catastrophes in Wall Street which did not happen with that firm's solvency maintained.

It is entirely probable, at any rate, that panic would have ended in due course, with or without the Tennessee Coal transaction. Judge Gary quotes Mr. Morgan as saying, at the time, that if the Steel Corporation "does not buy the stock, or unless it or some one else furnishes relief at this particular time, there is not any man on earth can say what the result will be in financial circles." The prediction was undoubtedly correct; but "some one else" was about to bring the relief which always comes at exactly that stage of a financial panic. The concerted guarantee, by powerful institutions, of the assets of the embarrassed trust companies, and the enormous import of gold from Europe in response to our market's sale of securities and commodities at a heavy discount, were factors in the eventual return of financial equilibrium, compared with which the "Tennessee deal" must sink into insignificance.

CURRENTS IN AMERICAN SOCIALISM.

Since the days of the late Henry Demarest Lloyd, New Zealand has been the great exemplar of advanced democracy. Whenever Socialists have fallen into the capitalist habit of pointing with pride, it is to New Zealand they have pointed; not perhaps as an example of the model socialistic state, but as a community justifying the claim that the way toward the abolition of poverty is through the transfer of economic functions from private individuals to

the state. But now comes Charles Edward Russell, who was the Socialist candidate for Governor of New York last autumn, and declares that progressive New Zealand, as the Socialists have called it, or socialistic New Zealand, as the conservatives have called it, is as badly off as we are. Long ago we learned that this "country without strikes" has had some very severe strikes. Mr. Russell now assures us that New Zealand also has poverty, slums, monopolies, landlordism, and a government subservient to class interests. Faster than government can take over private business, private business keeps up opening new channels of enterprise. And in those lines of industry where government competes with private initiative, government competition is but a farce.

The implications of Mr. Russell's statement are interesting. It places him with the revolutionary wing of American Socialists, with those who distrust the methods of gradual political conquest, those who, in the last resort, may be said to distrust the efficacy of political methods altogether. It is at first sight anomalous that one of the leading men in the Socialist movement should assume this position just when the Socialists have begun to win political victories and have given evidence that they must be reckoned with in the alignment of political parties. By the conservative press the charge has been made that the Socialist administration in Milwaukee is a failure. What Mr. Russell is now asserting is virtually that the Socialist administration in Milwaukee is bound to be a failure. For New Zealand has gone far beyond the Milwaukee Socialists in socializing industry and government, and New Zealand is a failure.

This situation means only that Socialism in this country is passing through the same evolution it has experienced in France, Great Britain, and Italy, and is now experiencing in Germany. It is easy enough for a party to be fiercely revolutionary when it is a hopeless minority with no chance of attaining office. The temptation comes with the first taste of power. Comes also the inevitable cleavage between those who are willing to take what they can get in expectation of better things to come, and those who see in compromise the wiles of the devil. Victory, on the whole, inclines to the moderates. In France, the revolutionary Socialists can point to men like Millerand, Viviani, and Briand, to prove the impossibility of a Socialist's joining hands with a "bourgeois" Ministry and remaining true to his faith. But that, after all, is judging from the revolutionary standpoint. The men in question may have ceased to be good Socialists in the very act of tingeing the whole French government a Socialist red. In any case, repeatedly disillusioned, the French Socialists are always supplying the Government with recruits from their ranks. In Great Britain, the socialistic element in the Labor party is acting in harmony with the Liberals. Italy has witnessed the unusual phenomenon of an ultra-revolutionist like Enrico Ferri rallying, not only to the Government, but to the monarchy. Germany has been the classic instance of no-compromise Socialism. For decades, the Socialists in the Reichstag have abstained from voting with the Government on any measure. But in Germany, too, the revisionist or moderate element is growing from year to year and has already sensibly modified the policy of the party in the non-Prussian states.

What does the revolutionary Socialist offer as a programme alternative to compromise? It is well enough to wait in solemn silence till you have won over a majority of all the voters in the country, and then start in and make a clean sweep of things. But even the revolutionist is aware of the danger of such a course. Nothing worse could happen to Socialism than that it should all at once be called upon to take over the reins of government. And even if Socialist leaders were willing to take the chance, it would be quite impossible to keep their followers inactive during the long years of waiting. Only Prussian discipline could make some three million Socialist voters content to sit tight and do nothing; and even in Prussia the Socialist voter's patience is coming to an end. Realizing, therefore, that something must be done to train the Socialist masses for the ultimate triumph and at the same time to keep their minds from wandering to the fleshpots of office and partial success, Mr. Russell proposes coöperation. While waiting for their ranks to swell, while waiting for the iniquitous system of capitalist production to complete its own inevitable suicide, Socialists may begin preparing on a partial scale for that new coöperative system of production which is ultimately to become universal.

But to advocate coöperation is only to argue in a circle. What reason has Mr. Russell for believing that the gradual introduction of Socialism in the economic sphere will be any more successful than the gradual introduction of Socialism into politics? In New Zealand, for instance, government ownership is not a success, because government landlordship is opposed by private land trusts, and government oil fields must compete with private oil monopolies. If the New Zealand government cannot compete with private enterprise, what chance has private coöperative enterprise in this country to make its way against the all-powerful Trusts? Hence the revolutionary course of action and reasoning would be somewhat as follows: We distrust partial political victories; we cannot wait for the ultimate political victory without doing something; we will initiate coöperative industry; it fails; it fails because private effort can do nothing against the Trusts; the Trusts must be taken over by the government; to do that we must have a majority of the voters on our side. And the circle is completed.

If New Zealand is indeed a failure, it is a most discouraging thing for Socialism. There is the New Zealand method of reconstituting society and there is revolution. The tendency among Socialists the world over is away from revolution as an impossible method toward the New Zealand method. But if Mr. Russell is right, this means only changing a policy that is impossible for a policy that is destined to fail.

INSURANCE AND DEMOCRACY.

The address delivered by Mr. Brandeis before the National Congress of Charities and Correction at Boston bears the title "Workingmen's Insurance — The Road to Social Efficiency." The sub-title, however, points to but one of the two parts into which the address is sharply divided. It is only after an eloquent introduction, dealing with the relation between the reform he advocates and the fundamental presuppositions of democratic government, that he takes up the question of the financial possibilities of workingmen's insurance and the results

in the form of social and individual welfare which are to be expected from it. That his exposition is forcible, on both heads, goes without saying. A distinctive feature of it is the comparison he draws with the operation of an insurance system in an entirely different domain, that of the "factory mutuals" of New England. The way in which these associations have cut down the fire loss in the establishments to which they apply is well known; and Mr. Brandeis is right in saying that this has been accomplished "by recognizing that the purpose of these so-called fire insurance companies is not to pay losses but to prevent fires." And he argues that just as the immediate benefit realized in the shape of reduced insurance premiums has led to a development of methods of fire prevention which have cut down losses to a small fraction of what they formerly were, so similar results in the prevention of death and injury to human beings would be attained, if the cost of these evils were daily made plainly visible in the shape of insurance expenses.

The idea is suggestive, and worth serious consideration. That in the ardor of his reformatory zeal Mr. Brandeis enormously overrates the value of the analogy must, however, be clear upon a little reflection. What he is talking about is insurance not only against accident, but also against invalidity and old age. The calamities due to accident might be cut down, we believe, to a small fraction of their present number by the adoption of proper precautions; and the fact that these precautions could be instituted at a moderate expense, and that it would evidently pay to institute them, if compulsory compensation laws were in operation, is one of the strongest arguments for the enactment of such laws. It has been because of the evident practicability and profitableness of fire-prevention arrangements that the factory mutuals have accomplished their results. But in the matter of old age, and in a large measure of invalidity also, no such simple connection exists; and, what is more to the purpose, it is not clear—taking a cold-blooded view of the matter—that the cost of supporting people in their old age would be diminished at all by the improvement of conditions. According to Mr. Brandeis's figures, the cost of fire insurance in the Boston Manufacturers' Mutual Fire Insurance Companies was reduced in fifty years from $1.37 per $1,000 to 68 cents per $1,000; of course, nothing even in the remotest degree resembling such a result could be looked for in the field of human insurance. Incidentally, we may mention that a closer acquaintance with death-rate statistics would have prevented Mr. Brandeis from accepting at their face value the figures for the model factory village at Bourneville, near Birmingham, which he says show "how near at hand the remedy for high mortality lies." While the general death rate in England and Wales was 15.7, that at Bourneville was 6.3; but Mr. Brandeis should reflect that to suppose this latter rate normal and permanent would be to suppose for all born at that favored spot an average length of life which is simply ridiculous.

Whether Mr. Brandeis overrates the possibilities of workingmen's insurance or not, no one can dispute the great importance of the subject. But in what way progress in this field can best be brought about, and what are its relations to the functions of government in a democracy like ours, is a far deeper question. Mr. Brandeis boldly lays it down that without it our government is a false pretence. He does not say it in so many words, but that is the precise purport of his assertions. Our government, he says, imposes upon the citizen a duty that can be entrusted with safety only to free men, the duty of voting, but "men are not free while financially dependent upon the will of other individuals. Financial dependence is consistent with freedom only where claim to support rests upon right, and not upon favor." And again: "If the government permits conditions to exist which make large classes of citizens financially dependent, the great evil of dependence should at least be minimized by the state's assuming, or causing to be assumed by others, in some form the burden incident to its own shortcomings."

We venture to doubt whether Mr. Brandeis or the hundreds who will thoughtlessly accept his doctrine have any real conception of its significance. If "men are not free while financially dependent upon the will of other individuals," the little homœopathic dose of freedom which would be injected into them by any scheme of mere old-age and invalid pensions would be far from sufficient to redeem them from their servitude. If it is necessary, in order that a man hold his head erect and vote as a freeman, that his subsistence and comfort be assured, nothing short of a socialistic revolution of the most complete character can supply the need of our democracy. That a man shall merely be able to keep soul and body together cannot satisfy his demands upon life; and under existing conditions millions would, even under a scheme of pensions vastly more liberal than anything Mr. Brandeis has in mind, be dependent for anything beyond that upon persons and things not within their own control. As for real political independence, the homœopathic dose would not merely fail to give this, but would actually take it away. The history of the Grand Army of the Republic, and the history of the protected industries, furnish clear object lessons of the effect of a claim on government support. With millions of men taught that it is the duty of the government to support them, and not of them to support the government, everything except the degree of that support would sink into insignificance in their political calculations. If we are not to have downright economic equality, dependence on the decrees of the government for a dole of economic help—whether regarded as a right or not—is bound to reduce to an inferior political status those classes to whom it applies.

THE MALIGNED PAGAN.

Paganism stands in need of clear definition. When a baccalaureate orator, the other day, applied the term pagan to Maeterlinck, D'Annunzio, Hauptmann, Ibsen, and Shaw, he obviously brought together birds of a different feather. Few people at first sight would deny the justice of the description as applied to the Italian, the Englishman, and the Norseman. But they would take exception to Maeterlinck, whose spirit and interests are not strikingly anti-Christian. And they would object to Hauptmann, whose career has been consistently one of service to the cause of beauty, no matter into what mystical vagaries he has latterly fallen. Neither in Maeterlinck nor in Hauptmann can we find that vigorous and intentional antagonism to established standards of ethics, social life, and religious faith which the other three men

have manifested, with decency by Ibsen and Shaw, with license by D'Annunzio. At bottom none of these five men is a pagan, and neither other people's calling him that nor his own calling himself that will make him so. Take the entire class of "modernists" in contemporary literature and the drama, and whatever else they are, they are not Greeks or Romans. They may be poor Christians, but they are still poorer pagans.

Three radical differences in character and temperament mark off the people of the classic world from the representatives of the "modern" spirit. The moderns are primarily and defiantly individualistic, and the ancients were not. Ibsen and Shaw and Wells and D'Annunzio are enormously self-conscious, and the ancients were not. Finally, the pagans were very good fighters, whereas Shaw and Wells and the others, first appearances to the contrary notwithstanding, are not. After cutting loose from conventional religion, conventional ethics, and conventional social arrangements, the modernists may formulate a system of their own, but they will find no model for their new institutions either at Athens or at Rome. Neither Solon nor Plato nor the Roman system knew anything of the sacred rights of the individual which Nietzsche, Ibsen, and Shaw have for their main fulcrum to topple over society. When these men assert the right of the person to live his own life in defiance of a worn-out Christian ecclesiasticism or a Christian system of ethics and family organization, they are warring against the great influence which first turned the centre of human interest from the state to the individual. It is quite certain that G. B. S. would never have enjoyed the liberty of speech or action under the Greek or Roman republics that he enjoys under Mrs. Grundy and George V.

The old pagans were not self-conscious. They were not always looking at their tongues in a mirror and feeling their pulse. They were not aware of their own bodies to the painful extent to which the modernists have carried their antipathy for clothes. They did not go about eternally fussing about the conflict between Duty and Beauty. Somehow they managed to keep the two in harmony, or, if they did not, they acted with fine innocence. They knew little of the parasitic theory of art from which Mr. Shaw finds it so difficult to get away. That is, they did not think it essential that, in order to create beauty, a man must be a scalawag, a dipsomaniac, and a law unto himself. Plato, to be sure, was aware of the vagaries of the poet, and had his doubts about his qualifications for citizenship. But Plato's remedy was not to turn society topsy-turvy, but to keep poets out of his republic. In general, these old pagans did not go about, as D'Annunzio does, saying to themselves, "Go to, I will create beauty. I cannot subscribe to the accepted laws of honor, because I must create beauty. I cannot and need not pay my debts or hold to my contracts, because I must create beauty." They created beauty as part of the normal day's work and without theorizing overmuch about it. To-day we theorize all the time about it and create good advertising copy.

The old pagans, like most normal men, could wage a good fight, whereas our moderns can only knock heads. To make a good fighter one must be essentially simple-hearted, whereas modernity is nothing if not complex. Ibsen, Shaw, Wells, and Galsworthy cannot fight, for the simple reason that they cannot pick a single issue to fight upon. The despised reforming Liberals of the Bentham, Mill, and John Bright type could fight because they had definite material ends in mind. The orthodox Socialists of the present day can fight because they, too, have definite material ends in view. A coöperative commonwealth, shorter hours, anti-militarism—these are fairly imaginable and mutually consistent issues. But Shaw, and Wells, and even Galsworthy, do not know what they want. They are Socialists who want the state to dominate, and individualists who assert the rights of the individual against society, and advocates of an income tax, workmen's insurance, and tenement-house reform, and mystics who believe in things not of this world, and poets, and several other things. In other words, they want to eat their cake and have it, an inconsistency of which the pagan mind was seldom guilty.

In justice, therefore, to the old pagans it should be pointed out that with all their defects they did build up a social organism and a civilization, and that under their institutions men worked and bartered and created beauty, married and gave in marriage, fought and made peace, and did all this unconsciously and consistently. What institutions the modern spirit, as revealed in the men we have been discussing, will develop, we find it impossible to imagine. The indications would seem to point to a system in which the state shall compel every one to do what he pleases.

THE ENGLISH COPYRIGHT BILL.

London, June 3.

That good intentions do not carry one far in drafting an adequate statute has been illustrated once more by the experiences of the copyright bill now under discussion. It was introduced into the House of Commons with a flourish of trumpets. On a second reading, the bill was carried without a division. Since then its details have been scrutinized by a standing committee of the House and by a host of newspaper correspondents outside, with the result of a general conviction that it must be made over again, and "made different."

The sections relating to music have given rise to an animated controversy. The most troublesome question relates to the mechanical means of performance—phonographs, piano players, and the like—that have come into such popularity during the last few years. The framers of the Copyright act of 1842 did not foresee this development, and therefore made no definition of the status of "records." Hitherto the composer has received nothing from the companies manufacturing these records, though they have paid thousands of pounds in royalties to Melba, Caruso, and other singers whose renderings they have reproduced. The present bill takes the position that a disk or cylinder or roll is as much a copy of a piece of music as is the sheet on which it is printed for use in ordinary piano-playing. But the mechanical music makers are now a powerful industry with large investments at stake. One company alone, as certified at Somerset House, has made more than a million dollars of profit during the last three years. The manufacturers are naturally using all their influence against the proposed change, and insist, in the words of the manager of the company just mentioned, that "the author plays a limited part, and often a very limited part, in the production of the finished record, and that he is not entitled to claim the record as his sole creation, and to enjoy without due regard to the interests of his fellow workers the exclusive benefit of mechanical reproduction."

On the artistic as well as the musical side of the bill a "joker" has been discovered. It seems that, if an engraving, photograph, or portrait is ordered by

some person and made for valuable consideration, the person who has ordered the work is to be the owner of the copyright. If, however, the order is for anything else—*e. g.*, a landscape painting or a statue—the copyright is to be held by the actual author. Thus, if a person orders a statue and then causes a photograph to be taken of it to distribute among his friends, he will become liable to an action for breach of copyright. Further, a clause provides that the sale of a picture or statue does not carry with it the transfer of copyright, unless such assignment is made in writing. Thus, unless the purchaser of a picture is forewarned of this risk, he may find that the seller still retains the copyright in it, and is making a good profit by the exclusive sale of reproductions. A novelty to British law is the proposal to give protection to architecture. This has been criticised as "copyright run mad," but it is in accordance with the Berlin convention, which has been agreed to by nearly all the great European nations.

The application of the bill to literature opens up a number of disputed questions, several of which closely concern the rights of the newspaper press. Take, for example, the problem of the reporting of lectures and speeches. Pleas were made by some of the Labor and Radical members of the House of Commons committee for the entire exclusion of lectures from the advantages of copyright, on the ground that their general dissemination through the press was for the public benefit. On the other hand, it was pointed out that many men earned almost their whole living by the delivery of lectures; and, if these lectures could be published *in extenso* in the press, they would suffer severe loss. Probably the case will be settled by simplifying the existing process, rather a roundabout one, of copyrighting a lecture, while allowing newspapers to publish a "reasonable summary." At the same time, one member of the committee argued that a distinction should be made between "speeches" and "lectures" for the purposes of this bill. He did not propose to take away the right of Lord Rosebery, for instance, to publish a collection of his speeches afterward, but it was important, in the interests of the public, that newspapers should be permitted to publish verbatim reports of them at the time of their delivery.

As regards books, the chief point at issue is the duration of copyright. At present the British law allows copyright for either (1) the author's life, plus seven years, or (2) forty-two years from the date of publication, according as the one period or the other turns out to be the longer. The new bill abolishes the variable term, substituting for it the uniform period of the author's life plus fifty years after his death. In favor of the uniform system the practical convenience is urged that all the works of an author should go out of copyright together, and that there should not be the need of discovering the date of publication of each several volume. This enlargement of the term is subject, however, to one important qualification. The bill provides that at the end of twenty-five years the controller-general of patents shall be empowered to issue licenses for the production of the book by other persons than the owner of the copyright if, in his judgment, the book is unduly withheld from the public, whether by the excessive price charged for copies, or by the undue limitation of the number of copies issued, or in any other manner.

The proposal for an extension of the term has been fiercely assailed in the name of democracy. The doctrine that "the fruits of genius"—in which seem to be included also the fruits of toil and research—belong to everybody who would like to share them has been preached by reputable persons in language that reads like a plagiarism from the exposition of the ethics of copyright given to Nicholas Nickleby by Mr. Gregsbury, M.P. One is thankful to Sir W. Robertson Nicoll for his direct, blunt acceptance of the challenge contained in this demand. "It is pleaded," he says, "that the copyright works of such authors as Tennyson cost some shillings to come by. So they should." As a matter of fact this assumption is far from valid. "Books are sold," says the Manchester *Guardian*, "according to the demand for them, and not according to their freedom from copyright, and the cheapest books of the day are copyright books. You can buy Mr. H. G. Wells's 'Tono-Bungay,' which is no more than two years old, for sevenpence. You can buy Walter Bagehot's 'English Constitution'—an older book, but still in copyright—for a shilling, and when the copyright finally falls in it is hardly likely that it will be possible to buy it for less."

In fact, the clauses relating to the term of copyright deserve criticism, not for their lengthening of the period, but for the serious risk of injustice through their provision for its limitation by the authority of the controller of patents. This means that as soon as an author has been dead for twenty-five years the holder of the copyright in his works may find its ownership a *damnosa hereditas*. During the second half of the fifty years' period repeated applications may be made to the controller for the issue of a license, and every time the application is resisted heavy expenses may be involved. As power is given to the controller to "award any party such costs as he may consider reasonable," the author's representatives may not only lose their property, but be heavily fined into the bargain. As a result of the discussion in the standing committee the bill is likely to be so amended as to give absolute copyright until twenty-five years after the author's death, to be followed by twenty-five years of limited copyright, during which it shall be open to any person to reproduce the book on condition of giving notice of his intention and paying the holder of the copyright royalties at the rate of 10 per cent. on all copies sold.

This summary has by no means exhausted the list of the debatable points in the Copyright bill of 1911. For example, the question of the relation of copyright in Great Britain to copyright in the self-governing dominions bristles with difficulties. Yet it is most desirable that the work of simplifying and revising the existing law shall be completed without much longer delay. At present the courts have to follow the guidance of twenty-four acts of Parliament and several orders in council, extending from 1734 to 1907. H. W. H.

L'ESPRIT DE LA NOUVELLE SORBONNE.

PARIS, May 31.

Writing over the signature "Agathon," two students at the University of Paris have published a vigorous attack on the decline of classical culture at the Sorbonne and the corresponding rise of methods characterized as excessively utilitarian. Agathon finds in the "palace" of the New Sorbonne no stronghold of traditional French culture, no intelligent interpretation of the seventeenth-century classics, no leaven of Greek and Roman thought for the modern world. On the contrary, he meets in every corridor a horde of Germanic, socialistic, pseudo-scientific influences, transforming the institution into an arid desert where nothing flourishes but the cactus of bibliography and the aloes of card-indexes. The subjects of study are split into an infinity of specialized chapters, so small and so narrow as to have no real educational value. It is merely "the dust of education." He cites the following subjects given out for compositions:

> Study the verb or the adjective on a certain page of Montaigne. Study the subjunctive in the following selection from Heine. Study the model auxiliary in this passage of Lenau.

This sort of work, says Agathon, drives the intelligent and imaginative student to despair. At the same time, it puts a premium on the temperament which can make an indefinite number of notes on cards, but which is totally incapable of forming a personal, original opinion. The Sorbonne is suffocating under a flood of index-cards, like the famous Penguin Islander, Fulgence Tapir. "Personal meditation . . . is proscribed as suspect and dangerous." The classics are studied as philological phenomena; notes, glossaries, compari-

sion of texts, the dry bones of erudition, taking precedence over the beauty of the flesh and the influence of the spirit. As for history, M. Seignobos, "one of the boldest protagonists of the scientific method," is quoted to the effect that "nothing in history is certain, but the truths of La Palice." The original truth of La Palice, it might be remarked parenthetically, is to be found in the verses, composed by his men-at-arms:

> Fifteen minutes before his death
> He was still alive.

M Seignobos will not admit the value of any fact less adamantine. In the matter of literature, a professor devotes a lesson to the following: Leconte de Lisle wrote a poem in which there was mention of a yellow-bellied lion. Very good. Appears a second edition in which yellow has turned to white. Discussion, followed by conclusion that the poet should have written yellow-and-white, since, in fact, the belly of the lion is white streaked with yellow.

Agathon is particularly severe with regard to the "scientific method" in the study of letters and history. The blame is laid at the door of M. Durkheim's objective doctrines. Durkheim, of Jewish extraction, is a professor of philosophy at the Sorbonne, whose course this year was on the "Science of Education." He is also a member of the Council of the University and of the Consulting Committee which supervises the appointments to chairs of higher education. His influence, therefore, is considerable. His system consists in the effacement of the individual. He speaks of society, of the Social Being, as something quite apart from the individual, having no connection with it. His scientific method takes no account of personalities or of imaginations. It knows only one thing: a fact, a solid, concrete, scientific fact, capable of demonstration. It being impossible to demonstrate the absolute value of a personal opinion, all such opinions are rejected. Everything is reduced to the baldest, the most level materialism. The Social Being is not endowed with talent or an imagination. Such things imply an undemocratic differentiation from the mass. When confronted by a scene from Molière or a page of La Bruyère, the Being's "esthetic reaction" is inappreciable. He is capable of a philological dissection of the passage in question; nothing more. Since, according to M. Durkheim, this rather pedestrian Social Being is all that exists in the world of democracy—or at least all that counts—everything must be arranged to suit his tastes and limitations; everything, even to the Faculty of Letters. He thrives on the scientific method; but on classicism, on appreciative or creative criticism, on general ideas, on disinterested human culture, he starves. Therefore, "the master no longer says to the pupil, 'Think; propose ideas for our discussion; little by little, we shall be able to disengage certain truths.' No, M. Durkheim's word of command is, 'You shall do this, and nothing else; you shall work in this way and no other; anything you obtain by other procedures will not be science.' "

There is no doubt that in the matter of examinations for degrees, there has been a marked lowering of the standard under the influence of this method. The theme in Latin has been abolished—too classical. Also the theme in French—too literary. Remains the exposition of Heine's subjunctives. Agathon cites an amusing manifestation of the "scientific superstition":

> At the Sorbonne there is a little room where the students meet to read and comment Montaigne, Corneille, Voltaire, the authors of the programme. Formerly such a place was called a *study*. But a name so modest would not suit the dignity of the work carried on there. At present it is called: *Laboratory of French Philology*. If by chance you are curious as to what goes on in this austere chamber and ask for some enlightenment on the subject, you will be told, "that is a workshop for scientific manipulations—of French texts." . . . But open the door and listen to this admonishing voice: "Gentlemen, you should clean your instruments before using them." Have you wandered into the department of chemistry? No, indeed, it is M. Seignobos, professor of history, criticising Fustel de Coulanges, in advising his students to utilize only unimpeachable texts.

Hand in hand with the progress of the scientific method goes the decline of good French. The "manipulators" in the "philological laboratories" seem deplorably lacking in the ability to express the results of their experiments in precise, correct, literary French. This phenomenon is recognized even by such defenders of the Sorbonne as M. Lanson and M. Lavisse. The serious papers of Paris comment on it frequently and at length. The *Temps* says, "At the Sorbonne, they speak German, English, Russian, Hungarian, Vlach, Manchu, without counting the jargon peculiar to sociologists; but, with rare exceptions, they no longer write French." The *Journal des Débats* is of the same opinion. M. Faguet, who knows, if any one does, what pure and brilliant French is like, goes even farther and says that in the future,

> There will be two languages: the one, French, written by a few people and understood by them and by some others, not many; the other, a language for which a name will be found, very imprecise, very vague, amorphous, confused, which no one, therefore, will understand very well, but which will serve, nevertheless, as the means of a somewhat rudimentary, somewhat barbarous communication between men, and which will have some distant connections, very nearly recognizable, with French.

Agathon's book takes a view of the situation perhaps a little too gloomy. In spite of M. Durkheim, there is probably still a good deal of "general culture" to be had at the Sorbonne. But, as regards the programme of studies for the degrees and in the matter of the "crise du français," making all due allowance for prejudices, the charges seem in the main to be true. The source of the trouble is apparently the "reform" of the secondary education brought about in 1902. This change consisted in dividing the lycée programmes into four groups or "cycles," which lead to diplomas equivalent in grade, but differing widely in the studies represented. These cycles are, respectively, Latin-Greek, Latin-Modern Languages, Latin-Science, and Science-Modern Languages. At the age of twelve or thirteen, the pupil chooses his group—a choice which determines in great measure the nature of his future education. Specialization has already begun. Following an altogether natural impulse to avoid what is, or looks as if it might be, difficult, a large proportion of the youth of the land turn their faces resolutely away from the group Latin-Greek, which represents the old classical ideal. But since the university must accept on equal terms students from all the cycles, even the Science-Languages, where those foregather who are "not especially endowed for the study of Latin," it naturally becomes necessary to abolish the university theme in Latin. Furthermore, within the cycles are found a vast number of subjects, each one more or less specialized. The inevitable result is superficiality. "Too many hours; not enough study." As the *Temps* said a few days ago, the lycées seem to have reversed a motto, which now reads *non multum sed multa*. As a result, the boy of eighteen, who takes his lycée degree, the *baccalauréat*, enters the university with a minimum of that humanizing culture which is supposed to be the especial gift of French secondary education. He is then immersed in the "scientific method," which may be very proper and necessary for the production of savants and technical scholars, but to which a certain amount of disinterested culture is prerequisite. As M. Faguet says, the scientific method, bibliography, annotation of texts, comparison of editions, should all come as the last step in higher education. They furnish the "instruments" for use in the "philological laboratories," but the student should first be provided with some material on which to work. This can only be had through the non-utilitarian secondary education, which should extend, according to M. Faguet, not only through the lycée, but even through the first two of the three years at the university.

In conclusion, it might be said that Agathon, in attacking the Sorbonne, perhaps mistakes an effect for a cause. The changes in the Sorbonne are the necessary result of the so-called reforms of 1902. These in their turn are simply the expression, in the department of educa-

tion, of the drift of power in the French Chamber toward the Extreme Left. The character of these changes has been ultra-democratic and socialistic. M. Lanson himself speaks of "lowering the standards of education" in order to spread it more broadly. He finds that French "classical culture, too refined, . . . goes over the heads of children from families where the newspaper is all that has been read, or ever will be read." At the university, after the theme in Latin, the theme in French is abolished because it is "beyond the powers of the majority." They should be taught, continues M. Lanson, "things which are coarsely and platitudinously exact, but which they can feel and grasp." This surely is debatable doctrine. Educate the people upward, or bend the education downward? The logical result of the second course, carried out completely, would be a programme, for primary, secondary, and higher education, consisting of the three R's. But it is not likely that this result is near; for, to return once more to the *Temps*, "professors, deans of faculties, economists, academicians, writers, engineers, denounce the faults of the programmes of secondary education elaborated in 1902"; what is needed, "to speak plainly, is less of the utilitarian fever and more of the human ideal."

HERBERT JONES.

NEWS FOR BIBLIOPHILES.

In the opening of Mrs. Gaskell's tragic story of the "Crooked Branch" there occurs a humorous account of Nathan Huntroyd's wooing. It is almost the only gleam of sunshine in that sombre picture. Nathan finds his old sweetheart in poor circumstances, and says:

> Hester, thou dost not mind me. I am Nathan as thy father turned off at a minute's notice, for thinking of thee for a wife, twenty years come Michaelmas next. I have not thought much upon matrimony since. But Uncle Ben has died, leaving me a small matter in the bank; and I have to see after it. Wilt like to come? *I'll not mislead thee. It's dairy and it might have been arable.* But arable takes more horses nor it suited me to buy, and I'd the offer of a tidy lot of kine. That's all. If thou'lt have me, I'll come for thee as soon as the hay is getten in.

The phrase italicized was suggested, as the Master of Peterhouse points out in the Knutsford edition, by one which Mrs. Gaskell had heard from a dear friend who occasionally made notes of the racy talk of the wives of the farmers and laborers with whom she came in contact. This lady's records, after being a source of amusement while in manuscript, were printed after her death, but without her name, in 1881, for private circulation, under the title of "Country Conversations."* This little volume is a very rare book. There is no copy in the British Museum, and the copy here noted, which came from the library of Dean Vaughan of Llandaff, was only obtained by a fortunate chance after twenty years of search. In the preface we are told that

> whatever interest these records may have arises from the fact that they are not the work of an inventive genius. The writer had a singularly accurate memory, a sense of quiet humor, and keen powers of observation; but of the faculty which creates she had no share. . . . She scrupulously avoided making any additions or changes, though she sometimes omitted trifling details, and recorded as little as possible of her own share in the dialogue.

An article by E. V. Lucas appeared in the *Monthly Review* of 1902, and a brief notice in the *Manchester Guardian* of that year, as well as an appreciative welcome in the *Academy* of 1881, shows how the quality of these sketches struck those who were lucky enough to see them. Gladstone, speaking to Mr. Grant Duff, praised "Country Conversations" in the same breath as Barrie's "Window in Thrums."

The "Crooked Branch" was written in 1859, and here is the actual conversation recorded in 1857:

> My son Tom, Miss G., has met with a disappointment about getting married. You know he's got that nice farm at Hallwood; so he met a young lady at a dance as he was very much took up with, and she seemed quite agreeable; so as he had heard she had five hundred he wrote next day to purshue the acquaintance, and her Father wrote and asked Tom to come over to Southwick. Eh, dear! poor fellow! he went off in such sperrits, and he looked so spruce in his best clothes, with a new tie and all. So next day when I heard him come to the gate, I ran out as pleased as could be; but I see in a moment he was sadly cast down. "Why, Tom, my lad," says I, "what is it?" "Why, Mother," says he, "she'd understood mine was a harable; and she *will not* marry to a dairy."

A comparison of the passages will show with what artistic skill Mrs. Gaskell has utilized the suggestion of her friend.

There are many other good things in the book, and if the writer had no creative faculty she had a genius for selection. Her farmer's wife stands out as distinctly as Mrs. Poyser. Then there is her daughter Mary, who decides that her future husband must combine piety and good "circumstances," and her son Tom, who goes to court one sister and gets engaged to the other, and then manages to extricate himself from this uncomfortable position. Then there is the laborer's wife, with her impressions of London Bridge: "Eh! dear, what a place it must be! They say the railway carriages, and carriages and cabs with horses, are all running together upon the rails, and it's nothing but them pints as keeps them from all being smashed together."

This is the same woman who, when she is ill, won't buy new clothes for fear of other people getting them after her death! There is the wife of a man who combines the avocations of gardener and astrologer and "always charges his glasses with a text before he looks in." Miss G., having told her that Mrs. B. has given birth to a son, asks, "Why did you turn round and look at the clock?" to which the astrologer's wife ingenuously answers: "Why, you see, ma'am, whenever I tell him of a child being born, he always asks me, 'What o'clock was it?' and he's very cross if I can't tell him, and you know I can scarce ever say for certain what o'clock it was when a child was born; so now I always say what o'clock it was when first I heard tell of it." Thus are our horoscopes ruled! The life of the authoress was, with the exception of a bad accident, the uneventful one of an English gentlewoman of the Victorian period, but one of intellectual tastes and given to good works.

It is really a pity that her vignettes from life should be doomed to the seclusion of a book printed only for private circulation. Perhaps in the future it may reach a wider audience. Meanwhile the booklover should keep a good lookout for any chance copy that may come in his way.

*This title of Miss Tollett's book, it is curious to note, was anticipated by a volume published in 1694—"Country Conversations: being an account of some discourses that happened on a visit to the country last summer on divers subjects, chiefly of the modern comedies, of drinking, of translated verse, of printing and printers, of poets and poetry," which, although anonymous, is regarded as the work of James Wright, an antiquary of that period.

Correspondence

PRIVATE PAPERS OF ANTHONY BUTLER.

TO THE EDITOR OF THE NATION:

SIR: The University of Texas recently received, in a quantity of the private papers of Col. Anthony Butler, a gift of more than local historical interest. Butler was chargé d'affaires of the United States at Mexico, from 1829 to the end of 1835, and a considerable part of this collection consists of correspondence connected with his legation. There are dispatches from the State Department at Washington bearing the autograph signatures of Secretaries Van Buren, McLane, and Forsyth; duplicates of many of Butler's notes to the State Department and to the Mexican Foreign Office; a mass of private correspondence with Secretary Alaman; the usual letters from American citizens, urging this or that claim against the Mexican government; thirteen letters from Joel R. Poinsett; and twenty original letters from President Jackson to Butler. Copies of many of these documents are to be found both at Washington and in the records of the American Embassy at Mexico, and Butler's possession of the autograph dispatches from the State Department is to be accounted for by the practice that then prevailed of sending diplomatic agents duplicate, or even triplicate, dispatches by different routes, in the effort to circumvent the vagaries of the postal service. But some of the matter is unique, and should have remained in the embassy records.

The Jackson letters deal almost exclusively with the question of the purchase of Texas, which was, perhaps, the dearest wish of Jackson's Presidential career, and which was the chief aim of Butler's mission. Three of the letters are almost entirely in cipher, and have not been translated, but such as have been read do not materially increase our knowledge of Jackson's position.

A deal of new light, however, emanates from the unofficial papers. Not for a long time have historians had any illusions concerning the character of Colonel Butler. They have known that he was personally interested in the purchase of Texas, that he shrank from no means of accomplishing that object, that for six years he deceived President Jackson with the hope of approaching success when there was no hope, and that at the end Jackson acknowledged him "a scamp and a liar"; but so far no one seems to have suspected that a conflict between

his private interest and his official instructions may have operated to prolong his fruitless negotiation. He was instructed to offer a maximum of five million dollars for about two-thirds of the present State of Texas, but the President, wishing to avoid a repetition of the Florida land troubles, insisted that all colonization contracts and other grants in Texas whose conditions had not been fully complied with should be annulled previously to the sale. Now, these papers show that in two speculating concerns alone—the Arkansas and Texas Land Company and the Galveston Bay and Texas Land Company—Butler held scrip aggregating a million acres, and in case of a cession of Texas the value of this was contingent upon the recognition of their titles by the United States. The situation was further complicated by the fact that the Mexican government itself did not recognize the legality of these grants. From this one may begin to understand what difficult elements were involved in the undertaking of our representative in Mexico. He had first to persuade the Mexican government to legalize the grants in which he was interested—and he was very probably interested in more than the two which have been mentioned—then to procure their recognition by the United States, and finally to induce Mexico to sell the province. And each was an impossible task. Interest in the situation is heightened by the disclosure that when Butler returned to Mexico in the autumn of 1835, after a brief visit to Washington, he carried authority from one James Prentiss of New York, who represented, by his own account, the principal stock of the Galveston Bay and Texas Land Company, to buy the soil of Texas for the company for ten million dollars, while obtaining a transfer of political jurisdiction therein to the United States. How seriously Butler considered this bizarre proposal there is no evidence to show; but whatever may have been his moral deficiencies, he was not lacking in imagination and he probably gave it some thought. His plausibility equalled his imagination, and in reading his papers one gets the curious impression that he really believed himself possessed of many virtues.

Anthony Butler was born about 1787. He entered the war of 1812 as a lieutenant-colonel, and was honorably discharged a colonel, June 15, 1815. He served as a member of the Kentucky Legislature, and was once a candidate for Governor of that State. In 1829 he succeeded Poinsett as chargé d'affaires at Mexico, and in 1838 began a term in the third Congress of the Republic of Texas. At the beginning of the Mexican war he offered his services to Gen. Taylor in the belief, as he said, that his thorough knowledge of the country would be very useful, but they were courteously declined. When he died is uncertain.

EUGENE C. BARKER.

THE ENGLISH IN INDIA.

TO THE EDITOR OF THE NATION:

SIR: In the hope of counteracting slightly the misrepresentation which Admiral C. F. Goodrich makes in the *Nation* of May 18, I ask your leave to present the truth concerning the English administration in India as it appears to an Indian. Admiral Goodrich asserts that there is no Indian nation. True, it is admitted on all hands that India is inhabited by several races of people, and that there is a considerable lack of homogeneity in their religious and social ideas. That does not mean, however, that there is no Indian nation. About twenty-five years ago a number of political theorists used to hold that there could be no nationality without ethnic unity; but the experience of Austria-Hungary, the United States, and the Swiss Confederation have exploded this theory. The Indian nationality is as potent and dynamic as the Swiss or the American. It is founded on a geographical unit. It is based on common traditions, hopes, aspirations, and, above all, sufferings.

The responsible leaders of the Indian nation do not ask that England should leave India at once. They insist, however, that India must not be governed despotically by England for her own selfish interests. They ask for those elementary rights of men which are the inheritance of all civilized people. They demand that the people of India shall not be deprived, as virtually they have been, of the freedom of press, the right of trial by courts, the right of holding public meetings, and the right of having an effective voice in the management of their own affairs.

The English rule is characterized by Admiral Goodrich as "just and kindly." What of the $150,000,000 which India is annually made to pay England for so-called home charges, without any economic return whatsoever. The home charges, to mention only a few out of the many unjust impositions, include the cost of maintaining a vast English army in India for imperial exploitation; the expenses of keeping up the India office in London; and the payment of life-long pensions to the English officeholders who have a monopoly of fat government jobs. It may be noted that the English colonies, which are as much a part of the Empire as India is, pay neither for the maintenance of the Colonial Office in London, nor for the protection of their shores by the English navy. Of course, we are well aware of the fact that the English financial jugglers have no difficulty in explaining the home charges to the satisfaction of their own consciences; but let us reverse the situation for a moment. Put them in the place of the Indians. How long would they think this enormous annual drain to be "just and kindly," were it imposed upon England, for example by Germany?

Admiral Goodrich makes a good deal, too, of the alleged fighting of Indian famines by England. The famines in India are due to the inevitable results of the rack-renting English rule. Within the last quarter of a century there have been ten big famines which swept away from 15,000,000 to 26,000,000 people. And the most signficant thing about these terrible famines is that instead of becoming lighter and fewer with the continuance of English rule, they are returning upon us with unprecedented severity and frequency. The truth of the matter is that as long as the English keep on piling up taxes on the starving ryots, there will be in Hindustan a ceaseless repetition of "tax-created famine and poverty-created plague."

India has been under English rule for more than 150 years, yet India has no public schools. Not more than one man in ten and one woman in a hundred can read and write. Is the curse of ignorance also to be counted as "just and kindly"?

In comparison with the oppression from which India is groaning to-day, the tyrannies against which the American colonies rebelled a century and a third ago, were but insignificant indeed. Is it then too much to expect that all Americans who love fair-play, justice, and liberty, will give a sympathetic ear to the wrongs inflicted on a weaker people by a stronger?

SUDHINDRA BOSE.

State University of Iowa, May 25.

THE DESPOT OF MEXICO.

TO THE EDITOR OF THE NATION:

SIR: Granted that the form of government established by Porfirio Diaz in Mexico was no genuine republic, the question remains whether on the whole it was not the form best suited to the stage of political evolution reached by the Mexican people. Are not we, *los sajones*, who have spent a thousand years in learning inch by inch how to govern ourselves, a little hasty in applying our political yardsticks to a people accustomed during that period to the rankest absolutism variegated with anarchy? And, down in the bottom of our hearts, are we all of us certain that our present unqualified universal suffrage system of government is really the concrete realization of the highest ideal?

Americans (not merely passing tourists or job writers for the daily press), who have lived in Mexico and have studied the problem, are firm in the belief that, for that people at that stage of their existence, Diaz's government was the best possible government. The indispensable requisite of any durable form of government is peace and order. When, as often happens with us in the States, there is a miniature insurrection under guise of labor troubles, when the submerged tenth has come to the top, and life and property are not safe, and all progress is at a standstill, the first thing for any ruler to do is to impose order and peace. When in such cases argument fails and appeals to reason are unavailable, the one thing to do is to use force, to crush down by brute strength the elements of disorder and barbarism. From the days of O'Donojú till Diaz's time, the history of Mexico is one long record of political, social, and economic anarchy. Diaz brought peace, order, and security; and Mexico leaped to the front rank of minor nations. But without universal suffrage or any proper representative government; and, Diaz frankly admitted, the reason for this lack of true representative, popular government in Mexico was that the Mexican people at that time were unfitted for such a regimen. Any fair-minded man who has ever had first-hand knowledge of Mexico will admit that Diaz was right.

The great social and economic problem for Mexico in the future is the creation and encouragement of a flourishing middle class. To-day there are but two classes: the *gente fina* (upper class) and the *gente baja* (the lower class). The former are mostly Europeans, and their descendants, who own vast tracts of land and live in patriarchal style; the latter—the original Indians, Aztecs,

Toltecs, Zapotecs, Mayas, etc.—are industrious, naturally intelligent, reasonably peaceful folk: an asset that no nation can afford to waste or discourage. The economic salvation of the country will undoubtedly come through the breaking up of the immense feudal agricultural holdings of the untitled aristocracy, the encouragement of the small and independent farmer, the introduction of small industries managed by native small capitalists, and, finally, the inculcation, slow and laborious, of habits and instrumentalities of saving and thrift.

These are some of the problems of the next dictator of Mexico. But the supreme merit of Don Porfirio is that he has made it possible for his generation to know the meaning of peace, order, and security before plunging into the next vortex of political upheaval. So long as his health and strength lasted, Mexico was tranquil and prosperous, but as soon as the old lion became weak, the jackals began to howl. It is rare that a great man is appreciated by the mob, and popular ingratitude is no new thing in history—Christopher Columbus is a standard example.

E. L. C. MORSE.

Chicago, June 5.

SCIENTIFIC MANAGEMENT.

TO THE EDITOR OF THE NATION:

SIR: I note in the *Nation* of May 11 an editorial on "Some Aspects of Scientific Management." Please let me thank you for the admirable warning which you have given to possible users of the system. It is most desirable that men who are interested in this subject should understand that the introduction of the principles of this management must necessarily be slow, and must involve a large amount of patience and hard work. I feel sure that perhaps four out of five men who will undertake its introduction will find themselves disappointed, chiefly because they lack the patience to wait for results and the perseverance to make the change. FRED. W. TAYLOR.

Philadelphia, May 31.

THE COMMISSIONER OF IMMIGRATION.

TO THE EDITOR OF THE NATION:

SIR: Prof. Henry P. Fairchild's letter on Ellis Island (*Nation*, June 8) is an admirable statement regarding the work which Commissioner Williams is doing so successfully, and for doing which Mr. Williams is now being attacked in the most brutal and scandalous manner by the German newspapers, and by Mr. Hearst's *Journal*. It would be well for the country if we had many more men of the stamp of Mr. Williams in official positions.

I have had the satisfaction of knowing Mr. Williams for a good many years, and I know his work at Ellis Island well. As the result of numerous visits to the island I am convinced that, so far from being hard-hearted and unjust, Mr. Williams has shown the most remarkable tact and kindness in his treatment of the thousands of difficult and distressing cases with which he has had to deal. In fact, it has always seemed to me that the present commissioner has been almost painfully conscientious in the discharge of his duty. There are few government officials who occupy positions of such responsibility. And it is safe to say that there are very few to whom the American people owe a larger debt of gratitude. It is not difficult to discern the real motives which lie behind the present outrageous attacks on Mr. Williams. Such attacks, however unwarranted and however unjust they are, do, unfortunately, affect a certain body of public opinion. It is, therefore, the business of those who wish to see an honest official kept in a position which he is remarkably well qualified to fill to bestir themselves in this matter. I heartily endorse every word of Professor Fairchild's excellent letter. ROBERT DEC. WARD.

Harvard University, June 10.

Literature

BOOKS ON EGYPT.

England in the Sudan. By Yaeoub Pasha Artin. Translated from the Freneh by G. Robb. With 122 photographs and map. New York: The Maemillan Co. $3.25 net.

Egypt: Aneient Sites and Modern Scenes. By Sir Gaston Maspero. With 17 photographs. New York: D. Appleton & Co. $4.

Oriental Cairo: The City of the "Arabian Nights." By Douglas Sladen. With 63 photographs and map. Philadelphia: J. B. Lippineott Co. $5 net.

On November 9, 1908, Artin Pasha left Cairo with Professor Sayee for a journey in the Egyptian Sudan. On January 15, 1909, he reached Cairo again, after spending twenty days in Khartum and ascending the Blue Nile to Rosaires and the White Nile to Gondokoro. This record of his impressions on that journey is a translation of the letters which he wrote daily to his wife in Cairo. It is not often that a traveller from the outside has gone down into the Sudan so well fitted by previous likings, environment, and study to see into the situations there and to grasp and state the problems. By heredity and through a long life connected with the administration of Egypt and especially with its education, he was able to bring to bear that mass of preparation and training and yet to look with fresh eyes on new scenes. And there were even closer links. At Sennaar he says: "One day, I may write what is known of the history of this unfortunate country in memory of a Fung negress who nursed me as a child, and who recounted to me the misfortunes of the king, her father, at the time of the eonquest of Ismail Bey." But it was his position as former minister of edueation—and the best that Egypt has ever had—that helped him most. Again and again he met old pupils from the schools of Cairo who remembered and reverenced him as their former helper. This gave him points of access throughout the Sudan which were invaluable.

Scattered through these letters we find such subjects treated as the whole water question, not only the irrigation canals, but, what is equally important, the drainage canals and the problem of clearing the Delta of almost stagnant water and the upper Nile of its *sadd;* the question of education, primary and technieal, and of the supply of teaehers; the different raees and their frictions, their ambitions and possibilities of development; the whole missionary problem, with its heavy handicap of the army system, viewed evidently from the outside, but very keenly and not without sympathy; the question of slavery, which is partly economie and partly one of Arabs *versus* negroes; the finaneial situation, with its diffieulty of keeping up reform on a small budget and not moving too fast for the mass of the people to understand and follow. With all this goes a multitude of little descriptions, very vivid and yet simply expressed. The river seenery, the difference between the three Niles—the united stream and the Blue and the White; the riverside population; the traces and stories of reeent history and notably of the rising of Abdal-Qadir; the last flare-up of Mahdiism, and how he and his like were viewed by the people; here close and suggestive parallels are cited between the negro tribes and the Germans as Tacitus knew them. Artin Pasha asks hopefully whether eenturies of contaet with our eivilization may not bring these tribes up in the seale, as the Germans were brought up by contact with Rome. But for that parallel to be valid, they must learn how to hold their own and not suffer themselves to be exploited out of existence by a dominating race. Are Abyssinia and Uganda in this to play the part of the inaecessible forests and swamps of northern Germany? The photographs are very good, and the translation from Artin Pasha's Freneh has been earefully and suceessfully done.

Sir Gaston Maspero's book is of a very different sort. It is journalism of a high class, impressions of modern Egypt, caught by a great Egyptologist on his official progresses up and down the river, and thrown into charming literary form. They appeared in the *Temps* and elsewhere from 1900 on. All begin with Egypt as it is, although always there lie behind intimations and glimpses of an Egypt which has vanished. We are led back from the fellahin to the Pharaohs, their fathers, as they are fond of calling them. Nowhere is the eontinuity of a race so continuous as here. So regularly and smoothly, in these essays, does the present slide back into the remotest past that if Sir Gaston were not one of the first Egyptologists alive, we might think that we were being played with by a daringly mendacious popularizer. But we are rather being taken by a very human path into the childhood of the world, and scenes of death and burial are made to yield up secrets of life.

Perhaps the most poignant of these touches comes in the last sketch, where we stand on the platform at Philæ and look with the despairing eyes of the last priests of Isis at the boats of the Blemmyes vanishing to the south, now the only worshippers of their goddess, their one safety against the rising Christian tide. Lighter are the legends and superstitions of Karnak and the tales which may be gathered there from the fellahs. These are common not only to Egypt, old and new, but to the world as well. Thus, some details of apparitions—a little dog trotting in and little figures dancing in the middle of a room—at Karnak (pp. 164 f.) are exactly the same as some narrated to the eccentric George Sinclar and published by him in his "Satan's Invisible World Discovered," as having been "seen in a dwelling house in Mary King's Closs, in Edinburgh" (reprint of 1871, pp. 245 f.). In telling of the afrites, who are the ghosts of men that have been murdered or accidentally killed, Sir Gaston does not mention that these afrites produce knockings to indicate their presence and tell their story exactly like the raps of modern spiritualism. Seldon Willmore, in his "Spoken Arabic of Egypt" (pp. 370 and 374) has given some interesting narratives about this, told in Egyptian colloquial. One of the few purely modern sketches tells vividly of a cab drive in Siout; but, strangely enough, Sir Gaston does not seem to know who is the saint who presides over the safety of cabs in Egypt (p. 56). It is the Shekh al-Maghrâbi whose neat little *qubba* stands beside the Pension Sima: to him all the *arabiya* drivers pay fealty. The translation might have been better, and the illustrations are of a somewhat formal type; they have little connection with the text.

Mr. Sladen's "Oriental Cairo" is journalism, too, but of the most perfervid, and in no wise scholarly. He revels in adjectives of far-flung promiscuity, yet he is also capable of very terse, neat characterizations. His weak sides are history and religion and an understanding of what things really mean, and his strong side is a genuine enthusiasm for native life and scenes. He started out well under the guidance of Lane's "Arabian Nights" and "Modern Egyptians" and of Lane-Poole's excellent book on Cairo. He also picked up an admirably humble-minded dragoman who could not be tempted out of the native town, but who knew his way about there thoroughly. Then, out of sheer love for it, he gave months to soaking in picturesque Cairo, at all hours of the day and night: in its mosques, palaces, festivals, processions, holidays, amusements, bazaars and markets, old houses, and street life. In this way he saw a really amazing amount. Even the old haunter of Cairo will find in this book things to make him want to go back and verify. And for what he has actually seen, Mr. Sladen can be trusted. The adjectival tendency has, of course, to be discounted, and on some occasions he apparently took less careful notes. Thus the description of the Ashura Night procession is by no means complete; at least from the point of view of one who has actually walked in it. But, all in all, the book should prove a good and stimulating guide to the by-ways of Cairo—a near approach to that Walks in Cairo which all genuine seekers there have desired. The only pity is that he did not know the "Guide-Joanne," which, especially in its 1900 edition under Hertz Bey's care, is better than Baedeker. The map, also, which he gives, may be the latest in Baedeker; but that in the last "Guide-Joanne" is much better and fuller, as is also the large but cumbrous plan of R. Huber. Finally, no faith can be put in him for things which he did not actually himself see. If he quotes Lane, he is safe; otherwise, as they say in Egypt, Allah leaves him very much to himself. And even Lane he can be made to doubt, as when "Mrs. Butcher, who has been in Egypt thirty years, says that the Kisweh is packed and taken in the Mahmal" (p. 235). We all know the people who have been thirty years in the country and the stories they tell. But Mr. Sladen's enthusiasm is fine, and his photographs are really good.

CURRENT FICTION.

The Dweller on the Threshold. By Robert Hichens. New York: The Century Co.

Mr. Hichens here abandons his exotic setting and meets the contemporary English novelist upon his own ground. The result is not altogether happy for Mr. Hichens. It becomes clear how much of the glamour, which a large public has felt in "The Garden of Allah" or "Bella Donna," depended on what may be called the "travelogue" element in this writer's work. His knack at word-painting and a certain intensity of manner have passed for more than they are really worth—with the aid of the chosen setting. But his characters pose and talk rather than live and breathe.

In shifting his scene to London, and abandoning that theme of human passion upon which he has hitherto been playing his popular variations, he has at least showed his courage. The "love-interest" goes for nothing in this story—or for as nearly nothing as is possible in any human action. These are the "Persons of the Drama," listed according to the incoming fashion—the fruit, we suppose, of the dramatized novel and the novelized play: Evelyn Malling, notorious because of his sustained interest in Psychical Research and his work for Professor Stepton; Rev. Marcus Harding, at the beginning of the story a marvellously successful rector in West End, London, and a man of dominating will; Henry Chichester, his senior curate, "a very good man and a decidedly attractive man, but too amiable, too kind-hearted, and too easily deceived"; Lady Sophia, "a woman who managed to be admirable without being dull"; Professor Stepton, interested only in Science. It is all, the reader will observe, quite "up-to-date": the place well-bred London, and the time precisely to-day. For the rest, of course, the phrase "Psychical Research" gives away the show before the curtain rises. The upshot of it is that the rector and his curate, at the instance of the former (who is a whited sepulchre), get to dabbling in the occult, and gradually exchange personalities. By some mysterious law (that, we suppose, of goodness triumphant), the weaker preys upon the stronger, and the personality of Chichester usurps the body of Harding. Lady Sophia, the wife of the rector, instinctively transfers her devotion from the new Harding to the new Chichester. But with the death of Harding's body the curate's soul returns to its rightful dwelling, and we behold Chichester feebly mourning his dead master, and blind to the advances of Lady Sophia. No theme of this sort has thus far been treated with marked success in fiction. Mr. Hichens has evidently done his best in the construction of his tale, but the product is a mere artifice.

The Colonel's Story. By Mrs. Roger A. Pryor. New York: The Macmillan Co.

Mrs. Pryor's touch on matters Virginian is authoritative. Hence perhaps it is that her colonel has all the chivalry and charm of other Virginian colonels, and in addition the welcome graces of temperate language and common sense. He does not swear, he loves his poets, he knows the difference between a mortgage and a wax candle. Only in his entire confidence that the New York publishers will jump at his manuscript novel does he show any fantastic mental flights. He is a character to love as dearly as his neighbors loved him, old and young, black and white. He and they are worthy progenitors of the Virginia to which the late Mr. Eggleston paid homage in his "Recollections," where "culture was deemed of more account than mere education," and "living was held in higher regard than getting a living." To Mrs. Pryor's book, the Virginia atmosphere of the day of President Taylor gives a quality wholly its own. There is perhaps no other writer who can so describe the Old Dominion, affectionately conveying its charm, humorously recognizing its simplicities; giving portraits like miniatures of high-bred sir and dame, and in the same breath lightly satirizing the haughty patrician lady who is bristlingly repellent to her own

class and angelically kind to the poor, provided the poor be humble. Family life on an old estate, summer trips to the White Sulphur Springs, a search for a vagrant in California, carry the action into varying scenes, described with the pen of experience and with that zest that, however it glories in the past, is indulgently alive in the present. Many of the characters are almost new to fiction, like the imaginative Mrs. Baugs and the modest Miss Betty Oliver, and carry entire conviction of their truth to nature. An agreeable suggestion of autobiography, pervading the book, though not declared, heightens both its interest and its value.

Gilead Balm. By Bernard Capes. New York: Baker & Taylor Co.

Gilead Balm—the name is a stroke of genius—might be described as an inverted Sherlock Holmes, that is to say as a detective of virtue instead of crime. Mr. Balm, a poor and lonely clerk, suddenly comes into possession of an immense fortune. Being philanthropically inclined, he opens a detective bureau for the discovery and relief of oppressed merit and suffering innocence. In ordinary cases he keeps out of view, but if any element of romance appears, he takes up the work himself—hence this series of tales, adventurous and amusing. Sometimes the appeal of suffering innocence turns out to be a trap of vice; sometimes mystery is involved, and sometimes humor. Necessarily, Mr. Balm falls in love with the first fair victim he rescues, and perhaps the weakest feature of the book is the artificial mystery that hangs around this girl and her supposed accomplice.

The Parting of the Ways. By Henry Bordeaux. New York: Duffield & Co.

Henry Bordeaux is one of the gallant minority in French letters whose mission it is to prove to the world that Paris is not France. The ways that part are the way of the giddy, rapacious, conscienceless metropolis which all the world knows, and the simple, laborious, pious way of the provinces which the outsider does not know at all. The war between Paris and the provinces is of long standing, and, in spite of the undeniable zeal and ardor with which the champions of the "real" France have labored, the foreign observer finds himself greatly puzzled. How can Paris continue to draw to itself the life-blod of France and yet continue to misrepresent her? What defect is there in the provincial blood that makes it succumb so easily to the Parisian virus? It is all very well to speak of the temptations of a great city; such temptations in the last resort are a matter of superficialities. At bottom the basic standards of life are the same in town and country—except in France, apparently. Paris does not affect its provincials in the same way as London or Berlin does; it does not change them; it completely reverses their natures. However, the problem does exist, and M. Bordeaux has here given it clear and persuasive treatment. Pascal Rouvray, a young medical savant from Lyons, with a splendid career and a splendid marriage opening up before him at Paris, sacrifices both at the call of duty. His father has labored all his life to save the family honor by paying off a huge burden of debt contracted by Pascal's grandfather. He dies before the task is completed and Pascal takes up the work. That is the first parting of the ways. Fifteen years later Pascal's work is done, he is once more in Paris, successful and famous, and old temptation comes to him in the form of an old love. This is the second parting of the ways, and once more, though not without escaping great peril, he chooses the right path, which leads away from Paris to Lyons.

The story in its original French form, "La Croisée des chemins," was noticed in the *Nation* of January 20, 1910.

FRANCE AND AMERICA.

France in the American Revolution. By James Breck Perkins. Boston: Houghton Mifflin Co. $2 net.

It is often pointed out that while there are many first-rate scholars in the British House of Commons, the presence of one in the American Congress is so rare as to occasion comment. Our one resource in this international contrast has for some years been James Breck Perkins, sometime Congressman from New York. As scholar and man of letters, Mr. Perkins is, of course, not to be compared with Mr. Bryce or Lord Morley; but he has at least studied the history of the seventeenth and eighteenth centuries with diligence, and has presented the results of his researches in a series of readable books, which together make a continuous history of the reigns of Louis XIV and Louis XV. The present work in a sense completes the series, dealing as it does with the reign of Louis XVI, or at least with one of the most important aspects of that reign. For American readers it has the added importance of emphasizing the fact, too often neglected, that our early history was inextricably connected with the history, not only of England, but of Europe—was, in fact, from the contemporary point of view at all events, a mere by-product of it.

There is nothing particularly new in the book, either in the way of information or of original interpretation. Mr. Perkins has relied upon Doniol and Wharton for the diplomatic aspects of the subject, the former being, in fact, the very foundation of the work. Besides these, he has used such secondary works as Loménie's "Beaumarchais," and the ordinary American collections, such as the works of Franklin, Washington, and Deane. With much excellent material in hand, Mr. Perkins has written the kind of book with which his former works have made us familiar: information well organized; facts selected with discrimination; a story interestingly told in simple, lucid English that is not without its undercurrent of humor, and which, although often diffuse, has frequently an epigrammatic terseness; conclusions, on the whole, sane and moderate, and never obviously untenable.

Mr. Perkins has not set out to prove any thesis, but if there is any central contention in the book it is that of the two motives which induced France to aid the colonies—the desire to humiliate England and the sympathy of the French people for the cause of liberty—the latter is of more importance than the former, or at least of more importance than is usually ascribed to it. "The rebellious colonies were popular," as M. Jusserand says in his appreciative introduction, "not especially because they wanted to throw off an English yoke, but because they wanted to throw off a yoke." "If the American cause"—thus Mr. Perkins puts it—"had not excited strong enthusiasm among the French people, unless interference in behalf of our forefathers had been not only approved, but demanded by the representatives of French thought, it is doubtful if the government of Louis XVI would have taken up arms in behalf of American independence."

This is doubtless true. At no previous period in French history could Franklin have accomplished a tithe of what he did accomplish in procuring aid for the colonies; at no other time can we imagine a La Fayette acting as he did act, or achieving what he did achieve for American independence. Mr. Perkins brings this out clearly. In chapter xi, he gives, for this purpose, an excellent account of the new spirit which the intellectual revolution of the eighteenth century had produced in France—the desire for change, admiration for, if not willingness to adopt, the simple life, the lyric enthusiasm for the lost virtues of the golden age of Arcady. Now for Frenchmen of that day, the American, observed at a distance of three thousand miles, and seen through the rose-colored glasses of their own aspirations, furnished a concrete example of the natural man dwelling in green pastures and beside still waters.

But then it is equally true that without Vergennes and his desire to humiliate England, France would not have aided the colonies. Whenever there are two so-called *causes* for any historical event, it is hazardous to say which is the more important, for the absence of either would probably have made the

event impossible. It should be said, however, that the argument is stressed by Mr. Perkins in his book, rather less than by M. Jusserand in his introduction. Mr. Perkins does not try to show just how the popular sentiment exercised pressure on the government. Aside from chapter xi, and suggestions thrown out here and there by the way, he is occupied with tracing the story of how France first gave secret aid to the colonies, with the negotiations that led up to the alliance, with the military events in which French troops took part, and with the final negotiations for peace. Yet it need not be doubted that the influence of the spirit of the age upon the decisions of the government was very great simply because it cannot be traced in the documents. There is much more in history than is dreamed of in the Philosophy of Documents.

We recommend Mr. Perkins's book to the "general reader," if such exists. It will certainly help him to see the history of his own country in truer perspective; and if, in order to do so, it is found necessary to add a cubit to the stature of Beaumarchais and to take one way from that of John Adams, nothing is lost in the end.

Over the Border. By William Winter. New York: Moffat, Yard & Co. $3 net.

This work, the latest addition to the new and handsome issue of the collected works of Mr. Winter, is full of the descriptive power and imaginative reflection which constitute the peculiar charm of the author's "Gray Days and Gold" and "Shakespeare's England," of which it is the natural sequel. Mr. Winter is no common observer, dependent upon the details of the local guide book, but brings to every scene that he dwells upon the knowledge of the student and the delicate skill of the practised writer, and thus is able to invest each scene with its appropriate spirit and atmosphere." "It is one thing," he says, "to visit and another thing to see," and he illustrates the truth of this remark by the varied richness of his own sympathetic fancy. A notable example of his power to summon up a vivid picture to the mind's eye is afforded in his descriptions of Edinburgh and its environment, but he is no less happy in his portraiture of the wildest and most desolate highland regions. The rugged ruins of St Andrews, with all their memories of the cruel days of the Scottish Reformation, the savage bigotry and bloody end of Cardinal Beaton, the murder of Archbishop James Sharpe, and the triumph of John Knox, are fertile topics of his eloquent pen. His ideal of Mary, Queen of Scots is more romantic than can be justified by the known facts of history, but her faults may be forgotten in the pathos of her fate. He repeoples the hollow walls of the once splendid palace of Linlithgow in which she was born, and recalls the stirring tragedies associated with the grim fortress of Stirling Castle.

One of the most fascinating chapters in the book is the essay on Sir Walter Scott, a bit of brilliant appreciation informed by sound judgment. In it the nobility of the man and the splendor of his genius are celebrated in a tribute of rare beauty and enthusiasm. Mr. Winter's literary skill confers a special interest even upon so unpromising a subject as the old Scottish graveyards, which inspire him with plentiful anecdote and pregnant meditation. The "Macbeth Country" is to him, of course, enchanted ground, and he discourses upon the various traditions connected with the Shakespearean story with learned authority and unfailing charm. On the remote island of Iona, so venerable for its religious and other historical or legendary associations, it was his fortune to be stormbound for many days, and he made the best use of his involuntary imprisonment. His account of his explorations and of his encounters with nature in some of her fiercest moods is full of information and admirable literary matter. It is not necessary to follow him in all his wanderings, which virtually cover the length and breadth of Scotland, but it should be remarked that the book is virtually a new one and contains some of the ripest and most polished work of its creator. To the patriotic Scot it will be precious, and to the tourist a most helpful companion. The spirit of it cannot be expressed better than by Mr. Winter's own words, written concerning Glasgow:

> I know not of any pursuit so gratifying to the imagination and so stimulating to spiritual growth as that of musing among haunts that have been adorned by genius, endeared by associations of heroic or pathetic experience, and dignified by the splendid force of illustrious example.

Every intelligent reader will be able to recognize the stimulus and profit by it.

Indian Wars of New England. By Herbert Milton Sylvester. Three volumes. Boston: W. B. Clarke Co. $15.

In nearly fifteen hundred pages of text and footnotes Mr. Sylvester has narrated the history of Indian warfare in New England from the earliest times to 1763. The first volume deals with the Pequods and the Mohegans, the second with King Philip's war and that with the tribes along the northern frontier of Massachusetts and southern New Hampshire, and the third with the Abenaké, chiefly in New Hampshire and Maine. The narrative is supplemented by chapters on the topography of the Indian tribes, the relations between the early settlers and the Indians, the land of the Abenaké, and the French occupation of Canada, with extended accounts of the causes and progress of the larger wars of which the Indian conflicts after 1690 were but a part.

Indian warfare in New England does not lend itself to continuous and organized narration. It presents no campaigns, no great battles, no opportunities for military strategy. The tactics employed were everywhere the same: the night attack, the day ambush, the sudden swift assault, the capture or the scalping knife, and a train of smoking houses left behind. Each incident stands isolated, conforming to a common type. The actors in each case are few, the action brief, the horrors cumulative but not coördinate, and the individuals concerned rarely of interest to the reader. Even the genius of Parkman would not have been proof against so minute a recounting of details, and Mr. Sylvester has not the genius of Parkman.

Quite apart from the inherent weakness of its subject, the work might have been greatly improved in a number of particulars. Much of the supplemental matter might well have been omitted, or at least condensed. To understand Indian warfare in New England we do not need to have a complete history of the French occupation of Canada or of the causes of the eighteenth-century wars between France and England. More serious still are the evidences of strong partisanship. Mr. Sylvester has deep contempt for the Puritan and a positive hatred for the French and the Jesuits. The former were "a set of incipient bullies," guilty of "misfit heroics," possessed of a "glut for blood" and "swayed by an asceticism as virile as it was ænemic" (*sic*). The latter were "malignants of cowl and hood," emissaries of "Rome subtly pregnant with savage atrocity," "devilishly subtle and not less persistent, blind as so many bats, spiritually warped and misshapen"—and so on through the volumes. On the other hand, the Indians were "poor, untutored savages," their atrocities "excusable, possibly righteous," their attitude one "of noble and dignified generosity," though in the third volume the author can speak of "their horrible atrocities" and can devote two pages to their "proverbial cowardice," their instinct for assassination, and their "satanic ingenuity" in warfare. And all this extravagance of statement is presented in a luxurious and florid style that leaves no fixed impression upon the mind of the reader.

Nevertheless, there is much to commend itself in this work. The author has mastered the very difficult problem of Indian topography, and in a few chapters, such as those on the Abenaké and the Shirley war, has shown himself a skilful narrator. His account of the siege of Louisburg in 1745 is excellent in its brevity. Indeed, in all that re-

lates strictly to Indian warfare he is at his best, for he has shown great patience in his search for details and has arranged his results in orderly and intelligent fashion. He is far from credulous in his acceptance of local tradition and has cleared up a number of difficult points where local historians had gone astray. What he has written will not need to be done again.

The work has very few errors. The remarks on the Anglo-Saxon folk-mote and the reference to the charter of Runnymeade provoke a smile, and the statement that the habitants of Canada "were hardly better than serfs" will not bear inspection, now that Munro has disposed of that myth permanently. In fact, Mr. Sylvester's account of the old régime in Canada is little better than a caricature. The spelling "Vaughn" for the name of Col. William Vaughan of New Hampshire is not that used by the courageous fighter in signing his own letters.

The Silences of the Moon. By Henry Law Webb. New York: John Lane Co. $1.50 net.

This is a book born of solitary communion with nature and consciously cultivated exaltation of spirit. Like many essays of the sort, its form seems superior to its matter. Exquisiteness of feeling, a succession of meditative states, a glancing comment on the issues of life and death—such is the material.

Such books we read largely for their mood, and there is an unkindness perhaps in pointing out inconsequentialities in what is, after all, but the texture of a dream. Yet the seeming wisdom of such studies as Mr. Webb's may impose upon certain readers. So let us note that he regards all our moon love as mere imputation of old human loves, longings, and admirations, that is as a magnificent example of the pathetic fallacy, and then bids us be animists and revere the life pervading nature from end to end. Still such circularity of argument need not seriously trouble the gentle reader. Mr. Webb takes the liberties of a graciously whimsical mind, and is at small pains to be consistent.

Much of the little volume is given to intimations of immortality, a natural sequel of its animism, and to the celebration of love as the ultimate reason of life and as the true induction to nature worship. It would be ungracious to suggest that, as in almost all counsels to return to nature, nature itself is undefined. It means apparently whatever is individual and opposed to the common course. Mr. Webb's *pensées* bear a belated look, as it were of surviving half-brothers of first "Locksley Hall" and "In Memoriam." Stylistically, the book is distinguished, its general fastidiousness being relieved by powerful single strokes, its tenderness by occasional fine scorn. We quote one of the analogies in which the book abounds:

That star in the west sinking into the arms of the river-valley and reddened by the veils of the river fog is Arcturus; the beams which are falling on my eyes with the gentleness of distant candle-light left their blazing sun nearly 109 years ago, and during that time have been travelling at the rate of 186,000 miles to the second. Below Arcturus a cloud is rising from the horizon, and there must be a hurricane blowing in the upper strata of our atmosphere, for the speed of its approach is like that of a sandstorm. It is more than impressive, almost terrifying, this sight of a lonely cloud errant in night spaces, this silent scudding hyperbole of darkness where all is dark; and now Arcturus has gone.

Here I come to my moral. The presence of the heaviest and most intolerable misfortunes coming between a human mind and the passion which is to make it realize its own immortality is of no more consequence than is that Titan of writhing mists, who has now overspread half the sky, to the immemorial flare in the heavens which man has named Arcturus.

The passage illustrates very well the temper of a delightful moralist at large whose charm has a tinge of Euphuism.

Notes

A fifth, revised and enlarged, edition of "Dillon on Municipal Corporations" is announced for immediate publication by Little, Brown & Co. It was more than forty-five year ago that the author, then a judge of the Supreme Court of Iowa, commenced his work, which came out in one volume in 1872. The fifth edition will appear in five volumes.

The "Iliad of Homer," done into English blank verse by Arthur Gardner Lewis, is announced by the Baker & Taylor Co.

John Lane Co. publishes this week: "The Young Idea," a story of child-life by Parker H. Fillmore; "The Socialist Countess," by Horace W. C. Nowte; "Billy," by Paul Methuen, and "The Nelsons of Burnham Thorpe," by M. Eyre Matcham.

Burns's "Poems Chiefly in the Scottish Dialect," published in 1786, has been reprinted in type-facsimile at the Oxford Press, and is about to be added by Henry Frowde to the Oxford Library of Prose and Poetry.

Doubleday, Page & Co. will have ready in the summer or early autumn: "The Passing of the Idle Rich," by Frederick Townsend Martin; "The Recording Angel," by Mrs. Corra Harris; "Rolf in the Woods," by Ernest Thompson Seton, and "The Harvester," by Mrs. Gene Stratton Porter.

As an addition to their Little Cousin series, L. C. Page & Co. announce "José: Our Little Portuguese Cousin," by Edith A. Sawyer; another book for juveniles which they have in hand is "Chinese Playmates," by Norman H. Pitman.

Messrs. Cotta of Berlin will soon publish a new volume of short stories by Sudermann.

A manuscript of the complete Hebrew Bible, said to be one of the oldest in existence, has been discovered in the Advocates' Library, Edinburgh, and is described in the *Expository Times* for June by Prof. A. R. S. Kennedy, who assigns it provisionally to the thirteenth century.

We are glad to learn of the continued popularity of Dr. J. J. Walsh's "Thirteenth Greatest of Centuries" (Catholic Summer School Press), to which a third edition bears testimony. In its present form the volume is enriched with above a hundred additional illustrations, taken from the architecture and other arts of the age. A new appendix contains twenty-six paragraphs (or skeletons, so to speak, of suppressed chapters) on various topics not brought out in the main argument of the book.

The Yale Collegiate School and Hospital in Chang-sha is an interesting educational enterprise in China, supported by the Yale Foreign Missionary Society. Founded six years ago, in the capital of a province, Hunan, noted above all others for its anti-foreign sentiment, it has won the esteem of the people to such an extent that last year not only more than half of the students were from the official and literary classes, but in the anti-foreign riots in April its buildings were spared. Recently a change of sentiment on the part of the gentry has enabled the college to buy twenty acres of land for a campus. It is hoped that sufficient funds will be forthcoming to permit the establishment of a medical department in connection with the hospital for the training of Chinese doctors.

The volume of "Minor Poems," edited by Ernest de Sélincourt, completes the Clarendon Press edition of Spenser, the first two volumes of which, containing "The Faerie Queene," were edited by J. C. Smith. This edition has two great advantages: the printing is in clear and handsome type of good size, the text is the result of extreme care. In the latter point, to be sure, what comparison we have made does not show any superiority to the Cambridge Spenser (Houghton Mifflin), edited by R. E. Neil Dodge. The Oxford text gives in footnotes a considerable variety of readings, most of which, however, are of small value; it lacks the explanatory notes which lend convenience to the Cambridge volume. In detail, there is little to say. Professor de Sélincourt has based his text on the first editions, believing, as does Professor Dodge, that the later editions did not receive Spenser's revision. He takes "E. K." to be Edward Kirke or some other friend of the poet; and, indeed, there is little to be said for taking the initials as a blind for the poet himself. Of the "Amoretti" Professor de Sélincourt accepts the traditional view, that they were addressed to the poet's future wife. He rejects P. W. Long's theory that most of these sonnets were written while Spenser was in London, and were addressed to Lady Carey. For those who do not demand explanatory notes, this is the best edition of Spenser.

"Sir Perceval of Galles: a Study of the Sources of the Legend" (the University of Chicago Press), by Prof. Reginald Harvey Griffith, is a monograph on the sources of the Middle English metrical romance of that name. As is well known, this poem differs from all the French romances relating to Perceval, inasmuch as it contains nothing concerning the Holy Grail; and

some scholars have, accordingly, regarded it as representing the most primitive form extant of the legend of this hero, although others—and it seems to us with better reason—have argued that it is merely a skilful adaptation of the "Perceval" of Chrétien de Troyes (*i. e.*, the first part), with omission of the Grail material. Mr. Griffith's conclusion is that "Sir Perceval of Galles" is "an English singer's versification of a folk-tale that was known in his district of northwest England." In view of the close agreement, however, that exists between Chrétien and the English poem, it is incredible that the sources of the two should lie so far apart, even if we assume that the former was uot the direct original of the latter. Under this theory, too, there is no satisfactory explanation for the French names of the characters in "Sir Perceval." In his comparison of the extant versions of the Perceval story, Mr. Griffith makes virtually no allowance for invention on the part of the individual writers or for chance resemblance of incident. Still further, he strains faint analogies between different stories to an unreasonable degree. For instance, the man who could extract from such stories as those cited in chapter v, the episode which is called, "The Rescue of tbe Lady Falsely Accused," would certainly fulfil Wordsworth's definition of a poet as a person who could discern resemblances between totally dissimilar things. Finally, like so many recent studies in this field—especially on this side of the ocean—the book is wearisomely over-elaborated. Even specialists must sometimes feel that, if investigations of the kind are not conducted with a better sense of proportion than at present, this whole class of studies is likely to suffer the fate which has been predicted for the modern battleship, in view of its ever-growing complexity, that it will break down of its own weight.

Routledge's New Universal Library (Dutton) issues Auguste Comte's "Early Essays on Social Philosophy," in the translation of Henry Dix Hutton. A brief introduction and additional notes are furnisbed by Frederic Harrison. "These six early essays of [Comte's] youth," observes the editor, "convince us that from the first he was inspired with the twofold [*i. e.*, scientific and social] purpose, and that in devoting some thirty years of his life to the sciences, it was simply from the profound conviction that a new social gospel must be preached from the chair of systematic science."

The Rev. Timothy Richard, D.D., of the English Baptist Mission, China, believes that Mr. Zuzuki's translation of the text of the Buddhist Church called "The Awakening of Faith" is deficient because that eminent scholar was "without the knowledge of the Buddhists' true key to the fundamental and central idea of the book"—which everyone must admit is a defect. He has attempted, therefore, to rectify the deficiency with a new translation under the title, "The New Testament of Higher Buddhism" (imported by Cbarles Scribner's Sons), and by insisting that the missing key is not "suchness," as Zuzuki rendered the native word, but "God as the true model." Doing away with "suchness" and substituting God certainly makes the "New Testament" easier for those to understand who prefer to have philosophic terms translated simply and pleasantly. The Rev. Dr. Richard also objects to Professor Kern's translation of the text called the "Lotus." By adopting instead the translation in Dr. Richard's book, "Western readers will be in a position to understand the vital connection between Christianity and Buddhism, and to pave the way for the one great world-wide religion of the future." We advise all readers to begin with the beginning, as succinctly stated on p. 49 of this book: "These common doctrines of New Buddhism and Christianity . . . both came from a common source, Babylonia." Other "discoveries" of the well-meaning author have been known for a long time; but it is pleasant to greet any clergyman so liberal in his views, and it will do his brethren no harm to read about all these "discoveries," whether made by Dr. Richard or by others.

"The Standard of Living Among the Industrial People of America," by Frank H. Streightoff (Houghton Mifflin) is a summary of all the important data which have thus far been collected by trustworthy authorities on the living conditions of the working men and women in the United States. The principal sources of information are the studies made by Prof. Robert C. Chapin, Mrs. Louise B. More, and the United States Bureau of Labor. Frequent reference is made to other works, however, and the author appears to have pretty thoroughly covered the available material. It is to be regretted that more intensive studies, like those above mentioned, have not been made, covering a larger part of our population. The present volume is mainly descriptive in character, and gives the facts in regard to such topics as the household budgets, amount of unemployment, housing, food, clothing, thrift, social and family life, health, and wages of the working classes. For these subjects the book will serve as a valuable reference work. One could wish, however, that the author had gone more thoroughly into the theoretic aspects of the standard of living, giving an account of the factors which determine the standard of living of any people, and particularly the conditions which have set the standard for the American people. We pride ourselves on having a higher average standard among our working people than any other civilized nation. It would be worth while to know whether this is so, and, if so, whether it is likely to continue the same. The influence of immigration upon the American standard is an important matter, to which the author gives only a few sentences. In general, the picture which the book presents is rather gloomy. In each one of the aspects of life which are considered it appears that a very large part of our working people suffer a serious deficiency. Six hundred and fifty dollars is set as the minimum wage which will suffice for the merest decencies of life for an average family over the country as a whole. Yet it seems that as many as 5,000,000 of the male industrial workers in this country do not earn $600 a year. The manufacturing plants of this country are utilized, on the average, only to 75 per cent. of their capacity, yet tbe average annual loss to the country through unemployment amounts to more than a million years of working time. One cannot read the book thoughtfully without feeling that the industrial adjustment in the United States is far from satisfactory or healthy.

We commend "A Tenderfoot With Peary" (Stokes), by George Borup, to all detractors of the American college, and, particularly to disparaging commentators on athletics. However Arctic exploration is to be regarded from a utilitarian standpoint, its exactions on brain and brawn and mettle combine to make it the enterprise par excellence for trying out the all-round fitness of the participants. Of the spirit which animated this expedition, we need quote only one expression—the "Tenderfoot's" entry on the day when it was in the order of the game for his sledge division to drop out of the running:

> This was my farthest North. I would have given my immortal soul to have gone on. I was in luck, to get as far as I did . . . Still it was part of the game. When the captain of your eleven orders you to go to the side lines, there's no use making a gallery play by frenzied pleas to be allowed to go on.

Academic sticklers should be gratified to observe how liberally the Yale curriculum has contributed to the "Tenderfoot's" orientation in scientific and other fields. We may safely say that in the matter of verbal resourcefulness and figurative profusion he has (in his own expressive phrases) "the whole bunch" of Elizabethan dramatists "skinned a mile." Ten years hence we may even need a glossary for such passages as "Eginguch noticed it (the partially eclipsed sun) first and when he saw that glim half doused, he yanked the surprise-screech stop out of his vocal organ." On the other hand, "The monotony was given its quietus on the jump," though perhaps not etymologically logical, will always convey the suggestion of ennui dispelled. Descriptions of sledging adventures, igloo architecture, polar menus, and the hunting of Arctic game with gun and camera certainly lose nothing by being couched in the undergraduate tongue.

There are books for beginners that present a fresher treatmeut, a clearer comprehension of the inner nature of the problems discussed, and a more persuasive presentation of their real importance and inevitability than are to be found in the two volumes of H. E. Cushman's "Beginner's History of Philosophy" (Houghton Mifflin). The book is a compilation rather than a new work. In the first volume in particular our author's indebtedness to one of his predecessors—namely, Windelband (whose "History of Ancient Philosophy" he translated)—is rather striking. Occasionally there is a verbatim quotation with no quotation marks, and in a number of places Wiudelband's treatment is simply translated into words of one syllable. Too much, however, must not be made of this, for in condensing the story of a long development of thought into a few words for the use of beginners it is well-nigh impossible to invent a perfectly new mode of presentatiou. The pedagogical merits of the book are its use of outlines, maps, and pictures, its sharp division of subjects into sub-heads (duly numbered), its labelled paragraphs (so that the student may always know what he is reading about), its short and clear sentences, its skilful simplification of difficult doctrines, and especially its interesting and helpful presentation of the relation between a given philosophy and the life of the times in which it originated.

One of the most vital problems connected with American education—a problem all unsolved as yet—is discussed by John Franklin Brown in "The Training of Teachers for Secondary Schools" (Macmillan). He shows how clearly defined an idea the Germans have of the ends of education, and how carefully considered are the means of obtaining teachers calculated to produce those ends. He then discusses the preparation of the secondary teacher in this country. He points out the great lack of training for the work, and suggests the improvement that would result through the adaptation of the German system to American conditions. It is interesting to note his opinion that the superior scholarship of the German teacher is the most important single factor in the excellence of the German schools.

Charles F. Thwing has written a history of "Education in the United States Since the Civil War" (Houghton Mifflin). He begins with a statistical comparison designed to show not only absolutely, but relatively, the growth of the public school system, and the great increase in liberality with which it is supported. He shows the improvement in organization which has taken place in the public schools, and in colleges and universities. The chapter on Educational Thought puts into few pages the vital changes in spirit and in ideals which the transitional period has evolved. Other chapters discuss Morals and Religion, the Athletic Renaissance, and Material Education. The book closes with sketches of some of those whose influence during the past forty years has been so potent in enlarging the work of education in the United States.

Of a similar purpose with reference to education in England is Sir Philip Magnus's "Educational Aims and Efforts, 1880-1910" (Longmans). Few Englishmen are better situated to give a clear survey of the progress of education in their country than the author of this book. Naturally his long service as organizing director and secretary to the city and guilds of London Institute, during which his work was the development of technical instruction for all classes of workers, has made his interest in that phase of education especially great, and we find it treated with much fulness in this book. The abandonment of the so-called "payment by results" system of support of the elementary schools, and the consequent liberation of teaching from lifeless mechanical drill for passing examinations; the abolition of fees; much progress toward adapting instruction to the needs of various classes of children; large extension of secondary schools, and a great advance in technical education are the achievements which the book records.

"Spanish Composition" (Holt), by J. P. W. Crawford, consists of thirty lessons and a vocabulary. The lessons are similar in plan to those of François's French composition books. Good judgment is shown in choice and arrangement of material.

It seems a pity that a book with so excellent a purpose as Henry W. Elson's "Guide to English History for Young Readers" (Baker & Taylor Co.) should not at least have been kept free from glaring peculiarities and errors. A book of this character is certainly not the place for a disquisition on the merits and defects of the modern jury system (pp. 67-70); nor for a superficial and biassed criticism of the relations between Canada and the mother country, with sidelights on American annexation (pp. 282-284); nor yet for a philippic against the "caste system" of an hereditary nobility, before which the English people to-day "bow in homage . . . as a weak-minded mother caters to the whims of her spoiled child" (pp. 178-180). It should seem to be about time, also, that makers of books for young people ceased to talk about such things as the crushing burdens of feudalism (p. 67), or the immediate potency of Magna Charta in securing an impartial administration of justice (p. 87), or the "detested (*sic*) sycophancy" of such men as Sir Thomas More in their references to their sovereign (p. 136). For the rest, the volume is a sketchy and readable account of English history, not good enough to be highly commended, and not bad enough to be condemned.

Science

Three Thousand Years of Mental Healing. By George Barton Cutten, President of Acadia University. New York: Chas. Scribner's Sons. $1.50 net.

Dr. Cutten, lest there should be any misunderstanding, let us interject that he is a doctor of philosophy and not of medicine, has done an important service to medicine, to religion, to psychology, and to practical life by gathering together for us here in America, where surely "no nation needed it so much," the scattered details of the history of mental healing. Men at all times have been cured of all sorts of ills from which they were suffering, by faith—that is, by arousing in them the confidence either that they had nothing the matter with them, or that some power not themselves was going to cure them. This was true in Old Egypt, it was true in Greece and Rome, it was true in the Middle Ages, it was true in the last century, it is just as true now as it ever was in human history. It is even probable that there never was a time when so many people were being cured of ills, real or imaginary, by faith as just now. All the quackery, virtually all the proprietary medicines, are faith cures, for their composition is well known and they have no mysterious secret composition, by which they work their wonders.

The commonest idea in faith cures of the more religious type has been either that disease does not exist, except in man's mind, because God is too good to permit it, or else that it is due to the devil's effect upon us which would surely be neutralized by faith. Dr. Cutten sketches the rise and spread of many large religious sects founded upon such notions within the past generation. Of course the book will have no effect upon those who have been benefited by these systems of thought and healing. It will, however, enable those who are interested in many curious modern movements to understand their psychology. We regret that the book is disfigured by many careless references to medical history in the Middle Ages. The supposed absence of medical teaching because of Church opposition is a disputable fact. Medical schools never had higher standards or more faithful teachers than in the later Middle Ages. Very general acceptance of superstitions is compatible with a high development of medical science, as we see in our own time.

The Hispanic Society of America will issue as No. 81 of its publications "Atlas of Portolan Charts, facsimile of manuscript in British Museum," with a brief introduction and list of charts, edited by Edward Luther Stevenson. These Portolan charts, designed for the use of navigators, are ascribed to Vesconte de Maiollo, who constructed his atlas shortly after 1500.

The "Berliner Astronomisches Jahrbuch" for 1911 has appeared, edited, like the preceding, by Professor Cohn, director of the Rechen-Institut.

The "Textbook of General Bacteriology" (Macmillan), prepared by W. D. Frost of the University of Wisconsin and E. F. McCampbell of Ohio State University, is based on material already used for some years in the teaching of college classes. It purports to meet a demand for a concise book on the subject in English. The lack of such books does not seem to us quite so marked as is assumed in the preface, having been decidedly diminished by the excellent book by Jordan which appeared a couple of years ago and has already reached a second edition. Conciseness is certainly attained, for the amount of material dealt with in a little more than three hundred pages is very great. There are some sixty illustrations, mostly judiciously borrowed and with a few exceptions well reproduced. The main facts appear to be correct, and the presentation is in parts good, sometimes excellent, but as a whole the book is unnecessarily hard to read. From the point of view of the young student it would be a gain to have further condensation of matters relating to classification and the like, with more elaboration of the sections which treat of the methods of culture and the theories of bacterial action, here all too briefly presented or relegated to the laboratory. More especially it may be urged that the methods of disinfection are not well described; that the distinctions concerning pathogenic bacteria are not always intelligible; that the problem of the ptomaines needs much explanation and many qualifications to bring out the present attitude of medical men toward the disturbances formerly attributed to these substances. The purely practical chapters are not clear enough, those relating to water and sewage being altogether too concise. The chapters on milk are exceptionally good. There are some unfortunate typographical errors, of which we note: "dysentariae" (pp. 235, 246), "trepenema" (p. 236), "amoebi coli" (p. 246), "suhaceous glands" (p. 319). The name of the noted little Swiss village where the water supply was first

shown to be the cause of an epidemic of typhoid fever is Lausen not Lawsen (p. 296). The index despite its size does not quite do justice to the text, and for many readers some kind of glossary would be helpful.

Drama and Music

A GREAT GERMAN PLAY.

CAMBRIDGE, Mass., June 5.

After the artificial craze of ultra-naturalistic and ultra-symbolistic experiments, it is refreshing to hear of the popular success of a drama unencumbered by æsthetic theories, born from the imagination of a real poet. And it is pleasant to note that the German Emperor, who has so often challenged the artistic predilections of the day, here finds himself in accord with the best public opinion, by proclaiming this poet as the man for whom the German stage had been waiting and as a true exponent of national dramatic art.

Karl Schönherr, the author of "Glaube und Heimat," is a Viennese physician about forty years old. He has shown literary skill and familiarity with the life and the feelings of the people in a number of Austrian dialect stories and plays; he has also, in his fairy drama, "Das Königreich," dealt successfully with the more complicated problems of sensual enjoyment and spiritual aspiration. But not until the production of this latest drama of his, which was first enthusiastically acclaimed last December at the Vienna Volkstheater and has since then run its triumphal course throughout Germany as far north as the Stadttheater at Kiel,* has he revealed himself as a creative artist of a high order.

The theme of this tragedy is the conflict between the peasant's attachment to the soil and his loyalty to a religious belief. The time and place of the action are the Austria of the era of the Catholic Counter-Reformation, toward the end of the sixteenth century; the principal characters are Austrian peasants whom adherence to the Lutheran cause transforms into martyrs and heroes. What gives to the play its poetic power is that, in spite of the religious strife and inspiration portrayed in it, it is absolutely free from any sectarian bias, confining itself to the doubts and terrors, the inward triumphs and exaltations, in other words, the universally human emotions, born from these religious struggles.

The action storms through three short acts, the end of each act bringing a climax of extraordinary intensity. There are no set speeches, no theatrical embellishments, no artificial retardations, hardly any byplay. One is reminded of the trenchant manner of Ibsen; but it is Ibsen without his vagaries and extravagances, Ibsen mellowed and humanized by contact with popular art.

Although the play bears the subtitle "The Tragedy of a People," and although it represents the martyrdom of masses of men and women, yet it centres in the catastrophe of one family, that of Christopher Rott, a prosperous peasant in an Alpine village. The Imperial Government has sent its soldiery into this mountain region, to hunt out all converts to Protestantism and drive them from the land. "The wild hunter is raging," the people say; and on every hand we see terror and destruction following his path.

All this is going on in the homesteads around Rott's farm, and more than one of his neighbors has fled to his house for succor. The family Rott is nominally Catholic; the wife indeed is a stanch believer in the Virgin and the saints; but Rott himself and his aged father are secret followers of the new creed. When they are alone, they take out the Bible hidden under a loose plank of the floor, and read the promises for those who confess His name before men, and tremble at the threats of perdition to those who do not dare to declare themselves. The course of events which lead to Rott's open confession of faith forms the main theme of the first act.

The second act is largely concerned with the inner conflicts and outer hardships which finally wring from Rott's eighty-two-year-old father—Alt-Rott, as he is called—the same decision to come out boldly for the cause to which he has long been secretly attached. Alt-Rott is perhaps the most complicated character of the play. In him the struggle between the allegiance to his ancestral home and the call of conscience which entails separation from all that is dear to him rages most fiercely. He feels near the grave; the village barber who is treating him for dropsy has given him only a fortnight more to live; all he longs for is an honorable burial in the family lot; and he is pursued by the dread of being driven out before then. So he holds back with his confession; he is determined to make it at the point of death, with his last breath, posing meanwhile as a devout Catholic. But at last even this old man, in whom the peasant's love of his native ground seems to overshadow all other feelings, is forced to sacrifice it for a higher spiritual demand. He comes to know that a neighbor's wife who has been killed for not giving up her Bible has not even had a Christian burial: soldiers have carried her body out to the "Knacker's Yard." And now the old man, crazed by the fear that this will happen to him if he is left alone to die in his homestead, flings his confession: "I, too, am a Lutheran!" into the face of his oppressors, and beseeches them to send him across the frontier, the sooner the better, so that he may be buried, on foreign soil to be sure, but as a Christian.

The last act brings the culmination of religious fanaticism and cruelty, but at the same time, in Rott's victory over his own feelings of hatred and revenge, a sublime and harmonious conclusion. The day for the deportation of all Protestants has now come. The whole Rott family are ready for it. The farm has been sold; the old father can hardly wait to reach a country where he will be sure of a Christian burial; Rott's wife, in spite of her Catholic sympathies, has decided to cast in her lot with her husband and to accompany him into exile; and their boy, Spatz, a charming, dare-devil, irrepressibly exuberant youngster of fifteen, is so infatuated with the prospect of "seeing the world" that he can hardly contain himself in his eagerness for the departure. It is then that the family are struck by the most terrible, the most crushing blow. Only grown-up persons, thus goes the command, are to be allowed to leave the country; minor children are to be kept by the authorities, so that they may be brought up in the true faith and be saved from damnation! So Spatz is to be separated from his parents.

But Spatz is determined to go with his parents; he defies the soldiers who are ordered to arrest him; and when there is no other way left for escape, jumps into the millbrook, to let himself be carried along by its swift current. His body only is recovered by the father. There follows a scene of wild despair and grim hatred. The tormented father leaps upon the Imperial Officer, and throws him to the ground. And while his wife, half crazed with grief, shouts encouragement to him, he lifts the axe to crush his enemy's skull. Then there comes to him the Bible word of forgiving one's enemies; he releases his opponent; he even holds out his hand to him; and then he puts the body of his boy upon the cart laden with household utensils, and father, mother, and the dead child start upon their journey into an unknown future. The officer follows them with his eyes until they are lost to sight; then, with a wild stamp of his foot, he breaks his sword in two, and sinks to the ground, overcome with confusion and self reproach.

I have given only the barest outline of a drama presenting a great variety of characters and throbbing with life in its every line. It is not surprising that, in these days of anti-Modernist reaction in the Catholic Church, the play should have been forbidden by over-zealous local authorities in Upper-Austria. But it cannot be stated too emphatically that the play itself is not in the least anti-Catholic. It is full of sympathy for any

*In book form (Leipzig: L. Staackmann) it has reached a sale of 40,000 copies.

religious belief. It does not condemn or judge; it interprets life.

KUNO FRANCKE.

Mary Austin's drama, "The Arrow Maker," recently played with considerable success at the New Theatre, now appears in book form (Duffield). A perusal of it confirms the favorable opinion produced by its stage representation. Although not a great literary work, it is by no means devoid of imaginative power or poetic expression, while it has especial value as an expert effort to present a living picture of aboriginal character and customs. As an illustration of quasi-historical fiction, it is both interesting and instructive. The story which it tells is ingenious and plausible and offers a variety of histrionic opportunities. In many ways the work is a valuable addition to the repertory of the real American Theatre.

It is through no lack of diligent research on the part of the author, Mrs. C. C. Stopes, that William Hunnis is forced to play a somewhat unobtrusive rôle in the large volume consecrated to his life and interests ("William Hunnis and the Revels of the Chapel Royal," Bang's Materialien zur Kunde des älteren englischen Dramas, XXIX). Much space is given to a recital, freshly documented, of conspiracies against Queen Mary, in which Hunnis bore a part, and to the dramatic activities of the Chapel Children, of whom Hunnis was for thirty years master. Of the plays mentioned in connection with his name, none has survived, though Mrs. Stopes pleads for his authorship of the extant "Interlude of Jacob and Esau." Grocer, alchemist, and poet, Hunnis is perhaps best known for his device of "The Lady of the Lake," in Leicester's Kenilworth festivities (1575), which Shakespeare is supposed to have witnessed. His sturdy Protestantism Elizabeth took occasion to reward with characteristic parsimony. She appointed him Supervisor of the Royal Gardens at Greenwich, by no means a sinecure, at 12d. a day, and, in 1570, toll-taker on London Bridge. It was a mere detail that this office was really in the gift of the Corporation and was then filled. The incumbent, however, hastened to buy him off for £40, and Hunnis expressed himself as quite content with the Queen's generosity. (London: David Nutt.)

Julia Marlowe and E. H. Sothern will close their season's work with a series of farewell performances, at popular prices, in the Broadway Theatre, beginning on the 3d. of July and ending on the 14th of the same month. The plays will be "Macbeth," "The Taming of the Shrew," "Hamlet," "Twelfth Night," "Romeo and Juliet," and "The Merchant of Venice." Since they were last seen in this city Miss Marlowe and Mr. Sothern have carried their Shakespearean repertory to the Pacific Coast and back.

Sir Herbert Tree will personally superintend the stage management of Ben Jonson's masque, "The Vision of Delight," which is to be one of the features of the coronation gala performance in His Majesty's Theatre. The first scene represents "A Street in Perspective of Fair Building," which changes to a cloud, and then to the Bower of Zephyrus, which opens to disclose the glories of spring. This will afford him ample scope for the exercise of his peculiar skill in the creation of stage spectacles.

"The Married Woman" is the title of a new three-act play by C. B. Fernald, which is to be produced in London by the Incorporated Stage Society. It is understood to be a piece of series intent, written in more or less humorous mood.

Lydia Yavorska, who made a notable hit in London by her performance of Norah in "A Doll's House," appears to have created a strong impression by her impersonation of Hedda Gabler in the Kingsway Theatre.

Under the somewhat ambitious title of "Théâtre Français de Londres" Vaughan Grey is giving a series of twelve French performances in a little West End London theatre, with eminent French players. The opening piece was "Octave," by Yves Mirande and Henri Géroule, played by Félix Galipaux and his company. Among future engagements are those of Léo Claretie, who will talk about "La Femme"; Vaughan Grey in selections from his repertory as given at the Théâtre des Capucines, with music by Curt M. Platho; Mounet Sully and Mme. Jeanne Granier, and Mlle. Lilian Greuze, from the Capucines. It is intended also to produce a play which Charles Reade wrote in French, entitled "Le Faubourg St.-Germain." M. Claretie is the French director and Vaughan Grey the English director of the scheme.

Edward Harrigan, one of New York's old-time entertainers—actor, singer, dancer, playwright, song writer, manager, and best remembered, perhaps, for his "Mulligan Guards"—died last week at the age of sixty-five. Among the plays which he wrote are: "Squatter Sovereignty," "McSorley's Inflation," "Cordelia's Aspirations," "Old Lavender," and "Reilly and the 400."

Ten thousand men and women of London listened the other day to a performance of Bach's "St. Matthew" Passion, at St. Paul's Cathedral. How different from New York, whenever this masterwork is produced! But then, in London, they have great choral conductors as well as good choirs. Concerning the performance referred to, the London *Times* said:

The whole space of the cathedral is crammed with attentive hearers, of whom many stand the whole time, and among whom there prevails a silence that might be envied by those who frequent secular concerts. If any refutation were needed of the silly parrot-cry that we are not a musical nation, it is surely to be found here, for the attraction is simply the sublimity of the highest music that man has conceived.

The composer of "Hänsel and Gretel" and "Königskinder" has a son, Wolfram Humperdinck, who made a successful début in Berlin the other day as orchestral conductor. He produced a youthful composition of his father, the prelude to Schiller's "Song of the Bell."

The Parisians are at last beginning to understand that for a proper performance of Wagner's music dramas a great conductor is as important as great singers. For the two Nibelung cycles to be given at the Opéra this month Felix Mottl and Arthur Nikisch have been engaged. In the days when Wagner himself was in Paris he found it impossible to get permission to conduct his own music. In the recently published autobiography he says in regard to the rehearsals of "Tannhäuser" that the singers were so unequal to their tasks that he had to count chiefly on the effect the orchestra would make:

But it was precisely in this department that the chaos was most hopeless. Every line of the drawing was made indistinct, the result being that the singers gradually lost all assurance and even the poor ballet girls could no longer find the measure for their trivial *pas*. I finally deemed it necessary to interfere and declare that the opera must be given under another conductor, my own if deemed necessary. This declaration brought the confusion to a climax; even the orchestral players, who had long since recognized the incompetence of their conductor and ridiculed him, now faced about and opposed me in favor of their notorious chief. The newspapers raved about my "arrogance," and in view of all these things Napoleon III could think of no other advice to give me than to urge me to desist from my desires, lest I jeopardize my situation and the outlook for my work altogether. The only concession I could get was permission to continue the rehearsals and have as many of them as I pleased.

The socialistic newspaper, *Vorwärts*, of Berlin, is joyfully proclaiming Schumann as a brother revolutionist, because of the discovery, by the keeper of the library of the Paris Opéra, of some part songs written by that composer in 1848. They are in his own handwriting, for four male voices on revolutionary words, and have never been printed. The librarian, Malherbe, for a long time kept his discovery to himself. Eventually a friend of his brought out a volume about Schumann, and M. Malherbe showed him the score, which was mentioned in the book. Immediately afterward the librarian of the opera was approached by persons on behalf of German choral societies, who wished to look at the manuscript. M. Malherbe refused, and has continued to refuse to show it. He gives fairly cogent reasons for his refusal. On the one hand, the copyright of Schumann's works has now lapsed. Therefore, M. Malherbe contends, the ownership of an unpublished manuscript by Schumann rests solely with the possessor of it, who is the sole judge as to the advisability of publication. The term of copyright having expired, Schumann's heirs have no more claim in the matter.

Art

COLLECTIONS OF THE ART INSTITUTE OF CHICAGO.

CHICAGO, May 31.

While recognizing the value of the work the Art Institute is doing in several directions, one must not forget that its main function is, after all, that of forming a permanent museum of works of art, and that its permanent collections, though neither so large nor so high in standard of merit as those of our own Metropolitan, are yet becoming important. In their influence here in the Middle West they should be very important indeed. I do not know enough of such matters to be a competent judge of the merit of the collections of Oriental art, of antique vases, etc. Of the collection of casts and works of sculpture, it may be said that it is a good one, and, as regards works on a large scale, more representative of our own art than any collection accessi-

ble in New York. But I am more interested in the collection of paintings, and it contains a good many things worth noticing. It seems to be a settled habit of Chicago collectors to hang their pictures in the Museum from time to time, thus placing them at the disposal of the public. There are several such collections now on the walls of the Institute, and each of them contains works of importance. I shall not, however, concern myself with these collections—each would demand a whole letter for adequate treatment—but where isolated loans hang among the pictures belonging to the Museum, and where their interest for me prompts me to do so, I shall consider them with their neighbors.

The most important picture in the Museum, in size if in nothing else, is El Greco's Assumption of the Virgin, which hangs at the head of the new grand staircase. Painted in 1577, when the artist was about thirty years old and was fresh from Italy, it should show the influence of his reputed master, Titian, but it would be difficult to find in it any evidence of relationship with the great Venetian. As far as it shows any recognizable influence, it is that of Tintoretto, whose manner of composition it suggests; but it is unlike him or any other Italian in color and in the types of the figures. The models Greco employed were probably Spaniards, and his cool color, at once brighter and grayer than that of his contemporaries, influenced the coloring of Velasquez, so that his work is already entirely original and seems already entirely Spanish. The drawing is rather careless, but it shows none of the strange distortions so common in his later work. A good many attempts have been made to explain the peculiarities of this or that artist by some malady of the eye, but the explanations are seldom convincing. In the case of the later works of Theotokopoulos, however—works which used to be explained by madness—there seem to me unmistakable evidences of extreme astigmatism. Spectacles were in their infancy in his day, and such a defect of vision could not have been corrected as it would be now. Greco is one of the latest discoveries of the dealers, and is being written up into a great master. This relatively sane picture is an interesting thing, and is more nearly beautiful than anything of his I have seen elsewhere, but it is scarcely great.

The Institute's other old masters are in the Hutchinson Gallery, and are nearly all of the Dutch and Flemish schools. Thirteen of them were purchased from the Demidoff collection, and nearly all of these are fine things in their way. The best of them all, the best thing in the Museum, and one of the best things anywhere, is the famous Portrait of a Girl by Rembrandt, sometimes known as The Orphan, which will be remembered by those who saw the Hudson-Fulton Exhibition as perhaps the most wonderful picture in that wonderful collection. As noble as a Titian, as subtle as a Leonardo, with all Rembrandt's power and humanity and with a degree of pure beauty hardly elsewhere to be found in his work, it is a picture never to be forgotten. The quiet browns and blacks—in spite of the printed description from the San Donato Catalogue, there is no red in the picture except in the coral necklace—are astonishingly full of color, the adorable blond head is effulgently yet discreetly luminous, and the handling is a lesson in the amount of richness of surface that may be attained with very little loading. It is a pure masterpiece, and one may perhaps be pardoned for envying Chicago its possession.

There is nothing else like this in the Institute, but there are other things that it is good to have. There are, for instance, a Hals of fair quality; a very good though not an exceptional Terborch, The Guitar Lesson; a small Ostade and a good sized Jan Steen, which are as interesting as such things are; and landscapes by Hobbema, Ruysdael, and Van de Velde. The Hobbema is an admirable example of his watermills, and the Ruysdael a fine picture of a torrent, but I prefer to either Mr. Ryerson's Ruysdael, which hangs in the same room, a sober little landscape with a touch of poetic melancholy. Another borrowed picture is a little Portrait of a Man by Netscher, so beautifully painted as almost to place its author among the great. The sitter—if one may call him so, for he is standing—is evidently a fashionable and wealthy young man, good-looking and wearing a flowing light brown periwig. He wears some kind of a wrap lined with blue silk over a costume of brown and gold, and beyond him is a landscape with water stairs where gentlemen and ladies are descending to a boat. The textures are rendered with a delightful freedom and a gem-like brilliancy that I have not before seen in Netscher's work, and I might have been tempted to think it by some other and abler hand were it not for the signature, so dissimulated in the crinkle of the silk as to be unmistakably a part of the original painting.

Among works of the Flemish school belonging to the Institute are a delightful Portrait of a Man by an unknown master of "about 1525," a Rubens, and a Van Dyck. According to the catalogue of the de Beurnonville collection, from which it came, the Portrait of a Man "has been attributed by some connoisseurs to Albert Dürer," but the connoisseurs must have been blind. The portrait is totally unlike Dürer in drawing and in technique. It is much more like Holbein, and more like Van Eyck than either, but it is later than Van Eyck and earlier than Holbein, I should say, for the costume suggests an earlier date than that given in the catalogue. Whoever the painter was, he knew his business. It is a beautiful piece of quiet characterization, accurate drawing, sober color, and smooth, united surface. Rubens's portrait of the Marquis Spinola is more interesting from the personality of its subject than for its technical merit, though it is admirably drawn and very skilfully painted. It is rather close and solid in texture, without the fluidity of more characteristic works. To compare it with the head of the same person in Velasquez's Surrender of Breda is to have a lesson in the variations of interpretation when different artists treat the same subject matter. The Van Dyck, a portrait of Helena Du Bois, wife of a painter who was Van Dyck's friend, is a fine and sound performance, with none of the fine lady affectations so common in the artist's later work. The head is beautiful and lifelike in its grave directness of regard, and the blacks and whites of the costume and the brown of the background are full of quality. The picture seems to have been painted after the Venetian manner, with glazes over a monochromatic foundation.

In this same room are two little panels of the Madonna, belonging to Mr. Ryerson, which are the only Italian works of any importance in the galleries. One is Florentine and would seem to have some relation to the school of Botticelli; the other, signed Hieronomo da Sata, and dated 1516, is early Venetian. I can find nothing about da Sata in books of reference, but the school in which he was trained is unmistakable. Neither of the pictures is a masterpiece, but their marked difference and their common air of breeding, as they hang side by side, make them pleasant and interesting to see.

After its Dutch and Flemish pictures the Institute is richest in modern French works, and the Field and Munger collections contain many more good pictures of the Barbizon school than I can find room to mention. Of the two large Corots there is, however, little good to be said, but the small landscape in the Field collection is, fortunately, of better quality, and the little figure of A Young Woman by the same painter is altogether delightful. Rousseau's Spring is very clear in color and delicate, if somewhat monotonous, in detail, and the larger of the two small marines by Dupré is unusually agreeable. Of a later time is Cazin's Tobias and the Angel, a picture which has always seemed to me—perhaps because it is the first Cazin I ever saw—to be one of the finest works of that artist. It was painted in 1878 and I saw it that same year and have loved it ever since.

But the one picture which dominates

the Field collection is Millet's Bringing Home the New-Born Calf. This, in spite of rather insufficient animal-drawing, is one of Millet's great things. The design is grand in style, the action of the figures is superbly rendered, and the color and light and shade are so rich in their sobriety as to make the good things which hang near look thin and papery by comparison. If I could bring one picture from these galleries home with me to New York, the Rembrandt only being out of the question, I should choose the Millet.

I must pass by things I had marked for mention. A picture called The Young Duchess, by John Faed, gives one a respect for a man who at least took his work seriously, and there are a large Manet, quite recently acquired, and a small Whistler, neither of which seems to me of high quality. Beside the Manet hangs a landscape by Jules Didier, a painter of whom I know nothing, which sets one to wondering if what we have gained from the impressionists is always a sufficient compensation for what we have lost. This picture of Hadrian's Villa, painted in 1859, is a belated piece of classicism. It is fine in its masses and in its cool dark color, but as you look into it there are endless surprises of beautiful form, lovely drawing of foliage, and firm anatomy of soil. A little way from it is a Pissaro of eleven years later, a dainty thing with apple blossoms and Corot-like houses—hardly more revolutionary than Corot and very charming. But after a while I find myself coming back to the Didier and finding a deeper and more permanent satisfaction there. Neither of these pictures, I am sorry to say, belongs to the Institute, but it does own a work that must not be forgotten, Fantin's noble portrait of Manet.

I shall say nothing of the American pictures in these galleries, though there were fine things here before the Friends of American Art took up their task, except to mention the most recent of the Museum's important acquisitions, a room full of Innesses, presented by Edward B. Butler. These pictures, from the collection of Emerson McMillin, evoke a question as to the degree of permanence to be expected for the present estimation of the painter. They are only temporarily placed, and the walls on which they are now hung are too light in color, so that they are not seen at their best; and, seen together, they do not help one another. Except for a few small and relatively insignificant canvases, they are all in the artist's latest manner, and, to speak frankly, they seem a little monotonous and a little disquieting in their formlessness. The earlier pictures are not early enough—I should like to have shown with them, for a time, two crisply studied pictures I know, both painted in 1849—and the late pictures are too late. After the very early pictures, Inness's style lost more than it gained for a time, until his broadening manner reached its ripeness in his later days. In the last three or four years of his life I think the ripeness became over-ripe. In the private collections of Mr. Hutchinson and Mr. McCormick, now on exhibition in other galleries of the Institute, are two or three pictures which reassure one as to the validity of the title to fame of him whom we are taught to think our greatest landscape painter.

KENYON COX.

At the Salon des Artistes Français, the *médaille d'honneur* in the section of architecture has been awarded to Henri Prost for his Sainte Sophie de Constantinople au sixième siècle and his Projet de transformation de la zone militaire de la ville d'Anvers. In the section of painting C. L. Godely received the Prix Rosa-Bonheur for his Pardon de Sainte Anne-la-Palud. No medal of the first class was awarded.

Detailed reports of the excavations at Corfu, to which the interest shown by Emperor William has drawn special attention, have now been published, and the results obtained prove to be of first-rate importance. The site on which the excavations have been carried on is that of the ancient city of Corcyra, about two miles to the south of the modern town, in a district locally known as Palæopolis. The systematic exploration of the site was undertaken by the Greek Archæological Society in April, the work being entrusted to Mr. Versakis, one of the ephors of antiquities. Emperor William, who was present at the unearthing of some of the objects, has undertaken to defray the cost of the excavations, which will henceforth be carried out under the supervision of Dr. Wilbelm Dörpfeld. The remains found hitherto belong to an archaic Greek temple of the end of the seventh or the sixth century B. C. The sculptures brought to light apparently formed part of the western pediment. Their arrangement, which has been made out with tolerable certainty, presents many uncommon features. The central group consists of Perseus slaying Medusa, who is of colossal proportions compared to her opponent, a diminutive figure approaching from the right. On either side of this group is a large couchant lion, while the angles of the pediment are occupied, on the right by Zeus slaying a Titan with a thunderbolt, and on the left by a seated goddess warding off the blow of an assailant. In general character the Medusa recalls the figure of the well-known metope from Selinus, which represents the same subject. The sculptures are of poros stone and were covered with colors, traces of which are still visible. The temple appears to be of large proportions, the width of this western pediment measuring about 22 metres. It is not certain to whom it was dedicated; in Dr. Dörpfeld's opinion it was probably Apollo, since an old Venetian map has a temple dedicated to him marked on this site.

During excavations carried on by the German Archæological Institute in Tyrins a number of fragments from fresco paintings were discovered both near the large staircase leading to the Lower City and in the débris of the megaron. These fragments have now been reconstructed as far as possible, and have produced a series of interesting compositions, which are the more important since frescoes on the mainland are comparatively rare. The paintings can be divided into two groups—those of the older and those of the later palace. Of the fragments belonging to the former it was possible to reconstruct the upper parts of two figures of girls, the figure of a charioteer, and a herd of cattle driven by a man. Among the paintings from the later palace the most frequent are hunting scenes; thus six different representations of wild animals pursued by dogs have been found, recalling in arrangement similar scenes from the shaft graves of Mycenæ. Interesting are also the scenes of a man with two dogs, two women armed with spears riding on a chariot, and a frieze of deer. Besides these frescoes, which measure only 20 cm. in height, fragments from larger compositions were recovered, of which the most important shows a girl carrying a vessel, not unlike the Cup-Bearer from Knossos.

Frederick E. Bartlett, a marine and landscape painter of New York, died on Friday of last week, at the age of fifty-five.

Finance

DISSOLVING A HOLDING COMPANY.

Under the decisions recently handed down by the Supreme Court, the Standard Oil Company has until November 15, and the American Tobacco Company until November 29, with sixty days additional time, if necessary, to dissolve. Both corporations are holding companies, the Oil Trust being made up of nearly one hundred separate corporations, and the Tobacco Trust of sixty-seven. How these two holding companies will obey the mandate of the Supreme Court to dissolve in a way that "shall be honestly in harmony with and not repugnant to the law," is a question which is, and for some time is likely to be, of uppermost interest in financial discussion.

Some people hold that the Court of Appeals, acting under the instructions of the Supreme Court, must relieve the Tobacco Company, at least, of the burden of finding a way out of its difficulties; others take the view that the duty of the lower court ends with passing on the legality of whatever plan is worked out by the Tobacco Company as well as the Standard Oil. In some quarters it is believed that the various oil and tobacco companies will simply separate under three or four different heads, and continue as before; in other quarters it is argued that a complete and thorough dissolution must be brought about. On one side the theory is advanced that both companies know, and have known for months, exactly what will be done; on the other side the belief is firmly expressed that neither company has any

definite plan for carrying out the instructions of the Supreme Court.

Probably those who hold the last-named views are nearest the truth, for, in solving their problems, the American Tobacco and Standard Oil Companies have no guiding precedent. The Northern Securities decision was by no means as sweeping as those just handed down; however, as that case is the closest parallel to the tobacco and oil cases, it might be well to recall what happened in 1904.

The Supreme Court decision ordering the dissolution of the Northern Securities Company was handed down on March 14, 1904. Four days later James J. Hill, as president of the company, issued a circular to shareholders in which it was stated:

> Your directors, at a meeting held this day, have, under advice of counsel, decided that in order to fully and promptly comply with the decree in this suit it is necessary to reduce the capital stock of the company, and to distribute to its shareholders the shares of the stock of railway companies now held by it.

The circular added that after the capital stock of the Northern Securities Company had been reduced from $400,000,000 to $3,954,000—the last-named amount covered assets in no way involved in the suit—shareholders would be called upon to deposit all of their Northern Securities. In return for Northern Securities stock, shareholders were to receive Northern Pacific and Great Northern shares on the basis of the original exchange; that is, Northern Pacific would be valued at 115 and Great Northern at 180. The circular then continued:

> As required by the laws of the State of New Jersey, under which the company was created, a special meeting of the shareholders of this company has been called by the board of directors for Thursday, April 21, 1904, to vote upon said resolutions. Holders of this company stock to a large extent have already expressed their approval of the recommendations of the board, but the laws of New Jersey require a two-thirds vote of the stockholders to permit the company to reduce its capital stock. Such vote is the first step necessary for the proposed distribution of the railway companies' shares.

That step was taken, but it was by no means the last before the Northern Securities finally distributed its assets. As owners of a majority of Northern Securities stock, the Hill-Morgan party naturally favored a pro rata distribution of assets giving them a majority of Northern Pacific as well as Great Northern. And naturally the plan was opposed by the Harriman-Kuhn, Loeb & Co. interests, which had deposited a majority of Northern Pacific shares. Harriman contended that Northern Pacific and Great Northern shares had been received by the Northern Securities Company merely as custodian and that the legal owners were the persons who had originally exchanged their shares for the stock of the Northern Securities Company.

Harriman applied to the courts for an injunction restraining the directors of the Northern Securities from carrying out their proposed plan. The application was granted by Judge Bradford of the United States Circuit Court. The case was then carried to the Court of Appeals, and in January of 1905 Judge Dallas, in reversing the decision of the lower court, declared that the injunction must be dissolved because the arrangement under which Great Northern and Northern Pacific had been acquired was one of unconditional purchase and sale. The case was again appealed. Early in March, in affirming the decision of Judge Dallas, the Supreme Court declared:

> In fine, the title to these stocks, having intentionally been passed, the former owners, or part of them, cannot reclaim the specific shares, and must be content with their ratable proportion of the corporate assets.

Thus more than a year passed while the Hill and Harriman interests were disputing how the orders of the Supreme Court to dissolve the Northern Securities Company should be carried out. However, as soon as the Supreme Court approved of the pro rata distribution of Northern Securities assets, the circular of March 18, 1904, was again sent out and the work of dismantling the $400,000,000 holding company began.

James J. Hill in a statement, made on the same day on which his long dispute with Harriman ended, said:

> A pro rata distribution was the only practical way of carrying out the court's decision. A redistribution of the Great Northern and Northern Pacific stock originally deposited would have been out of the question. One might as well go to a bank and demand a return of the same money that one deposited there.

In the case of Northern Securities, a pro rata distribution was comparatively simple, for the reason that the stocks of only two railways were involved. With nearly one hundred separate oil companies and sixty-seven tobacco companies a very different situation now exists.

Olmsted and Gordon's Spanish Grammar for Schools and Colleges

By E. W. OLMSTED, Professor in Cornell University, and ARTHUR GORDON, Assistant Professor in the same. xii+519 pp. 12mo. $1.40.

Combines a systematic treatment of the grammar with ample colloquial drill. The exercises are practical and interesting to an unusual degree. The body of the book is made up of a connected series of lessons, covering the essentials of Spanish grammar. A full appendix contains tables of forms, various word-lists, and the minor details of grammar, together with selections in prose for sight reading and poems for memorizing.

NOW READY

THE SUFFRAGETTE

A History of the Women's Militant Suffrage Movement.

By E. SYLVIA PANKHURST

To fully understand the aims, methods, and achievements of the Suffragettes this book is indispensable. The author is a part of the movement of which it is a vivid, dramatic, and accurate history. It shows how militant tactics have brought the Votes-for-Women Movement into practical politics. The illustrations are from snapshots of arrests, raids, forced feeding, and other typical incidents of the Militant campaign. (Cloth. 12mo. Fully illustrated. $1.50 net.)

A CHINESE APPEAL TO CHRISTENDOM

CONCERNING CHRISTIAN MISSIONS

By LIN SHAO-YANG

8vo, $1.50 net; by mail, $1.65

Not since the publication of the *Letters of a Chinese Official* has so logical, incisive, and telling a criticism of Western thought and belief issued from the press to agitate, antagonize, and convince as this brilliant tract that comes from the pen of a Chinese official. It is a brilliant arraignment of the illogical attitude of the Church in trying to force upon the East beliefs which the Christian world has outgrown.

FRENCH SCHOOL FOR GIRLS IN ROME

MADAME J. A. REIFFEL of Paris, Professeur diplômé, has opened a French School in Rome, where higher studies, history, literature, art and music may be pursued in the French or English languages. Special attention will be given to preparation for entrance to American colleges, for which purpose instruction will be given in the necessary subjects by American professors.

School year begins October 15. For references and other information, address MADAME J. A. REIFFEL, Banca Commerciale Italiana, Rome, Italy. Programmes may be had upon application to the *Nation*.

BRYN MAWR, Pennsylvania.

The Misses Kirk's College Preparatory School

Prepares for Bryn Mawr and other colleges. Certificate privileges. Number of pupils limited and special schedule arranged for each. Percentage of pupils who have entered Bryn Mawr College unusually large. Gymnastics and outdoor sports. Thirteenth year opens October 5th, 1911.

PRINCIPAL OF A COLLEGE PREPARATORY school will take 4 boys to tutor for the fall entrance examinations this summer on the Maine coast. Opportunities for boating, sailing, and bathing. Address PRINCIPAL, care *The Nation*.

COLLEGE PREPARATION AT moderate rates for four girls. In home of woman Ph.D., exceptionally able tutor; New York suburbs. Time saved and mental grip acquired. Also home and thoughtful care without tuition for four children. EXPERIENCE, care of *Nation*.

Just Issued

NEW ECLECTIC ENGLISH CLASSICS

49 Vols., in Cloth. The 20-cent Series.

Including most of the College Entrance Requirements in English, carefully annotated and edited by experienced teachers. In convenient pocket size, the lowest priced edition published.

AMERICANS: An Impression

By Alexander Francis.

A. S. Clark, Peekskill, N. Y., is a buyer and seller of books, magazines, and pamphlets.

Reading Case for the Nation.

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

The Nation

NEW YORK, THURSDAY, JUNE 22, 1911.

The Week

Senator Nelson of Minnesota has never ranked high among Constitutional lawyers, which is perhaps why it was left to him to discover that President Taft had exceeded his powers under the Constitution in making the Canadian agreement. The argument apparently is that the President can negotiate a treaty but cannot make a pact. We can easily understand why the opponents of reciprocity with Canada devoutly wish that the measure had come before the Senate in the form of a treaty. In that case, one more than a minority of one third could defeat it. And it is plainly the fact that the pending bill requires approval by only a majority, which increases the rage against it as "destructive," to use Senator Nelson's words, "of the independence of the legislative department of the government." Indeed, the Senator has made the discovery that "the President is depriving the farmers of this country of their Constitutional protection in a two-thirds vote of the Senate." But surely the Senate is not only independent but absolutely free and easy about reciprocity. It can talk about it till the crack of doom, if it so desires. It can take or leave the bill. Nobody is attempting coercion; nobody is coerced. Let Senator Nelson waive for the moment his painful Constitutional scruples. There stands the Canadian pact. No matter how it was got into shape for submission to Congress, submitted to Congress it is. Is it a good thing or not? If it is, Congress should approve it without wasting time over speculating what the bill would have been if devised by some other people in some other way.

Attorney-General Wickersham scored a strong point against the proposed Arizona Constitution, in his address at Yale on Monday. He pointed out how utterly unstable the Constitution itself would be under the provisions contained in it for its own amendment. To initiate such an amendment would require only the proposal of it by 15 per cent. of the number of persons who had voted in the last preceding election for Governor; and, once so proposed, all that would be necessary for its adoption would be a majority of the whole number of votes cast on the subject of the amendment, no matter how small that number might be. Of course, a Constitution amendable in this way is not a Constitution at all, in the sense in which we have been accustomed to think of such an institution. It might easily happen that less than one-tenth of the voting population proposed an amendment; and it would be in no way strange if the total vote on the proposition was so small that it would be carried by a vote in its favor comprising only one-fifth of the total voting population, or even less. Under such a scheme of government, said Mr. Wickersham, a small organized minority of the qualified electors might accomplish a change in the Constitution before the great majority of the electors were aware of what was going on.

In response to the offer of the New York Clearing House Association for admission of trust companies to its membership on certain prescribed terms, sixteen trust companies have already entered on such relations. The total number of trust companies in Greater New York being forty-four, it follows that twenty-eight institutions remain as yet outside the Clearing House. Of these, however, fifteen have a capital stock less than the $1,000,000 minimum fixed by the Clearing House as preliminary to admission. Some of the fifteen doubtless will qualify, and all of them may do so, through increasing their capital. In addition, there are left, outside the Clearing House, thirteen trust companies whose capital is sufficient for membership but who have not applied for it. Some of the institutions in this last-named group are among the largest and most important institutions of their class; they have taken the ground that their own business is so preëminently of the old-fashioned trustee sort that the need of Clearing House participation does not apply to them. Others of the group may yet decide to apply for admission.

It will thus be seen that although considerably less than half of the trust companies in Greater New York have joined the Clearing House Association under the new rule, there is nevertheless a prospect that the majority of these institutions will eventually have taken that action. Even as matters stand, a highly important and salutary change has been brought about in the New York banking position. It must never be forgotten that Clearing-House membership signifies not only that checks drawn on member institutions may be exchanged and collected without the cumbersome machinery of personal presentation and payment in full in cash, but also that any member institution will be able to command, in an emergency, the united support of the other Clearing House institutions. If the panic of October, 1907, has taught no other lesson, it has proved convincingly the dangers which beset financial institutions standing alone with no existing machinery for united support against the common danger. Perhaps it cannot be said that the problem would be wholly solved by admission to the Clearing House Association of only a majority of the city's trust companies. But compared with the confusion, mutual suspicion, and total lack of coöperation or organization, with which these institutions drifted into the great financial storm of three and a half years ago, the state of things, even now, is such as to furnish cause for great congratulation.

One of the current misconceptions of the possibilities of our trade with Latin America is due, says Mr. H. M. Kahler in the last number of the *Annals of the American Academy of Political and Social Science*, to the over-anxiety of advocates of a ship subsidy. They belittle existing shipping facilities, until many Americans believe that we have none at all to South American points. Freights to these countries are carried almost entirely in foreign bottoms, but so they are to nearly all others. There never has been any lack of carriers for goods which we can sell abroad. Thus two questions are confused. Another misconception which, in Mr. Kahler's opinion, is of wide and disastrous effect, has to do with credits. Many American manufacturers refrain absolutely from

entry into the Latin-American field because of an impression that success there requires long-time and hazardous credits. Nothing could be further from the fact. "Of our present very creditable showing of sales to Latin America—or about one-eighth of that territory's total imports—it is conservative to state that more than one-half are cash transactions." And, he adds, the level of business morality in all Latin America is far higher than here. Fraudulent bankruptcy is nearly impossible, and the largest shippers testify that their losses abroad are negligible as compared with those at home.

Gen. Wood's plan for a short-term enlistment in the army would be of little value unless a method could be worked out by which the recruits should be enlisted at fixed times and thoroughly drilled by specially capable officers. He proposed six months of service in the hope of attracting the boy just out of college or about to enter business. Now, in France and Germany certain students who have passed a special examination denoting accomplishments about equivalent to the completion of the sophomore year in our colleges are permitted to serve one year, instead of three. But they enter at a given time, and are trained systematically in the school of the soldier and the company, until toward the end of the year they are ready to take their part in the regimental, brigade, and division drills, and finally in the great manœuvres. All of this is carried on under a pressure of work and in a feverish activity never dreamed of in this country. The iron character of the discipline is also unknown here. But it is only by this really extraordinary forcing process that the finished German soldier is turned out at the end of a year. No Prussian martinet would, we are sure, undertake to turn out a really trained soldier in six months. The uneducated soldier serves two years; the educated one, if he possesses the necessary qualities, becomes at once an active officer or a member of the reserve, and returns to his regiment for six weeks' training for some years thereafter.

Should Gen. Wood's scheme go into effect to-morrow without the working out of a regular course of training, the young college man Gen. Wood seeks would, when enlisted, be assigned to a recruit depot, where he might or might not be well trained. There would be no guarantee that he would get the same kind of training as his cousin from Yale at another recruit depot. Recruit depots, moreover, are not always attractive places to be immured in for six months, and the average sergeant is a pretty rough customer to place over a lad fresh from the academic shades. Should such a recruit wish to join a regiment his actual training would again be affected by his luck in drawing a sergeant who was a good drill master. He might easily serve six months and never see an entire regiment parade or march more than two or three miles a few times. In many posts, he would be bored to death for lack of work. It is said that no less than 3,000 men have deserted from our army on the Mexican border. This is probably an exaggeration; but the reason given—overwork and fatigue—shows how "soft" the men had grown in their garrisons and would make every Continental soldier rub his eyes in amazement. The college recruit would like life under canvas, and plenty of field work. It would be an exception if he got it and, in most cases, he would return to civil life with that little knowledge which even in matters military is a dangerous thing. Finally the cost of equipping and transporting the six months' soldier would be very heavy, especially if there were created provisional regiments to make possible his progressive training from the A B C of the manual of arms to the intricacies of regimental drill, guard duty, etc.

The confirmation of William H. Lewis, the able Boston colored lawyer, as Assistant Attorney-General of the United States, without the expected opposition, marks, we hope, the beginning of a new era in dealing with such appointments. Mr. Lewis will be the holder of the most important office under the Federal government ever filled by a colored man. When the Crum nomination was under fire, a frequent Southern question was why Northern colored men were not selected for office. The present appointment is but one of a number of answers to this question. There was no rational ground for any opposition to Mr. Lewis. Both at Amherst and Harvard, where he was a famous athlete, he was socially popular because of his sterling qualities, and as Assistant United States District Attorney in Massachusetts, his record, carefully studied by Mr. Taft, was of the best. To say that such a man should not rise in the government service is surely to take quite as illiberal a view as that which would bar to men of Jewish parentage and humble origin the right to rise in our military or naval service.

Among the coronation honors which were announced in London last week, there is one that is of great interest to Americans. Dr. William Osler, who is to be made a baronet, was born in Canada and never renounced his allegiance as a Briton; but it was as professor of medicine at Johns Hopkins University and medical head of the Johns Hopkins Hospital that he did the work, and exercised the influence, which gave him his world-wide reputation. The Regius Professorship of Medicine at Oxford, which he has held since 1905, was an honor that came to him when he had passed the age of fifty-five; and it came at the close of sixteen years of work in Baltimore which will never be forgotten by the colleagues with whom he was associated, or by the hundreds of students to whom the inspiration they derived from him was a priceless benefit. The influence he exerted was due no less to the extraordinary charm of a rare and poetic personality than to his gifts and attainments as a physician and a scholar. That he should not have remained in our country to the end, must ever be a source of keen regret; but it is easy to understand that the attractions of Oxford, to a man in whom both literary taste and the historic sense are so highly developed as they are in Dr. Osler, were irresistible.

The decision of the Trustees of Wellesley College to continue the Wellesley tradition by the appointment of a woman president has been welcomed with keen satisfaction by those interested in the maintenance of opportunities for women engaged in the higher fields of intellectual endeavor. Their satisfaction is no more than the occasion warrants. The successorship to Miss Hazard had taken on the character of a test case. Miss Pendleton had been dean of the college for ten years, and her work in that post, it seems to have been admitted on all hands, had been

admirable. She had been acting president for the past eight months, and had shown her fitness for the duties of the office, and college sentiment pointed emphatically to her selection. In short, the question was virtually not a personal one at all, but a question of principle—or, what is still more important, a question of mental attitude.

If Wellesley, after its long tradition of women presidents, and able women presidents, had turned from the appointment of a woman, especially when a highly capable successor was at hand, the decision would have meant not only the adoption of the principle of the ineligibility of women for the college presidency, but something more far-reaching than that. It would have furnished the strongest kind of indication that Wellesley would hereafter gravitate more and more toward the attitude, so frequently manifested in other women's colleges, of preferring men to women in the higher teaching positions—the full professorships and often even the associate professorships. It is an anomaly that women should be permitted to enter upon an intellectual career and should not be permitted to look forward to the natural rewards of successful labor. It is still more of an anomaly when this impediment exists in institutions devoted to the higher education of women.

Francisco Madero's position is improved by the collapse of the so-called Magonista or Socialist faction in lower California and their approaching disbandment in Chihuahua. Not very powerful by reason of their own numbers, it is not at all impossible that the enemies of Madero elsewhere might have found a way of encouraging the Magonista bands to keep the field in order to embarrass the successful leader of the revolution. We need not question the motives of the handful of men who set out to establish a Socialist republic in Mexico, in order to show that mischief would have been the probable result of their labors. The followers of Magon may be quite right in asserting that the Maderist régime is bound to fall short of a really democratic republic. But it is equally plain that for complete democracy, as we understand it, Mexico is not as yet ripe. Had Diaz read his duty correctly he would long ago have laid the foundations for democracy against the time when he should no longer be on the scene. He preferred a policy of "after me the deluge." It is now left to his successor to take up the necessary work of educating the great body of the Mexican people to the proper use of liberty.

Mr. Fielding, the Canadian Minister of Finance, has sent to the English press a sharp letter of protest against "dragging our Canadian affairs into the field of British party politics." He refers particularly to the attacks which have been made in England upon the reciprocity agreement between Canada and the United States. To assert, as Mr. Fielding does, that this is a Canadian "affair," is only to assert the undisputed fiscal freedom which the Dominion has enjoyed for more than fifty years. Speaking directly of those English Conservatives who have represented Canadian reciprocity with America as a blow at "Imperial unity," Mr. Fielding says: "May I venture to suggest that the British statesman who is careful to refrain from such interference, and who leaves citizens of the Dominions to manage their own affairs within the limits of their respective Constitutions, is the best friend of the Empire?" To give further point to all this, the Canadian Minister of Finance takes up a recent speech by Lord Selborne. In that it was stated in effect that British imports into Canada are menaced by the reciprocity agreement, and also that "for the first time" one part of the Empire enjoys a trade preference in a foreign country, while the rest of it does not. On both heads Mr. Fielding has no difficulty in showing that Lord Selborne was entirely wrong.

The last few weeks have witnessed an enormous increase in the prestige of the Kaiser's first Minister of State. It was not so very long ago that the fall of Von Bethmann-Hollweg was regarded as imminent. He had been two years in office and had succeeded neither in framing a definite political programme nor in putting through any important piece of legislation. In the Prussian Diet he had played but a sorry rôle in the matter of the reform of the antiquated franchise. To-day the Chancellor has two highly important legislative measures to his credit. The Reichstag, with the Socialists alone dissenting, has adopted the Government's recodification of the workingmen's insurance laws, a work of monumental scope and vital importance. But perhaps a more dramatic victory was the enactment of a Constitution for Alsace-Lorraine on an approximately democratic basis. The Conservatives bitterly opposed the bestowal of the suffrage on the inhabitants of the conquered provinces, and for this occasion the Chancellor broke with his Junker allies. With the help of Liberal and Radical votes, the Constitution project was put through, the only concession to the Conservatives being the coupling of plural voting with universal suffrage. Publicly thanked by the Kaiser for his services, Von Bethmann-Hollweg is regarded as firmly installed in office. He is now urged to offer battle to the Junkers once again on the question of electoral reform in Prussia.

There is little doubt now that what France has dispatched to Morocco is not a flying expedition, but an army of occupation. There are at present in Morocco, or soon will be, 25,000 French troops. The British forces in Egypt number a little under 20,000. The withdrawal of this imposing array is not to be expected in the immediate future. It is still maintained by French statesmen and the partisans of France abroad that such action does not violate the Act of Algeciras, which guaranteed the integrity of the Moroccan Empire and the authority of the Sultan. On the contrary, it is impossible at present to speak of the integrity of a country that is rent by continuous civil warfare and anarchy and whose ruler cannot make his authority felt outside the walls of Fez, if indeed he is safe within his own palace. So competent an observer as Mr. E. J. Dillon declares that Germany has no ground to stand on in any attempt she may make to antagonize French action in Morocco. In the first place, by her agreement with France concluded in 1909, Germany virtually gave the French government a free hand in Morocco. In the second place, since Germany has persistently disclaimed any political ambitions in Morocco and has confined herself to pleading for the open door, it cannot be argued that a pacified country would in any way be inimical to German commercial interests.

CHAMP CLARK AS CHANTECLER.

The genial gentleman from Missouri who was leader of the minority in the Sixty-first Congress, and is Speaker of the House in the Sixty-second, performed a brilliant exploit in the domain of prophecy during the closing days of the former body, and in his speech last week at Harrisburg he accomplished a similar feat in the field of contemporary history. In his famous welcome of Canadian annexation as the predestined result of reciprocity, the scream of the American eagle was no more lusty than was the bray of the Democratic donkey in the pæan of triumph with which he awoke the echoes at Harrisburg. Hear him tell of what happened in Washington in the Sixty-first Congress:

> When I remember what the House Democrats were at the beginning of the Sixty-first Congress—a wrangling, jangling, peevish, feeble, and despised minority—and how, by a conciliatory policy, we got together, wrenched victory after victory from our opponents, made of ourselves the most superb fighting minority ever seen in Washington, and established a record on which we swept the country in 1910, not only electing a Democratic House, but capturing a half-dozen Senatorial seats from the Republicans and a half-dozen Governors in Northern States, I assert without fear of successful contradiction that no parliamentary minority in history ever made a more splendid record.

That the Democratic party did win a great victory at the polls last year, that it is now in a position of strength before the country to which it had long been a stranger, and that its representatives at Washington are showing a degree both of character and of sagacity which has delighted the friends of the party and astonished its enemies—all this is perfectly true. But it has required the sunny vision of Mr. Clark to see the history of that achievement in the light in which he presents it. The Democratic victory of 1910 was the theme of many pens, both during the campaign in which it was looked upon as almost a foregone conclusion, and after; but we seem to have no recollection that anybody regarded as a chief factor in producing it the magnificent record of the Democratic minority in the House. The mere plodders who write for newspapers and magazines mechanically set down a number of quite unheroic elements as the causes of Republican defeat and Democratic success. Most people ascribed it, in the main, to three things—the split in the Republican party caused by the "insurgent" movement and by Rooseveltism, general resentment at the Payne-Aldrich tariff, and the pinch of high prices. And all the while, the real explanation was waiting to be given—"the most superb fighting minority ever seen in Washington," a history of splendid achievement matched by "no parliamentary minority in history." Coming from the man who was the leader of that minority, there might be some objection made to this announcement, either as to its modesty or its reliability; but Mr. Clark disarms all criticism of this nature. "Every Democrat who served in the House of the Sixty-first Congress," he says, "is entitled to his full share of the honor. In the words of Admiral Winfield Scott Schley, touching the battle off Santiago, 'There is glory enough for all.'"

In sober truth, there is "glory enough for all" in the fact that the Democrats have known how to use with credit the opportunity that has fallen into their hands; there is no need of claiming any superhuman merit in the bringing about of the opportunity. And, indeed, so far from such extraordinary qualities having been shown by the minority as turned a desperate situation into a promising one by sheer strength and wisdom and courage, almost the opposite was the case. When the Payne-Aldrich bill was under consideration in the extra session of the Sixty-first Congress, the Democrats made a pitiful showing until the Republican "insurgents" put backbone into the situation. It was only after this extraordinary opportunity had thus been fully developed, and only after further weakness and disorganization had been injected into the Republican situation by the Ballinger trouble, that the Democrats rose to the occasion. We do not say that the minority did not afterward acquit itself well; but its "superb" record had little more causal relation to the development of the new political situation than did the crowing of Chantecler to the rising of the sun.

The matter is of no particular importance, perhaps, except as another exhibition of quality on the part of a man whom, good enough within his limitations, it is irritating to think of as seriously an aspirant for the Presidency of the United States. The question that is of real interest in regard to the Democratic party relates not to the little episode of the conduct of the House minority a year or two ago, but to the measure it is giving of itself in its day of prosperity and promise. The conduct of the party in the present House of Representatives has thus far surpassed the most sanguine expectations. Difficulties of very serious character have been overcome, one after another; and the party has presented a united front not by sacrificing all aggressiveness in its programme for the sake of harmony, but by proving able to move harmoniously in the carrying out of a vigorous policy. In several States, too, of the greatest importance from the standpoint of national politics, the record of Democratic Governors or Legislatures has been such as greatly to strengthen the claim of the party to respect and confidence.

The single weak spot in the situation is New York—but that is an exception whose significance is enormous and which may easily prove fatal. When the time comes for voting for the next President, there are certainly thousands of voters in this State, with strong leanings to the Democratic side, whose first thought will be not of Taft, or of Wilson, or of Harmon, but of Tammany. The men that voted for Dix last November because they were tired of the Republican tariff policy, or disliked Roosevelt, or were disgusted with the Republican "Old Guard," knew they were taking a risk; but to take a risk is one thing, and to see their worst fears fulfilled is another. With every day furnishing new evidence of the Legislature's shameful subserviency, and of the Governor's pitiful weakness under the shadow of Murphy, it is not in human nature for the ordinary man to swallow his indignation and vote the national ticket of a party the election of whose State ticket has yielded such fruit. The one cloud in the Democratic sky is this Tammanyized State of New York; but from that cloud may come the deluge that will wash away the whole harvest.

DANGERS OF PUBLIC SPEAKING.

Carlyle's contempt for political oratory is well known. He maintained that a public speaker could not tell the truth as it lay in his own mind, since the desire to please his audience would be sure to lead him into lying before he knew it. Even Gladstone admitted

that the listeners gave in mist to the speaker what they got back in shower. But he did not, on that account, join Carlyle in bidding men eschew public speaking as they would any other device of Satan! Carlyle himself hazarded his soul in his address to the students of Edinburgh, and did not come off so badly. But wholly apart from these inner perils of the orator—the testing of his own veracity—an external one has grown in our day to proportions that are serious. What we mean is the reporting of speeches in the press. Sometimes, of course, this comes to outright misreporting; but the danger to which we refer lies rather in the fragmentary report.

Gov. Wilson has just been partially a victim of this. A section was torn out of the speech that he made at Harrisburg on Thursday of last week; and this, by itself, was capable of being taken as a highly sensational utterance. Of course, if it could be so taken it has been so taken. A press on the watch for sensations could never let so good an opportunity escape. The Governor said: "The great monopoly in this country today is the money monopoly." "All our activities are in the hands of a few men." Such round affirmations, read by themselves, might easily be thought a kind of revived Bryanism—extravagant, unguarded, and disturbing. But the moment one turns to the fuller report of Gov. Wilson's speech, one sees what a great mistake such an inference would be. The Governor was dealing with the series of large issues which are going to show the stuff that is in American statesmen during the next few years, and among them he mentioned the crying need of banking reform. Yet no sooner do you attack that problem than you discover that "the control of credit is dangerously concentrated in this country." That is a plain fact which the coolest-headed economists and most unemotional students of finance have long been pointing out. It has been referred to over and over in the discussions of the Aldrich plans for currency reform. So here was no private bombshell of Gov. Wilson's. And the sentences of his which have been so widely quoted and commented upon fall into their orderly place in the speech as really delivered. Moreover, they were almost immediately followed by a passage in which the Governor sought to forestall misunderstanding and to prevent the notion getting abroad that he was a dangerous radical going about with a torch in his hand. We cite a few of his words of warning which were entirely omitted from the condensed press reports:

> There are well-known conditions which surround so great a task. In the first place, it cannot be executed if attempted with inconsiderate haste.
>
> We must remember that the abuses which we seek to remedy have come into existence as incidents of the great structure of industry we have built up. This structure is the work of our own hands; our own lives are involved in it. Reckless attacks upon it, destructive assaults against it would jeopard our own lives and disturb, it might be fatally, the very progress we seek to attain.
>
> It would be particularly fatal to any programme to admit into our minds, as we pursue it, any spirit of revenge, any purpose to wreak our displeasure upon the person and the institutions who now represent the abuses we deprecate and seek to destroy. I do not say these things because I think there is danger of vengeful action or revolutionary haste, but merely because we ought always to recognize that it is of the very essence of constructive statesmanship that we should think and act temperately, wisely, justly, in the spirit of those who reconstruct and amend, not in the spirit of those who destroy and seek to build from the foundations again.

It seems to us clear that any sensible man taking Gov. Wilson's speech entire, and sitting down to read it in cold blood, would never dream of regarding it as the work of an incendiary. But it did not come to the majority of readers entire, nor did they sit down to it in cold blood. They got but a portion of his actual language; they got nothing of his personal attitude and bearing. And so it was natural enough for some to cry out, "Why, Wilson is only another political sensationalist." Just this is the great peril which we have said besets public speakers in our day. Anything startling which they may say is certain to be reported in the newspapers; their qualifying words are almost equally certain to be left out.

But press reports of speeches have to take their chance with other matter, and often must be cut down. This means that only fragments are given, and it is only human nature that those fragments should be retained which contain the most piquant or even sensational utterances. We are not defending this, we are only explaining; and what we desire to add is that public men are bound to bear the process in mind. We would not wholly acquit Gov. Wilson from indiscretion in using such phrases as he did. It should have been present to his mind that they would be sure to be seized upon and their meaning distorted. A public orator whose words are to be telegraphed over the country needs to walk warily. It is for him to avoid those things which, while they will not make a bad impression upon his immediate hearers, will pretty surely cause disquiet to readers at a distance. It might be a good rule for any orator in public life who felt himself on the verge of saying something to make his audience "sit up," to think at once of the larger audience not present, and to bridle his tongue, or else to enter a prompt disclaimer of perverse misinterpretations of his language, and tell the reporters to be sure to get that, too. It is better, after all, to be safe than to be sensational. With such an awful example as American speakers had for seven years of misplacing emphasis and saying the right thing in the wrong way and inflaming and exasperating and raising false hopes which at last recoiled upon the head of him who begot them, it ought not to be so hard for them to avoid some of the more obvious pitfalls that lie by the path of one who has often to address his fellow-countrymen.

HARRIET BEECHER STOWE.

It is fitting that the greatest tract of the anti-slavery struggle, the book which sober historians have pronounced the most influential novel ever written, should have come from the pen of a woman. What more natural than the inspiring of a woman to tell of the sins of bondage, which bore most heavily upon the slave women, if only in denying them the right to chastity, to marriage, and to their children? Certain it is that Mrs. Stowe steeped herself in these fearful wrongs until her moral indignation, touched as of genius, wrought out a work that not only made her immortal, but, what was of far more importance to her, made converts by the hundred thousand to the cause for which she and all her chivalrous family were ready to perish if need be.

Criticised the book has been. In the South even to-day, among the illiberal and the prejudiced, it is quite customary to denounce Mrs. Stowe as the worst

of vilifiers and slanderers. The college professor who should praise "Uncle Tom's Cabin" and declare it a reasonably fair characterization of slavery could not to-day hold his position south of Mason and Dixon's line. Sherman alone is so black a beast. To most of these the historic facts upon which Mrs. Stowe built her defence of "Uncle Tom's Cabin" are unknown, as are those "Testimonies of a Thousand Witnesses" compiled from Southern sources that to-day give slavery so fearful an aspect—as different from the descriptions of the latter-day novelists of the South as the night from the day. That she had made the worst overseer in the book a Northern man, that she had made the good and humane Southern characters the most prominent, went for naught. The unpardonable offence was that there was criticism of the sacred institution. The vehemence of the replies, of course, revealed the force of the blow, and the book's immortality is in itself the clearest proof that it was based upon truth; for no book of slander and lies, no unjust condemnation of a great social system affecting millions upon millions, can survive merely by great art. Forty-seven years after its publication, this book, which was said to be a wicked libel, led in popularity all the English fiction in the New York Public Library.

Great art there was not in Mrs. Stowe's book. "The style," says James Ford Rhodes, "is commonplace, the language is often trite and inelegant, sometimes degenerating into slang; and the humor is strained." Yet he records that Macaulay characterized it as the "most valuable addition that America has made to English literature"; and Lowell described it as genius. It was a rare timing of a book with the precise psychological moment when the conscience and heart of the North were ready to be touched and stirred on the slavery question as they were by no other event prior to the firing on Sumter, save by the hanging of John Brown. Mrs. Stowe refuted once for all the Southern defence of slavery on the ground that the negro was only an animal, as predestined to bondage as the ass, the ox, or the horse, because she made the whole world weep over the sufferings of both white and black, and made it plain to all that when it comes to grief and sorrow there is no color line in the pain and anguish the human heart can endure. The millions who have wept over the deaths of Uncle Tom and Eva, as portrayed by every kind of dramatic company, and thrilled at the escape of Eliza, have doubtless not been severe critics nor proof against mawkish sentiment. But their emotion is explicable on no other ground than that at bottom Mrs. Stowe touched with rare dramatic power the underlying human emotions not only of her generation but of many another, and thus proved anew that an appeal in behalf of human rights, made with justice and passion and self-obliterating earnestness, can never fail to bear fruit.

That Mrs. Stowe never produced any other book comparable in its success to "Uncle Tom's Cabin" has often been held up against her. Instead, it is, perhaps, but proof of the way in which she spent herself in this work, giving the best that was in her in order that others might see slavery as she beheld it. No complete history of America can be written that does not take measure of her moulding of her time and credit her with a glorious share in purging the country of a national shame.

RECENT AVIATION.

Although the experimental aviation flights in Europe have undoubtedly fallen short of the expectations of their promoters, some results worthy of serious attention have already been reached. Among them are: (1) the unexpected staying power shown by individual machines; (2) the persistent bad behavior of the monoplane in its most searching try-outs; (3) the necessity of neutralizing the dangers of the aerial surf; and (4) the effort of the Germans to apply to heavier-than-air machines the same scientific rules for acrial navigation that they have put in practico with buoyant aircraft.

Pierre Vedrine in his trip to Madrid, and Gibert, who went more than three-fourths of the distance, both used the same single-surface machine they started out with. Conneau-Beaumont did the same thing in his later trip to Rome. Theso records were made in battling with the elements under all sorts of conditions over diversified stretches of open country, and exceed by double and treble the endurance flight of Legagneaux at Pau last December, when he monotonously reeled off three hundred and twenty miles in a marked circuit with familiar air and selected weather to help him. Although Legagneaux's distance was made without stoppage, the speed shown was only fifty-three miles an hour, whereas Vedrine in the first division of his trip thrummed along at the rate of seventy-five. This performance brings home the fact that the flying machine, since it was introduced to public notice by the Wright brothers less than four years ago, has outrun the early automobile by giant strides in its advance toward trustworthiness and extended radius of travel. But it is asserted by many experts, who accept as their guides the Wright brothers, Von Parseval, Euler, Farman, and Sommers, that the monoplane made this remarkable showing in spite of its crankiness and other admitted defects.

It is now a demonstrated fact that, with equal strength of construction and spread of wing surface, the biplane apparatus has only half the weight of the single-surface type as at present constructed. Not only were the machines used in the Paris-Madrid and Paris-Rome tours encumbered with this superfluous weight, but they were fitted with heavy motors of more than 100 horsepower that consumed, say, an equal number of pounds of gasolene and lubricating oil. The critics add to this handicap faulty adjustment of the centre of gravity, which made itself manifest in the capricious lurching and frequent capsizing. Out of the fourteen who began the Paris-Rome-Turin circuit but four got to the second stage, and only one of them, Conneau-Beaumont, arrived in the machine he started with. Garros broke up two, and Vidart and Frey one apiece.

Such untoward results were disappointing to the advocates of the monoplane. The brave beginning in a thirty-mile wind indicated a marked improvement in constructional efficiency due to increased effectiveness of the steering and stabilizing rudders—the controls that exhibited such weakness at the Belmont race-track last October. Then the hangars of the monoplanes were locked up and deserted, while their operators and attendants watched the three American biplane pilots, Brookins, Hoxsey, and Johnstone, placidly riding on the wings of a furious hurricane, the two

latter at an altitude of a mile and a half riding backwards, to be sure, but all of them showing a perfect mastery of their apparatus. True, the last series of disabling accidents to the monoplane came about almost entirely from the forced landings to replenish the gasolene and lubricating tanks, landings made in the moving strata of the atmosphere closest to the earth's surface, where there are swishing vortices able at times to wrench any machine apart.

Just how and when a device will appear that shall give warning of these sudden perils of the air, the most knowing of the experts do not predict. In the large omnibus passenger-carrying machines, soon to be introduced into public use by the leading biplane makers of Europe, and in the Wright brothers' present single-passenger service machines, provision is made for two operators and duplicate levers, one pilot handling the elevating plane and the other the steering rudders. Greater weight in construction and the consequent increased momentum also make for safety.

Though it may not so strongly appeal to popular fancy as long-distance speed contests, the German passenger-carrying test of eleven hundred and fifty miles, that took the northern, or "wind-strong," region of that country, none of the carefully designed daily flights being greatly in excess of a hundred miles, shows the way for utilitarian experiments. It embraces the amount and kind of work that the methodical Teutons believe the automobile of the skies will be called upon to do when first ushered into use as an economical conveyance. Both monoplanes and biplanes entered for the comprehensive tour that may last until July 7, with prizes to the amount of $106,000 for the winners. The itinerary includes Hamburg, Kiel, Hanover, Münster, and Cologne; but is especially noteworthy because it has a definite and coherent technical aim, viz., a systematic attempt to apply to aeroplane flight the aerial tactics in vogue with the pilots of the German military and civilian dirigibles and of their free balloons.

As a foundation, Germany, by means of the observations and soundings of Hergesell, Assmann, Berson, Elias, Marcusi, and other experienced meteorologists, has charted the winds to a height of two miles or thereabouts. When one of the hundred balloon pilots starts, for example, on a point to point race, he "gets his air" from the most convenient aerological station, and, making the wind his motive power and his rudder, travels by compass and barograph perhaps two hundred miles, landing, as Paul Meckel and his equally skilled associates have done more than once, within a thousand feet of the predetermined goal. Foreknowledge of atmospheric conditions has been utilized by Reichert, Leitsch, and Willenstein in the present tour.

Steering by compass is another everyday affair with German aviators, and they have so far mostly flown a direct course from one recording station to another. The German management of the three mountain crossings to be essayed, based, as it will be, upon aerological forecasts, will exhibit another interesting phase of aviation progress. Whatever the success of the present German passenger-carrying contest, it seems not unreasonable to say that it has set a pace and fixed a standard that other nations must follow. It is cross-country flying of the most useful character, and the one-man haphazard flights will doubtless ere long be left to the same obscurity as the so-called aviation "meets" and field-exhibitions of last year.

RAKING A WRITER'S PAST.

Sixty-one years after the death of Balzac the discovery of a hitherto unpublished novel by the French master is announced. Forty-eight years after the death of Thackeray we are presented with a little treasure trove from the years before "Vanity Fair." Within the last few years there have been additions made to the published writings of men as far back as Sterne, Hazlitt, and Lamb, not to speak of the total discovery of a new author in the person of the seventeenth-century poet Traherne. We have had Renan's journal of his youth and Emerson's. Letters of Carlyle and Ruskin are constantly entering the field. Among the freshest wares on the market are verses by Poe, letters by Stevenson, and an autobiography of Richard Wagner. To speak of all these as discoveries in the sense of the unearthing of absolutely unsuspected material, would be incorrect. In most instances the existence of the manuscript has been known to one person or a small number of people, and its publication has been dictated by any reason from whim to expediency. In the case of Balzac, we have a novel presented, after the magnificent fashion of the man, to the Duchesse de Dino who had inspired it. A descendant of the lady thus honored recently gave it to a man of letters, who lost no time in giving it to the world. In the Duchess's family the existence of this novel must surely have been known, and it is difficult to imagine that it escaped the knowledge of that wonderful searcher after things Balzacian, the late Baron Spoelberch de Lovenjoul. The Wagner autobiography had, of course, been read by several people.

The value of such literary finds is a subject upon which persons who are best qualified to judge have by this time arrived at a pretty definite opinion. And this opinion holds that only too frequently neither the dead author nor the living public is the gainer. When the find in question is biographical in nature this objection will not, of course, apply. Anything that adds to our store of facts in the life of a great man has its importance; and if protest is forthcoming it must be on some such ground as was taken by many people in regard to the publication of the Browning letters. It is a question whether our increased knowledge of the dead is sufficient compensation for the injured feelings of the living; and only that. We cannot take seriously the objection that the personality of the dead Brownings may have suffered in the eyes of those who adore their works. If the prestige of these works remained unimpaired, we should be content. But it is precisely such injury that is wrought by raking up the discarded apprentice efforts of a man's youth and loading the balance against his mature fame. The gain to the professional teacher of rhetoric in a bit of fresh material illustrating the development of Stevenson's craftsmanship may easily be counterbalanced by the shock to tens of thousands of readers in the discovery that the young Stevenson sometimes wrote rather badly. A safe guiding principle for the editor of a new manuscript by a dead author would be to ask himself whether the new work is worthy of its author as the world has learned to appraise him.

Who would not give much for a new volume by Thackeray or Balzac? Every one of us would. But this new volume must indeed be Thackeray or Balzac. Sentiment will take the mediocre pages of a master and endow them with qualities above their true worth. If a reader is so happily constituted, there is no more to be said about the matter. But where the critical faculty cannot be kept from coming into play, the great discovery might well have been left unprinted if it lacks intrinsic merits. And, after all, why should we so thirst for a new page of Thackeray, when there is so much to be had in the pages we know? The individual aroma which comes from the pages of a master may as easily be caught by reading "Pendennis" twice or "Père Goriot" twice as by reading two different stories from the same pen. To paraphrase a well-known epigram, whenever we are asked to read the rough first draft of a story by Stevenson written in his early twenties, we will read "Kidnapped" and "Prince Otto." Certain it is that the author himself is entitled to say what he wishes of his work to be preserved and what he wants forgotten. His judgment may often be wrong. But the editor must be very sure that it was indeed wrong, before he assumes the liberty of giving to the public what the artist himself thought unworthy of himself or his pains.

In the end this practical consideration remains the weightiest. It is ill travelling the path of fame with a heavy baggage; why increase the load which every great writer is compelled to carry? The spirit of criticism spares no one. Literature has its fashion cycles and the man who is apotheosized in one generation is often compelled to undergo the judgment of the next. Nowadays we do not hesitate to point out faults in Balzac, Thackeray, or Dickens. In one is found a great tedium; in the second an over-intrusion of the author's personality; in the third a serious distortion of character values. That the next decade may completely reverse us does not matter. To-day we do find fault with the masters, even knowing them as we do at their best. Hence it is no kindness to them to put into print work that is obviously not of their best.

MISCELLANEOUS GERMAN BOOKS.

Great as is the number of volumes containing letters exchanged at Weimar in Goethe's days, "Johann Heinrich Mercks Briefe an Anna Amalia und Karl August," in the handsome edition of the Insel-Verlag of Leipzig, is sure of a hearty welcome. Although in the service of the court of Darmstadt as accountant, Merck was a man of remarkably thorough knowledge on a variety of subjects, from art to archæology, from literature to agriculture. Karl August employed him as a buyer of etchings, drawings, and paintings, and sought his advice on economic and agrarian problems. This business intercourse gradually brought the two into something like purely human relations. But whether his temperament or his versatility was a drawback to his career, the gifted man never made a success of anything he himself undertook. He was a hypochondriac, discontented with everybody, and at times isolated himself completely from human society. As if to escape from his fellow-beings and himself, he became absorbed in the study of prehistoric nature, and finally committed suicide.

The letters fairly mirror forth his eccentric character and the spirit of his time. The spice of conversation, as of correspondence, was that particular kind of gossip which the French euphoniously call *médisance*. With amazing freedom Merck indulges in this smart but malicious small talk. He tells the princess that the ladies at the court of Darmstadt do not like to converse with anybody except gentlemen of sixteen ancestors, unless it be the *accoucheur*, the coachman, or the valet. He reports to the prince the most equivocal occurrences in his environment. With evident relish he circulates the scandals coming to his ears and suppresses no caustic comment even if they concern personages of exalted position. On the other hand, he gives not a few evidences of his great-heartedness and broadmindedness. Thus he defends Georg Forster, the traveller and writer, against damaging rumors, and warmly pleads the cause of the Mennonites. His indefatigable zeal in seeking art treasures for the princely collector and his repeated complaints about his meagre income have a touch of the mercenary. But these glimpses of his personal life shed such a peculiar light upon the relations of princely patrons and literary protégés in those days of Weimar's glory that they have a place in any picture of the period. Merck's impressions of his contemporaries and reminiscences of days spent at Weimar also contain historical material. Karl August especially stands forth in the light of these letters as nobler and more profoundly intellectual than biography has credited him with being. The numerous allusions to and discussions of serious scientific topics prove him to have been really a scholar of a remarkably wide scope of interests and occupations. But the prime charm of the letters is that which emanates from the personality of their writer. He was, indeed, as Goethe said at the news of his death, one whose like would not be born again.

Among the "Bücher der Rose," which bear the imprint of Wilhelm Langewiesche-Brandt in München-Ebenhausen and Leipzig, one of the recent additions is entitled "Ein Kampf ums Licht," and contains letters, memoranda, and poems by Lenau (imported by G. E. Stechert & Co.). The editor has cleverly arranged the selections in chronological order, so as to form a consecutive though indirect record of Lenau's development. He calls the poet's life a *Donquixoterie* of sorrow, or the tragedy of a will centred in introspection and never released for free action. Yet the struggle of Lenau against what seems to have been an inevitable fate was bravely waged, and the man deserves the full measure of sympathy. The letters, of which many had hitherto been unknown, give interesting glimpses into the workings of his mind. He consoles a friend who complains of her childlessness, by saying that individuals should not regard themselves as mere channels of species, but live as independent entities. His love-letters, too, shed a new light upon his relations with the two women with whom he imagined himself in love successively or simultaneously. Of curious interest to American readers are the pages referring to his American journey in 1832-33. After a week's stay in Baltimore he writes to his brother-in-law that America has no nightingales and no wine, and that a Niagara voice is needed to preach to "these rascals that there are other gods besides those coined at the mint." His description of a meal in the cheap boarding-house where he had taken lodgings is amusing because it seems to have given the cue to many a picture of American manners drawn by his compatriots unto this very day.

An anthology of letters, "Frauenbriefe aller Zeiten" (imported by Lemcke & Buechner), has been compiled by Bernhard Ihringer, and in about four hundred pages gives a fair picture of two thousand years of woman's history. The letters are selected from the correspondence of women of all ranks and of all countries of Europe, and cover the ground with no little discretion and with commendable thoroughness. The first letter in the book is one by the sister and the daughter of Charlemagne addressed to their teacher Alcuin, and strikes the keynote of fervent piety which prevailed in the first five hundred years. There are in this group letters by Héloïse and Catherine of

Siena and a number of others, giving glimpses of the life of women in convent and castle. Curious for its worldly tone is that addressed by Alessandra Strozzi to her son Filippo, in which she announces the betrothal of her daughter and says that she will give her one thousand lire. "For whoever takes a wife also wants money. It was highest time for me to decide in this matter, for she was already sixteen and could not wait to be married any longer." There are letters passed between Queen Elizabeth and Mary Stuart, Anne Boleyn and Henry VIII, letters by Lucrezia Borgia, by the wife of Luther, by Christine of Sweden, and many others of varied historical importance. A farewell note of the Marquise de Brinvilliers was written to her husband on the eve of her execution for her part in the "affaire des poisons." Some of these epistles revive the memory of famous loves. A pathetic document is the dedicatory letter to Count Collalto, which introduced the poems of Gaspara Stampa. Nor can one read without emotion the letter of la Vallière to the Duchess of Montausier referring to her relations with the French King. Two letters by Ninon de l'Enclos to the Marquis de Sévigné are really essays on love, a subject on which the writer was surely an authority. The book fitly closes with a letter to Hartleben by his wife Selma, the little mother of the incorrigible big boy.

The young generation of German writers are subjected to a steady analysis, mostly of a friendly character. To the books on Gerhart Hauptmann previously recorded may be added a volume of more than four hundred pages: "Gerhart Hauptmann: Der Entwicklungsgang seiner Dichtung," by Dr. Kurt Sternberg (imported by G. E. Stechert & Co.). The author divides his book into ten chapters. Upon the details of Hauptmann's life he dwells only long enough to prove him a genuine product of his time, obeying the various impulses, ethical and æsthetical, that swayed the generation into which the poet was born. He affirms what the works of Hauptmann, since the appearance of "The Sunken Bell," suggest—that the soul of the poet is the scene of a tragic conflict between the inborn idealism of his nature and the naturalism of his time, as also between the egotism of the Superman and the altruism of the Nazarene. While the influence of Ibsen and Nietzsche is predominant in the first period of his creative work, that of Tolstoy seems to prevail in his later development. In the analysis of Hauptmann's style, Dr. Sternberg notes the enthusiasm with which the poet first embraced the method of Holz and Schlaf, and his subsequent spasmodic reactions against it. He frankly admits Hauptmann's gradual decadence, but in his brief allusion to the novel recently published, "Emanuel Quint," suggests that it may prove to be a turning-point in the author's career. This hope of his sympathetic analyst Hauptmann has, in the meantime, destroyed by the publication of his play "Ratten," which marks a relapse into a naturalism more repulsive than that of his earlier period. Though the book contains little that is new in the way of interpretation, it is very readable.

Heinrich Spiero's "Deutsche Geister" (Leipzig: Insel-Verlag) is a volume of studies and essays dedicated to Wilhelm Raabe, and contains a gallery of contemporary German portraits, showing a remarkably catholic range of interests and sympathies. The book begins with the Austrian poet Ferdinand von Saar, and includes appreciations of such of his fellow-singers as Emil Prinz von Schönaich-Carolath, Jakob Julius David, Gustav Falke, Agnes Miegel, and Lulu von Strauss und Torney. It recalls to the reader the well-poised and refined personality of Wilhelm von Polenz; it groups in succession the three dramatists of the period, Wildenbruch, Sudermann, and Hauptmann. The singular story of Ilse Frapan's life and work forms an interesting chapter. A number of other men and women that have earned for themselves a distinct place in the history of Germany's intellectual development are characterized with much insight. The latter part of the book is composed of essays on various literary subjects. In a study of the new historical novel Spiero comes to the conclusion that the works of Wilhelm Raabe will in time be recognized as masterpieces of "unconsciously historical" fiction. In the essay on poetry and politics, the author regrets the aloofness of the German poet from current politics and points to the poets of France as examples of what poetical genius can accomplish by being in close touch with practical life.

An unusually attractive book of travel is Bernhard Kellermann's "Ein Spaziergang in Japan" (imported by G. E. Stechert & Co.). It contains fascinating personal impressions of the country and its people by the novelist whose stories have recently begun to attract much attention. From a writer of his poetic temperament, one could not expect a systematic record of a journey planned and carried out along beaten tracks. He himself sets an example, showing how to travel in a foreign country without anxiously following in the footsteps of predecessors or hesitating to obey momentary impulses. In teahouses, theatres, and temples, Kellermann studied the life of the people, and by direct contact with them acquired in a comparatively brief time a remarkable knowledge of their customs and especially of their drama. The references to performances are numerous, and the special chapter on the drama is one of the most valuable in the book. That there is not a commonplace passage in it is its most commendable feature, for travelling in remote corners of the world and making pretentious volumes out of Baedecker material has become itself a commonplace occupation, and Japan has been particularly unfortunate in its exploitation by tourists and scribes.

A. von Ende.

NEWS FOR BIBLIOPHILES.

It has been definitely announced that the sale of the first portion of the Huth Library will begin early in November. The Huth collection of autographs was sold by Sotheby, Wilkinson & Hodge, on June 12 and 13. A very fine and interesting letter, written by Shelley to Joseph Severn, dated Pisa, November 29, 1821, and beginning, "I send you the Elegy on Keats," brought £770. This was, no doubt, a copy of the first edition of "Adonais," printed at Pisa, "with the types of Didot," during the latter part of June and the first of July. Henry Fielding's contract with Andrew Millar for the publication of "Tom Jones," and his autograph receipt for the price, £600, brought £1,015. An autograph letter of Defoe, signed with initials "D. F.," dated October 11, 1704, brought £295. Burns's manuscript of "The Jolly Beggars," three pages folio, brought £491. The following are a few other prices: Anne Boleyn, autograph signature on a letter, £315; Anne of Cleves, autograph signature on a vellum document, £101; John Calvin, autograph document, signed, £62; Bartholomeo de las Casas, fine A. L. S. about the persecution of the Indians by the Spaniards, £200; Sir Francis Drake, autograph signature on an interesting letter, £100; John Dryden, fine A. L. S., in which he says, "I am still drudging on, always a Poet, and never a good one," £130; Queen Elizabeth, long A. L. S., £365; Katherine of Aragon, fine unpublished A. L. S., in Spanish, £800; Sir Walter Raleigh, A. L. S., written from the Tower, and begging that "my wife might agayne be made a prisoner withe me, as she hath bene for six yeeres last past," £520.

Correspondence

NEWSPAPER FILES AT ALBANY.

To the Editor of The Nation:

Sir: Many persons familiar with the New York State Library and its great wealth of American historical material are unaware of the marvellous collection of early American newspapers which it contained, and which is now totally destroyed. There were thousands of volumes of New York State newspapers from Colonial days to date. These for the most part were catalogued and accessible; but in searching last year for early Illinois newspapers I found more than 175 bound volumes of miscellaneous newspapers covering the period from 1810 to 1860, and including titles from every part of the United States—the whole collection uncatalogued, virtually

unknown and inaccessible to historians and librarians.

To illustrate how rich this collection was, I need only say that I listed no fewer than 246 separate titles of Illinois newspapers, nearly all of them published prior to 1850, and many of them apparently unique copies, as I have found them in no other library. Several I had never elsewhere even found mentioned as having been in existence, and several others afforded the only known source of some points in early Illinois journalism. Other States and Canada were as fully represented as Illinois. Most of the 246 items were of single copies, but there were a few runs of great value, like that of the Kaskaskia *Republican Advocate*, 1823-1824, and its continuation, *Kaskaskia Republican*, 1824-1825. Even the single numbers were valuable far beyond seeming, because they were usually first issues, or issues of some special or peculiar significance, illustrating changes in policy, name, or ownership, or containing particularly significant items of news.

The collection was the work of Joel Munsell, an editor and printer of Albany, who in 1828 made one of the earliest attempts to procure a file of American newspapers. He was, as S. N. D. North wrote (Census Report, 1884), "a gentleman who did as much as any man who ever lived in this country to advance and promote the art of typography and to preserve its annals. The papers in Mr. Munsell's . . . collection satisfactorily illustrated the character and condition of the American press at the time. It was bound in 100 volumes, which are now deposited in the New York library." The 100 volumes included papers much later than 1828, and had been increased to nearly 200 volumes long before Mr. North's sentences were written.

North credits Munsell with having been the first to make such a file. But Isaiah Thomas of Worcester, Mass., made a comprehensive collection in gathering material for his "History of Printing," published in 1810. This well-known collection, given to the American Antiquarian Society in 1813, is especially rich in first issues. A still earlier collection is in the Harvard library. It was made by Christoph Daniel Ebeling, professor of history in Hamburg, Germany, and is described in Thwaites's "The Ohio Valley Press before the War of 1812-15:" "One of the most important sources which he used in his great work on the 'Erdbeschreibung und Geschichte von Amerika,' published at Hamburg from 1783 to 1816, were the newspapers of the various States. His collection, numbering some 200 volumes, and especially strong in the last decade of the eighteenth century, was, after his death in 1817, purchased with the rest of his library and presented to Harvard University." Munsell's collection, with accretions, was, as to titles, the most comprehensive single collection in existence for the period from 1825 to 1850, although others are more valuable because they contain longer runs. Its destruction is made the more deplorable because it had never been accessible, and of late years had seldom, if ever, been known or used.

KEATS'S "MISSAL."

To the Editor of The Nation:

SIR: In your issue of May 11, Prof. F. N. Scott suggests the possibility of finding a particular missal which inspired Keats's familiar line in "The Eve of St. Agnes." In such a search it is of first importance to understand the line itself, and I judge (I cannot quite be sure) that Professor Scott shares in a somewhat common misunderstanding of the word "clasped," taking it to mean "held fast" or "cherished." This misunderstanding seems to underlie Leigh Hunt's often quoted comment: "Clasped like a missal in a land of *Pagans*: that is to say, where Christian prayer books must not be seen, and are, therefore, doubly cherished for the danger." But however Hunt understood the word, it is certain that it does not mean "held fast"—the application of the simile quite forbids that. Dr. Garnett pointed this out in a communication to the *Nation*, December 21, 1905:

> "Clasped" means simply fastened with a clasp, and the sleeping maiden is compared to a shut missal, precisely as in the last line of the stanza she is compared to a shut rose; with the heightening circumstance that not only is the missal shut, but it is shut in Heathenesse, where it will never be opened.

The conclusive proof, which Dr. Garnett failed to give, may be found in H. B. Forman's edition of Keats, where we learn that the successive forms of the line as originally written were: "Shut like a Missal," "Like a shut Missal," "Like a clasp'd Missal," "Clasp'd like a missal." So much for "clasped"; and our desired missal would be, not one jealously guarded by Christians in a heathen land, but one neglected or abandoned there.

But do we understand rightly the phrase "where swart Paynims pray"? Professor Strunk once even proposed to read "prey." And the "Century Readings in English Literature," edited by Professors Cunliffe, Pyre, and Young, has this explanation, which is new to me: "*Missal where swart Paynims pray:* A prayer book bearing upon its margin pictures of converted heathen in the act of prayer." Manifestly, if this can be substantiated, we are searching too far afield. Perhaps the editors of the "Century Readings" will enlighten us. I submit that I am skeptical of their explanation, which leaves the latter half of the line an ornamental appendage, with no apparent function in the simile. Or will some one profess to see a heightening circumstance in the converted heathen—symbols, may it be said, of unholy impulses transformed within the sleeping Madeline's bosom to silent prayers?

"These are very slender disquisitions," wrote Dr. Johnson in a note on Shakespeare, "but such is the task of a commentator."

ALPHONSO G. NEWCOMER.

Stanford University, June 10.

BETRAYED CONFIDENCE.

To the Editor of The Nation:

SIR: Are college presidents losing a sense of decent propriety about the treatment of letters addressed to them? Twice recently I have been asked to write to the presidents of well-known colleges about the qualifications of candidates for appointment on their respective faculties. In one instance the request came from the president himself, in the other from the candidate. In both cases I wrote frankly my best judgment, in each case the president appointed another man, but sent to the unsuccessful candidate all the letters written about him! In one case I was immediately in hot water, because the candidate thought I ought to have recommended him more highly, and I was held by him responsible for his failure to procure the position. But my embarrassment is not the point at issue. If letters, whatever their quality, are to be treated in this way without the consent of the writers, there is evidently an end of all sincerity in such correspondence.

I am perfectly willing to sign my name to this protest, but in that case I must also print the names of the presidents referred to, and this I do not like to do.

UNIVERSITY PROFESSOR.

A BIBLIOGRAPHY OF AERONAUTICS.

To the Editor of The Nation:

SIR: I am sure many librarians and scientific men will share the surprise and regret with which I note the defective character of the work in Brockett's "Bibliography of Aeronautics," recently issued by the Smithsonian Institution. For example, under "Bryan, G.," "Bryan, G. H.," and "Bryan, George Hartley," are successive lists of titles, all, or most, of which undoubtedly belong to Bryan, George Hartley. A bibliography should certainly make a more satisfactory attribution of articles to authors than this. Similarly there is a page of entries under "Neureuther, K." (p. 625), while on pages 614-16 are twice as many entries under "N., K.," most of which must belong to Neureuther. In fact, it is evident that no attempt was made to bring together articles by the same author signed in different ways. An exception occurs in the case of "Langley, Samuel Pierpont," where all are entered under the full name, though it is doubtful if all were so signed; and the name Langley is made a subject heading for a number of anonymous articles referring to him, although other anonymous articles appear only under the first words of their titles. In the case of other subject headings, there are simply lists of the numbers of the entries to be referred to.

In the list of abbreviations of serials referred to, eight French serials are arranged under "La" and "Le," and one German serial under "Der," but no English one under "The." Many times the number are just as much entitled to be entered under the article as those which are so favored (?).

Minor inconsistencies and inaccuracies are altogether too numerous for a work bearing the imprint of the Smithsonian Institution.

W. I. FLETCHER.

Amherst, Mass., June 14.

PESTS ON WHITE PINES.

To the Editor of The Nation:

SIR: In regard to the pest of white pine attacking our white pines, the following experience with a simple, yet effective, remedy may be of interest. For the past two seasons, my baby pines have been attacked by a small gray insect, which fairly swarmed on the new, tender growth,

and sucked the life out of it. Sulfocide, Paris green, whale oil soap, were all successively used upon the pest, but to no avail. They seemed to thrive upon germicides, or, at least, next morning seemed more lively and numerous than ever.

In connection with the pest, I observed that black ants seemed to be extremely active, climbing and descending the same tree. Thinking that possibly the pest was "colonized" by these black ants, I tacked a strip of sticky fly-paper around the trunk of each white pine, rubbed off the lice, and awaited results. The pest has disappeared as if by magic.

Whether this will prove an equally effective remedy for white lice, I do not pretend to say, as I do not know whether the ants work in combination with this new pest. But perhaps the experiment is worth trying.

Of one thing I feel sure, however, and that is that the ant is responsible for a good deal more in the way of supplying pests which attack our crops and trees than he is given credit for. As R. L. S. would say:

> Hated as his age increases,
> By his nephews and his nieces,

he ought to be exterminated. The comparatively inoffensive house-fly has had his day in magazine literature. We should have a crusade against that far blacker villain, the black ant.

WILLIAM TRUMBULL.

Literature

THE FEDERAL CONVENTION.

The Records of the Federal Convention of 1787. Edited by Max Farrand, professor of history in Yale University. In three volumes. New Haven: Yale University Press.

Historians and constitutional lawyers have long desired to see all the records that exist of the formation of the Federal Constitution, gathered into a record which shall be at once correct, critical, and comprehensive. Their wish is now gratified. Professor Farrand, formerly of Leland Stanford University and now of Yale, has given us in these three portly volumes a body of data more complete than any ever brought together before, adding to the material previously printed, but heretofore dispersed in various books, a certain amount of new matter drawn from other sources, some of them never hitherto explored by any competent scholar.

Broadly speaking, the sources for the history of the Convention here collected are the following: (1.) The Journal of the Convention, kept by the secretary, William Jackson, preserved in the State Department at Washington, and first printed in 1819, after being edited by John Quincy Adams, then Secretary of State. It was, said Adams, not so much a journal as a set of minutes from which a regular journal ought to have been prepared; and Adams thought it his duty to correct these minutes and put them into better shape. In the present edition, they are printed exactly as Jackson left them, though Adams's edition is cited where necessary. The unsatisfactory character of the minutes is illustrated by the fact that the record of Ayes and Noes upon the questions submitted to a vote is not explained by a note of the dates of the votings, and that in about one-tenth of the votings, the issue voted on is not recorded. Mr. Farrand suggests in the present edition the dates of issues which he thinks probable, but he remarks that the state of this journal, or minutes, makes it evidence far from satisfactory. The secretary was not a careful man, but whose influence it was that secured his appointment does not appear.

(2.) The notes of the proceedings of the Convention, taken down by James Madison of Virginia, one of the delegates, and afterwards (as everybody knows), Secretary of State and twice President. These are one of the fullest and most authentic sources we possess. Madison corrected them, apparently with a view to publication, some time after the appearance of the Journal in 1819, and they were published in 1840, after his death. Great as is their value, he slightly reduced it by making a good many changes when he revised what he had written, changes apparently intended to bring his record into conformity with the Journal, though it is probable that in some cases he was right and the Journal wrong.

(3.) Notes taken by several members of the Convention, viz., Robert Yates, Chief Justice of New York; Rufus King and James McHenry of Maryland; William Pierce of Georgia; William Paterson of New Jersey; and Alexander Hamilton, together with a few things from the papers of Charles Pinckney and George Mason.

(4.) Documents drawn from the papers of James Wilson (preserved in Philadelphia), belonging to the drafts of the work done by the Committee of Five, which elaborated the Virginia resolutions, and similar documents belonging to another committee, the Committee of Style.

(5.) Extracts from letters and scattered writings of various members of the Convention which throw light upon the proceedings. These are very various and of very different value, but taken together, they do much to elucidate the history of the Convention. They are here grouped under the title "Supplementary Material," and fill Volume the Third.

To have all these data brought together and their perusal made both easier and more profitable by cross-references and a good index is a gain which can best be appreciated by those who have heretofore tried to study the Convention from materials scattered through dozens of books. Great credit is due to the Yale University Press for conceiving such a plan and for executing it in a form so handsome and convenient; nor is less credit due to Professor Farrand for the care and knowledge he has displayed in the editorial and explanatory part of the work. Some will regret that he did not add fuller and more numerous elucidations of the course the debates followed and the grounds for the attitude of particular men and States. These may no doubt be obtained from the histories of the formation of the Constitution; yet it would have been convenient to have them here.

To any one with a taste for constitutional antiquities, the work is most enjoyable. There is a delicious Old-World quaintness about the language, and very often about the ideas also. Everything is decorous, and though now and then an orator spoke with warmth, vehemence is discreetly toned down. We are surprised to find ourselves still not quite emerged from an age when people spelt as they pleased and did not care for uniformity. Madison, for instance, a precise and careful person, nevertheless spells the name of Mr. Gorham, delegate from Massachusetts, as "Ghorum," and that of Mr. Ellsworth (from Connecticut) as "Elseworth." The historical illustrations of federalism are almost all drawn either from ancient Greece, and often through Montesquieu, whom they sedulously read, (*e. g.*, the faults of the Amphictyonic Council and the merits of the Lycian federation), or from the Germanic Empire (which they saw to be really a mere confederation, and a weak one), while for the writings of political machinery they usually cite Great Britain. We are constantly reminded of the *Federalist*, in which, of course, Madison and Hamilton repeated the arguments and illustrations they had used in the Convention some months before. But what most strikes the reader is the gulf which seems to separate the political thinkers and constitutional lawyers of that age from any who have since adorned either the United States or any other country. That they should be unlike the men of the French Revolution, who, only two years after the Convention closed its labors at Philadelphia, began their less fruitful labors at Versailles, is natural enough; for the historical antecedents as well as the intellectual characters of the two sets of men were strikingly dissimilar. But the men of the Convention are almost equally unlike any subsequent generation of American statesmen. They are unlike contemporary or subsequent Englishmen. In their time the world of political thought began—and suddenly began—to travel very fast, so that later generations seem to be separated from these sages of

Washington's day by centuries rather than by generations.

A reperusal of their debates does not lessen one's respect for the men of the Convention of 1787. They moved upon a high level, and though the records of their discussions doubtless omit the more trivial arguments of all the speakers and neglect the weakest men altogether, the reader remains impressed by the amount of vigorous thought and clear good sense which was brought to the work. There were among the delegates at least six men of first-rate eminence—George Washington, Benjamin Franklin, Alexander Hamilton, James Madison, Gouverneur Morris, and James Wilson, the three first of whom belong to the history of the world—as well as many others whose ability rises very far above the level of the average capable member of a national legislature, whether in the United States or in any great European state. These are Edmund Randolph, Roger Sherman, Oliver Ellsworth, Robert Morris, Patterson, Gorham, Elbridge Gerry, Livingston, Mason, and Wythe. Some would say the same of Luther Martin, Yates, Baldwin of Georgia, and the two Pinckneys. Considering how small the body was, this shows a remarkable average of talent. It compares favorably with the average of the much smaller body which drafted the Federal Constitution of Canada eighty years later, and favorably also with the Conventions which prepared the Constitutions of the Australian Commonwealth and of the South African Union. The Canadian statesmen did their work in private, but the debates of the Australian Conventions were published, and they do not reach the level of those of 1787.

Some of the most entertaining pages in these volumes are those in which one of the delegates, Pierce of Georgia, gives little personal sketches of his colleagues (Vol. III, p. 87, Appendix cxix). They are written on the whole in an admiring spirit, and (except perhaps in two cases) with no trace of spite; and they help us to realize how the most eminent figures looked and spoke and carried themselves among their fellow-delegates. A little further light on personal traits is thrown by a confidential report sent by the diplomatic representative of France to his own court, in which he describes some of the leading men of the Convention, dwelling especially on their sentiments toward France. The remarks on Hamilton, Rutledge, Randolph, the two Morrises, and Mifflin are quite interesting (Vol. III, p. 232, Appendix clix). To most people, the appendices, which fill one whole volume, will be the most novel part of the book, for the letters which they contain bring a good deal of comment to bear upon the formal records, and contain not a few instructive anecdotes.

We must refrain, in such a review as this, from entering on any of the larger questions connected with this most famous of all Constitutional Conventions. To one reflection, however, a few words may be given. The Convention never showed its wisdom better than when it determined to deliberate in secret. Had the public been following the proceedings, the proceedings could hardly have reached any profitable issue. Men were able to say things without the fear of being reported, and of having to explain or defend themselves. The press had not the opportunity of misrepresenting or attacking views and propositions before they had time to be fairly considered. Compromises were infinitely easier when men did not stand committed to the public by words and votes previously recorded. Yet it would, in our day, be virtually impossible, in any modern country, to get leave for any such Convention to exclude the public from its debates, and one may fear that it would be far more difficult than it was then to enforce upon each and every delegate any obligation of secrecy that a Convention might impose. It may, indeed, excite surprise that in England, when large constitutional questions arose, such as that of making a new Constitution for Ireland to regulate her relations with Great Britain, it was not proposed to apply this method of a convention to a situation which eminently called for it. The decision to entrust the making of the Constitution of the United States to a special body, instead of to Congress was, indeed, along with the determination to exclude the public, almost as efficient a cause of the success attained as was the unrivalled statesmanlike capacity of the men who sat in this memorable assembly.

CURRENT FICTION.

The Bramble Bush. By Caroline Fuller. New York: D. Appleton & Co.

A vast amount of good "copy" accumulated in extensive observation of New York's literary and artistic tribe has been worked over into an amazingly diversified literary entertainment. Selected specimens of our rising generation of dramatists, painters, sculptors, poets, critics, journalists, and actresses, supplemented by a few property fathers and mothers, constitute the *dramatis personæ*. A plot which betokens more ingenuity than originality on the designer's part manages to include them all in a kind of mutual benefit association and to contrive a professional success and matrimonial happiness for each aspirant. It also affords unrivalled opportunities to witness the antics of young birds of the artistic feather, as they are to be seen in their city haunts, and more particularly in summer flocks on Long Island Sound; also to hear phonographic records of their chronically clever conversation.

As a sort of moral background for "the whole show," a parable is expounded out of Mother Goose. The Bramble Bush of nursery fame symbolizes "the tearing disillusions that come to those who pursue art in any form." "All of us get our eyes scratched out at some time or other, and the successful chap is the one who has grit enough to jump into another bush and scratch 'em in again. . . . The cynics are those fellows who stick in the first bush permanently and stay blind." This disposes of the perversities of the artistic temperament very neatly, besides furnishing the theme for enough sweet preaching and admonitory incident to fill a "Pansy" book. Prominent among the pursuers of art through the brambles is a youth who thought he was a cartoonist, wanted to be a composer, and turned out to be a playwright. Another is a young woman who affects depravity, and writes cruel critiques for a living; the author has taken great pains with her fascinations, providing her with the physical equipment of an Oriental sorceress and allowing her to conceal warm, womanly feelings beneath a nipping and an eager air. A third is a lovely fair-haired painter of babies whose sentimental education is accomplished in the course of the narrative. These have their progress in the allegory pointed out to them at intervals by the sanest and most sympathetic of distinguished middle-aged sculptors of established fame.

The author varies her style with her intention, which is by no means stable; she is farcical, romantic, mystical at pleasure. Variety is her notion of excellence, and she has not sufficient sense of humor to permit her to be serious with impunity.

A Question of Marriage. By Mrs. George De Horne Vaizey. New York: G. P. Putnam's Sons.

The merits of this book lie in its readableness and in the bits of philosophy, humor, truth, and sweet reasonableness that lie along the way. The central incident is distinctly unphilosophical, but as it defeats itself in the end, it must be supposed that the author intended to enforce her point by making highly reasonable folk temporarily guilty of deeply unreasonable conduct. Vanna Strangeways, sprung from a family tainted with persistent madness, is warned against marriage by a great physician. She highly resolves, is sorely tempted, and enters into an engagement with definite understanding that it shall never be fulfilled. "Engaged *not* to be married," a friend pertinently puts it. The eight years' duration of this bond is the credulity-taxing part of the story. Its rupture and the triumph of good sense restore the tale to a normal plane. Meanwhile, without any very di-

rect bearing on the main point, the life, love-affairs, and happy marriage of the lively, brilliant Jean are fully chronicled. Various lesser characters are introduced with good effect; comments, reflections, wise and witty conclusions, emanate from actors and author. But above all improbability rises a wholesome lesson—that it is within and not without that one is to look for content. The use of the utterly trivial matter that on the final page drives this home to Vanna's consciousness, made receptive by her sufferings, and generosity, her sense of justice, is a little touch of truth which is characteristic of the author's way of putting things.

The Return. By Walter De La Mare. New York: G. P. Putnam's Sons.

To look into a mirror and to see there not one's own face, but a strange one, may well curdle the blood and raise the hair. Add to this manifestation the efforts of a French suicide, two centuries dead, to repossess himself of a mortal abode, and we have the chief elements of a story of supernaturalism standing well above its fellows. One point of superiority is the absence of the aggressively material, which as a rule offsets the intangible. Though details are carefully worked out, the general impression is of spiritual phenomena. There is a sense of Hawthorne translated into a more modern form of expression. Another feature not usually found in this class of writings is the quite remarkable clearness and originality of character-painting. Here are characters consistently modelled and intrinsically striking. An aloofness of touch, a restraint in particularizing, do but add to the impalpable quality of the terror which haunts the tale. The story is not easily communicable, even were it desirable to forestall interest. But the reader may safely be promised tremors more inwardly racking than the bodily quake caused by the ordinary spook.

The Royal Pawn of Venice. By Mrs. Lawrence Turnbull. Philadelphia: J. B. Lippincott Co.

The time of this typical historical romance is the latter half of the fifteenth century; the place, Cyprus. The central figure is that of Caterina Cornaro of Venice, who became a luckless Queen of Cyprus. The action coincides with her career as Queen. As is common in this sort of story, the appeal is chiefly made to a sense of reverence for royalty approaching worship—especially for young feminine royalty—which appears to be undying in the human breast. The writer of this book evidently possesses this sense in extraordinary intensity. A portrait of Caterina by Titian is reproduced as frontispiece. With this portrait, we are given to understand, the dashing young King of Cyprus first fell in love. One day he obtains "sight of the girl's fair face with its tender flush like a flower in spring, painted with skill by the greatest artist of Venice. The breeze might have toyed with that mist of golden hair, and the great dark eyes—softly luminous—had the expectancy of a gazelle awaiting the joy of the daydawn." Now as for the color of the lady's cheek and hair, they were no doubt what Titian would have made them. Her total effect, however, to the disinterested eye, is that of a rather stout nurse-maid in somebody else's Sunday clothes, with a dull face and a sly glance—as who should expect a policeman at the nearest corner. But Mrs. Turnbull does not profess a disinterested eye—she would scorn such a thing, no doubt. To her Caterina is a bride fit to mate with a young monarch who is "beautiful as a young god"; and her career has all the glamour of that divinity which hedges royalty. Those who share her prepossession will no doubt find the story worth reading. Those who demand of their fiction the presentation of characters and action of inherent rather than adventitious interest will not care for it.

TWO BOOKS ON MONGOLIA.

The Face of Manchuria, Korea and Russian Turkestan. Written and illustrated with twenty-two plates by E. G. Kemp, F.R.S.G.S. New York: Duffield & Co. $2.50.

Tramps in Dark Mongolia. By John Hedley, F.R.G.S. With illustrations and a map. New York: Imported by Charles Scribner's Sons. $3.50.

These two books on different portions of the vast area once under Mongol domination offer some suggestive contrasts. The author of "The Face of Manchuria" represents the intelligent globe-trotter, primed with information from guide books and foreign residents, whose journey was made possible by those railway lines which are things of yesterday. Mr. Hedley, a missionary among the Chinese of upper Chihli and a careful student of the people to whom he devotes his life, explores unknown roads on foot and pony where Europeans are never seen. The one is a volume of superficial impressions, showing how readily an unprotected woman may now visit regions which a generation ago were fast sealed to the most intrepid traveller. The other reveals the character and attitude of peoples in the same region still untouched by the railway.

"The Face of Manchuria" is frankly personal, being occupied with many of those details that bulk large in a traveller's experience. The author does not leave upon the reader an exalted idea of the comforts of travel in Chinese and Russian railway trains, but her temper is good and she grumbles quite contentedly. Much the most acceptable feature of her book is its array of sketches in water color, some of which present the color value of buildings and landscapes with considerable charm, though the drawing often leaves something to be desired. We get a notion of the author's pertinacity in reading the story of her success in obtaining one of these sketches. Within the past two years access to the tomb of the murdered Queen Min, outside of the capital of Korea, has been denied to visitors because of wanton outrages committed upon its monuments by European tourists. This tourist, however, was determined to climb a hill and see it:

> I decided not to wait for permission, and hastily ran up to a beautiful spot commanding a fine view over the plain with the tomb immediately below me, and set to work with the utmost dispatch. I had the pleasure of seeing the other visitors arrive and get sent away, and then the guard came up to dislodge me. I met him with a disarming smile, and showed him the sketch, ignoring his obvious intention. Our American friend was greatly concerned as to the righteousness of feigning ignorance, for she understood and translated all they were saying, such as that no one was allowed there except people of great importance, etc., etc. Further shouting from below to send us away was followed by the slow climbing of the hill by other officials. I greeted them in the same way as the first, and it had an equally disarming effect; they seemed quite nonplussed, and before they could decide how to act the sketch was finished, and I presented them with an acceptable *doucour*, and said good-by. Their refusal to allow people to approach the tomb, where only the little finger of the Empress is buried, is quite reasonable, for the dearest Korean feelings have been outraged by the wanton disregard shown by visitors who have amused themselves by pretending to ride the stone animals and otherwise "fooling" about the spot.

In consequence of which little escapade, we are likely to hear that the whole enclosure is hereafter to be barred to foreigners.

The description of the three towns visited in Russian Turkestan does not add greatly to our knowledge of that wonderful land, though the artistic soul of the author is aroused by its picturesqueness and color to impassioned and almost pathetic efforts to find expression in words.

Mr. Hedley's account of the edge of Mongolia beyond the wall is a book of another sort, having to do with missions only incidentally. His three journeys include a part of the territory where the famous Gilmour labored, apparently in vain, a score of years ago. The Chinese in this border land are still foreigners, but the Mongols are at disadvantage in competing with them. Like the Reservation Indian, the Mongol is a pretty good fellow, if left alone, ingenuous, direct, and easily tempted,

but he is a lazy skunk, and one finds it hard to forgive laziness. In the district of which I am now writing he neither sows nor gathers into barns, and yet he revels in such luxury as suits his environment. He smokes, he drinks whiskey, and likes a lot of it; he gambles; he talks; he idles around all day and every day, and only wakes up when the hunting falls due, and then he spends three days each month chasing terrified hares across the plains, or trying to bring down pheasants with his ancient matchlock.

As the Chinese is more industrious and capable than the simple Mongol, it follows inevitably that the steppes from which the latter has raided his civilized neighbor for thousands of years will pass at length into hands that know how to cultivate them, and one of the most remarkable fighting races known to history will be exinguished by the relentless action of the law of the survival of the fittest. It is surprising to be told that the doom of the race is hastened by its excessive religiosity. The Mongols are devout followers of that form of Buddhism called Lamaism, the economic effects of which are similar to those from which the Eastern Empire of Rome was rescued by the efforts of Leo the Isaurian in the eighth century. As in Tibet, the source of the creed, the youth of both sexes in Mongolia is withdrawn into monasteries, but unlike Tibet, Mongolia needs a larger population. The priests, declares Mr. Hedley,

> live unproductive and therefore worthless lives. They do not work in the fields; they do not herd the flocks; some few do practise medicine, but it is a case of Heaven help the patient! The only thing they seem to do beyond their ecclesiastical tasks is in community to prepare the food for their meals, and even that is brought to them by their parishioners. . . . Morality, Lamaism is an open and filthy sore. It is simply impossible to reproduce in print the tales everywhere heard of vice and immorality of the most virulent and shameless character. The pen is not made that could write it all down. It must be left to the imagination to picture the worst orgies of the cities of the plain, or the fashionable vices of the satiated rakes of ancient Rome or modern Babylon to come anywhere near an appreciation of what is commonly known to take place in these monasteries of the Mongol deserts and plains. Think of scores and even hundreds of men, strong, lusty, fullblooded young fellows living under a vow of celibacy, and yet conscious of no restraint from their religion in regard to the blackest and vilest sins.

One gets from this description a distinctly new conception of the life of the steppe. These are conditions affecting nearly half of the area of the Chinese Empire. Instead of the free, if primitive people of our imaginations, the Mongols have become since their great conquest of China a worthless and corrupt people, content to live on the labor of their women, bound body and soul by their religious leaders. Lamaism appears to offer a far more effective obstacle to Christianity than is to be found anywhere in China proper. "The attempt to evangelize Mongolia," we are told, "presents one of the greatest problems that faces Christian enterprise today. The land is so wide and immense, the means of communication so expensive and precarious, the population so sparse and scattered, the people so ignorant, and as a consequence so superstitious, that the task might well appal the stoutest heart and try the strongest faith." Thus far the efforts of Christianity seem to have met with no success whatever. One missionary who lives among them confesses that he knows of only one Mongol who can be called a sincere Christian man.

The most notable place visited by the author in these tours was Jehol, the Ch'eng te Fu of the Chinese, from the Portuguese spelling of which name Coleridge is supposed to have got his "Xanadu," where Kubla Khan decreed a stately pleasure dome. Its historical importance is chiefly due to its palace, where the Emperor Chien Lung received Lord Macartney in 1795, and where another emperor, Hsien Feng, died after running away from the English in 1861. Entrance to the palace and to the great Potala, built in imitation of the Vatican of Lamaism in Lhassa, is denied the foreign tourist, but some idea of their great enclosures may be derived from views from the surrounding hills. Other considerable buildings in the town convey a suggestion that much might be found here by a trained investigator to supply material for the study of Buddhist art in recent centuries.

Mr. Hedley's numerous photographs and a map of the region between the Shira muren and the Great Wall drawn from his own surveys add appreciably to the value of a book which is likely to remain long the best authority on this little known portion of Asia.

Complete Poems of Edgar Allan Poe. Edited by J. H. Whitty. Boston: Houghton Mifflin Co. $2 net.

This new edition of Poe is doubtless of much more importance to the specialist than to the general reader; but in these days, when even the general reader demands a complete and scrupulous text, the volume will be a formidable competitor in popular favor with all other editions. Poe, as is well known, was continually revising his poems with a care and an intelligence which give exceptional value to his latest emendations, and it is Mr. Whitty's good fortune to be able to present for the first time what seem indisputably to be Poe's last revisions of several of the most important of the poems. These revisions were made for the Richmond *Examiner* during Poe's last visit to the Virginia city, and he appears not to have lived long enough to subject any of them to further changes. The proofs of the poems revised for the *Examiner* passed into the hands of Poe's friend, the now forgotten writer, F. W. Thomas—forgotten, that is, save in connection with Poe—and the authenticity of the changes is beyond dispute. That readers of Poe will profit greatly from the fact that they can now read several favorite poems in slightly altered forms is a question of taste into which we need not enter. It is also a question of taste whether the eight poems "now first collected," which Mr. Whitty prints with ample proofs of genuineness, will at all enhance Poe's reputation. It is certain, however, that in his Appendix and in his "Notes and Variorum Text" Mr. Whitty has performed with great patience and success a task for which he should receive the hearty thanks of all students of Poe. It is probable that for many years to come editors of Poe's poems will draw largely upon the information, textual and other, here put in convenient form. It is to be hoped that they will never forget to make due acknowledgments to Mr. Whitty, and it is also to be hoped that he himself may be persuaded some day to give the fullest kind of record of his own experiences as a Poe collector, including, when possible, the present abiding place of all known Poe MSS. and other relics.

The memoir of nearly seventy pages prefixed to Mr. Whitty's edition is, as he tells us, "the fruit of researches extending over a period of thirty years." Like the text, this memoir is in many respects new and authoritative and mainly valuable to the special student of Poe. Emphasis is naturally put upon Mr. Whitty's own discoveries and upon his own views on such moot points as Poe's visit to England shortly before the publication of "Tamerlane." The result is a sketch which, in our judgment, new or merely casual readers of Poe may find unsatisfactory as a short biography and as a critical exposition of Poe's character and of the nature and worth of his poetry. For general purposes, then, the introductory matter of the Stedman-Woodberry edition of the poems is not superseded. But no future biographer can dispense with this memoir any more than any future editor of Poe can dispense with Mr. Whitty's textual apparatus. Its chief value seems to consist in a large number of details, few of which are important in themselves, but which singly and collectively help the student to develop new views and to alter or supplement old views. Perhaps the most important point is the frank treatment of the domestic troubles of Poe's adopted parents, but some may be inclined to dispute this statement and to find in Mr. Whitty's accounts of Poe's two visits to Richmond in 1848 and 1849 the most valuable contribution made by the memoir, although Professor Woodberry,

to whom this edition is appropriately dedicated, dealt very fully with both events in his expanded biography. Mr. Whitty's reference to the mysterious letters owned by the Valentine Museum in Richmond leaves one almost as much in the dark as did Professor Woodberry's reticent mention of the same documents. True, the latest authority informs us that these letters were read to a "small select audience in Richmond some years ago," and that they are said, "taken with the notations" upon them made by Mr. Allan, "to give an impression that Poe was ungrateful to his patron." But what if they refer to facts in Poe's life which, interpreted by students, not by select listeners, make his youthful years seem the very nadir of his life? Might they not, in such a case, help to relieve instead of darkening his character? Ought they to be kept entirely unpublished? Might they not be given to the public with the excisions, which we gather from a remark of Mr. Whitty's to be desirable? However these questions may be answered, we are sure of one thing, viz., that the minutest biographical gleanings with regard to Poe ought to be received gratefully, since the world still lacks a biography of him strong on the side of sympathetic, not partisan, interpretation. Mr. Whitty's researches seem to us to make the task of such a biographer lighter and to encourage future gleaners.

Sectionalism in Virginia from 1776 to 1861. By Charles Henry Ambler, Ph.D. Chicago: The University of Chicago Press. $1.50 net.

The study of sectionalism as a factor to be reckoned with is becoming a conspicuous feature of historical investigation in this country. By sectionalism is meant not the rivalry between the North and South culminating in the civil war or the hatred and jealousy of parties representative of different portions of the country, but rather the struggle, often unconscious, between regions of smaller area—sometimes included within the boundaries of a single State and sometimes embracing parts of many States—that represent common racial, economic, or religious interests. Such sections are the tidewater and the back country in colonial times, the trans-Alleghany country, the Ohio and Mississippi Valleys, the lake region, and the Western plains later. State boundaries are often artificial divisions without significance as landmarks of national progress and expansion. Historical writers are recognizing the necessity of a more thorough understanding of sectional peculiarities before attempting to explain the operation of such local and national issues as the tariff, slavery, suffrage, internal improvements, and the like.

Toward the end of our colonial period, when the region between the older settlements of the coast and the foot-hills of the Alleghanies began to be settled by a mixed population of Scotch, Irish, and German sectaries, a new section came into being. It was surcharged with new interests and motives. It was more democratic and individualistic than the tidewater; it had needs and ideals that were unknown to the older settlers; and it frequently opposed the policy of the colonial governments where the conservative classes held dominant political control. This sectional struggle appeared in nearly all the colonies from New England southward, and eventually led to modifications in governmental policy and in some instances to actual dismemberment. Nowhere was the struggle more prolonged than in Virginia, where for a century tidewater and up-country and mountain sought to accommodate their conflicting interests, only to end in the withdrawal of the mountain sections and the establishment of West Virginia as a separate State.

The conflict forms the subject to which Dr. Ambler has addressed himself in this excellent work. He has traced the ramifications of the controversy as fought out in the halls of assembly and on the stump from colonial times to 1861. He has shown wherein the economic conditions of both upland South and mountain territory were at variance with those of the conservative low country and has noted the effects in party rivalries and acts of legislation. His treatment falls naturally into three periods: the first ending with Bacon's rebellion in 1676; the second with the constitutional convention of 1829-30; and the third with the dismemberment of the State in 1861. The first great outcome of the conflict was the overthrow of the established church and the abolition of the system of entails, which produced democratic equality in Virginia. Constitutional and economic reforms followed the supremacy of the Republicans in 1801 and the decline of the East in population and industrial activity after 1818. The West was growing more important and influential, but was not strong enough to settle the issue in the constitutional convention of 1829-30. The victory of the conservatives transferred the centre of discontent from the upland to the mountain, and marked the line of sectional conflict between the areas which are now Virginia and West Virginia. The idea of a new State began to take form. The divergence of view between East and West on the subject of slavery and representation intensified the differences, and local issues began to blend into national issues. The mountain opposed secession from the Union. Controversies over education and a split in the Methodist Episcopal church increased the sectional rivalries, and when Virginia seceded from the Union, West Virginia seceded from Virginia.

Dr. Ambler has, for the most part, performed his task with thoroughness and care. His search has been wide and his presentation of the theme is characterized by justice and impartiality. Crudities of style are an occasional defect, and one feels at times that the author adhered too often and too closely to the merely political aspects of his subject.

Notes

A popular-priced edition of Price Collier's "England and the English" has been published by Scribners. Lord Rosebery furnishes a preface in which he says that the book is "probably the best ever written by an American about England."

In a letter printed in the *Nation* of April 6, Andrew Lang gave some account of a book called "The Adventure," which related the mystifying vision of two ladies at *le petit Trianon*. The book is now published in this country by the Macmillan Co.

The American Philosophical Society of Philadelphia announces that an award of the Henry M. Phillips prize will be made during the year 1912. The subject upon which essays may be written is: The treaty-making power of the United States and the methods of its enforcement as affecting the police powers of the States. The essay is limited to 100,000 words, exclusive of notes, which should be kept separate as an appendix. The award is $2,000.

In the autumn B. W. Huebsch will publish John Nolen's "Replanning Small Cities," a study of six American towns: Roanoke, Va.; San Diego, Cal.; Montclair, N. J.; Glen Ridge, N. J.; Reading, Pa., and Madison, Wis.

June 24 has been set by the Century Company for the date of issue of "Thorpe's Way," by Morley Roberts, a novel which is described as a blend of mediæval romance and modern socialism.

Doubleday, Page & Co. will bring out in the summer or early autumn: "The Recording Angel," by Mrs. Corra Harris; "Cicely," a civil war romance by Sara Beaumont Kennedy; Rudyard Kipling's "History of England," written in collaboration with C. R. L. Fletcher; Bouck White's "The Call of the Carpenter," meaning Christ, and a new biography of Andrew Jackson, by Prof. John Spencer Bassett.

The T. Y. Crowell Company has in its list of announcements: "Man: King of Mind, Body, and Circumstance"; "The Eight Pillars of Prosperity," both by James Allen; in fiction: "A Watcher of the Skies," by Gustave F. Mertins; "Ranier of the Last Frontier," by John Marvin Dean; "Monna Lisa," by Gugliemo Scala, and a railway story, "On the Iron at Big Cloud," by Frank L. Packard.

"The Legacy of Past Years: a Study of Irish History" is a forthcoming book by Lord Dunraven; it is in the press of John Murray.

An essay by A. R. Orage on "Nietzsche, the Dionysian Spirit of the Age," has been

published by A. C. McClurg & Co. It is a clear enough exposition of Nietzsche from the point of view of a professed follower. Mr. Orage admits the nebulous character of the Superman as defined by Nietzsche, but does not see how deeply this constructive weakness vitiates the whole attempt to found a system of ethics "beyond good and evil." The book is less valuable than Mr. Orage's own "Nietzsche in Outline and Aphorism," published last year.

Under the title "Palæographia Iberica," Prof. John M. Burnam, of the University of Cincinnati, hopes to publish, through the Librairie Ancienne Honoré Champion, 5, Quai Malaquais, Paris, a collection of facsimiles of manuscripts and documents (in Latin and the vulgar tongues) of Spain and Portugal. These facsimiles, made from manuscripts in the principal libraries of Europe, will be accompanied by transcriptions, bibliographical and palæographical notices, and will be issued in a work of three hundred numbered copies, arranged in fifteen fascicules of about twenty plates each. The price will be at the rate of twenty-five francs the fascicule, but subscriptions, of which about one hundred and twenty are needed to prevent financial loss, must be made for the work entire.

"Three Middle English Romances: King Horn, Havelok, Beves of Hampton" (D. Nutt), retold by Laura A. Hibbard of Mount Holyoke College, conforms in size and design to the well-known series, Arthurian Romances unrepresented in Malory, which is issued by the same house. It would not have served the purpose of the book, which is to extend a knowledge of these romances to wider circles, if the edition had offered literal translations of the originals. The author has been wise, accordingly, in paraphrasing the stories, while using sufficiently archaic English to reproduce to a considerable degree the charm of the Middle English texts. The brief Bibliographical Note, which is prefixed to the paraphrases, simply swarms with misprints and seems to betray, besides, a rather feeble grasp on German inflections. Why, moreover, should Miss Hibbard give in this note only Skeat's old edition of "Havelok," issued in 1868, and not mention the more recent edition (Clarendon Press, 1901) by the same editor? Indeed, Holthausen's edition was also worth adding to the list.

The most recent volume of the series of Original Narratives of Early American History (Scribner) is devoted to narratives of early Carolina and is edited by Alexander S. Salley, jr., secretary of the Historical Commission of South Carolina. It contains no material hitherto unprinted, but includes a very fine collection of reprints of rare documents and tracts that are probably less familiar to the general reader than are many of the texts printed in previous volumes. The earliest narrative is that of Edward Bland, 1650, entitled "The Discovery of New Brittaine" and written to attract settlers to the region south of Virginia. Other pamphlets of a similar character are Yeardley's letter to Ferrar, 1654; Hilton's "Relation," which was used by the proprietors in 1664 for advertising purposes; Horne's "Description," 1666, likewise used to hasten the sale of the proprietor's real estate, and Wilson's "Account of Carolina," 1682, which extols the province as a place for settlers. Among the most valuable documents are Thomas Newe's letters, written in 1682 to his father in Oxford; Sandford's "Voyage," 1665, found among the Shaftesbury papers, and the "Journal" of Elder Pratt, 1697, now in the possession of one of his descendants. Defoe's long pamphlet entitled "Party-Tyranny" is not of much value for the history of Carolina, and the very partisan production of John Ash, 1706, because of its unreliable character, does not deserve a place in the collection. Even the elaborate extract from Oldmixon's "British Empire" must be used with very great caution, as that Whig pamphleteer is a very untrustworthy historian. It is noteworthy how large a part of this volume is made up of publications designed for advertising or party purposes. For this reason Archdale's "Description of Carolina," 1707, is particularly welcome as a sober historical work. Among the early selections Tavernen's account of his voyage in 1632 might well have been included, since, though brief, it is an interesting narrative and has never been printed.

Since Unitarianism is an attitude of mind rather than a fixed body of doctrine, the attempt to define the religious beliefs for which Unitarians stand is attended with great difficulty. Prof. Ephraim Emerton of Harvard University essays the task in a volume entitled "Unitarian Thought" (Macmillan). He endeavors to show that Unitarianism is neither a religious philosophy nor a system of morals, but a vital and earnest faith. He is also concerned to prove that Unitarians are not occupied exclusively with negations, but that their teachings offer positive and permanent principles. With these objects in mind he discusses the Unitarian position on such topics as Miracle, The Nature of Man, Jesus, and The Future Life. Liberal views are set forth with entire candor, in lucid style, with clear pronouncement on subjects of general religious interests. There is no attempt to make the Unitarian position less objectionable by concealment of its radical departure from accepted views or of its confession of doubt and uncertainty at many points where orthodox believers are more positive. The volume is well calculated to remove prejudices and spread information. It would be well if other respectable denominations engaged in similar propaganda, and did not leave all the proselyting to the religious vagarians.

The third volume of Hastings's "Encyclopædia of Religion and Ethics" (Scribner) maintains the high standard of the preceding volumes (see *Nation* for February 18, 1909, and April 21, 1910); the material is varied and full, the treatment in general satisfactory. The convenient "combination" form (an introductory general survey of a topic, with separate articles for the various regions or religions) is employed freely; so articles Calendar, Catechisms, Celibacy, Charity (almsgiving), Charms and Amulets, Chastity, Concubinage, Children, Circumcision, Communion with the Dead, Communion with Deity, Confession. The survey of the various calendary systems of the world is of permanent value, consisting of reports of specialists, with references to the original sources of information, so that the reader is in position to check the conclusions of the writers. The articles on celibacy and concubinage, in showing the degree of license that has prevailed in Christian ecclesiastical circles at certain times, suggest that the progress of Christian morality (like that of Greece and Rome) has been largely dependent on the general advance of society. Care for the poor as a human instinct is illustrated by the accounts of early charitable customs and institutions, pre-Christian and Christian. Usages in respect to circumcision are given in great detail, and there are discussions of the origin of the custom which mostly fall into the error of ascribing it to impossibly refined ideas (dedication to a deity and the like); but it is certain that it originated in a state of low savagery, and the motive for it must be sought rather in the desire for bodily enjoyment. In the article on communion with deity the term "communion" is often used in a loose way, being made to cover every form of approach to a supernatural power; but when the savage brings his offering and his request for some good, his one concern is that his prayer may be favorably received—it is only in relatively high forms of religion that there is anything like converse of souls, communion in the sense in which the word is generally understood.

One of the most useful functions of an encyclopædia of this sort is the gathering, from trustworthy sources, of the customs of low tribes whose history is not accessible to any but specialists. A large number of such tribes, in Asia and the Americas, are described in the present volume. Apart from the vast variety of religious usages, what is especially noteworthy is the persistence of lower customs where tribes have come under the influence of higher religions. The Mongolian Buriats have in part adopted Buddhism, but the old shamanism and crude polytheism assert themselves everywhere; in Buddhist Burma the actual religion of a large portion of the people is tinged with the old demonism, and this is true also to some extent of the Christianized Karens; the Chams of Indo-China have a queer mixture of faiths, Brahmanic, Buddhistic, Mohammedan, pagan. Some obscure tribes, like the South American Mozcas, and particularly the Chuhras of the Panjab show a remarkably high development; the system of the latter is so nearly like Christianity that one might suspect borrowing, but of this there is no proof. For the supposition of a Cherokee androgynous deity (p. 504, col. 1) there is no warrant in the facts. The more advanced religious systems are well represented; we have various Vaishnava sects, Buddhism in China and Ceylon, Calvinism, Christadelphians, Christian Science, the British Church, the Church of England, the Church Army, Clericalism and Anticlericalism, Communistic Societies of America. There are articles on the idea of the Church and on its doctrine, and a very elaborate history of Confessions. The article Christianity quietly assumes, without discussion, that the Christian religion is essentially the developed trinitarian system of the creeds, and ignores all other forms, so that it might seem as though the author of the article had never read the Sermon on the Mount. Among general religious articles we may note the excellent account (in Cæsarism) of how naturally the Romans come to the worship of the emperors. A very large and carefully prepared collection of facts illustrates the religion of the Canaanites in the time before the advent of the Hebrews. Under the heading Celts, the effort is made to put into shape what is known of the Gallic,

Irish, and British divinities and religious usages and ideas. The article Cherub, missing the chronological order of treatment (beginning with Eden and the wilderness tabernacle instead of with Solomon's temple), fails to note the Phœnician mythological character of the figure.

The Pali Text Society (Henry Frowde, Oxford University Press) has recently published, under the able authorship of Mrs. Rhys Davids, a translation of the important text called "Abhidhammattha-Sangaha," which was published by the same society in 1884. The translation, entitled "Compendium of Philosophy," appears as the work of a native Burmese scholar, S. Z. Aung, who has also written an introduction, with comments on the text in the form of an appendix. Mrs. Rhys Davids has furnished a preface containing the history of the text. To the general reader the most valuable part of the book is the introductory essay by Mr. Aung. The Compendium itself might better be called a compendium of metaphysical categories than a compendium of philosophy. It is a manual for students, written probably eight or ten centuries ago by one Anuruddha of Ceylon, a work later than the complementary "Visuddhi Magga," and differing from it in that the latter is psychological only by way of attaining to its ethical end, whereas the Compendium is solely psychological. The list of errata is rather trying to the scholar, betraying a somewhat perfunctory attention to details. To speak of other lands than India as "not the daughters—*orasā jātā*, mouth-born, of the Exalted One's own ministry," makes one wonder what "mouth" means. Can Mrs. Rhys Davids have been thinking of the Latin word for mouth?

Under the caption of "A Philadelphia Lawyer in the London Courts" (Holt) Thomas Leaming puts into instructive form the results of certain reading and observation. The volume would be welcome, even without the inappropriate excuse that "nothing in print is available" from which much can be learned concerning the judges, barristers, and solicitors of present England. Headlam's "Inns of Court," Pitt-Lewis's "History of the Temple," and Loftle's "Inns of Courts," are among the most recent of the several available books on one branch of the subject, while Duckers's "Guide to Students' Law Books" contains a full statement of the processes of becoming solicitor and barrister, and the "New Guide to the Bar," by "LL.B.," is most thorough and practical. However, it is common to treat the literature of the English bar as a sealed book. Even in his chapter on The Making of Lawyers, Mr. Leaming gives no reference to the prolonged discussion in England with regard to an improvement in legal education and the possible recognition by the Inns of the work of the universities, a movement not infrequently accompanied by the veiled threat of possible action by Parliament in limitation of the prescriptive rights of the Inns. Of the fifteen chapters in this book, two contain material somewhat new to American readers, that on Masters—the Time Savers, and that on Discipline of the Bar and Solicitors. It will surprise the American lawyer to note the large amount of preliminaries which are disposed of by a master in order to simplify and shorten the actual trial. Of the practice before masters, Mr. Leaming mentions the "tender of damages" as "one of the cleverest contrivances" of their practice, though it is apparently not unlike an "offer of judgment" as known in New York procedure. The chapter on discipline presents facts as to English standards and customs which may well startle some American practitioners. There is a chapter on the Central Criminal Court and one on the Dhingra trial, but neither these nor such chapters as that on fees add very much either to the facts or to the atmosphere which are found in Serjeant Robinson's "Reminiscences" or the "Life" of Baron Brampton. This is all the more to be regretted, as the style of narrative, the conciseness of statement, and the wealth of allusion make this book one which certainly the lawyer, and probably many laymen, will wish to finish at one sitting, and not hurriedly. The chapters on the fields of activity of the barrister and of the solicitor are well done; and throughout there runs a strain of sympathetic comparison of the English and American systems. We hope to see the author appear again, and as "A Philadelphia Lawyer at Home."

A new edition has been published of B. Lundstedt's volume about "Tidningsmän" in "Svenskt Porträttgalleri." It contains above 800 portraits with accompanying brief sketches, giving merely the chief biographical data, of men and women who during the last fifty years have been more or less regularly connected with the press of Sweden. As the Swedish newspapers, like the German and French, and to a much larger extent than the American, offer their readers scientific and literary studies of high value, they attract writers of reputation in all lines. Hence this volume will prove a useful reference book. The volume is, in a way, a supplement to the latter part of the author's bibliographical work "Sveriges periodiska litteratur, 1645-1899."

"Bihang II" to Claes Annerstedt's "Upsala Universitets Historia," containing documents covering the period between 1655 and 1694, has now been completed, after having been issued in parts with various "Rektorsprogram." Among the more interesting items in the volume we find, under date of 1687, the communications of the university faculties of medicine, theology, and philosophy concerning Carteslanism.

Clement B. Shaw, already known as translator of Tegnér's "Frithiof's saga," has again tried his hand, and with much success, at metrical translation from the Swedish; this time it is a translation of J. O. Wallin's "Dödens engel" ("The Angel of Death," Chicago: Engberg-Holmbery Pub. Co.). The stately stanzas, as well as the spirit of the original, are well rendered.

Col. Charles William Larned, dean of the United States Military Academy, and author of "The Great Discourse," died on Monday last, aged sixty-one.

Hiram Corson, who since 1903 had been a professor emeritus at Cornell, died a week ago at the age of eighty-two. In 1870 he was elected professor of rhetoric, oratory, and English literature at Cornell. He was noted for his reading of Tennyson, Browning, and Milton, and was the author of many books, among them being: "An Elocutionary Manual," "Handbook of Anglo-Saxon and Early English," "The University of the Future," "The Claims of Literary Culture," "The Idea of Personality and of Art as an Agency of Personality, as embodied in Browning's Poetry," "An Introduction to the Study of Robert Browning's Poetry," "An Introduction to the Study of Shakespeare," "The Aims of Literary Study," and "An Introduction to the Prose and Poetical Works of John Milton." Besides, he edited parts of Chaucer, Juvenal, and other writers.

Carlo Leonardo Speranza, professor of Italian in Columbia University, died on Saturday of last week, in his seventieth year. He specialized in Dante, and in 1897 was made a chevalier of the crown of Italy, because of his attainments in scholarship and his work in behalf of Italian immigrants in this city.

The death is announced of Dr. John Campbell, Oman, sometime professor in the Government College of Lahore, India, and author of "The Great Indian Epics," "The Mystics, Ascetics, and Saints of India," "The Brahmans, Theists, and Muslims of India," and "Cults, Customs, and Superstitions of India."

Dr. Paul Ewald, professor of New Testament exegesis, is dead in Erlangen, aged fifty-four. Among his important works are: "Uber das Verhältnis der systematischen Theologie zur Schriftwissenschaft," "Glaubwürdigkeit der Evangelien," and "Der Kanon des Neuen Testaments."

Science

Prof. Charles S. Sergeant is publishing through Houghton Mifflin Co. part iii, Vol. II of his work on "Trees and Shrubs."

The Century Co. has in the press "A Laboratory Outline of Organic Chemistry," by Prof. Lauder William Jones.

The grosbeak, it seems, is a much maligned bird, for, according to Farmer's Bulletin 456, just issued by Secretary Wilson, it serves its country by destroying certain of our worst insect pests, notably the potato bug.

The *Annales de Géographie* for May opens with a suggestive article by the editor, Vidal de la Blache, on the relation of human life to its geographical environment. He emphasizes the value of the different seasons in giving to man "numerous possibilities of intervention and initiative," while the uniform climate affords no such stimulant. In treating the forest problems he remarks that we must look for their solution to the United States. Among the other contents is an illustrated description of the ancient Ægæan lake in the Balkan Peninsula, contributed by Prof. J. Cuijic of the University of Belgrade. There is also an account, with a map, of the railways of Central America, by Count M. de Périgny. We regret that we must call attention to the erroneous statement in the geographical notes that "the United States has just bought the Galapagos Islands from the Republic of Ecuador, for the sum of 175,000,000 francs." To this supposed fact is attributed the recent scientific Chilean expedition to Easter Island, which has for its aim not simply the establishing of a seismograph but the affirmation of the ownership by Chile.

The spread of the plague and other epidemics during the last fourteen years is

described by Dr. R. Pöch in *Petermann's Mitteilungen* for April. With the aid of a chart of the world and a map of a part of eastern Asia he shows how the railways and the steamships have aroused from their sleep, as it were, almost forgotten diseases. The economic conditions of the Lesser Antilles are treated by Dr. K. Sapper, who says in conclusion that the study of these islands has given valuable information in regard to the worth of certain colonial institutions. In the notices of geographical literature special prominence is given to the publications of the United States Geological Survey. In the military section Major F. Immanuel emphasizes the strategic importance of Korea to Japan in her relations to China and Russia. There is also an account of the proposed fortifications of the Panama Canal.

A missionary book, embodying much sound doctrine, is "Farm Dairying" (McClurg), by Laura Rose. Its limited scope lends definiteness, its advice is clear and good, and the illustrations are well chosen. In fact, the diagrams showing the increase of bacteria under bad conditions are enough to convert even the old-style farmer to the use of cleanliness and ice. A useful feature is the dozen blank pages for notes.

A concise little volume containing much of interest, but virtually nothing new, to the student of geography is one recently prepared by Dr. Josef Stoiser, a member of the faculty in the Handelsakademie of Vienna, entitled "Grundriss der Allgemeinen Wirtschafts- und Verkehrsgeographie" (Vienna and Leipzig: Carl Fromme). The writer approaches the subject from the more modern as also from the scientific point of view, in that his study of economic or commercial geography is based first of all upon the physical sciences. The book is divided into six chapters, the first two of which, embracing about one-half of the whole volume, are devoted to the more significant matters in physical geography, and serve as an appropriate introduction to the treatment which follows.

A noticeable characteristic of Charles Morris's "Industrial and Commercial Geography" (Lippincott) is the plain though forcible manner in which the writer tells the story of the leading industries of the principal countries of the world, and of the commerce which results from the exchange of the surplus product of man's labor. The aim of the book, as stated by its author, is to show what nature has done toward preparing the various regions of the earth for human occupation, and what man himself has done toward adapting himself to natural conditions and modifying his environment. Furthermore, "it attempts to point out why the great cities of the earth have grown up where they are, and why some of them have become active centres of manufacture and others of commerce; why some lands are thickly and some thinly settled, and what are the products and industries to which the various nations owe their prosperity." In spite of this declaration, it seems fair to say that the present volume is partly open to the same general criticism as its elementary predecessors which have dealt with "commercial," "economic," or "industrial" geography, in that it contains, after all, much of description and comparatively little of actual explanation of the conditions portrayed. It is, nevertheless, less "dry" than was its typical predecessor, and its mastery will give the youths of our schools a pretty good idea of what man has done and is now doing with his physical environment. The book contains a liberal number of maps and illustrations, many of which have been reproduced by permission of the Philadelphia museums.

"Elements of Geology" (American Book Company), by Eliot Blackwelder and Harlan H. Barrows, is a clearly expressed and well-illustrated volume, which begins, as it should, with the minerals and rocks of which the earth consists. When these have been described, the physical changes in the outer shell, such as folds, faults, vulcanism, and metamorphism, are passed in review, and next the modifying effects upon the earth's surface from the atmosphere, the underground and surface waters, and the glaciers. An outline of the larger physiographic features concludes part i. The second part is devoted to historical geology. The several periods are described in succession, with discussions and illustration of their forms of life. The reader will find a few departures from current practice, such as the subdivision of the Carboniferous period, as ordinarily used, into two, the Mississippian and the Pennsylvanian, the name Carboniferous dropping out. The Lower Cretaceous, as ordinarily described, is made a distinct period and called Comanchean.

The death is reported from Edinburgh of Dr. Alexander Bruce, an eminent specialist in the diseases of the nervous system, and the author of several important books, among them: "Illustrations of Mid and Hind Brain," and "The Topographical Atlas of the Spinal Cord." He also translated Thoma's "Manual of Pathology," and Oppenheim's "Textbook of Nervous Diseases."

Prof. A. E. Törnebohm, the Swedish geologist, is dead at the age of seventy-two. He is remembered principally for his studies on the iron mines of Sweden and on Portland cement.

Drama and Music

The Origin of Tragedy. By William Ridgeway, Sc. D., F. B. A. New York: G. P. Putnam's Sons. $2.25 net.

Less than a generation ago, a classical scholar who ventured, like Andrew Lang, to illustrate Greek customs and Greek religious ritual by analogies with other primitive peoples, was regarded with suspicion. It was regularly assumed, if not definitely stated, that Greek civilization was set in a vacuum, and that to drag in animism and totemism, to illustrate the Demeter legend by the Pawnees, to say that the prehistoric past of Greece must have had much in common with the present of the lowest and most savage contemporary races, was to be terribly at ease in Zion. The anthropologists and the humanists were working at opposite ends of a tunnel, and very few of the humanists desired to be met half-way. Lang, Frazer's "Golden Bough," Ridgeway's "Early Age of Greece," Jane Harrison's studies in Greek religion, indicated a reconciliation, which is seen at its happiest in Murray's "Rise of the Greek Epic." Naturally, the anthropological humanists differ as much as the anthropologists themselves. Lang leans to totemism and taboos; Reinach makes totemism secondary to animism and the worship of the dead, to which he ascribes all that is deep and essential in religion.

Applying what is known as the anthropological method to test the traditional theory of the origin of Greek tragedy, the professor of archæology in the University of Cambridge decides that tragedy arose solely from the worship of the dead. His "Tomb Theory" has for some years been familiar to scholars, but in the present volume he offers it for the first time to the general reader. That Greek tragedy was Dionysiac in origin, an expansion of the dithyramb sung and danced by the worshippers of the Thracian god Dionysus; that it represented the sufferings of the wandering, immigrant god, whereas comedy sprang from the more licentious aspects of the cult; that the invasion of the heroic saga into the theatre was regarded as a slight to Dionysus and was resented by Athenian conservatives in the question, "What has this to do with Dionysus?" which passed into a proverb; that when Euripides, at the end of his life, wrote the "Bacchæ," he was reverting to the ancient usage; these are statements that may be found in any history of Greek literature. Aristotle tells us in the "Poetics" that tragedy developed from the earlier and coarser Satyric drama, and the scanty evidence for the beginnings of the drama that can be gleaned from the "Poetics" usually passes unquestioned. It will, therefore, be a shock to most scholars to find Mr. Ridgeway dismissing this passage as "Aristotle's error." If Aristotle is right, Ridgeway's ingenious structure falls to the ground. He believes that Greek tragedy did not arise in the cult of a deity, but rather from beliefs respecting the dead as widespread as the human race itself, beliefs which, in Greece, were manifest in the cult of the local hero, the rites performed at the hero's tomb. Tragedy is a form of hero-worship.

Aristotle once out of the way, Ridgeway easily discards another famous passage in which Herodotus (v, 67), relates how Cleisthenes of Sicyon, jealous of the worship paid at the shrine of the Argive Adrastus, whose misfortunes were celebrated "in tragic choruses," "restored," or "assigned" these dances to Dionysus. Ridgeway, whose theory demands that the worship of the hero shall antedate that of the Thracian god, translates ἀπέδωκε "assigned," and asserts that previous translators have ignored the fact that "when Herodotus uses ἀποδίδωμι in the sense of 'restore,' he adds ὀπίσω"

(page 28). He fails to point out that in the same passage Herodotus uses the uncompounded verb ἔδωκε for the honors of ritual assigned to Melanippus. Moreover, his statement about Herodotus's use of ἀποδίδωμι is incorrect. However, his case need not rest on the interpretation of this passage, which to be strictly fair, he should rule out as ambiguous. Instead of this, he proceeds, exactly like an Homeric critic, to use as positive evidence an arbitrary interpretation, and alludes throughout to the superimposition of the Dionysiac cult on the more ancient cult of Adrastus at Sicyon as an established fact. Just so he assumes as proved by himself, in defiance of Brugmann, that the choruses of Attic tragedy are not really in the Doric dialect, as has been taken for granted, but are "old Attic." This is in order to do away with the theory of the Dorian origin of tragedy and the development of the dithyramb by Arion.

But his most convincing evidence is drawn from the extant tragedies. There we find the prominence of the tomb, its use as an altar, libations to the dead, the use of graves as sanctuaries, the importance of ghosts to the community, as in the "Persæ," all indicating the primitive worship of the dead. Where there is no tomb you find the Kommos, which we must now regard as one of the most primitive elements in tragedy. Since the dead could affect the fortunes of the living, it was natural that tragedy should become an official function long before comedy, which was the offspring of the new and unclean cult of Dionysus. For we may note that Ridgeway is careful to ignore the tragic side of the worship of Dionysus, the aspect emphasized, for instance, by Pater in his "Greek Studies." How far Ridgeway's theory may carry one is shown by his statement that "Euripides wrote the 'Hippolytus' from the standpoint of one who was composing a drama to honor and propitiate the illustrious dead" (p. 147); on the "Rhesus," he says (p. 150): "No more fitting piece than the 'Rhesus' could be found for the glorification and propitiation of the spirit of Rhesus at his shrine in Thrace."

Ridgeway's theory is highly ingenious and he handles his material as ably as Verrall himself, in the act of discovering some totally new meaning for a Greek masterpiece. Both assume a conspiracy of silence among the Greeks in which we find it hard to believe. Ridgeway devotes only fifteen pages to analogies of the drama among savage tribes, such as the Malays, the Veddas of Ceylon, and the Tibetan Mystery Plays, and, in the cases cited it is not always clear that these performances are intended to propitiate the spirits of the dead. The chief value of the book lies in this, that even though scholars may not generally accept this view of the direct descent of tragedy from hero-worship, they are not likely to neglect for the future that preoccupation of the Greek mind with the hero-cult of which there is such strong evidence in the remains of Greek tragedy.

To the three plays by J. M. Synge, which they have already issued, John W. Luce & Co. of Boston, will add this month "In the Shadow of the Glen," the one-act tragedy which Mrs. Fiske produced the past season, and "The Playboy of the Western World."

Henrietta Crosman will be seen in a new play next season. It was written by Catherine Chisholm Cushing, and was produced at the end of last season by Miss Crosman on the road, under the name of "The Peacock and the Goose." When it is played at the Maxine Elliott Theatre this autumn it will be called "The Real Thing." Another play by Miss Cushing, called "Miss Ananias," will open in Chicago in September, with Adelaide Thurston in the leading part.

Anton Tchekov's "Cherry Orchard" did not make a favorable impression upon London critics on its first production at the Aldwych Theatre by the Stage Society. Says one:

> At the beginning of the second act, a German governess industriously informed the audience—apparently her most intimate friends—that she didn't know who she was or what she was there for. The spectators, in a still worse dilemma (since they didn't know who anybody on the stage was or what anybody on the stage was there for), must have heartily sympathized, and here lay the root of the afternoon's failure. To begin to understand Tchekov, you must grow a beard under the Czar. He is as intimately Russian as a cow is bovine, and you can no more translate the one into English than you can transmute the other into a sheep.

It is said, however, that Bernard Shaw characterized the production to Mrs. Edward Garnett, the translator, as the most important in England since that of "A Doll's House."

Gustav Mahler's last compositions are now in press. They include his ninth symphony and a cycle of songs for alto and tenor, with orchestral accompaniment, entitled "Song of the Earth." A prominent German critic, Paul Schwers, has expressed the opinion that the most valuable of Mahler's compositions are his various songs with orchestra, especially some settings of the "Wunderhorn" poems "which are gems of musical miniature painting. The treatment of the orchestra, which, in general, was one of the brightest sides of Mahler's accomplishments, attains in these songs a delicacy of coloring surpassing that of all others who have composed things of this kind." Another eminent German critic, Dr. Leopold Schmidt, writes that "Mahler's songs are a sort of specialty; most of them have an orchestral accompaniment. A peculiarly fine poetic fragrance pervades them; their source is folksong, modified by a strong personal temperament. The songs of 'Des Knaben Wunderhorn' and the 'Kindertotenlieder' will live when many things that now are sung will have passed away." As a symphonist, he was influenced by Schubert and the Austrian folkmusic, but he impressed his individual genius on his works, and in turn is now influencing others. "Whatever Mahler wrote not only looks well on paper, but sounds well, no matter how bizarre and complicated his procedure may be. He has thus really created an orchestral style of his own, which is already beginning to form a school. He was inexhaustible in his combinations of an intimate or piquant character, which could not but gratify even the most jaded musical epicures."

The first of this month Adelina Patti gave a concert at the Royal Albert Hall, London, for the benefit of William Ganz, who for forty years had been her accompanist, and who has now been disabled by an accident.

Richard Strauss has denied the rumor that he intends to write an opera in collaboration with D'Annunzio. His next large work, his friends say, is to be a symphonic poem with chorus.

The London Philharmonic Orchestra ended its ninety-ninth season with a concert conducted by Nikisch, with Katharine Goodson as soloist. The hundredth season of this famous orchestra begins on November 7 with Mengelberg as conductor and Rachmaninoff as soloist.

The Spaniards have been enjoying a "Festival Wagner" at Barcelona, where the four Nibelung operas and "Tannhäuser" and "Tristan and Isolde" were each performed four times within a month at the Gran Teatro del Liceo. This theatre holds 3,600 hearers, yet it was sold out for nearly every one of these twenty-four performances. They were conducted by Professor Koehler of Schwerin, but the singers used the Italian language.

According to John Towers of St. Louis, who has compiled a dictionary which mentions 28,000 operatic works, the most prolific of all composers for the stage was an Austrian, Wenzel Müller, whose operatic output included no fewer than 166 works. Next to him are Draghi, whose figure is 149; Piccini, who wrote 145 operas; Paisiello 123, Guglielmi 114, Galuppi 109, Offenbach 103, Sir Henry Bishop 102.

"We liked the music of 'The Count of Luxembourg' better than that of any musical play, English or Austrian, of the last few years," says the London *Times* of the latest production of Lehar, whose "Merry Widow" started the amazing series of works which have once more made Vienna the world's operetta centre, as in the days of Johann Strauss, Suppé, and Millöcker. The plot consists in a grand duke's wanting to marry Angèle Didier, the opera singer. But she must have a title before the Czar will consent. Therefore, the bankrupt Bohemian Count of Luxembourg shall be offered $100,000 to marry her without seeing her, shall leave her on the spot, and be divorced from her in three months. He consents, and then, of course, he and Angèle Didier meet and fall in love.

Raoul Laparra, the composer of a gruesome opera, "La Habanera," which has had some success abroad, intends to tour America next autumn to earn money enough for a year's residence in Japan, in which country he intends to place his next opera.

If Henry Russell carries out his scheme of taking the Boston Opera Company to Paris next spring for a series of French performances, he intends to have the composers conduct their own works whenever possible.

As Nikisch, who is undoubtedly the greatest orchestral leader of the time, can get only five weeks' leave of absence, he will be heard in only sixteen American cities during his American concert tour with the London Symphony Orchestra, beginning next April. The tour will begin in New York, and end in Boston; it will extend as far West as Chicago, and will include two Canadian cities.

John Oliver Francis, musician and composer, is dead at Plainfield, Conn., after a long illness of the brain.

Johan Severin Svendsen, the Norwegian composer, who is best known through his romance in G major for the violin, died last week in Copenhagen. He was born in Christiania, in 1840, where his father was a military bandmaster. He was taught to play the violin by his father, and wrote his first composition for that instrument when only eleven years of age. He studied in Leipzig, and while there he wrote his quartet in A, an octet, and a quintet, all for strings, quartets for male voices, and a symphony in D. Later he arranged the incidental music to Coppée's "Le Passant," in which both Sarah Bernhardt and Agar performed, and studies by Liszt and Schuhert. Early in 1871, his symphony in D was performed at the Gewandhaus, Weimar, and his fame as a composer was firmly estahlished. He met Wagner at Bayreuth, and soon became his close associate. For the five years, 1872-77, he was conductor of the Christiania Musical Association, and in that period was granted an annuity by the Storthing, and several decorations by the king. Svendsen was one of the most cosmopolitan composers of his time.

Art

THE PARIS SALONS.

PARIS, June 10.

In England it is said that if only the state gave its patronage to art, all would be right with the artist. In France the state plays the patron, commanding big decorations and acquiring works at the large exhibitions; hut all is not right with the artist by a good deal. He knows his trade better than the artist in England, his knowledge is sounder, he is much less afraid of hard work, and has far more vigor to put into it. But he seems to be passing through a moment when he has no special use to make of his admirable craftsmanship and energy, no special personality—or individuality, or originality, or whatever the great essential of all may he called—to express. To pass through the two Salons, with their rows upon rows of *machines*, their thousands of well-executed canvases turned out according to old out-worn patterns, is to understand, even to sympathize, with the wildest flights of the Indépendants on the Quai d'Orsay. It is in the endeavor to escape from the benumbing, stultifying grasp of convention that they have built up their impossible figures in cubes like a mathematical problem, and painted their purple and crimson nudes in the light that never shone on sea or shore or even in the studio, and dyed their horses with saffron, and distorted their portraits into caricatures that would be more in place with the Humoristes at the Palais de Glace. Though I remember the fate of pictures at the old Salon des Refusés and our scorn to-day for the critics who laughed then, I cannot helieve that masterpieces lurk unsuspected among the staring eccentricities of this year's Indépendants. But, still, I am not sure that their deliberate and self-conscious strivings after originality have not got more of the right stuff in them than the smug, correct hanalities of the artists long since arrived who show in the Champs-Elysées.

There, the new Salon, or Salon of the Société Nationale des Beaux-Arts, is the more disappointing hecause more is expected of it. Signs of fatigue or exhaustion are not only in the work shown, but in the work not shown. The Spaniards, headed hy Anglada and Zuloaga, have disappeared. So have Zorn and most of the Scandinavians. The distinguished Germans have for some years ceased to contribute. Frenchmen like Cottet and Simon, whose work of late has heen one of its chief interests, are absent altogether. Jean Veber, who recently has given to the collection a note of gayety, has nothing either among the paintings or the prints. Even Carolus-Duran fails to send, for the first time in the quarter of a century during which I have made regularly my annual visit to the Salons. Of the men who do send, there are few who have not been seen to better advantage in previous exhibitions. Besnard has a huge design, part of a ceiling for the Théâtre Français—one of those enormous compositions from which the British artist would shrink in fear but which the French artist undertakes as a matter of course, and moreover in possession of the necessary skill and strength for their accomplishment. As it is seen here, however, merely a fragment or a part, the composition does not explain itself. I hesitate, as with Sargent's lunette at the Royal Academy, to pronounce an opinion. In the centre of the design Corneille, Racine, Molière, and Hugo, treated heroically, are seated; to the right, Adam and Eve are tempted by the serpent, with the head and body of Lilith; to the left, allegoric figures are tumbling through space. As it is thus seen, apart from the other sections of the ceiling, the artist's intention and scheme are not clear, while the foreshortening, when the panel is hung as a picture, becomes unpleasantly violent and destroys the serenity and dignity of a decoration that must be set up in its appointed place before it can be appreciated. It may result from long work on this and similar designs, and the necessity of adapting his eyes to their perspective, that Besnard seems to have seen with something of the same foreshortening the figure in the portrait of a man which is his one other contribution.

Still, there are no decorative designs that can compete with his. Anquetin's La Bourgogne, expressed in Rubenesque forms and rococo ornament, and Roll's Le Libérateur, with cloak flying and horse prancing on a vague hilltop, must be carried out in the tapestry for which they are destined before they can he fairly judged. Caro-Delvaille grows frigidly academic when he deserts the "five o'clock" and interiors he knows for a classic group of nudes and semi-nudes, making L'Offrande des Amants, of which he knows nothing. Gillot has broken away sufficiently from tradition to find a theme for his Panneau Décoratif in the smoking chimneys and massive works of the modern industrial landscape, though he has not found with it the rhythmical lines and the harmonious color that are there for the artist with eyes to see and are indispensahle to fine decoration. However, it is stimulating to come upon work that reveals at least some independence and freshness of vision and motive. Repetition enfeehles, and men, who started out not so long ago with suhjects and methods that commanded attention and appealed to the imagination hy their new interpretation of old problems, have repeated themselves until their designs are apt to he passed by now with the one criticism, "Connus." For instance, Gaston La Touche, commissioned by Mr. and Mrs. McDougall Hawkes of New York to decorate a library and by "M. C." to decorate a vestibule, has produced two panels that may tell admirahly when each fills the space assigned to it, but that at the Salon seem merely variations of the theme that has preoccupied him for several years past. Aman-Jean, for two of his designs, has sought his models in the circus, or the side-shows, an unexpected departure from the land of leisure and elegance where his anæmic beauties droop and fade. But he has taken with him the old, pale, rose-tinged scheme and given to his new models the phantom-like forms of the weary ladies who trail their draperies and pose wearily among the flowers and foliage of his parks and gardens.

It is not solely in decorative work that repetition has had so pernicious an influence. The portraits suffer scarcely less. Had fashion not changed in the meanwhile, Boldini's three large full-lengths of women might be the same that have hung on the same walls, spring after spring, for years past: marvels of technique, amazingly clever, character exaggerated into caricature, the vagaries of the mode insisted upon

until the pictures seem huge and sublimated fashion plates, and not one word to say of them that has not already been said spring after spring. Gandara's sitters disappear in his records of the elegance and *chic* of fashion as cultivated by the Parisienne; and though for his Blanche an Eastern dancer has posed, he has not availed himself of his opportunities with conspicuous triumph. It is the same with the landscape painters; at one extreme, Ménard, re-creating, if on a larger scale, his own idealized hills and waters; at the other, Lhermitte, showing again the familiar river bank and ferry, fields and skies, with the realism to which he has too long been faithful. Already Le Sidaner appears to be at a loss for inspiration and returns to the little empty court and the table with its white cloth, all shadowy in the fading daylight, by which he originally won fame at the Salon, but from which something of the first subtle charm he gave to the place and the hour has passed. Better is an arrangement of several little tables set out in front of white and rose-flushed houses, with, beyond to the right, a stretch of dim blue water; though here too the effect depends upon the mingling of the fading daylight and the light burning within the houses and seen through a window or a glass door, as it has already been seen in so many of his paintings. Morrice has before this recorded much such elusive impressions as he now shows of the sea at St. Malo, the walk on the cliffs at Dieppe, and snow at Quebec; though he does so with a delicacy and harmony of color that repetition cannot quite stale. Myron Barlow evidently is conscious of the danger if he continues to linger over-long in his cool low-toned rooms with the soberly-robed women who work or rest there in a tranquillity that is almost statuesque. In two canvases he keeps to his favorite scheme; in a third, one of the tranquil women has wandered as shepherdess into a cool green wood with which her cloak is in pleasant harmony. This harmony is perhaps too obviously found, the landscape background too obviously built up, in the studio, but it has helped the painter to escape from the bonds of a hard and fast formula. Frieseke, in Jeunesse, paints a dressing room or boudoir filled with the elaborate hangings and stuffs and toilet paraphernalia he loves, the figures of the two girls posing in their midst becoming, as he sees them, but part of a graceful arrangement of still life. From this artificial atmosphere, which he understands and suggests with charm, he takes the bracing plunge he needs into the real open-air work in two studies of sunlight.

For careful observation, direct rendering, and amusing design, nothing interested me more than Hochard's impressions of the world and the people he knows. His men and women live on his canvas, and yet they are made part of a well-thought-out scheme of line and color. He has not had to arrange his Prussian officers and French soldiers in his studio, but painting them as he may have stumbled upon them by chance in their own surroundings, he has woven a really beautiful pattern from the repeated lines of gold given by the Prussian helmets and the repeated spaces of red by the French trousers. There is character in Charles Guérin's portrait of a lean, scrawny woman, L'Echarpe Rose, though his technique, the curious tapestry-like texture he gives to his paint, I must confess, annoys me; nor can I believe that character is only to be rendered by emphasizing all that is most ugly and ungainly in a sitter. Maurice Denis, for the moment, has left the decorative world of myth and fable to study the very real effects of light upon sea and beach and bathers. I am not sure that his primitiveness is so well adapted to these subjects; the naïveté with which he paints his women and children at the seashore seems at times a trifle strained. But there is no question of the truth of the atmosphere that envelops them and of the quality of their flesh steeped in sunlight; nor, indeed, when the figures are clothed, of the decorative value in the composition of the stiff, archaic folds of their drapery. Beyond these things I saw little worth recording, save, perhaps, the Marché Noir au Sénégal by Antoni, put in with vigor and some feeling for character; the rich, radiant landscapes of Flandrin, artificial in the shapes of the trees and their rendering, but so vivid that the near pictures fade into empty shadows by comparison; and the streets of Paris by E. Scott, rather feebly constructed, it is true, but not without conscientious searching for color and tone. The crowd, not of my mind, still gathers in preference about the neatly-told anecdotes in paint by Jean Béraud and the humorous tales by Guillaume.

Of the paintings at the old Salon, it is useless for me to say much. Why repeat what I have so often written of Bonnat's truth, almost photographic, in the portraits in which his one background has become as inevitable as once was the photographer's rustic bridge; or of the two Bails and their arrangements of brass and linen; or of Harpignies and Pointelin? Pointelin's empty moorland grows emptier with time, that is the sole difference; but Harpignies this year has evolved a new arrangement of trees and sacrificed nothing of the dignity of his landscapes in doing so. Henri Martin, whose work is usually one of the redeeming features of this Salon, has nothing. The Spaniards who show with the Artistes Français have lost something of the animation that often made their big canvases a welcome relief to the prevailing commonplace. Zo remains the most interesting, though not so much in his big canvas, with its now familiar Spanish types, as in a little Cordova, with a tender beauty in the distant hills and the sky that he has not accustomed us to look for in his pictures. The Americans, too, are less prominent. Richard Miller's La Toilette, a subject in which he, like Frieseke, delights, has fine passages in the painting of the delicate hangings and the rich silk gown. A portrait of President Taft by Madame de Wentworth is successful chiefly for evading all expression of the character in which surely her sitter is not generally supposed to be wanting. Though good things may be hidden away in the miles of canvases, I recall nothing else important enough for special mention. An idea of the dulness of the exhibition will be given if I add that its *clou* is Grun's enormous Vendredi au Salon des Artistes Français, in which, I believe, the many figures crowding the foreground are portraits—the sort of work that, done on a small scale and reproduced in an illustrated paper, would have had perhaps the value of news and the spice of personality.

The standard of the sculpture is higher. There seems a genuine demand for sculpture in France as well as sculptors fully equipped to supply it. But here, too, the conditions of the big modern exhibition force the exhibitors into excesses, and in their strenuous bid for notoriety, allegory runs riot and action is exaggerated. Of special interest to Americans is MacMonnies's fountain for Denver. Not the allegory, but the life of Colorado has been his inspiration. The hunter and miner, the woman of the pioneer and all the figures that adorn it belong to the country as truly as the youths of the frieze of the Parthenon belonged to Greece. In the new Salon Rodin's bust of the Duc de Rohan is as vigorous a piece of work as he has exhibited for some time, the head noble and dignified, the modelling expressive, the character strong. Striking, too, is Bourdelle's bust of Charles-Louis Philippe, the face lined and tired, unmistakably a portrait. His bronze of a young girl has more charm and grace than, as a rule, he tries for in his work.

The drawings and prints have been more remarkable. Some of the draughtsmen are claimed by the Humoristes whose exhibition, close by, is open just now and so a rival. Etchers and lithographers keep much of their best work for the shows of their own societies. The old Salon continues to devote most space to the reproductive men. Original etchers and lithographers are few. Among the wood-engravers, I found neither Cole nor Wolf. At the new Salon Bauer has three of his impressive etchings of Oriental subjects by which he helps one to forget that

the large plate is "an offence," though, that it is, a reminder follows quickly in the big sprawling prints of Chahine. Louis Legrand has a group of his masterly dry-points, always interesting technically, but varying little in motive, and also an etching printed in color which is used sparingly and as it should be in a few simple touches and flat spaces—a reproach to the manufacturers of the huge elaborated color prints now produced by the hundreds, simply in deference to a passing fad or fashion. If Veber does not exhibit, there are echoes of him in the work of Le Petit, who pays him that undesirable form of flattery said to be the most sincere. Florian and Lepère are both well represented. The sky-scrapers of New York figure in plates by W. Hale and H. Webster, and D. S. MacLaughlan sends three prints, in the Alps, in Venice, and on the Thames. N. N.

Finance

THE GOVERNMENT THREE PER CENTS.

Saturday's sale by the United States government of $50,000,000 fifty-year 3 per cent. bonds to the highest bidders, was in two ways an interesting landmark in our national finance. It is the first bond issue since the Spanish war to bear a higher interest rate than 2 per cent., and it is the first since the National Bank act of 1863 in which the value of the bonds was not artificially enhanced by their privileges of use by national banks as security for note circulation. In both respects these new bonds embody the policy advocated in his first annual report by Secretary MacVeagh. In December, 1909, the Secretary declared that it was, in his judgment, "high time for the government to realize that it does not have a 2 per cent. borrowing power and has never had," and he added that "no government, however rich, has a 2 per cent. borrowing power," and that "possibly it would have been better never to have issued 2 per cent. bonds, or bonds at any rate of interest below the borrowing power of the government in the open investment market."

The Secretary did not mean that 2 per cent. bonds had not recently been sold at par or better; the Panama Canal has thus far been financed on that basis, so far as it was financed by loans, and another 2 per cent. issue might possibly have been placed this month, had the bonds retained the "circulation privilege." But it has long been recognized that this use of government bonds gave a wholly artificial price to them. The fact that the government's borrowing power was thus artificially supported on the market was stated, some years ago by so impartial a foreign critic as M Leroy-Beaulieu, as an apparently hopeless obstacle to the placing of the banknote currency on a scientific basis. He argued that to dispense with the "circulation privilege" and assign some other basis for the currency, would make it impossible for the Treasury to borrow on 2 per cents, except at a price of 90 or less, and he inferred that any such step would be opposed in the interest of the government.

But it was an equally significant result of our old system of bond-secured banknotes that the circulation itself could never normally expand and contract under such machinery. It has been the history of that circulation, almost from the start, that its outstanding volume has increased or decreased, not in accordance with the general trade activity or inactivity of a given year, and not even in response to the normal fluctuation of trade demands for circulating medium at different seasons, but almost exclusively according as the government was issuing new bonds or redeeming old ones. In seasons of intense business activity the Federal revenue would invariably increase; the outlet for an unwieldy surplus was redemption of debt. But re-purchase of outstanding bonds meant removal of the collateral against existing bank circulation, and thus it happened that the currency supply repeatedly decreased when the need for it in trade was at the maximum. Conversely, when trade was dull and the public revenue deficient, new government bond issues would often be the sequel. Since the banks were almost the only customers for sales of 2 per cents at the prevalent fictitious price, and since these banks had little use for the bonds, except for the purpose of increasing their circulation, it also followed that the currency frequently would expand when the need for it was actually diminishing. Such expansion, in the face of the slack demand from our present inactive trade, would undoubtedly have followed the sale of $50,000,000 2 per cents, this month, with the "circulation privilege."

It was this abnormal situation with which the Treasury undertook to deal, and Saturday's 3 per cent. loan offering was the first step. Naturally, under such circumstances, great interest was bound to converge on the question what price the new bonds could command, without that artificial privilege, and who would take them. The Treasury has now examined Saturday's tenders, and it appears that the price of the bids ranged from a fraction above 102 to a fraction above 103, and that the average price for the actual allotments will be somewhere around 102¼.

This may fairly be called a very successful sale. It is not perhaps a wholly accurate measure of the government's future borrowing power, since, in the first place, a period of trade depression, large accumulations of idle money, and distaste for stock speculation, is exceptionally favorable to the market for "gilt-edged" bonds, and, in the second place, the new 3 per cents still enjoy indirectly part of the "circulation privilege." They cannot be used as security for new banknotes, but they may be exchanged, by a bank which holds them, for such of the $63,000,000 outstanding 3 per cents of 1898 as may be lodged in other quarters than the national banks. There are something like $40,000,000 of those bonds in that position.

But whether it is or is not premature to assume that the United States will hereafter be able to sell its 3 per cents at 102 or 103, the price obtained in this sale makes possible some interesting comparisons. The banking syndicate which financed the Treasury's gold reserve in the desperate days of February, 1895, on the basis of a 4 per cent. loan at an exceedingly low price, offered par for 3 per cents, if made expressly payable in gold. The 3 per cent. War Loan of July, 1898, was offered at par and enormously oversubscribed; the bonds sold on the open market at 112 a year or so afterward. In both these instances the "circulation privilege" was an element in the calculation. If that is allowed for, it may be said that the price of this month's 3 per cent. loan is far higher than that proposed in 1895 and not so very much lower than the market price of the older 3 per cents in 1899 and 1900.

Not less interesting is comparison of these bids for our 3 per cents, on a legitimate investment footing, with the price of European national securities. The 3 per cent. *rentes* of France bring this week about 95⅜ on the Paris market; German Imperial 3 per cents sell at 82½, and British 2½ per cent. consols at 79¾. Along with the recent advance of 3 or 4 per cent. in the price of New York city bonds, the outcome of Saturday's sale may be taken as indicating a sound condition of the general investment market.

AN EPOCH-MAKING WORK IN WHICH THE AUTHORSHIP OF OUR FEDERAL CONSTITUTION IS, FOR THE FIRST TIME, EXPLAINED

THE ORIGIN AND GROWTH OF THE AMERICAN CONSTITUTION

By HANNIS TAYLOR

"As Mr. Taylor treats it, the Constitution need no longer be reserved for the dry perusal of professional students. His pen makes a human interest story of it, as engaging and marvellous as any other chapter of history. It tells clearly how, emerging from youth to adult stature, it has carried its increasing burdens lightly and naturally, fully justifying not only all the hopes of those who fathered it, but the high opinions pronounced upon it by the world's best judgment." —*New York World.*

"A vast field is traversed, and facts are brought out which are sure to claim the interest of all students of American constitutional history."—*Washington Post.*

School Advertising in The Nation

The Nation stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes —lawyers, physicians, bankers, and other professional men— and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

VOL. XCII.—NO. 2400 THURSDAY, JUNE 29, 1911 Reg. U. S. Pat. Office. PRICE TEN CENTS

UNQUESTIONABLY
THE GREATEST BOOK IN YEARS

MY LIFE

THE AUTOBIOGRAPHY OF

RICHARD WAGNER

Written by one of the most striking personalities of modern times; kept secret, for urgent reasons, during the twenty-eight years since the author's death; this great work is now to be published in Germany, England, the United States and many other countries.

THINK OF IT!

Wagner wrote this autobiography from memoranda that he had kept for thirty-five years; a king transcribed part of it at his dictation; some eminent literary critics who have seen the manuscript say that this is one of the most remarkable books of recent times, and will stand among the world's most famous autobiographies.

The way in which this remarkable autobiography came to be written and kept secret for forty years is a matter of more than usual interest. Between the years 1868 and 1873 Wagner compiled his memoirs from diaries and other memoranda which he had kept for thirty-five years. As these memoirs were extremely frank, and discussed not only the affairs of the author, but the affairs and characteristics of prominent people of the time who were well known to the writer, Wagner took the utmost precautions to keep his work a secret. The book was set up by French compositors who did not understand German; twelve copies were printed; and the type was then distributed. Of these twelve copies, eight were entrusted to Frau Cosima Wagner and four copies were distributed among the author's nearest and dearest friends. The greatest care was exercised in the event of the death of any of these five people that the closely guarded memoirs should be turned over to one of the survivors. In this way the secret was kept so closely that although Wagner died twenty-eight years ago, very few people even in Germany have known his Autobiography was in existence. Its publication means the release to the artistic and music-loving public of the civilized world of a book of the most intense interest.

Letters and Memorials
OF
Wendell Phillips Garrison
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Mrs. Wilfrid Ward's New Novel

THE JOB SECRETARY

Crown 8vo. $1.20 net; by mail, $1.30

New York "Mrs. Wilfrid Ward has made an interesting study of the processes of the human mind. An English novelist, whose home relations are most cleverly indicated, has need of a temporary stenographer and secretary. One is supplied, and he is put into the trying position of finding her perfectly useless as hands for him, but most useful as a thought stimulant. His story progresses under her free discussion, and, almost unconsciously to him, it becomes her story instead of his own. How it is related to actual fact, and how it is used to untangle misunderstanding and restore happiness to a man and his wife, unhappily apart, it would be a pity to tell here. There is an accustomed tone in the author's style and use of material which gives value to her work."—*The Outlook.*

San Francisco "The two men and three women to whom the story is confined are skillfully drawn, while the comedy vein is as pleasing as it is distinctive."—*Chronicle.*

Boston "The theme is treated with the skill that characterizes Mrs. Ward's work in general."—*Herald.*

London "A short, unlabored, and kindly book, with a perfectly happy ending."—*Times.*

Edinburgh "Readable and enjoyable from first to last."—*Scotsman.*

Liverpool "There is a good deal of originality in the story, and some clever bits of characterization."—*Post.*

THE PUBLIC LIFE OF JOSEPH DUDLEY

By EVERETT KIMBALL, Ph.D., Associate Professor of History in Smith College. 8vo. $2.00 *net*; by mail, $2.14.

A study of the Colonial Policy of the Stuarts in New England, 1660-1715.

HALF A MAN

The Status of the Negro in New York.

By MARY WHITE OVINGTON. With a Foreword by Dr. FRANZ BOAS of Columbia University. Crown 8vo. $1.00 *net*; by mail $1.10.

"'Miss Ovington's description of the Status of the Negro in New York City,' writes Dr. Boas, one of the most eminent anthropologists of the country, and the chairman of the committee under the auspices of which these investigations have been conducted, 'is based on a most painstaking inquiry into his social and economic conditions, and brings out in the most powerful way the difficulties under which the race is laboring, even in the large cosmopolitan population of New York. It is a refutation of the claims that the negro has equal opportunity with the whites, and that his failure to advance more rapidly than he has is due to innate inability.'"—*Chicago Post.*

The COMIC SPIRIT in GEORGE MEREDITH

An Interpretation.

By JOSEPH WARREN BEACH. Crown 8vo. $1.25 *net*; by mail, $1.35.

The author considers the comic spirit in Meredith's novels their chief distinction, an aspect of his work much ignored by critics in their preoccupation with his amazing style and philosophic message. On this basis the significance of Meredith's work as a whole is discussed, and individual novels and characters are interpreted.

THIRD EDITION NOW READY

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

First Edition, October 1st; Second Edition, November 21st; Third Edition, March 1st

Fully illustrated with portraits and other illustrations. With copious notes and bibliography. $5.00 net. Postage 26 cents.

The Nation

NEW YORK, THURSDAY, JUNE 29, 1911.

The Week

Certain phrases serve as a kind of touchstone in revealing a man's attitude toward a protective tariff. A "Chinese Wall" is one of them, and President Taft used it in his speech at Providence last Friday night. When the head of the protectionist party makes that condemnatory description of a high tariff his own—coolly adopting the language of free-traders—it is enough to make the ancient and rock-ribbed standpatter rub his eyes and feel of his head. There is a phrase on the other side, formerly used by good protectionists, and even employed by the innocent Mr. Dingley in 1897. This is the one expressing the wish that our sacred country were surrounded by "a sea of fire," so that not an invoice of hated and contaminating foreign goods could reach our immune shores. That test of high-tariff orthodoxy has long been dropped, as too exacting except for isolated saints of the protectionist church. But it must look to the faithful as if the very foundations were being destroyed when a Republican President declares that the days of the Chinese Wall in tariff matters are over. Yet it was all along probable that the blast on the horns of Canadian reciprocity would cause that antiquated barrier to crumble and fall like the walls of Jericho.

The President's eulogy of the Supreme Court at New Haven calls attention to the fact that destiny has, after all, been kind to Mr. Taft in giving him what he wanted. More than to be President, Mr. Taft desired to be a member of the Supreme Court of the United States. That ambition was denied him; but it has been granted him in full measure to shape the personnel of the court, and, through it, the future of the nation. No less than four of the present justices are Mr. Taft's appointees. The court's complexion may be fairly said to represent the President's own views upon the great measures which it is called to pass upon. Mr. Taft is not the kind of man that rises to his full strength in advocating popular policies. We need only imagine his predecessor saying of a measure to which he was opposed, "I am bound to confess it will do no real harm, but I don't like it." That is Mr. Taft; and that is why he has not impressed himself on the imagination of the country as some other Presidents have done. But as things have fallen out, it is doubtful whether any legislative programme Mr. Taft might have carried through would serve him as well in the final appraisal of history as his efforts and solicitudes in connection with the Supreme Court.

That the Delegate of Arizona in Congress, presumably speaking for his constituents, should have asked the Senate committee to strike out from the Constitution of the proposed State the provision for the recall of judges, does not surely indicate that this will be done. It does, however, indicate two things. One is that the people of Arizona are not prepared to make the recall an article of a standing or falling Constitution; the provision appears to have got in happy-go-lucky, without any especial zeal on the part of the voters. The other is that the weight of discussion of the proposal has gone heavily against the recall of judges. Seldom has so pronounced and authoritative an expression of opinion been called out, and apparently Arizona perceives the need of giving heed to it. If the measure were separately put to vote in that Territory the probability now is that it would be decisively rejected. It is a somewhat awkward coincidence that Arizona should be making ready to abandon the recall of judges just at the moment when the Contributing Editor of the *Outlook* came out in an article vehemently arguing her right to have it.

What practical conclusion did Mr. Hill of Connecticut expect the House to draw from his story of the beautiful Russian shawl which he unfolded the other day to the gaze of his fellow-Representatives? He had bought it, he said, for $25, and had paid 60 per cent. duty on it, but that was "too little by far," for it would have cost $150 in the United States, and we could not duplicate it. Is it Mr. Hill's idea that the duty, instead of 60 per cent., should be 500 per cent.? That is apparently the rate that would be necessary to cover the difference in cost of production; and if it is a national disgrace that we permit the poor Russian weavers of these shawls to undersell us, and keep us from making their beautiful products in our county, 500 per cent. duty is what American patriotism demands in the case. If we were to clap on that duty, it is true enough that the result might not be that we should make the shawls in America, but that we should do without them altogether; but what does that signify when a sacred principle is at stake? Indeed, in the matter of the shawls, no momentous consequence follows either way, so far as the American people are concerned; but the same policy works similarly in the matter of blankets. We have been putting on woollen blankets duties in the neighborhood of 100 per cent., and the consequence has been that the vast majority of the American people get along as best they can without them.

Even in such a matter as custom-house frauds it is worth while to make distinctions; and in the particular instance of the cutlery undervaluations there is a point which, whether it ought to be regarded as an extenuating circumstance or not, is at all events worthy of notice. It has been stated by custom-house investigators that the great bulk of imported cutlery has come in at valuations shaved just barely below certain "dead lines" that would double or triple the duty if crossed; and it was also stated—in keeping with this—that in a lot of forty-three cases of cutlery valued at $10,243 there was found to be an undervaluation of only $866, but a loss of customs revenue amounting to $3,379. Now this is a sort of thing which ought to be impossible, and for the possibility of which a vicious method of rate-making is responsible. It is a fundamental maxim of taxation method that no such break of continuity should exist. In levying an income tax, for example, it would be a most vicious plan to exempt incomes below $2,000, say, and then, in cases of incomes above that amount, to tax the whole income; the only proper way to do is to tax the amount in excess of

the $2,000, keeping that exempt. Otherwise, there is an irresistible temptation to misrepresentation—you can't expect a sinful man whose income has been $2,010 to state it exactly, when the acknowledgment of the last $10 means subjection to tax on $2,000 also. This elementary principle of right method in taxation is violated in the sudden rate-changes occurring at innumerable points throughout our beautiful tariff system; and the resulting abnormal temptation to make slight undervaluations, resulting in great saving in duties, should be laid to the account of our tariff-makers.

Trenton's adoption of the commission form of government is an event of first-rate importance. That it is the capital of an Eastern State so important as New Jersey would alone give the result great significance; and, as a matter of fact, Trenton is not only one of a very few Eastern cities to have taken the step, but—with its nearly 100,000 inhabitants—it is the largest of them in population, and is a far more typical city than Lynn, Mass., the only other Eastern town with a population approaching Trenton's that has adopted the new form of government. The primary things aimed at by the commission plan are the concentration of responsibility, the better organization of administration, and the fewness of the elective officials; but in the New Jersey scheme there is one other feature of cardinal importance. We do not refer to the recall; that has attracted an altogether disproportionate amount of attention, especially since it is not applicable, under the New Jersey statute, until the expiration of a year of the officer's term. What we do mean is the elimination of party, in so far as it is possible to do that by law. Nominations for the commission are to be made by petition only. There is to be a primary election, which is virtually a free-for-all affair; and then comes the final election, at which there appear on the official ballot the names of those whose votes stood highest in the primary election, the number of names placed on the ballot being twice the number of commissioners to be elected. Not a word about party in the whole of this machinery—and if it shall prove to eliminate party, or even relegate it to comparative insignificance, in municipal affairs, that of itself will be a blessing whose value it would be difficult to overestimate.

The Poughkeepsie regatta has been called the greatest sporting event of the year, and for several reasons. It brings together more contestants, counting by colleges and individuals, than any other competition outside the field and track intercollegiates; and those are more properly a programme than a single event. It is viewed by more spectators than even the best attended of football games. It is the most beautiful of all contests to watch. But, above all, it exhibits an unparalleled example of physical and nervous discipline, in the spectacle of men submitting to a year's laborious preparation for a single twenty minutes' test. Football in this respect falls far behind. The Yale team may be pointed for the single struggle with Harvard, but football works its way to the climactic event through a long series of contests, which always offer partial compensation for final defeat. But, with a solitary exception here and there, the crews who rowed at Poughkeepsie Tuesday afternoon had this sole race to stand or fall by. The supreme effort in this case is also the first effort. A crew that enters the contest unaffected by the nervous strain of months of preparation has undoubtedly given evidence of the very high capacity to which the human body can be developed.

The value of a college education can now be reckoned in dollars and cents. The one hundred members of the class of 1900 at Dartmouth have been canvassed, with the gratifying discovery that they are receiving incomes averaging above two thousand dollars. One of them earns six times this amount, and eleven others receive from $4,000 to $7,500 each. These men have been out of college but a decade, and they are presumably not yet at the maximum of their earning power. Nor is there any reason for supposing that Dartmouth's sons are more successful than their brethren of rival institutions. It was long since disclosed that the college graduate had a better prospect of getting his name into "Who's Who" than the man without a degree, and now it seems that he has what will count much more heavily with many persons, namely, the likelihood of a larger income than have those to whom Sophocles is not even a faded memory.

When the villagers of Hadley, Mass., were fighting desperately in one of the assaults of King Philip's war, an aged man with flowing white hair and beard suddenly appeared and took command of the battle. Although many thought him an angel sent from heaven, he turned out to be Goffe, the regicide, who had long been hiding in the town. Something like this experience seems to have befallen Wichita, Kan. On a recent afternoon, the school-children were dismissed in order that they might listen to a lecturer who had been brought to the town by accounts of its civic corruption. The stranger made a study of the conditions in Wichita and conferred with the Mayor and the city commissioners regarding means of bettering them. And then—he was gone. His name, however, was learned, and his expenses paid. In this dramatic way Professor Zueblin instituted what may easily develop into a great profession, that of consulting reformer. We have had the man who sat in his library and wrote, and the man who sought to improve things by taking an active part at the polls. But now comes the expert, bearing a store of general information and theory in one hand, and a schedule of local details in the other. Here to-day and gone to-morrow, what is to prevent him from leaving in his wake a continually lengthening line of towns that, under his magic touch, turned from Babylons to Utopias between noon and sunset?

Harrisburg, Pa., has hitherto been more famous for its politics than for its æsthetics, but this one-sided development is being corrected. George Gray Barnard has nearly completed the artistic feat of draping the groups of statuary that adorn the entrance to the Capitol. Their original condition, it will be remembered, shocked the sensitive Pennsylvania legislators. The hand of a master, say the dispatches, is shown in the skilful way in which the delicate task has been performed. The triumph lies in the choice of material which can be removed at any time without disfiguring the statues. Here, therefore, we have the novelty of adjustable art. Whenever the Keystone statesmen conclude to imitate the ancients, they can

do so with ease. Mr. Barnard, however, refuses to touch one undraped figure of a youth, upon the ground that he would only make it look ridiculous.

The heart-rending occurrence at Nantucket ought to have the effect of making some impression on the persons who indulge in the thoughtless but terribly mischievous and reprehensible habit of throwing away lighted matches or burning cigar or cigarette ends. It is true that in this case there was a contributory element, as gasolene had been used to oil the floor of the room which was set on fire. But disasters of like character are constantly occurring through the same cause. The Washington Place fire in New York, with its horrible loss of life, was almost certainly caused in this way. The official, and probable, explanation of the great Baltimore fire in 1904 was the throwing of a lighted cigar or cigarette on the sidewalk, and its being blown into a warehouse cellar on top of a pile of rubbish. Of the enormous loss by fire in our country, and the loss of life that goes with it, a very considerable proportion is caused by this indefensible habit. It ought to be made a criminal offence. The benefit of doing so would come not only from the fear of punishment, but still more from the association it would beget in people's minds.

A brand-new argument against Home Rule for Ireland has been discovered by the *Spectator*. It was suggested by "a series of menacing and provocative questions in regard to the action of the French troops in the neighborhood of Morocco" put to Sir Edward Grey by Mr. Dillon. Happily, the "dignified and very proper answer" of the Secretary for Foreign Affairs at once removed any possible cause for French resentment, but the incident is full of ill omen in the eyes of the *Spectator*. Only suppose that the disturbing Irish leader were the moving spirit in an Irish Parliament, what would prevent him from vilifying France or any other foreign country, or even from passing resolutions condemnatory of French action? To be sure, France, as a specially friendly Power, would do her best to help the humiliated Cabinet at Westminster out of the difficulty. But imagine it were Germany. Suppose that the German Chancellor explained that he knew he could not hold England responsible for things said in Australia or Canada, but that, as Ireland was expressly precluded from dealing with foreign affairs, and was situated in Europe, either England would have to stop its subordinate Parliament from insulting foreign sovereigns or the latter would have to find a remedy for themselves. Well, in such a crisis it is to be feared that the insulted sovereign would have to exercise the same common sense that marks the treatment by the English Parliament of the frank expressions of our State Legislatures upon the duty of England to give Ireland a Parliament of her own.

Hostility to the principle of proportional representation is assigned as the chief cause of the overthrow of the French Cabinet. M. Monis had put that reform upon his programme. The setback, however, can be regarded as only temporary. The agitation for electoral reform has made such rapid headway that no Radical Ministry can hope to make a stand against it without adding immensely to the prestige of the Moderates and Conservatives who have long been in a minority in the Chamber of Deputies. Electoral reform under the Third Republic has hitherto taken the shape of repeated experimentation with the so-called *scrutin de liste* and the *scrutin d'arrondissement*. Under one system the members of the Chamber are elected on a general ticket for each department, corresponding to our mode of choosing Presidential electors. Under the other system they are chosen from separate districts within the departments, as is the case with our Congressional districts. Both methods have been tried and discarded, according as it suited the majority in power at the moment. But neither method has been found capable of producing a Chamber that should exactly mirror the various shades of opinion among the electorate. According to the contention of the advocates of the proportional system, the rights of the minority have always been sacrificed.

The principal argument against the proposed reform has dwelt on the unwieldy nature of the machinery of proportional representation. Several formulas have been worked out for arriving at a just distribution of representatives between majorities and minorities, but none of these can be accounted perfect. The real motive of opposition is found in the natural desire of every party in power to let well enough alone. The Radical forces that have been in control of the French Government since the days of Dreyfus are averse to any measure that may endanger their monopoly of power. But there is at hand, nevertheless, a less selfish argument against the proposed change. Under the two-party system as it has hitherto obtained in Great Britain and this country, a proportional division of strength between majority and minority is not necessarily fatal to effective government, since party discipline will enable a Ministry to maintain itself even with a slender majority at its command. "Insurgent" movements among us take years to develop. But under the Parliamentary "group" system that obtains in France a Ministry must have an overwhelming majority, indeed, if it is to survive the sudden defection of any one group among its supporters. Proportional representation, by preventing bumping majorities, will probably make a Ministry's position less secure than ever in republican France.

Sentence has been delivered in the case of Duez, government administrator of the dissolved religious congregations in France, who was found guilty of embezzling the handsome fortune of six million francs. The case brings up once more the disappointing financial results which have attended the liquidation of Church property sequestrated under the Separation Law. One statement has it that of an expected $200,000,000, less than one and a half million dollars was turned into the state treasury by Duez. This is gross exaggeration, of course. Even the most reckless of grafters would be incapable of such wholesale pillage. A soberer explanation of the fact is found in the bitterness with which the Church has fought the liquidation of its property. Expensive lawsuits have been instituted by the descendants of original donors for the recovery of ecclesiastical property that had been diverted from its primary purpose. There would seem to be little doubt that a great deal of the former Church holdings has been disposed of at ridiculously low prices. The land speculator has his innings in times of conflict between Church and State.

LIGHT FROM GUGGENHEIM.

Mr. Daniel Guggenheim, sailing for Europe on Tuesday, confessed that he embarked as an unhappy man. His sorrows are not personal; he was merely thinking altruistically of business conditions in this country, and they filled him with dejection. There is, for instance, the "tie-up of Alaska," for which "some one is responsible," and which is "very sad." But the main thing that makes mischief is the perpetual meddling of the Government in private affairs. How can we expect financial recuperation when there are these endless investigations by the Department of Justice, not because it "knows that our corporations are doing illegal acts," but solely to forestall "Congressional criticism"? True, the captains of industry and leading financiers are steadily predicting better times—are all the while telling us that with the railway-rate question or the Supreme Court decisions or the crop uncertainties out of the way there will be a boom—but none of these things comforts Mr. Guggenheim. It would appear that American magnates never are but always to be blest.

These plaints are no doubt typical; otherwise they would not be worth serious attention. Mr. Guggenheim utters the thoughts of many hearts. In some newspapers and often in the unstudied conversation of men having to do with large affairs, similar opinions are encountered. But it is highly probable that, if we were to look at the whole matter soberly and in the light of economic history, we should find (1) that conditions to-day are not so black as they are painted, and (2) that the causes assigned by despondent chiefs of corporations are not the ones which really account for such depression as afflicts us. Let these too quick despairers turn back to the years which followed the financial panic of 1873. Let them read Mr. James Ford Rhodes's article in the July *Scribner's* on the railway riots of 1877. These occurred, with the intense disorganization of business of which they were a symptom, four years after a panic—precisely the same distance we are now away from the panic of 1907. Yet at that time there was no Government nagging of business men; the Anti-Trust law was not yet heard of; conservation was then not born. Simply, the country was going through the long and painful process of recovery from a financial debauch; and it is at least a fair probability that a like sobering off is what is still going on after our later excesses of speculation and over-strained credit. The things Mr. Guggenheim speaks of have their influence, it need not be denied, but their effect must be far less than that of the large financial and economic forces visibly in operation.

It is noteworthy, however, that Mr. Guggenheim, like Judge Gary and others, would cure Government interference with business by prescribing more of it. His particular suggestionn is a "competent Government Board of business men"—this, it will be noticed, is a trifle more modest than Mr. Perkins's plan of a Supreme Court made up of business men—whose function should be to study conditions and to collect "data" for the Administration and for Congress and bring about a useful cooperation between the governmental authorities and great corporations. This Board should have the power to "permit or prevent combination or syndicating," and thus put our proud land on a level with Germany, the aim being, of course, to serve "the best interests of all the people of America." Few details of the ambitious scheme are given, or could be given, but the whole is put forward as one more remedy offered by a man who hates Government meddling.

The really surprising thing about this whole class of dreams—for that is what they are—is that they should be given us by hard-headed business men. These men are supposed to be our most intense "realists." They have no cobwebs on their brains; they look at the thing exactly as it is. How can it be, then, that they do not see more clearly the exact facts with which they have to reckon, and the fundamental conditions under which it is certain that the great business of this country will for a long time have to be conducted? That it is folly for them to think of the possibility of Government coddling ought to be evident to them from the way in which a man like Senator Root concedes that even the day of a protective tariff, as a governmental wet-nurse to infant industries, is rapidly passing away. What we are sure to have is neither petting nor persecution from Washington, but a better enforcement of general laws designed to regulate big business. When so essentially conservative a man as President Taft declares that there will be no step backward, and that the large corporations must adjust themselves to the statutes as interpreted by the courts, the beginning of wisdom for financiers and great industrial managers is to write that down as settled. They must regard it as an element of their business just as truly as a cost-sheet, and deal with it as they would with any physical obstacle that has to be estimated for in building a railway. If this means a change of policy on their part, they must face the necessity of making it. And if it means the cutting down of enormous profits, such as Mr. Havemeyer's $10,000,000, not from manufacture or buying or selling, but from mere promoting, they would do well to quit dreaming and prepare themselves for that stern reality also.

THE CUNNINGHAM CLAIMS REJECTED.

The decision announced Monday by the Commissioner of the Land Office, and approved by the Secretary of the Interior, probably brings to a definitive end the struggle over the Cunningham claims to Alaskan coal lands, which have so long been under investigation and attack, and which for a time formed the storm-centre of American politics. And now that the decision has been made, it seems extraordinary that it should have been so long a time in coming. Commissioner Dennett assigns for his disallowance of the claims reasons so simple and untechnical that one can but wonder that it should have required any very prolonged consideration to find them conclusive.

Indeed, to understand the Government's case, the one thing needful is to seize the fact that it has been the very opposite of technical. Under a law limiting the claim of an individual to 160 acres, and forbidding agreements that would defeat the purpose of this limitation, thirty-three claims of 160 acres each were filed by a group of persons who, it was alleged, were, in effect if not in form, under such agreement with one another; and it was the case of the claimants, and not the case of the Government, that had to be maintained on a technicality if it was maintained at all. And the evidence that there was, in reality if not in form, an agreement of the kind forbidden by the law, is simple and conclusive. It is indicated

in a convincing way by Mr. Dennett in his decision. "The facts," he says, "speak for themselves, and speak plainly." Among them are the circumstances that "there was not at any time a single act performed that connected any claimant with the precise tract he claimed to locate"; that "not a dollar was spent by any locator, individually or by agent, on the land he entered, but every act done and each dollar disbursed were for the purpose of determining whether the field as a whole contained workable deposits of coal"; that the separate claimants "exercised no choice in the selection of their claims, manifested no interest in their individual values, and (except perhaps Baker) sought no information of their respective locations." In a word, "the field jointly acquired by all of them and explored at the common expense was the only object of their solicitude."

And yet this same Mr. Dennett, to whom the case at the present time seems as plain as a pikestaff, who disallows the claims because they were in clear and substantial violation of the requirements of the law—this same Mr. Dennett wrote to Mr. Ballinger (then at Seattle) on April 6, 1908, as follows:

> In regard to the Cunningham group, the situation is also very distressing, and as much so as it is in all of the Alaska matters. You know that Glavis objected to the issuance of patent, and I expect a report from him shortly, having wired to him to make it, and probably there will be the same technical violation of a stupid law, and the best thing they can do is to pound on Congress to pass that Alaska bill.

In this little expression is to be found, we believe, a large part of the explanation of the whole matter. The coal-land law really *is* a stupid law; and the difficulty with which Glavis and Pinchot and Garfield were contending was that, during Ballinger's ascendency, the exploiters of the natural resources of Alaska overcame the inconveniences of a stupid law, not by getting a better law made, but by practical nullification, and by appropriation of the resources to their own use. For their resistance to such treatment of the law of the land, the men who made the long fight for the law are entitled to the sincere gratitude of the country. Had it not been for their courage and persistence, there can be little doubt that the Cunningham claims would have been allowed long ago—a thing that would have been not only of great importance in itself, but of even greater importance as a precedent.

Nor is it merely on the general principle of faithfulness to the law that the loose views which have been so widely entertained in regard to the execution of the Alaska coal-land law are to be condemned. Even a wholly stupid law is entitled to enforcement so long as it is the law; but this law was not wholly stupid. It was a stupid method of providing for an object that is not in itself stupid, but on the contrary highly meritorious. It was designed to prevent the wholesale grabbing of immensely valuable national possessions without just compensation to the nation. The 160-acre restriction was stupid, because coal lands cannot be profitably worked in these small parcels; but the act called for is not simply to repeal the restriction. Along with the permission to take up larger tracts, there must go provisions securing to the people their proper share in the proceeds of the working of the lands. The land-grabbers have been very contemptuous of the "fanatics" of conservation who have stood in their way; but they could have procured the throwing open of the coal lands of Alaska long ago if they had gone about the matter honestly. Instead of acting on the view that the law was so stupid that no enterprising capitalist need let it stand in his way, they should have acknowledged the just rights of the people, and exerted themselves to procure the passage of a practical law safeguarding those rights while throwing open the lands. But that is not the way of the breed.

HOUSE AND COMMUNITY.

Lord Rosebery—so we still call him, for the Earl of Midlothian does not yet come trippingly off the tongue—has made a startling discovery. He wrote a breathless letter to the London *Times* to ask if any of its readers knew that "under the Finance Bill of last year a valuer may enter any house and inspect it at his will for the purposes of a land valuation." "I did not," added his lordship, "but so it is." And then the biographer of Chatham went on to remark:

> There is thus a definite end of the proud boast of centuries that an Englishman's house is his castle. We all remember Chatham's famous burst—"The poorest man may in his cottage bid defiance to all the forces of the Crown," and so forth. I warn all Speech Day celebrations off this recitation, for it is now only a mockery and a deception. We are a tamer race now.

This may seem a trifle hysterical, coming from a seasoned politician, though it undoubtedly represents a widespread and bitter feeling in England against the new land taxes. But the particular ground on which Lord Rosebery places his resentment echoes hollow beneath him. For there are dozens of other officers of the Crown who may enter his house at will, not for the purpose of committing an arbitrary act of oppression, but of enforcing the law of the land. They may come in, for example, to inquire if there is an infectious disease; or if the plumbing and the drains are in sanitary condition; or if the gas pipes or conduits for electric lighting are laid in conformity with the city ordinances; or if the servants have been vaccinated, or a score of other things. None of them was done in Chatham's time, yet because we submit to them to-day are we to be called a "tamer race"? Rather, we should say, a tamed race: tamed from a wild and ignorant individualism to a civilized sense of what we all owe to the community.

Liberty and the rights of the citizen are to be defined to-day just as they used to be; but the stress and bearing of the definition are different now from what they were in Chatham's time. Now, as then, we are entitled to the enjoyment of every natural or Constitutional right, in so far as it does not infringe upon the rights of others. There's the modern rub. The "rights of others" have been coming to larger prominence. We begin to think less of the house than we do of the community; or, to put it in another way, the house as the citizen's "castle" is less often in our thoughts than the house as a part of the neighborhood, the city, in which it must take its place of due subordination.

Under the police power of all well-organized governments, to-day, there has been a great extension of the term, "affected with a public interest." This does not apply to common carriers and great corporations only. It necessarily reaches out to many individual activities. In the world as we know it to-day, it is true in a wholly new sense that no man liveth unto himself. So far as his manner of life may injure the health or morals of the community, he is necessarily subject to inspection and even regulation—not for the purpose of prying into his private affairs, or laying the heavy hand of tyranny upon

him, but in order to see that he complies with the laws which have been enacted for the good of all. Right here is the thing which Lord Rosebery forgot in his outburst. There was no question of inequality before the law. It is the same for all. Neither was there a case of unjustified inquisition, or entering his house on suspicion and without a warrant. All the proceedings were in pursuance of a plain statute; and if Lord Rosebery had been minded to take a quotation from further back, he might have turned his personal grievance into a public pæan, citing Hooker's familiar words in praise of that law to which all things in heaven and earth do homage, "the very least as feeling her care, and the greatest as not exempted from her power."

We have no wish to squeeze this incident till we draw blood from it. It simply presents itself as a fresh and pertinent illustration of the continual balancing, in the modern state, of a private interest against that of the common weal, and of the way in which the former has been compelled at so many points to give way. The stoutest individualists going—and we sympathize with them instinctively—cannot be unaware of the enormous growth and pressure in our day of the community sense. Indeed, a good part of that growth has been due to the voluntary surrenders made by individualists. In them has been powerfully developed what Mrs. Humphry Ward calls the feeling of "social compunction"; and in their desire to help on the work of readjustment and betterment in society, they are ready to make many a sacrifice and to give up many a privilege to which they might be able to make out a strictly legal title. This conviction that we are all in the same boat and must be prepared to yield much in order to keep it from capsizing, is one of the unmistakable signs of the times. It is not so much a reasoned principle of political action, as it is a result of human need. Nor does it in any way mean that we must inevitably swing to a kind of "regimentation" in government, to use Huxley's word, that lies at the opposite pole from individualistic anarchy. It means merely that the "castle" theory of the citizen's rights has insensibly given way to a juster sense of the balance between the rights of the individual and the community.

CRUELTY TO THE TIMID.

Shyness is nowadays classified among the diseases that are curable by mail. The heart-to-heart columns in the newspapers and magazines never tire of exhorting the timid to put on courage. One editor points out that the diffident really can never hope to tread the road to Success. Mr. Bok gently bewails their depressing effect in the world of social amenities. The popular evening prints remind them how poor their chances are of obtaining the best wives in the market. Through it all runs the assumption that shyness can be got rid of by taking thought, precisely like obesity or the habit of biting one's nails. The fact that there are so many more stout people than there are shy people is not allowed to interfere with the swift course of the argument. If you are shy it is your own fault; more than a fault, it is a crime. One of the most popular forms of adding insult to injury consists in proving to the shy that the cause of their trouble is at bottom a vast conceit. The implication is that the young man who falls over his own feet in company does so because he believes his to be the most beautiful pair of feet in the world.

This method of ready relief may be unjust, but it is not so cruel as the indirect method, which consists in teaching people who are not timid how to cure those who are. In this respect shyness is peculiar among popular ailments. The uplift columns never think of teaching A how to cure B of tuberculosis, or insomnia, or corpulence. The appeal is always to the victim's own better self. Shyness would seem to be in a class with dipsomania, of which a man can be cured either through his own efforts or through the efforts of a relative who is willing to put a powder into the sufferer's coffee. The motives behind such advice are of the very highest. But the method, if not consciously cruel, is cruel just the same, both in its necessary implications and its results. It is all very well to urge every one to do his best to make the man who is shy feel at home, to surround him with a gentle and soothing atmosphere, to wrap him in a tender solicitude that shall hatch confidence out of the timid soul like the chick out of the egg. But to ask every one to be kind to the shy is precisely to give every bystander the right to put drugs into a man's coffee. It is a privilege that will be abused, sometimes through malice, most often through ignorance.

Nobody can give more pain in less time than the ordinary "sympathetic hostess." Her mission is to overdo things. Her voice is too soothing, her smiles are too radiant, her interest in the victim's native village and his college career would not be justified if the village were Stratford-upon-Avon and the college career were Macaulay's. It has been dinned into her by a thousand oracles that the only way to put a man at his ease is to talk to him about himself, and subtly to lead him on to take up the argument and talk about himself. The treatment may bring results in some cases. Applied to the timid man, it works havoc. If the unfortunate man has made a long voyage or written a short book, the sympathetic hostess will regale him on geography and literature. In the first case, she will ask him whether Japanese ladies, under all circumstances, wear kimonos; whether he prefers Japanese silk to Chinese; what he thinks of the Japanese influence on Whistler; why the Japanese can endure such fearfully hot water in their baths; why it is that Japanese servants are so good but dishonest. After a half-hour of being made to feel at home in this fashion, the diffident victim would feel at home in purgatory.

An obvious duty and an obvious kindness is to let the shy alone. Even the constant preaching at them is of doubtful merit. The recently inaugurated campaign against tuberculosis is alleged to have brought about, in certain sections of the country, an actual increase in the number of consumptives. The theory is that the vast publicity with which the campaign has been carried on has created among people with a predisposition to the disease a morbid condition that has made them ready victims. Unquestionably, the ceaseless harping on the disadvantages of shyness has had the same effect. If an excessive self-consciousness is the real fault, why not kill the germ of self-consciousness by a vast conspiracy of silence? But this, we are aware, may be asking too much. It is not asking too much to demand that if the conscious attempt to cure is to be made, it should be made by the victims themselves. Let no unlicensed, unprofessional outsider

be permitted, far less encouraged, to make experiments with the raw sensibilities of the timid man. Let no one feel at liberty to reform him. He is really much happier in his corner than most lively people imagine. Why drag him from his seat of blissful contemplation to pillory him in the middle of the room?

Or, if that, also, is asking too much, if this muscular age insists on saving a man even if it has to knock him down in the process, let us at least be muscular. Let us drag the victim into the middle of the room and make him sing from Schumann. Turn twenty pairs of eyes upon him by asking whether he doesn't think coronations are silly. Do so loudly, suddenly, violently. Shock sometimes cures when it doesn't kill. But in all mercy refrain from the condescending sympathy that makes the timid soul turn in pale terror upon itself.

THE LIFE OF COLUMBUS.

PARIS, June 12.

In three volumes—"Etudes critiques sur la vie de Colomb avant ses découvertes," one volume, couronné par l'Institut; and "Histoire critique de la grande entreprise de Christophe Colomb, two volumes*—Henry Vignaud has gathered into one orderly whole his critical studies of forty years in the life of Columbus. His solution of the problems he has stirred stands by these volumes (The *Nation*, February 9, "Two French Publications," gave the substance of his conclusions from advance proof-sheets). But his *magnum opus* is much more than an exposition, however complete, of the many vexed questions in the history of Columbus. From those which concern his family and the date of his birth to those which concern his real plans, authentic negotiations, and share with others in the discovery, we have here indeed a full description of all known sources of information, the bibliography of all that has been written until now, the minute analysis of questions in dispute with the pros and cons hitherto proposed, and Mr. Vignaud's own investigation of the subject with his reasoning in support of his conclusions. But, more than this, every item of knowledge concerning Columbus which it has been possible for him to glean along the way is here set down and scrutinized. In appendixes to each study the chief documents in the case are reproduced. It is because Mr. Vignaud has been so scrupulous in controversy that these closing volumes of his life's studies have come to form a final repertory of Columbian history as far as the discovery.

To the volumes of the second and last series—for Mr. Vignaud at the age of eighty informs us he shall not carry his work further—he has prefixed the words of Herbert Spencer: "Demonstration fails to change established opinion." Without anticipating the detailed judgments of historical students of Henry Vignaud's own calibre, we can say with confidence: No future history worthy of the name, and no competent re-edition of classical works, concerning the life of Columbus, the discovery of America, and its place among that age's discoveries which stretched the narrow bounds of the known world to the very limits of the *orbis terrarum*, can be undertaken without reference, page by page, to Mr. Vignaud's volumes. However much or little may remain of those portions of the traditional history which Mr. Vignaud sums up as the "Columbian legend," those for whom he has worked and written will acknowledge gratefully that it was high time historical science should make a clean breast of it. There is not question solely of the authenticity of Toscanelli's letter or of the unknown pilot or Pinzon's law-suit. It was necessary to decide whether history should keep walled off from scientific criticism the well-rounded Legenda Aurea, in which more than one detail long since drew the surprised attention of scholars like Humboldt and Fiske. Mr. Vignaud has labored to sift completely legend from history and to work out all that is authentic and certain.

These studies, documentary and critical, are readable for all who are willing to go beyond mere narration. The first series, after an introduction on the two-fold sources of our knowledge of Columbian history, studies the veritable family tree and condition of the discoverer; the two Colombos, "admirals" or corsairs, who were not his relations, but have been confused with his history; the date of his birth—1451—which has been confirmed since Mr. Vignaud first maintained it; education, first voyages, arrival in Portugal in 1476; the voyage to Iceland; establishment and marriage in Portugal, and wife's family; summary and conclusions, with nineteen pages' alphabetical index of subject-matter, books and documents, and a minute analytical table of contents for the whole volume.

The two new volumes, after six years' time, show the same painstaking order and completeness, enabling even the general reader to get his bearings easily. The introduction explains "the great design of Columbus" as it has been set forth by himself, his son, and Las Casas, and modern authors from Irving to Harisse. The studies take up in order the origin of the design with Columbus in Portugal; the correspondence with Toscanelli, a question which Mr. Vignaud exposes with complete documentation, following the progress of the controversy until now and reaffirming his position; Columbus's brother Bartholomew, and the propositions made in Portugal, Genoa, and Venice, England and France; Columbus at the Court of Castille, the rejection of his plan, and Beatriz Enriquez (who was not Columbus's wife); and relations with João II of Portugal from 1485 to 1490. This is the matter of one volume.

The last volume studies the final negotiations of Columbus with the Catholic Kings, the organization of the expedition, and the discovery, with the part to be attributed to Pinzon and the indications received by Columbus from an unknown pilot; the two legends started after the discovery, that Columbus intended to find a Western passage to the Orient and that Toscanelli set him on the track; projects to discover a Western passage to the Indies by Martin Behaim and Jerome Müntzer and their possible relations with Columbus; general recapitulation and conclusion. An appendix contains a documentary chronology of the life of Columbus until 1493; a list of Columbus's companions in the discovery; his maps, and the three texts and translation of letters attributed to Toscanelli; 60 pages of documents reproduced; 75 pages of alphabetical index, and again the minute analytical table of contents.

There are obvious reasons, in a work so momentous to historical science, why Henry Vignaud should have written it in French. But for thirty-five years, he united this scientific study of history with his duties as secretary of the United States Embassy at Paris; and he dedicates his work "to my friend and compatriot Alcée Fortier, the eminent historian of our dear Louisiana." In fact, Henry Vignaud's ancestors were found with Bienville at Mobile, then the capital of Louisiana, in the beginning of the eighteenth century.

S. D.

*Both these works are imported by Lemcke & Buechner, New York.

SWISS NOTES.

NEUCHÂTEL, June 10.

Father von Rickenbach, the learned Benedictine who died the other day at Einsiedeln, was known in Rome as well as in Switzerland. For more than sixty years he had pursued the study of philology. At the Einsiedeln monastery he was both professor and librarian. He rendered excellent service to the college of Monte Cassino, and was later rector of the Athanasianum at Rome. Next to Mezzofanti, he was the greatest of modern linguists, speaking fluently thirteen living languages. He wrote many monographs relating to classical philology and Hellenic culture.

Recent excavations at St. Maurice have uncovered some interesting Ro-

man remains in an old cemetery. The tombs are encased in brick at a depth of about six feet. Skeletons of men and of dogs have been found there. The graves belong to a comparatively late period, when Rome had ceased to be pagan. As the skeletons lie with their heads toward the east, the remains are probably of Christians.

The chapel of the Swiss Guard at Rome is to be restored. Both archæologically and architecturally it is an interesting building, situated in the rear of the Vatican near the cemetery where the guard has always buried its members. The chapel is really not a part of the Vatican. Consequently, when the kingdom of Italy was established, the place was not extra-territorial, and the Swiss guards could not attend the religious services in uniform. Since 1870 the chapel, which is called San Pellegrino, has been much neglected and is dilapidated. It has at length been placed in the care of Professor Naef of Lausanne, under whose direction the Château of Chillon was restored. The restoration will be effected with the approval of the Pope. The expenses will be borne by the Swiss federal government: for, quite apart from religious considerations, the sanctuary has patriotic associations, and it is believed that Swiss Protestants as well as Catholics will be interested in preserving this historical monument.

Those who would see Swiss scenery protected against the incursions of money-making exploitation will be glad of the vigorous protest made by the central committee of the Heimatsschutz against the building of a railway from Gryon to the summit of the beautiful Diablerets. The committee says: "The Swiss nation has affirmed its strong intention not to abandon the finest Alpine summits to the speculator." It adds that objections made to such exploitation show "a progress of social morality, a healthy reaction against the materialism which threatens the very life of an independent people."

The anatomist Prof. Auguste Châtelain has been appointed rector of the University of Neuchâtel until the autumn of 1913.

Mademoiselle de Mestral has collected from the essays and novels of Edouard Rod, and from his fugitive contributions to reviews and newspapers, a large number of citations which give an adequate idea of his opinions concerning religion, ethics, art, literature, society, and love. The compilation is well executed and is very interesting. A curious moral impression left by Rod's works on all his critics is that of a man who was obsessed by "le scrupule." As with Cherbuliez and other writers of Swiss origin, there was a specifically Protestant, an almost Calvinistic, color in all Rod's writings. M. Faguet says, for example:

> The scruple was like the inmost soul of Edouard Rod. His art was scrupulous, and he revised four or five times what he wrote. As he grew older he multiplied his manners of style. And he thought scrupulously; he yielded nothing to imagination nor to feeling nor to the fear of saddening and wounding himself. As those who have a conscience act purely, so he wished to think purely. Into his thought he put a severe, timid, and superstitious conscience.

Unlike most compendiums, that of Mademoiselle de Mestral is very satisfactory.

Two old houses at Lausanne are about to be demolished. In one of them Rousseau gave a concert in 1732, calling himself by the false name "Vaussore." The performance was greeted with noisy contempt. The other house was originally owned by the convent of St. Mary Magdalene. In the fifteenth century it passed into the hands of the Reformers, and until 1839 was the residence of the chief Protestant pastor at Lausanne. Viret lived there and received visits from Calvin and Farel. But old Lausanne is being transformed, and both these historic buildings are to be sacrificed.

It is probable that women will soon be heard from the Swiss pulpits. The question of their eligibility as pastors has been submitted to the local sections of the ecclesiastical council in the Canton of Grisons. The sections of Coire, the capital, and of the upper Engadine have been unanimously in favor of the innovation.

The death of Col. Schack the other day deprives the Swiss army of one of its most scientific and efficient officers. He was in the corps of engineers, and during the last years of a very active life had been studying aviation with special reference to its use in war. Schack was director of the balloon Helvetia which in 1908 won the Gordon Bennett cup in Norway. He was the creator of the aerostatic service in the Swiss army. By his frequent visits to other countries, he had a thorough knowledge of the technical details of his profession. He was a native of Geneva, where he was greatly respected both as a man of science and as an officer.

A recent fire has destroyed one of the oldest buildings in Switzerland. It was the Abbey St. Jean, in the canton of Berne. Founded in 1090, it became one of the wealthy ecclesiastical institutions of Central Europe. In 1834 it was sold by the Bernese to a rich merchant of Neuchâtel, who turned the place into a factory. The Berne government repurchased the abbey about thirty years ago, and it became the home of a penal colony. The old church and a small part of the main building escaped destruction.

A. A.

Correspondence

WAGNER AND HORNSTEIN.

To the Editor of The Nation:

Sir: In connection with the recent publication of Wagner's autobiography, "Mein Leben," an excellent criticism of which has appeared in your pages, it is only fair to make mention of an instance, which has just come to the knowledge of the public. Wagner had a rare gift for raising money, but in so despotic a manner that all who refused his demands paid the penalty sooner or later.

One of this number was the musician, Robert v. Hornstein, who has paid the penalty by being exhibited in Wagner's Memoirs as a fool and a knave, instead of the talented musician that he was. Hornstein in his youth was a warm friend of the man, and an ardent supporter and follower of the artist, Wagner. The relationship between the two men is impartially expressed in Hornstein's autobiography, which was published some years ago by his son, Ferdinand v. Hornstein, who, after the false treatment his father has received at the hands of Wagner, has only now published two letters generously and tactfully excluded from the original Memoirs.

In these extra pages we learn why young Hornstein fled from Zurich. He could no longer endure Wagner. A common friend, Karl Ritter, whose family had long supported Wagner pecuniarily, had expressed to him his conviction that Wagner's friendship for him was not due to his personality or talent, but to the fact that he would one day inherit money from his father. "He knows your financial condition," Ritter had said to Hornstein, "and sooner or later he will act accordingly. He is awaiting a favorable opportunity." When Hornstein's father died, in 1861, the heir, then in Paris, received a letter of condolence from his pseudo-friend, which began: "I hear you have become wealthy." Wagner informed him further that he needed a loan of 10,000 francs. "It may be difficult for you to procure so large a sum, but possible, if you are willing and do not hesitate at sacrifice. And I demand it." Hornstein was then exhorted to show himself a man, and as thanks for his aid the promise was held out of close intimacy with Wagner, so close that Wagner was even willing to pass the next summer on one of Hornstein's estates. Indeed, Wagner was willing to make a bargain with him; he would be content for the present with 6,000 francs. The rest should be due March 1. Hornstein says in his Memoirs that he refused on account of the tone of the letter and the greatness of the sum: "It was easier for me to refuse, for I knew that this was the case of a keg without a bottom; that 10,000 francs was a great deal for me, for him nothing at all. I knew that Napoleon, Fürstin Metternich, Morny, and Erlanger had been bled for large sums, which were only drops of water on a hot stone. Ten thousand francs would not have saved him to art." Therefore, Hornstein refused, with the excuse that he was not wealthy, and that none of his estates was in readiness to receive guests for a great length of time. Wagner's answer was in the strongest terms of abuse. It begins: "I cannot bring my-

self to leave uncensured such an answer as you make me. Although it will scarcely happen again that a man such as I will appeal to you, it may perhaps be of benefit to you to learn how indecent your words are." Then Wagner instructs him in what is due him, Wagner: "If you were not prepared to receive me on any of your estates, it was your place to grasp the distinguished opportunity I have offered you, and to have arranged to receive me wherever I wished."

That was the end of the friendship. And in the interest of Wagner, the musician, one cannot help regretting that so much has become known of Wagner, the man.

HELEN W. FOSTER.

Munich, Germany, June 10.

FALSE HEROES.

TO THE EDITOR OF THE NATION:

SIR: This is certainly a time for extraordinary discoveries in things historical. Unless I am much mistaken, not the least extraordinary is the discovery of Haym Salomon, a money broker in Philadelphia in the latter part of the eighteenth century. I approach the subject in all humility of ignorance, and in a purely inquiring spirit, anxious to reach the new material that research may have uncovered. In this instance the claim is urged that Salomon made heavy pecuniary sacrifices for American independence, that he suffered much in consequence, and therefore that he should have a monument, and his heirs recognition, if not compensation, from Congress; that his services were as great as those of Morris; that he was entrusted with all the war subsidies of France and Holland on his personal integrity, for which he received a commission; that he was banker for the French forces, treasurer of the forces of France in America, and so on, and was prominent in the first "bank." Much else is stated about him; but enough has been mentioned to show how neglectful our nation has apparently been of its really great characters.

I am reasonably familiar with the history of the Revolution, and have not confined my reading to the printed sources; but I do not recall meeting with Salomon in transactions other than were common among the brokers of that day. He advanced money to delegates in Congress pending the arrival of State funds, and he dealt in Continental paper. That he was officially connected, directly or indirectly, personally or by agent, in any of the financial operations of France or the confederated States demands proof, of which I have seen no examples in somewhat hysterical addresses recently delivered in his behalf, or in the essays upon his "services." Members of the Virginia delegation in Congress admitted their indebtedness to him; beyond that, some records are needed to establish his claims. The French subsidy was expressly given to be disposed of by Washington, and would never have been granted under other conditions. Morris controlled the expenditure. The French army had its own paymaster, its own agent, or broker, and needed no other. The Dutch "subsidies" were loans regularly negotiated in Holland by John Adams, and disbursed under his direction by means of bills drawn upon him by Morris or the Board of Treasury. So far as I know, nothing was found in the papers of the Continental Congress, of Morris, of Hamilton, or of Adams, or in the publications of Doniol (official), the American Jewish Historical Society, or any other reputable source, pointing to the participation in the operations of the day by Salomon, as agent or as quasi-agent. He subscribed to the "bank" as many others did, and took all the risk involved; he bought the "securities" of the Confederation like any other broker, and died before Hamilton's plan for restoring public credit became effective, under which he would have received exactly what any other holder of the paper was entitled to receive. If it was a speculation, and it is absurd in such a case to urge the element of sacrifice, he went into it voluntarily. Is it certain that his heirs did not deliver for redemption those "public securities" found in his estate—a redemption that applied also to State issues made for the conduct of the war? No claim was made in his behalf until 1848.

I protest against the methods employed in this case, methods which are calculated to bring history into contempt, and to make personalities serve in its stead.

WORTHINGTON C. FORD.

Boston, June 22.

GETTYSBURG.

TO THE EDITOR OF THE NATION:

SIR: You have done a worthy service in your review of Beecham's "Gettysburg: The Pivotal Battle of the Civil War" (*Nation*, June 1), by outlining some of the shortcomings of that volume. To what your discerning review of the volume has furnished may I add a further instance of the astounding errors of the book—namely, its repeated misplacement of the Fifth Army Corps on the second day of the fight. According to Beecham, this command was on Thursday morning "many weary miles" from the field; all day it was making a forced march to get there—Meade longing that either "night or Sykes" might speedily arrive—and at last, at seven in the evening, it "entered the arena" of the battle near Little Round Top! The fact is (as Slocum's report shows, Official Records, XXVII, 2:759) that the corps arrived at five that morning, Thursday, July 2, that at 3 P. M., half an hour before the assault on Sickles began, Sykes was ordered to the left to support Sickles, and that before four o'clock a brigade of the Fifth Corps had occupied Little Round Top, just in time to save it from Hood after a desperate struggle, part of the time hand-to-hand, the fight at this point going on at the same time with the struggle raging along the zigzag line extending from the foot of Little Round Top, through the Devil's Den, and the Wheatfield, to the Emmettsburg Road at the Peach Orchard. In view of these facts, the blunder of Mr. Beecham in regard to the whereabouts of the Fifth Army Corps on that second day at Gettysburg is inexplicable.

May I further raise the question whether your reviewer has not made a slip in the following sentence:

> The story that Longstreet's scout, Harrison, brought the first news to Lee of Hooker's crossing the Potomac is repeated, though that fiction had been exploded by Confederate authority.

Longstreet, in his work "From Manassas to Appomattox," gives the whole story in detail; and Lee, I think, refers to the same man and the same service when he says in his report of the campaign (Official Records, XXVII, 2:307):

> Preparations were now made to advance upon Harrisburg, but on the night of the 28th (of June) information was received from a scout that the Federal army, having crossed the Potomac, was advancing northward, and that the head of the column had reached the South Mountain.

Does your reviewer take the ground that the scout who brought Lee that information on that night was not Harrison, but some other man? If this story be "fiction," then what is the truth in the case? And what is the right version according to the alleged Confederate authority?

JESSE BOWMAN YOUNG.

Jacksonville, Fla., June 12.

[Col. John S. Mosby's examination of the Harrison story and the conclusions reached by him and published many years after the publication of Longstreet's book seemed to establish the physical impossibility of the scout Harrison having brought to Longstreet and Lee the first news of the crossing of the Potomac by the Union army.—THE REVIEWER.]

THE NATIONALITY OF IBSEN.

TO THE EDITOR OF THE NATION:

SIR: In your excellent and vigorous criticism of Henderson's "Interpreters of Life and the Modern Spirit" in the *Nation* of June 8, you may think it worth while to correct the error whereby Ibsen is called a "Dane." CHARLES H. GENUNG.

Nepaug, Conn., June 15.

[As the reviewer had no thought of claiming Ibsen for Denmark, he was no doubt hasty in calling him a Dane. It was his intention merely to allude to the Danish strain in his ancestry. Ibsen's great-great-grandfather was a Dane. With this stock were mingled German and Scottish elements. Biographers appear to agree that the pure Norwegian element was extremely slight.—THE REVIEWER.]

A READING IN BYRON.

TO THE EDITOR OF THE NATION:

SIR: The following lines occur, as all your readers know, in one of the finest passages of "Don Juan":

> Ave Maria! oh that face so fair!
> Those down-cast eyes beneath the Almighty Dove—
> What though 'tis but a pictured image?—strike—
> That painting is no idol,—'tis too like. (III, cili).

The penultimate line in the first edition (which, however, contains several misprints) reads: "What though 'tis but a pictured image strike—" This variant E. H. Coleridge neglects to note. He gives no explanation of the word "strike," and I have found none elsewhere. Can any reader of the *Nation* tell me what Byron means by the expression? The lines, with the rest of the stanza, seem to refer to some particular picture, as is often the case with such passages in Byron. It would be interesting to know whether there is a painting of the

Virgin and Child at Ravenna to which the description would apply.

SAMUEL C. CHEW, JR.

Baltimore, Md., June 16.

Literature

BERGSON IN ENGLISH.

Matter and Memory. By Henri Bergson. Authorized translation by Nancy Margaret Paul and W. Scott Palmer. New York: The Macmillan Co. $2.75 net.

Creative Evolution. By Henri Bergson. Authorized translation by Arthur Mitchell. New York: Henry Holt & Co. $2.50 net.

The addition of these two translations to Mr. Pogson's version of the "Essai sur les données immédiates de la conscience" (reviewed in the *Nation*, November 24, 1910) places at the service of the English-reading public all the principal metaphysical writings of the most original and most influential of contemporary French philosophers. It is, however, to be regretted that to none of the translators has it occurred to include in his work a rendering of the "Introduction to Metaphysics" published by M. Bergson in the *Revue de Métaphysique et de Morale* in 1903; for the general reader this essay is much the clearest and most illuminating, as it is the most compact, exposition of his system which the author has given. The present translations offer little occasion for criticism; both are, in accuracy and in the quality of their English, above the average of their species. The translators of "Matter and Memory" were, however, scarcely well-advised in rendering *esprit* so frequently by "spirit" instead of "mind." For their volume M. Bergson has written a new introduction which supersedes that prefixed to the original work. Mr. Mitchell occasionally follows his French too closely to write entirely idiomatic and effective English; one comes upon such expressions as "immanent to the universe," "matter does not go to the end" (*ne va pas jusqu'au bout*), and the like. The following paragraph-opening is a really bad piece of translation:

> Now, we have considered material objects generally. Are there not some objects privileged? The bodies we perceive are, so to speak, cut out of the stuff of nature by our perception, etc.

This should read:

> Now, we have thus far been considering material objects indiscriminately. But are there not some such objects which constitute exceptions to what has just been said? *Inanimate* bodies (*les corps bruts*), we have maintained, are, as it were, scissored out of the general fabric of nature by an act of perception, etc.

But such examples of careless work are by no means frequent enough to destroy the usefulness of the translation as a whole.

The latest notable modern French philosopher is at one with the earliest in his conception of the proper starting-point of philosophy. Like Descartes, M. Bergson begins his metaphysical construction with "that existence of which we are most assured and which we know best—our own"; his earliest work was characteristically concerned with "the immediate data of consciousness." His whole doctrine, indeed, might not uninstructively be interpolated at a definite point in the Cartesian framework; it is in some sort an attempt at the completion of a specific task which Descartes undertook but almost immediately abandoned. That the "thinking thing" is known to us directly, and most surely to exist, the author of the "Discourse on Method" showed; that it has no attributes in common with that other kind of possible entity of which the essence is spatial extension, M. Bergson—sharing Descartes's love for the *genre tranché* in metaphysics—heartily agrees. But *what sort* of being that inwardly certified existence is, what *its* positive essence is, Descartes only perfunctorily inquired; certainly he did not stay for an answer. Mathematician and physicist by training, he allowed his attention too quickly to become engrossed by that clear and simple external world of space wherein it was possible to geometrize.

The answer to the neglected question M Bergson offers. The essence of the *moi qui pense* is change; to be conscious is, first and foremost, to experience temporal transition. If the distinctive attribute of pure matter is extension, the distinctive attribute of pure consciousness is duration. But in that inner world which has duration for its attribute, it is quite impossible to geometrize; for it is not at all a clear and simple world. So radical is the difference in nature between the two kinds of being, that all the preconceptions and habits of thought appropriate in dealing with the one must be put off by those who would understand the other; above all must the mathematician's habit of thinking in terms of quantity—of homogeneous and commensurable magnitudes—be abandoned by those desirous of apprehending the nature of the "real duration" characteristic of consciousness. The philosophy which develops seriously the Cartesian insight that reality is best known to us immediately and inwardly is, therefore, not likely to be a philosophy of "clear and distinct ideas"; probably few readers of M. Bergson, whether in French or English, will find it so. "*If*," Professor James once wrote, "anything can make hard things easy to fellow, it is a style like Bergson's." The praise is deserved, but the saving clause was a wide one. M. Bergson's talent for exposition is extraordinary, and may beguile his most superficial readers into supposing that the matters expounded are clear; but they are not so in fact, and are scarcely even meant to be so. It is one of the articles of the new doctrine that "for our intelligence to insert itself into the movement of reality, to grasp the nature of reality by means of that *intellectual sympathy* which we call intuition—*cela est d'une difficulté extrême.*" Those who do not experience the difficulty are to understand that they have not been initiated into the doctrine.

To its obscurities, no doubt, the new system owes part of its popular vogue. Of nothing does mankind talk more willingly than of the ineffable; and there is a good deal of the ineffable in M. Bergson's philosophy. There is in it—to use a much-abused word—more than a touch of mysticism; only, the object revealed to the direct mystical intuition (though hidden from the logical understanding) is not the peace "which holds quiet the centre" of things,

> La natura del moto che quieta
> Il mezzo, e tutto l'altro intorno muove,

but rather the unceasing restlessness and infinite ability of the inner nature of each of us. Very curiously, however, the contrast between these two natures—the immutable One of historic mysticism and the *flux posé sur flux* of the new metaphysics—tends in the course of M. Bergson's analyses to become, at several points, rather evanescent. He discovers, as he believes, in "real duration," when the idea of it is purified of all foreign elements, some surprising peculiarities. It is not a succession of discrete moments, but an indivisible unity; its parts are not "outside of" one another, but reciprocally "permeate" one another; it has, properly speaking, no quantitative attributes at all; and it appears to have the right (claimed by the Absolutes of many philosophical systems) to take some liberties with the principle of contradiction. A time-process so characterized can not easily be discriminated from the changeless and the eternal. The truth is that M. Bergson—led by certain plausible dialectical considerations—has, in spite of his best intentions, falsified the real nature of our consciousness of temporal duration; and he has consequently come perilously near to a metaphysics diametrically opposite to that at which he aimed. To think of even "subjective" time with a mind wholly purged of the category of quantity is not merely "of an extreme difficulty"; it is a psychological impossibility—just as it is a logical self-contradiction. To be aware of a transition or to feel duration without in some degree distinguishing "before" from "after," the lapsing from the incoming content of consciousness, is an inconceivable feat; internal multiplicity, "reciprocal externality," of elements is of the essence of the experience.

In one of the arguments by which M. Bergson is led into this misconception, it is possible to discern precisely the point at which his philosophy is diverted from its proper course. The argument is simply a revival of the ancient paradox of the Eleatic Zeno about the moving arrow. Change, it is argued, cannot be constituted by the serial addition of distinct and definite moments, nor is a duration produced by the mere consecutive aggregation of states. For each of the component moments, taken by itself, can only be a static mass of content; transition as such consists in the *getting from* one moment to another. Nor can this gulf be bridged by multiplying the number of units and imagining them to be very near one another. Between any two nominally successive moments there must be an interval; and it is in these ever-elusive intervals that the transition takes place. "Before the intervening movement," we are told in "L'Evolution créatrice," "you will always experience the disappointment of the child who by clapping his hands together tries to crush the smoke. The movement slips away from you through the interval." Now what M. Bergson has done here is, first, to assume that if the sequence of our states of consciousness is divisible at all, it must constitute a continuum like the mathematician's line—which is such that between any two distinct points, however near, intervening points may be taken; then, in order to rid "real duration" of the paradoxes of the continuum, M. Bergson has gone on to deny that it *is* a numerical sum of smaller "pieces" of duration. But if, instead of applying, or misapplying, this sort of dialectic to our time-experience, M. Bergson had simply examined that experience itself, he would have found his initial assumption false. "All our sensible experiences, as we get them immediately," wrote William James (in the very chapter of "A Pluralistic Universe" which was intended to be a defence of M. Bergson's philosophy), "change by discrete pulses of perception, each of which keeps us saying 'more, more, more,' or 'less, less, less,' as the definite increments or diminutions make themselves felt. Fechner's term of the 'threshold' is only one way of naming the quantitative discreteness in the change of all our sensible experiences. They come to us in drops. Time itself comes in drops." It is, James adds, our intellect that transforms and falsifies this concrete succession of definite amounts of content by representing it as a continuum, by "insisting that in every pulse of it an infinite number of minor pulses shall be ascertainable." In so far as we are concerned only with the real changes in our perceptions, there need be "no Zenonian paradoxes or Kantian antinomies to trouble us."

Such is the report of actual psychological introspection about the consciousness of succession; it exactly reverses M. Bergson's account of the matter, according to which, in order to avoid the Zenonian paradoxes and Kantian antinomies, we must represent duration as in itself indivisible, irreducible to separate "drops," but must charge the intellect with falsely picturing duration by converting the idea of it into that of a sequence of discrete elements. This misrepresentation, moreover, M. Bergson regards as due to the intellect's unhappy habit of ascribing to time the attributes of space; whereas the truth seems to be rather in the view expressed a number of years ago by another French philosopher, M. Pillon: "Time, with its two aspects of co-existence and succession, assumes in appearance the character of *continuity* only because it borrows it from space, only by being, so to speak, exteriorised and spatialised by the imagination." In short, it seems to be M. Bergson himself who consults logic rather than introspection for his conception of the nature of duration as a phenomenon of direct experience; and it is he who "spatializes" the idea of "subjective time" by gratuitously importing into the pulse-like sequence of our conscious states, the ancient difficulties about infinite divisibility which inhere in the spatial continuum.

M. Bergson's notion of the *durée réelle* is the fundamental as well as the most characteristic thing in his philosophy; the foregoing comments, therefore, touch the tap-root of the system in its present form. But its present form is not the one in which the profound and germinal idea from which it springs finds its true expression. Meanwhile, there are in these volumes many other fruitful conceptions more or less dissociable from the misapprehension which has been pointed out. The most important of these, and the one most likely to gain wide popular currency and to influence the general view of things of our generation, is the doctrine of the "creative" character of the evolutionary process; the universe for M. Bergson is no block-world, no ready-made article, but a constant "becoming" of genuine novelties and of real enrichments of content. This doctrine is by no means a new one; it has been growing up for a century, though long overshadowed by mechanistic interpretations of evolution; it has, for example, been vigorously defended for above thirty years by one of our American biological vitalists, Dr. Edmund Montgomery. But it has, perhaps, never been set forth so fully, so impressively, or with so much ingenuity of argumentation as in "L'Evolution créatrice."

CURRENT FICTION.

The Street of To-day. By John Masefield. New York: E. P. Dutton & Co.

A hero named Lionel and a twelve-line invocation beginning,

> O beauty, I have wandered far;
> Peace, I have suffered seeking thee;
> Life, I have sought to see thy star,
> That other men might see,

and ending,

> O may our labors help the birth
> Of nobler souls than ours,

are ill omens. However, the consecrated pen has been reserved for occasional passages only—notably the final one:

> Life is a wild flame. . . . Perfect life, or that which we on earth call God, is no thunderous thing, clothed in the lightning, but something lovely and unshaken in the mind, in the minds about us, that burns like a star for us to march by, through all the night of the soul—

which is much better poetry than the verse. If too much of the rest has been written with the nose, so to speak (Lionel's heart being most directly accessible through his olfactory nerve and "warm sweet scents" heralding all feminine approach), there yet remains, over and above the devotional and the cloying, a considerable body of sound creative work.

The value of the novel consists in a study of three relationships between man and woman—first the man who requires "an asylum for his affections" and the superficially charming woman of fashion; then the husband immersed in affairs and the neurotic wife; lastly the young reformer, ruthless, impetuous, and the woman who "has made the world her child." The fact that one man plays all these masculine parts and one woman the first two feminine rôles does not make the three dramas any the less distinct. Indeed, a general tendency to moralizing has served the author throughout in lieu of any firmer unity; and the lack of cohesion extends even to the characters. Lionel is to be remembered as the subject of many poignant experiences rather than as a personality. The one consistent element of his character is his uniform passivity under feminine influence. He resents neither devastation nor solace—an uncanny thing in a man. The phases of his active life, as man of science, reformer, and yellow journalist are hard to reconcile. Rhoda, his wife, is changed by marriage as by a chemical process. Not development but an abrupt substitution of values converts the frank, approachable maiden into the brooding, treacherous creature of nerves and notions. Only in the case of the mature woman, whose character remains constant, has a genuine effect of individuality been preserved.

Many issues are raised, none is fairly

faced: the question of the expediency of sensational measures in reform is lost in solicitude for a heartening ending; in Rhoda's revolt against matrimonial obligations, a physical disability is confounded with a moral incapacity; and the total inadequacy is charged up by Lionel against the "American spirit"—"We were fine in the eighties, before America came in." On the other hand, the writer has rare insight into certain conditions of soul and their symptoms. His power of divination, acuteness of phrasing, and balance of sympathy enable him to do wonderful justice to all scenes involving a clash of temperaments.

The Valley Captives. By R. Macaulay. New York: Henry Holt & Co.

The valley is primarily in Wales, secondarily in any bounded spot on earth. The captives are the two children of a Welsh gentleman who has muddled his life by marrying, or allowing himself to be married by, a vulgar widow with money and two impossible children. Oliver Vallon himself has been the more easily snared on account of his half-crippled body and his helpless estate of widowerhood. So destiny has arranged the Bodgers for his undoing and for the misery of his own two sensitive children. Tudor and John (a girl) are under the tyranny of the Bodger pair from the moment when the fragmentary families try to unite. John is far the stronger of the Vallons, and suffers chiefly for Tudor. That young gentleman is, it must be admitted, a pretty thorough weakling. He is both physically and morally a coward, and it is hard to get up enough sympathy for him to make the story of his disintegration tolerable. He represents the extreme of that vacillating, irresponsible, sense-determined temperament to which it is customary to append the word artistic. But the girl John should perhaps be considered the real hero, so to speak, of the tale. Not that she is a masculine figure, but it becomes her duty to add her brother's virtues—the virtues he should have had—to her own. When he sinks to poltroonery, she shows herself perfectly brave; when his nature dissolves in feeble self-pity, she becomes for his sake as firm as a rock. The pair are captive to habit, to the deadly familiar round that binds them by force of sheer repetition. The Bodgers merely represent the malign forces that harass and even ruin domestic life when unfortified by real affection. The male Bodger is a drunkard, but he is stronger than Tudor, and carries him, full of impotent hate, in his train. It is impossible not to feel some sympathy for the Bodger, a surly brute enough, but with some marrow in his bones. The female of his ilk is a spiteful hussy: here one feels no obstacle to the perfect hatred in which she is held by the Vallons. Of course, it all comes to a head. Tudor's ambition to become a painter is frustrated by the guardians of the Bodger purse, and by his own inertia. Year by year the incongruous housemates hate and despise one another, and it remains for a trifle to bring about the inevitable catastrophe. Tudor, in a fit of hysterical frenzy, nearly kills his bullying stepbrother, and runs away. John, stung to madness by her step-sister's taunts, deliberately attempts what amounts to murder and suicide. Tudor turns up in the nick of time, to save the pair at the cost of his own life. The tale, it will be seen, is not for sensitive readers—it is, to tell the truth, doubtfully worth the telling. Let us have sombre pictures of sombre aspects of life, by all means; but let us avoid mere squalor, whether of body or soul.

The Contessa's Sister. By Gardner Teall. Houghton Mifflin Co.

This is a charming little romance of Capri, in which the hero, an American, storms and captures the citadel of his Italian adorata's heart with fairly amazing swiftness. It is in other ways an international plot, for the Signorina Francesca, before her abject surrender to the conquering Signore Americano, is the dutiful fiancée of a German baron—such an one as was never equalled for bad manners and personal repulsiveness outside of a novel or a play. Naturally, this bond is easily and quickly broken with almost no effort by the hero, and his rival kindly takes himself off without a protest when he receives his congé. Mr. Teall has told the story well. Delightful people flit through his pages, Capri's skies are never so blue as for them, and their conversation is generally highly entertaining. There are the expected Italian servants and shopkeepers as a background, if anything more attractive than usual. Mr. Teall needs, however, to guard against straining for cleverness of style as well as of dialogue; a little bit more and the manner of telling would be stilted and artificial.

The Tennessee Shad. By Owen Johnson. New York: Baker & Taylor Co.

The popular success of Mr. Owen Johnson's Lawrenceville stories is attested by the fact that the present volume is the fourth in his series of schoolboy chronicles, and bears with it the promise of a fifth to come. The reasons for such success are somewhat harder to ascertain. In any case, whatever may have been the merit of the earlier books, in this volume, devoted to the adventures of the Tennessee Shad and Doc Macnooder, the humor runs wofully thin and the strain after situation at times grows painful. In the lavish use of the capital letter for emphasis and comic effect and in the grotesque nomenclature with which the author has saddled his heroes, we catch the echo of an attempt to do what Stalky & Co. did so well not many years ago. But there is a certain stamp of vulgarity in these Lawrenceville stories which is never found in Kipling.

MORE LETTERS OF R. L. S.

The Letters of Robert Louis Stevenson. Edited by Sidney Colvin. A new edition rearranged in four volumes, with 150 new letters. New York: Charles Scribner's Sons. $6 net.

Opinions in regard to the value of this enlarged edition of Stevenson's letters will vary in accordance with the estimate placed on Stevenson himself. There used to be many, even outside of Scotland, who had a kind of Mohammedan reverence for everything that Stevenson wrote; such devotees, it need not be said, would wish the 150 new letters were double the number. But such unstinted admiration is largely, though not entirely, we believe, a thing of the past. Those who have come to a juster estimation of Stevenson as a writer of the second class, often charming, but sometimes empty, will hear with dismay of this added bulk to his correspondence; and their fears will be justified by the facts. We say, reluctantly but positively, that we hold this increment to be no service to Stevenson, but quite the contrary. The letters published were already too numerous, and these four volumes will frighten away many readers who would have been attracted by a collection in two volumes.

Many of the new letters are valueless, some of them mere trivial notes. There are a few, however, which show Stevenson at his best and really add to our knowledge of the man; and it would have been well if these could have taken the place of the less interesting of the earlier collection. There was something essentially youthful in Stevenson's nature—"mais c'est que vous êtes tout simplement enfant," as his Russian friend, Madame Zassetsky, once said to him—and the lack of essential gravity in his writing is due in part to his inability ever to grow old. One of the consequences of this obstinate youthfulness is that the letters written in his earlier years—contrary to the almost universal rule in correspondence—are on the whole more entertaining and natural than those of his maturity. It must at least be said in favor of the present addition to his correspondence that most of it comes from his better period. One or two of the new letters to Mrs. Sitwell throw a stronger light on the religious differences with his father than did anything we had before, and in general this part of the correspondence adds to our knowledge of the beautiful relation between the ambitious young man and

the lady, afterward Mrs. Sidney Colvin, who stood to him as a kind of literary and spiritual confessor.

Of particular letters which will be prized, we may mention one to Sidney Colvin, written from San Francisco in 1880, which gives the first allusion to the famous "Requiem":

ROBERT LOUIS STEVENSON
born 1850, of a family of engineers, died . . . . . .
"Nitor aquis."
Home is the sailor, home from the sea,
And the hunter home from the hill.

Perhaps the most eloquent passage in all the correspondence as formerly known is that in the letter to Mrs. Sitwell which gives his meditations before a photograph of the so-called Fates of Pheidias. In a new letter to Mrs. Sitwell, evidently earlier by a few days, this meditation is completed by several paragraphs, one of which may be quoted at length:

Thursday.—I have said the Fates are only women after a fashion; and that is one of the strangest things about them. They are wonderfully womanly—they are more womanly than any women—and those girt draperies are drawn over a wonderful greatness of body instinct with sex; I do not see a line in them that could be a line in a man. And yet, when all is said, they are not women for us; they are of another race, immortal, separate; one has no wish to look at them with love, only with a sort of lowly adoration, physical, but wanting what is the soul of love, whether admitted to oneself or not, hope; in a word "the desire of the moth for the star." O great white stars of eternal marble, O shapely, colossal women, and yet not women. It is not love that we seek from them, we do not desire to see their great eyes troubled with our passions, or the great impassive members contorted by any hope or pain or pleasure; only now and again, to be conscious that they exist, to have knowledge of them far off in cloudland or feel their steady eyes shining, like quiet watchful stars, above the turmoil of the earth.

Despite the interest of a few of these new letters we must repeat our opinion that the increase in the bulk of the correspondence is a grave error. Otherwise the new edition commands only the heartiest praise. It is a great advantage to have the various earlier collections brought together in uniform style and chronological sequence. Mr. Colvin's annotations are models in their kind, brief and sufficient, and never superfluous.

My First Summer in the Sierra. By John Muir. With illustrations from drawings made by the author in 1869 and from photographs by Herbert W. Gleason. Boston: Houghton Mifflin Co. $2.50 net.

To the list of recently published readable books about the West, John Muir has added the most readable of them all—his diary of a trip which he made in 1869 as overseer of a flock of sheep in the Yosemite region:

June 3, 1869.—This morning provisions, camp-kettles, blankets, plant-press, etc., were packed on two horses, the flock headed for the tawny foothills, and away we sauntered in a cloud of dust: Mr. Delaney, bony and tall, with sharply hacked profile like Don Quixote, leading the pack-horses, Billy, the proud shepherd, a Chinaman, and a Digger Indian to assist in driving for the first few days in the brushy foothills, and myself with notebook tied to my belt.

These are the *dramatis personæ*, who, with Carlo as inimitable sheep-dog and bears as resourceful sheep-devourers, give a background of narrative and human interest to 350 pages of nature description and enthusiasm. Only such blind mortals as the shepherd, who refused to step aside to see even Yosemite Valley, could resist the charm of these pages. Mr. Muir is in a perpetual glow of superlative joy—save when the bread gives out and mutton nausea visits him—but he has a sense of humor, a fund of literary ingenuity, and a lucky habit of calling the halt that save him from gush and foolishness. He has one quality at least that lends meaning to his journalistic name of "the Thoreau of the Far West"—manliness. Though he protests at intervals that he could stay at a certain spot "tethered forever with just bread and water," the reader attributes these outbursts to the passing effects of the scenery rather than to an essential trait in an abnormal temperament.

"The Range of Light" Mr. Muir would rename the Sierra. His, indeed, is a philosophy of light. He shouts and gesticulates like a Whitman "in a wild burst of ecstasy," till he makes Carlo the sheep-dog anxious and frightens a brown bear, who "ran away very fast." He risks a fall of some three thousand feet into Yosemite, and dreams that night of "rushing through the air above a glorious avalanche of water and rocks." On the other hand, he casts aspersions upon tailored tourists, silly sheep, Western wine, dirty Indians, and man-built churches. He even distrusts an extraordinary instance of "telepathy, transcendental revelation, or whatever else it may be called," chiefly, one suspects, because such things lack the candor of the Sierra. The following paragraph, dated June 13, is typical of Mr. Muir's manner:

Another glorious Sierra day in which one seems to be dissolved and absorbed and sent pulsing onward we know not where. Life seems neither too long nor short, and we take no more heed to save time or make haste than do the trees and stars. This is true freedom, a good practical sort of immortality. Yonder rises another white skyland. How sharply the yellow-pine spires and the palmlike crowns of the sugar pines are outlined on its smooth white domes. And hark! the grand thunder billows booming, rolling from ridge to ridge, followed by the faithful shower.

Notes

The Index of the *Nation*, January 1 to June 30, will be printed with the issue of July 6.

The Clarendon Press is publishing the New Testament portion of the Codex Sinaiticus, reproduced in facsimile from photographs by Prof. and Mrs. Kirsopp Lake.

In the list of Sturgis & Walton's announcements are found: "A Little Book of Homespun Verse," by Margaret Sangster, and "The Ship of Solace," by Eleanor Mordaunt.

Wayne Whipple's new book, "The Story-Life of Washington," will be issued on Independence Day by the John C. Winston Co. of Philadelphia.

The larger edition of Dr. Rice Holmes's "Cæsar's Conquest of Gaul" has been out of print since the beginning of 1909. A new and revised edition is soon to be put forth by the Oxford University Press.

Prof. Stephen Leacock, through John Lane Co., is bringing out "Nonsense Novels."

Some hitherto unpublished letters of Napoleon from the Vienna Archives will be a feature of the new and enlarged two-volume edition of Fournier's "Napoleon I," which will be published by Holt early in July. The translation of this new edition is by Miss A. E. Adams.

The Grand Prix de Littérature, amounting to 10,000 francs, has not this year been awarded by the French Academy. The quinquennial Prix Estrade-Delcros of 8,000 francs has gone to Charles Péguy for his "Mystère de la charité de Jeanne d'Arc."

"The Annual Library Index" for 1910 is now issued by the *Publishers' Weekly*. The general editorship still remains with W. I. Fletcher. For those who wish to follow the activity of any writer or the discussion of any topic through the year, the volume is invaluable. A new department gives a list, arranged geographically, of the principal Private Collectors of Books throughout the country.

"Burdett's Hospitals and Charities" (London: The Scientific Press) for the year 1911 has come to us with its usual burden of statistics, and other information. The chapter on Nursing is notably enlarged.

The *Homiletic Review* for July contains: "The Version of 1611—with some reference to its Authors and their Work," by Prof. Henry E. Dosker; "Scientific Difficulties in a Section of Paul's Teaching," by the Rev. Robert Paterson; "The Present Status of Missions in Japan," by Prof. Harlan P. Beach, and other articles.

To the admirable and long-desired reissue of the works of Samuel Butler of "Erewhon," by Fifield in London and by E. P. Dutton & Co. in New York, two new volumes, "Unconscious Memory" and "Life and Habit," bring back echoes of Butler's onslaught upon Darwin for neglecting the part of his grandfather, Erasmus Darwin, in developing the theory of evolution. They bring back also Butler's own theory of conscious and unconscious memory as the main factor of evolution. Butler was not himself an experimental scientist, but he was

a man of wide experience and keen observation, and his discussion of memory as an active force comes nearer to some of the present-day hypotheses of biology than does Darwin's principle of natural selection. And Butler is a cogent and entertaining writer. For "Unconscious Memory" Prof. Marcus Hartog has furnished an excellent historical and critical Introduction.

C. R. L. Fletcher's "Introductory History of England," originally issued by E. P. Dutton & Co. in four volumes, is now bound up as two, with a corresponding decrease in price ($3.50 net). In its review (September 2, 1909) of the original edition of this work, the *Nation* said: "The more the book is studied the more clearly a judicious critic will perceive how admirably suited it is for the young."

There was ample need for such a handbook of the new Turkey as "Odysseus" furnished eleven years ago for the old in his "Turkey in Europe," and F. G. Afialo's "Regilding the Crescent" (Lippincott) is an attempt to fill the need. He has prefixed a modest and disarming preface, and has plainly a full sense of the magnitude of his task. But it must be said frankly that his book, although very readable, is also very sketchy, and sometimes puts events, situations, and problems in a one-sided and superficial way. Wherever, also, he goes in the least beyond matters of his own personal knowledge he becomes absolutely untrustworthy. The evolution of the Moslem state and the part played in it by religion; the fundamental attitudes of Islam and the mind of Mohammed, its founder; the interplay of races and civilizations in Islam and in the Ottoman Empire are things which cannot be lightly mastered, and on them all the older and commonly quoted authorities are worse than useless. To refer for such matters to Carlyle, Deutsch, Draper, and Freeman is to be out of court at once. But on the present-day situation, which he saw with his own eyes, Mr. Aflalo is conspicuously better informed. His sketches of the different personages on the stage are probably as fair as any single onlooker can create. His judgments on the press, the army, and education are balanced and moderate. The two chapters on commercial and industrial Turkey and on the problems of the future had the great advantage of revisal by Edwin Whittall. But it is still open to "Odysseus" to write of the new Turkey both in Europe and in Asia. There are twenty-four illustrations and a map.

The publication of a handsome book of "Essays by Henry Francis Pelham" (Frowde) is at once a work of piety and of service to scholarship. The editor—who has prefixed an admirable biographical sketch—is F. Haverfield, a pupil and friend of the author, and his successor in the Camden professorship of ancient history at Oxford. The essays are fourteen in number, though the editor, by a curious miscalculation, says there are thirteen, while the last is numbered fifteen. They deal exclusively with the history of Rome, and all but three are already in print and well known to scholars, but many persons who are interested in history generally will welcome their appearance in a single volume. Of the new papers the most interesting is the chapter on the Domestic Policy of Augustus. It is at the same time the most distressing, being a portion of a large "History of the Roman Empire" which Pelham—the one man in England for such a task—began in 1888, but, owing to a cataract of the eye and the pressure of administrative duties, had to leave unfinished. He was one of a small group of men "who desired that Oxford should not only popularize knowledge and conduct the necessary round of examinations, but should definitely encourage scientific inquiry and advance true learning." He "belonged rather to the school of Mark Pattison than to that of Jowett." As these essays show, Pelham measured himself, not by the local standards of his academic society, but by the demands of European science; they explain why his "Outlines of Roman History" "is the best existing summary of Roman development from the earliest days to the end of the Western Empire"; for what he epitomized was not a lot of large books, or the conservative English tradition, but a personal synthesis of the ideas current in the world of scholars generally.

"The International Law and Custom of Ancient Greece and Rome," by Coleman Phillipson, two volumes (Macmillan), is the result of a prodigious amount of ill-directed effort. To collect and order all the data on the forms observed by the ancient city-states in carrying on economic, social, diplomatic, and military relations with one another is, of course, a worthy task, and one for which a student of modern international law, like Dr. Phillipsen, is not unsuited—though the failure of even Ranke to comprehend antiquity as well as mediæval and modern times discloses the difficulty of such an enterprise. To complete it satisfactorily, however, more is needed than simply to make an exhaustive bibliography, as Dr. Phillipson has done, and with its aid to run through the extant materials. Years of patient study are commonly required before one learns to discriminate among authorities and sources. Nor is the acumen of any single scholar sufficient to detect the bearing of every passage. Hence it is the leader of the ordered battalion of scholars who now achieves the solid triumphs. The work of Dr. Phillipson, moreover, is not good individual effort, as is that of Sir Samuel Dill on "Roman Society"; what he has given us is, in fact, little more than a paraphrase of the sources and a rehash of a lot of books and articles of miscellaneous value.

This would have to be our final judgment if we were dealing with the work of a specialist in ancient history, writing primarily for his fellow specialists. For Greek inscriptions are sometimes quoted by Dr. Phillipson from Rangabé's "Antiquités helléniques," with all the imperfections of the epigraphy of sixty years ago; the second edition of Dittenberger's "Sylloge Inscriptionum Græcarum" is the only one cited, but the numbers given, when they are not incorrect, are those of the first edition; the *deditícii* are frequently discussed, but no mention is made of their appearance at a decisive point in the recently found fragment of Caracalla's "Constitution" of 212 A. D. And such are characteristic flaws. Errors of fact simply defy enumeration. Dr. Phillipson seems to have studied no detailed history of Greece more recent than Grote's. His acquaintance with Rome is, however, in general more intimate. Moreover, despite the multitude of different states existent in Greece at each successive moment, and despite the infinite diversity of national behavior manifest in the records of the thousand years of their experience which Dr. Phillipson has plundered, the Greeks are treated by him as a unit. This is a fundamental defect. It would be hardly less irrational to combine the habits of the Ostrogoths, Comneni, and Prussians in order to present a single view of the international law and custom of Europe. The fact is, however, that Dr. Phillipson is a lawyer interested in modern international law, and writing for his *confrères*. These will find the case clearly established in his work that the Greeks and Romans had a well recognized law of nations; that they had anticipated many of the modern agencies for effecting communication with foreign states while possessing many queer ways of their own; that they had many of the same difficulties in interpreting and enforcing interstate conventions which we moderns have encountered, but were in the habit of calling upon the gods to witness and to redress in a manner not now in fashion. A good many people will find it helpful to use this work with the aid of the index.

Papers on various aspects of municipal government, read at the Buffalo Conference on Good City Government, November 14 to 17, 1910, are published in the report of the "Sixteenth Annual Meeting of the National Municipal League," under the editorship of Clinton Rogers Woodruff (Philadelphia: The National Municipal League). The book, which, with the index, extends to almost 600 pages, includes in addition to the papers read at the meeting carefully prepared reports of the various "round table" discussions on municipal topics. Besides the annual address of President Charles J. Bonaparte on "Patriotism in Municipal Affairs," a paper by William Dudley Foulke on "Conservation in Municipalities," and one by Mr. Woodruff on "The New Municipal Idea," there are more than a score of papers on such various subjects as city accounting and budgets, commission government, transportation and public utility problems, police, schools, parks, libraries, excise, the civil service, the short ballot, and direct nominations. The book is made available as a reference work for students of city affairs by a full index.

In three volumes entitled "Heralds of a Liberal Faith" (Boston: American Unitarian Association), Dr. Samuel A. Eliot has gathered brief biographies of a large number of American Unitarian clergymen from the first New England liberals to the close of the last century. Those from 1759 to 1825 he calls "Prophets," of whom he has sketches of sixty-nine, largely compiled from Dr. William B. Sprague's "Annals of the Unitarian Pulpit." The ninety-eight biographies of the second volume, the "Pioneers," describe ministers of the first half of the nineteenth century, while the one hundred and thirty-four sketches of the third volume, the "Preachers," bring the biographies almost to the present time. The life history, the important events, and the distinctive characteristics of all prominent Unitarian divines will be found in these volumes. There is no attempt at eulogy and limitations are frankly set forth, as in the sketch of Theodore Parker. Dr. Eliot has collected with great patience a wealth of biograph-

ical material, which will make his work valuable to students of American biography as well as to those of religious history.

For many years past it has been the habit of a few Oxford scholars to meet from time to time with Canon Sanday for the study of the synoptic problem. As early as 1899 one of the members of this seminar, Sir John Hawkins, published the first edition of his "Horæ Synopticæ," of which Holtzmann then said that it was the most important contribution to the subject that English scholarship had made. In the present volume, "Oxford Studies in the Synoptic Problem" (Oxford: Clarendon Press), Dr. Sanday collects and publishes a batch of thirteen papers presented by himself and six other members which, taken together, form a unified and solid, if not at every point novel, addition to our knowledge of the subject. In spite of some diversity of opinion in minor matters, as, for example, Allen's contention that Q is a "Book of Sayings" and Bartlet's rather unconvincing hypothesis that Luke knew Q only as it had been incorporated in his special source, there is essential agreement that Mark and Q are the two main literary sources used by Matthew and Luke, and that Mark knew Q. Worthy of special notice is Sir John Hawkins's evidence to prove that Luke did not use Mark in either of his two great insertions (Luke, vi, 20—viii, 3, and ix, 51—xviii, 14), and the brief but clear and convincing sketch by Streeter of the literary evolution of the Gospels, a paper which Dr. Sanday warmly commends in an Introduction, in which he gives with characteristic candor and fineness of judgment a discriminating estimate of the papers of his colleagues. The value of the volume would have been enhanced had some one, perhaps Bartlet, given a critique of B. Weiss's brilliant work on the sources of Luke's gospel, as Williams has done of Wendling's studies in the sources of Mark. No serious student of the synoptic gospels can neglect these Oxford studies; there is much in them which would prove attractive, both in style and matter, even to the general reader.

It can be said of William E. Chancellor's "Class Teaching and Management" (Harper) that it is quite unlike any others of the numerous books on this general subject. There is hardly a topic in the whole range of educational theory and practice that is not touched on somewhere in the book and upon which very definite opinions are not expressed. Designed for study by teachers, it should stimulate thought quite as much by the fact that the reader will find in it many things with which he does not agree as because it coincides with his own thinking and experience.

Ibáñez's "La Barraca," edited with introduction, notes, and vocabulary by R. H. Keniston, has appeared in the series of Spanish texts published under the editorial supervision of Professor Ford of Harvard by Holt & Co. The ably edited and representative work of this rugged, powerful writer should prove a welcome addition to the resources of our Spanish classes.

"American Government and Politics" (Macmillan), by Charles A. Beard, is designed for college students and for citizens wishing a general survey of our political system. The author states in his preface that it is not a contribution to political literature, but is based on the best authorities of recent times. The great merit of the work is its absence of dogmatism. It gives exactly what it pretends to give, a clear, scholarly review, first of the history of our political system, and secondly of its practical operation. The fact is recognized that for its proper understanding we must look not merely at the text of the Constitution and laws, and the judicial decisions construing them, but also to the practice which has sprung up in regard to their application. He does not merely, for instance, give us a discussion of the powers of Congress under the Constitution, but he shows how these powers are exercised by Congress at work, and in this connection discusses the mode in which bills are introduced, the formation of committees, the powers of the Speaker, and a number of other subjects tending to throw light on the way in which the powers conferred are actually used. Carrying out this idea, the author devotes considerable space to political history, to the discussion of various issues which have come up from the beginning to the present time, and to the history, development, and organization of the various parties. Altogether the book can be highly recommended.

So much attention has been given, both in the newspapers and in the library periodicals, to the more conspicuous and spectacular features of the new Public Library building in New York, and its formal opening, that what is, perhaps, the most important matter has received little notice. This is the establishment of its new library school, which may easily and quickly become a dominating factor in the library world of America. The school will have a faculty of library experts devoted entirely to the work of teaching, and, in addition, will have such assistance as may be needed from members of the regular library staff. Two courses of one year each will be provided, the first a general or elementary course, in which the time is to be given mainly to formal instruction and study; the second, a course made up chiefly of practical work in the library or its branches, with occasional lectures to illustrate the work. Regular compensation is to be given for work done in the second year's course. Students can enter on the second course only on the completion of the first with a record of special efficiency. For admission to the first year's course applicants must either present a certificate of graduation from an approved college or university, or pass a general entrance examination provided by the school. Candidates must be at least twenty years of age, and those desiring to enter by examination must have the equivalent of a high-school certificate. Examinations for the coming year will be held at the schoolrooms, September 8, and the first term of work will begin October 2. After the first term has opened, no applicants will be received before the beginning of the next school year. The tuition fee for the first year will be $45 for students whose homes are in the metropolitan district, and $75 for those living outside of this district. For the second year's course no fee is charged. For principal and director of the school, the trustees have chosen Miss Mary W. Plummer, long known in the library world as the founder and director of the Pratt Institute Library School, and the author of a useful manual of library economy.

The death is announced of Dr. Æneas Mackay, formerly professor of history in the University of Edinburgh, and author of "Practice of the Court of Session," in two volumes.

Science

D. Van Nostrand Company announces: "The Progress of Physics During Thirty-three Years, 1875-1908," by Prof. Arthur Schuster; a reprinted edition of "Solubilities of Inorganic and Organic Substances," by Atherton Seidell, and the fifth volume of Sir William Thomson's "Mathematical and Physical Papers."

"How to Capture Sleep," by Dr. Joseph Collins, and "Paper-Bag Cookery," by Soyer, the London chef, are promised in the autumn by Sturgis & Walton Company.

Mexico, "the land of surprises," occupies by far the largest space in the *National Geographical Magazine* for May. Its physical features, history, government, fauna and flora, and products are treated by J. Birkinbine, whose work as mining engineer has carried him since his first visit in 1882 into many parts of the republic. A trip of 2,000 miles on horseback through the territory of Lower California, one of the least known parts of the continent, enables E. W. Nelson of the United States Department of Agriculture to give a graphic account of this "land of desert and drought," with an extraordinary flora in which the creeping devil cactus easily leads. The situation is not hopeless, for the ancient ruins show entirely different conditions in the past, the greatest drawback at present being the unenterprising character of the native population and lack of transportation facilities. To most readers the article on "Shore-whaling, a World Industry," by R. C. Andrews of the American Museum of Natural History, will be an unexpected revelation of facts about "not only the largest animal that lives to-day, but is also, so far as is now known, the largest animal that has ever existed on the earth or in its waters," a creature whose extinction through wholesale slaughter is predicted within a few decades.

Dr. T. G. Longstaff, the well-known Himalayan mountaineer, describes in the *Geographical Journal* for June an exploration of a part of the Purcell Range of British Columbia. He remarks: "The great extent of the snow-fields and the general altitude of the range was quite a surprise to me, and is not, I think, generally appreciated. It undoubtedly offers a very attractive field alike to the topographer and the mountaineer." The plans of the proposed Australasian Antarctic expedition are explained by its leader, Dr. Douglas Mawson, one of the most valued assistants in Sir Ernest Shackleton's last expedition. It is not impossible that it may establish a wireless weather station on the continent, which will be of great service to Australia in agriculture alone. Major Leonard Darwin believes that "the cost of such a station might be recovered in a very few years." Among the other contents is a suggestive paper by A. J. B. Wace on the distribution of early civilization in northern Greece.

Dr. Anna M. Galbraith, already known as a writer on these subjects, has now published a book treating of "Personal Hygiene and Physical Training for Women" (W. B. Saunders Co.). Her principal chapters on the first topic, about two-thirds of the book, will hardly add to her reputation. In general, it may be said that the reader is told too much, far more than she can understand (even when correctly told, which is unfortunately not always the case) and is encouraged to dose and doctor herself and others, when a real physician would be a safer adviser. This is particularly true of the extended first chapter on hydrotherapy, in which many procedures are described with little or no intimation that precautions are necessary. To note one example, the tyro surely ought not to be permitted to enematize without clear notions of the proper pressure, and even so simple a matter as the ear douche has dangers worthy of mention. The chapter on "dress, the fundamental Cause of Woman's Deterioration" is decidedly better. There is much about corsets and the corset question. The history of this important article of dress is traced at some length, largely according to Bouvier. Of special interest is the account of the reformation of the corset, and here the general reader may learn much about the "curved front," "straight front," and the relatively new "abdominal" corset, which is possibly the corset of the future. Dr. Galbraith is not altogether opposed to good corsets properly fitted, and some such attitude toward this question apparently has better prospects of success than that of violent opposition. In the case of shoes, the author's advice is, like many of the bad shoes, short and pointed. The last two chapters treat of physical training, "the key to health and beauty." Dr. Galbraith thinks well of such sports as direct attention to good form rather than great records, and favors team work. Gymnasties and athletic exercises are urged as aiding symmetrical development, good carriage, and grace of movement. There are many, nearly sixty, special pictures showing the graceful gymnastic poses and dancing of a recent Vassar student, with some account of the exercises themselves. The "æsthetic dancing" is commended as a recess exercise in many occupations.

Drama and Music

In a volume fleshy to the padlike texture of its pages and erotic to its hyacinthine cover, Francis Gribble has circumstantially recounted the liaisons, the squabbles, and the avidities of a French-speaking Jewess in the first half of the nineteenth century ("Rachel: Her Stage Life and Her Real Life"; Charles Scribner's Sons). That this Jewess was a genius and had a great artistic career are facts that have not escaped the vigilance of Mr. Gribble; and he is far from insensible to the value of a lofty and serious art as a footnote to the life-records of a woman who shared the couch of the descendants of at least two of the reigning families of France. The moral interests of the stage-struck daughters of clergymen are adduced in the preface in support of the book's claims to a place in monitory literature, and it must be admitted that the work is successful in proving that the atmosphere of the French stage from the forties to the sixties differed in several striking particulars from that of the English parsonage. Three new volumes of French memoirs about Rachel furnish the literary excuse for a work which the authentication of every syllable in its flaccid contents could not make other than profoundly libelous. An engrossment with scandal is rarely attended by the power to evoke its intellectual significance, and beneath this lacquer of fulsome anecdote the real woman remains as inaccessible as in the dazzling indistinctness of the footlights. The style is sometimes tawdry, sometimes fatuous, more often merely hackneyed, displaying a cut-and-dried vivacity, and an auctioneer's calculated gusto. It is fair to say that the interest which has exacted so many sacrifices has been attained, and the book will be read with pleasure by those who cannot think of it with patience. A not unaffecting narrative of Rachel's last days, taken largely from her own letters, must be set down as an extenuating feature.

Among the plays which will be produced next season by Charles Frohman will be new comedies which are being written by Augustus Thomas, A. E. Thomas, Thompson Buchanan, Winchell Smith, William Gillette, and Martha Morton. He has also contracted for new plays by J. M. Barrie, R. C. Carton, Hall Caine, Henri Bernstein, and Sir Arthur W. Pinero, while a new comedy by Caillavet and de Flers, called 'What Woman Wills," will be seen here before it is played in Paris. John Drew will open the Empire early in September with "A Single Man," by Hubert Henry Davis, author of "The Mollusc"; Maude Adams will begin her season in "Chantecler," and will give special matinées in which she will appear in three short plays. Ethel Barrymore will follow John Drew at the Empire in "The Witness for the Defence," by A. E. Mason. Billie Burke will be seen in September in a comedy by Pierre Veber, called "The Runaway," which has been adapted by Michael Morton. Mme. Nazimova will have a large repertory during the season, including two plays by a new American writer. The Criterion Theatre will open in September with Haddon Chambers's "Passers By," and will be followed by Marie Doro in "A Butterfly on the Wheel," Otis Skinner in a new play by A. E. Thomas, Kyrle Bellew, Francis Wilson, and William H. Crane. A new musical play by the authors of "A Dollar Princess," with Donald Brian, Julia Sanderson, Frank Moulan, and Will West in the cast, will be seen at the Knickerbocker Theatre in August. It is called "The Siren." Mr. Frohman has also procured "The Doll Girl," by the same composer. "Preserving Mr. Panmure," by Pinero, will be seen in this city in October.

Elith Reumert, court player to his Majesty, King Frederick of Denmark, and a member of the endowed government theatre, the Royal Opera House of Copenhagen, has arrived in New York to make preparations for a tour of America in a series of recitations in English of Hans Christian Andersen's Fairy Tales. The favorite stories in Mr. Reumert's répertoire are "The Little Girl with the Matches" and "The Princess and the Green Pea."

A recent production, "Mixed Marriage," by St. John G. Ervine, at the Royal Court Theatre, is built upon certain grim facts in the bitterer side of life as lived in the great manufacturing town of northern Ireland, Belfast.

The new literary partnership between a K. C. and an M. P., which produced such a striking result the other day in "A Butterfly on the Wheel," is already responsible for another dramatic venture in "The Crucible," presented at the Comedy Theatre. Says a London critic:

> In this play, as in its predecessor from their pens, Messrs. Hemmerde and Neilson have invented or chosen a motive with a strong grip of emotional interest. . . . They have borrowed from "Measure for Measure" a motive which seems somehow to suffer an increase of brutality and a loss of convincing power when Isabella and Claudio and Angelo exchange their mediæval costumes and surroundings for the dress and drawing-room of to-day.

Adolf Wilbrandt, whose death in his seventy-fourth year is announced from Rostock, is best known as the dramatist who wrote "Der Meister von Palmyra," "Arria und Messalina," "Die Tochter des Herrn Fabricius," and "Jugendliebe." He wrote also a number of novels, among them: "Meister Amor," "Die Rothenburger," "Hermann Ifinger," and "Die Osterinsel." His biography of Heinrich von Kleist first gave him standing as a writer.

"The Family Letters of Richard Wagner," in an English version by W. Ashton Ellis, will shortly be issued by the Macmillan Company.

Among the singers to be heard at the Munich Wagner Festival in August and September are Heinrich Knote, Fritz Feinhals, Ernst Kraus, Lucie Weidt, Zdenka Fasshender, Anton von Rooy. However, as the typewritten statement before us adds in Bavarian English: "Changements reserved."

The best musical news that has come across the Atlantic for many a moon is the announcement that the greatest of living baritones, Maurice Renaud, will be heard again in the American opera houses next season. He will be heard in the familiar parts in which he has no equal, and in some others. Pleasant surprises are in store. Inasmuch as Massenet's "Don Quichotte" has become so great a success in Paris, and Renaud would prove an ideal impersonator of the titular part, it is by no means improbable that he may be heard in this opera.

Jan Kubelik is to begin in October what is announced as his farewell American tour. It will include both North and South America. Last month he played in the Paris Trocadéro to an audience of 6,000, and in the London Albert Hall to one of 8,000.

Leoncavallo has taken to task a correspondent of the *Musical Courier* because that periodical reported from Berlin that his opera, "Maja" was a failure in that city. "My opera," he said, on May 20, "is nearing its fifteenth performance. Is an opera a fiasco which was repeated so many nights?"

To Maud Powell fell the honor of being the first to play the new violin concerto of the veteran Max Bruch. She played it at the recent music festival at Norwich, Conn.

Joseph Bennett, who is dead at the age of seventy-nine, was well known as a musical critic in England. From 1870 to 1905 he wrote for the *Daily Telegraph*. "Forty Years of Music" is the title of the reminiscences which he published.

Bruno Oscar Klein, a musician who died last week at his home in New York, aged fifty-three, had studied under Rheinberger, the senior Wüllner, and Baermann. Born in Osnabrück, he came to this country in 1878. He composed many works for the piano, and the opera "Kenilworth" which was produced with success in Hamburg in 1895.

Art

THE EXHIBITIONS IN ROME.

ROME, June 12.

Italy is celebrating the fiftieth anniversary of her existence as a free and united nation with a series of festivities and a number of exhibitions which, if less important in point of size than some of the great world fairs held in other countries in recent years, have certain interesting features of their own. The exhibitions are not all in one city, but are held partly in Rome, which has devoted itself to art and history, and partly in Turin, where the progress of industry is reviewed—a proper division of labor, in view of the respective character of the two cities. Florence, too, has celebrated the historic year with some minor artistic shows. I shall limit myself for the present to the Roman exhibition, or rather group of exhibitions.

The original scheme was to have a great international festival in Rome which should show the influence of the city and of Italy in general in the artistic development of the world, but the idea was carried out with many modifications and additions. Several important restorations of ancient buildings and the inauguration of some new ones were to coincide with the jubilee, to which they would lend greater solemnity. The Baths of Diocletian, hitherto encumbered with rubbish and partly hidden from view by unsightly wooden shanties, taverns, and warehouses, were to be cleared and added to the historic monuments of ancient Rome; Castel Sant' Angelo, for many decades the engineers' barracks and recently restored through the indefatigable and intelligent labors of Colonel Borgatti, offered an admirable setting for a retrospective exhibition of the Papal city in the Middle Ages; the great monument to Victor Emmanuel, begun in 1886, and now on the point of completion, may be taken as a symbol of the Third Rome; and finally, the long-cherished ideal of Prof. Lamberto Loria, the traveller and ethnographer, of creating an Italian ethnographic museum, could now be realized.

A large committee under the presidency of Count San Martino was constituted with many tributary sub-committees attached, a great deal of money was raised and spent, not all of it wisely, armies of workmen were engaged on the various exhibition grounds, the streets of the capital were rendered dirtier and more frequently encumbered than ever before, much dissatisfaction with the work of the organizing committee, not all of it unfounded, was produced, and a general belief engendered that the exhibition would never be held or that it would prove an utter failure. But, in spite of everything—the mismanagement of the committee, the lack of proper organization, the difficulties of galvanizing the stolid Roman into energetic action—the exhibition has been created, and, after allowance is made for all its defects, it is unquestionably a very beautiful and original show, unlike anything which has been seen before.

The exhibition of fine arts which attracts most attention is at the Valle Giulia; a better spot from a pictorial point of view could hardly have been chosen. Situated on the outskirts of the Villa Borghese and surrounded on three sides by masses of fine trees, the group of exhibition buildings presents a charming aspect, although the grounds will not be at their best until the trees have grown up. The most important building is the large Palace of Fine Arts, a handsome permanent structure in the Italian classical style by Cesare Bazzani, one of Italy's most talented young architects. It contains the works of Italian artists as well as of those whose nations have no pavilions of their own. As an exhibition the Italian section is disappointing, and certainly far from representative of modern Italian art. One is struck immediately by the many omissions. Michetti and Sartorio, two of the most original and interesting Italian painters, and Canonica and Trentacoste, who hold high rank among the sculptors, are not represented at all, nor are many other prominent artists. This is said to be due to faulty organization on the part of the committee, but whoever may be to blame, the result is regrettable. So, too, the self-denying ordinance whereby no picture painted previously to 1909 was to be admitted has made anything like a retrospective exhibition impossible, and even the best artists exhibiting have been in many cases unable for this reason to send their best work. Altogether, Italian art has been unfairly handicapped by the side of the foreign schools on this occasion, and it can be far better judged at any of the biennial exhibitions in Venice than at Valle Giulia in 1911.

Foreign art, on the other hand, is set forth in a much more complete form, notably that of Great Britain. This indeed is generally admitted to be the finest show of all; it is contained in a very handsome building by Edwin Lutyens in the style of Wren, and presents a history of British painting from Hogarth, Reynolds, and Gainsborough, through Rossetti and Burne-Jones, to Shannon, Lavery, and Sargent (the last-named having pictures in both the British and the American pavilions); and nearly all the works chosen are admirable specimens of their respective artists. The early British masters have come as a revelation to the Italian public, for they are hardly represented at all in any Continental gallery (except the Hermitage in St. Petersburg), nor has such a complete summary of British art ever before been exhibited outside of Britain. The French show is not remarkable, and does less than justice to modern French art. In the Austrian pavilion the vagaries of Klimt arouse curiosity and interest, if not always admiration. Hungary, which has a pavilion of its own, cuts a good figure, and the Servian and other South-Slavonic artists are gathered in a building designed by the Servian sculptor-architect Mastrovich as a model for a monument to Servia's national heroes. Germany, Russia, Belgium, the United States, Japan, and Spain all have their own pavilions, while there are Swedish, Norwegian, Danish, Swiss, Dutch, and Chinese pictures in the Palace of Fine Arts.

But the art exhibition, interesting and varied as it is, is less original in character than the other sections. Castel Sant' Angelo, in itself one of the most fascinating and mysterious buildings in Italy, contains various collections illustrating the life of mediæval Rome—costumes, paintings, furniture, arms, etc. —a part of which is to remain as the nucleus of a future Italian Musée de Cluny. Several of the apartments have been fitted up and furnished in the style of the period from which they date, and some of the exhibits, such as the great bedstead and other pieces in beaten iron lent by the Marchese Rodolfo Peruzzi, are particularly remarkable. Among the pictures there are several (including a Perugino) from the Villa Albani, that secluded pleasaunce into which its jealous owner, Prince Torlonia, seldom lets any stranger penetrate. Outside the main building, but within the castle enclosure, are several small buildings containing other collections. The most important is the topographical section, which consists of a series of drawings, engravings, maps, and plans of Rome from the early Renaissance down to the latter half of the nineteenth century, put together and arranged by Signori Bartoli and Calcagno and Dr. Ashby (of the British School in Rome). We can here follow the growth of the city, seeing it as it was when goats browsed on the Capitol

and cattle were tethered in the Forum, when classical survivals burst through the gloom of mediæval customs and beliefs; we see, too, how much, alas! has been ruthlessly swept away under the pretext of hygiene and modern improvements, not always with a proper respect for the relics of the past, and how many parts of the city have been altered out of all recognition, and not for the better by their modernization. In addition to the many general views and plans, each quarter of the city, each piazza, each of the chief buildings, are illustrated in their various periods and aspects. The collection of water-colors by Roesler Franz is particularly worth examining, as the artist sketched every part of the city which he heard was about to be altered. Another pavilion contains relics of strangers who lived and worked in Rome, and in a third is the military museum.

Classical Rome is illustrated at the Baths of Diocletian. These immense ruins, the size and importance of which few except profound archæologists had hitherto realized, may now be seen in all their imposing grandeur, and appear hardly inferior to the better known Thermæ of Caracalla. They have been temporarily converted into a museum of casts and models of all the chief Roman statues and monuments scattered about the thirty-six provinces of the Empire. Professor Lanciani is greatly to be congratulated on the care and ability with which he has selected and arranged the exhibits, which are a picture of the splendors of the Imperial power. In addition to the purely Roman objects, there is a very complete set of casts of the finest specimens of Greek sculpture in the museum at Athens, a present to Italy from the Greek government which will prove invaluable to art students in Rome. It is a pity, however, that the catalogue is so long delayed and that the descriptive notices are inadequate.

Finally we come to the *Mostra etnografica*, which is in some ways the most unique section of the whole exhibition. The grounds, which are on the old Piazza d'Armi between the Tiber and Monte Mario, contain a number of buildings intended to illustrate the most characteristic aspects and the artistic development of the various parts of Italy. Each of the sixteen *regioni* is represented by a building in its own style of architecture, reproducing some of the most striking and beautiful specimens existing in the district. As yet only three or four are ready, and, in fact, this part of the exhibition is the most backward, but others will soon be opened, and everything is expected to be complete within a few weeks. These *paviglioni regionali* have been built with the greatest care and the most exquisite taste, the reproductions of interiors, frescoes, carved ceilings, and wainscoting, furniture, and decorations being as perfect as anything of the kind can be; and, although each building is made up of fragments of many parts in various styles and of various epochs, they are so combined as to present a most harmonious whole. One can only regret that so much work and skill should have been expended on structures which will be demolished in a few months' time, when at a slightly increased cost, permanent edifices might have been erected, constituting embassies, so to speak, of the Italian provinces in the nation's capital. But it is to be hoped that at least some of the interior decorations will be preserved.

In addition to the regional pavilions provincial Italy is further represented by a number of smaller buildings characteristic of the local life of the country; thus we have a Venetian canal scene, with Monte Mario in the background; a fragment of the old Santa Lucia quarter of Naples, with the proper accompaniment of street singing and macaroni sellers; groups of farmhouses from Sicily, Lombardy, Tuscany, the Abruzzi; a Sardinian *nuraghe*, or prehistoric tower; a *procoio*, or conical shepherds' hut, from the Roman Campagna, etc.

The ethnographic exhibition proper is a collection of specimens of the work of Italian rural laborers from all parts of the country collected and arranged by Signor Loria. This show will come as a revelation to most people, even to many who know their Italy well. The amount of æsthetic feeling and genuine taste which has always been and still survives among the masses of ignorant peasants throughout the peninsula is quite astonishing. We have here a wonderful exhibit of embroidery, costumes, lace, carpets, jewelry, wood-carving, domestic utensils, all having some artistic touch and many executed with great delicacy, albeit by the rough hands of toilers of the soil. If the qualities whereby this very beautiful work was produced could be developed and generalized, they might be the basis of a new civilization, original, and yet descended from an unbroken tradition of countless ages. But, perhaps, they would thus lose their naïve charm.

The upper floor of the ethnographic building contains a curious collection of prints in common use among the Italian peasantry, illustrating proverbs, popular stories, and sacred history, and a few *presepi*, or plastic groups of the Adoration of the Magi (inferior, however, to a similar collection in the Museum at Munich), while elsewhere is a collection of wax figures representing the traditional Italian masques of the eighteenth-century *commedia dell' arte* of which Carlo Gozzi was the chief exponent.

There is also an architectural section. As the Piazza d'Armi grounds are to be laid out as a new city district, a number of architects have built houses, both as exhibits of their work and with a view of letting or selling them afterward. But I cannot say that architecture is the most successful part of the exhibition.

Taken, altogether, and when all possible faults have been admitted, these Rome exhibitions are worthy of many visits and attentive study, as evidence of the nation's vitality and the people's intellectual activity. L. V.

Those who read the special correspondence in the *Nation* of June 8 on "Whistler and Greaves" will be interested to hear that, since the presentation of the facts by William Heinemann and Joseph Pennell, the prefatory note to the Greaves catalogue, with its misstatements, has been withdrawn.

A new edition of Vasari's "Lives," edited by Dr. Karl Frey, from the original editions of 1550 and 1568, is in preparation by Georg Müller of Munich. The first volume of the work, which will consist of six to eight volumes, is announced for July 30, the fourth centenary of Vasari's birth.

In an exhibition just opened at the rooms of the Society of Antiquaries at Burlington House, London, are shown the remarkable discoveries made by Prof. John Garstang, on the site of Meroë, the ancient Ethiopian capital in the Sudan. The work during the last season has been on a larger scale than ever before, six hundred workmen being employed at a time. The Temple of Amon, where the Ethiopian kings were crowned, and where they ruled, has now been completely cleared, so that its plans, which present several unique features, can be properly studied. Several interesting products of Ethiopian art were brought to light. In the Hall of Columns was found a daïs, carved out of a single block of stone, upon which probably stood a small image, since glazed fragments were picked up in the vicinity. Here was also found an altar designed for the sacrifice of animals at the shrine of the temple. In the outer temple were discovered a royal daïs with remarkable representations of captives, bound with their elbows attached to their heels behind their backs; and a great obelisk of black granite bearing what Professor Garstang believes to be the best continuous Ethiopian inscription that has been found. Another interesting discovery was a fine cameo carved with a design of galloping horses, one black and the other white, dating probably from about 300 B. C. Besides the Temple of Amon, the Solar Temple, which is situated about a mile out into the desert, was also completely unearthed. On the south side was found the funerary chamber, in which stood vases filled with bones and charcoal, perhaps the remains of the human sacrifices mentioned by Heliodorus. On the walls were sculptures representing men and boys being slain and tortured by the conquerors. Several other smaller buildings were also included in the season's excavations, such as a great columned hall, with frescoes of the king and queen on the walls. In front of the entrance was found a massive bronze head, dating from the period of Augustus, and perhaps representing Germanicus (15 B. C.—19 A. D.). The eyes are inlaid with alabaster. In the other palaces which were

unearthed were found pieces of glazework, bearing the names of seven or eight royal personages of Ethiopia, probably of the sixth or fifth century B. C. Gold dust and nuggets to the value of nearly $10,000 were discovered in two jars of pottery, unquestionably part of the traditional treasure of the Ethiopians.

The death is announced in his seventy-second year of Prof. Johannes Otzen, for some years director of the chief studio of architecture in the Berlin Academy of Art, and the designer of several of the principal churches in Berlin, Hamburg, and elsewhere.

THE SOUTHERN PACIFIC MERGER DECISION.

The decision for the railways in the suit of the Government against the Union Pacific-Southern Pacific combination, handed down on Saturday at St. Louis by the Federal Circuit Court, is interesting as the first important application of the Anti-Trust law since the Supreme Court's Oil and Tobacco decisions. It is also the first important case which the railways have won in prosecutions under that law; for the often-cited "Knight case" had to do with industrial combinations. These facts have already led some commentators on the St. Louis decision to infer that the courts are deliberately reversing the position taken in the Northern Securities case. If this were so, it would be a matter of fundamental importance—not less so, in view of the fact that it was the Federal Court of this same circuit which decided unanimously against the Northern Securities merger in 1903.

In 1901 the Union Pacific, through one of its subsidiary companies, purchased $126,650,000 stock of the Southern Pacific, or about 46 per cent. of that company's entire outstanding stock. The main lines of the two railways were theoretically parallel, though serving different districts. Southern Pacific ran from New Orleans westward, along our Southern boundary, to San Francisco. Union Pacific, six or seven hundred miles further north, ran from Omaha and Kansas City westward to Ogden, Utah, with a subsidiary line connecting it with the coast of Oregon. It had no line of its own to California; but the Southern Pacific owned, through a somewhat curious chain of events, the Central Pacific, which connected Ogden with San Francisco, and which completed the direct East-and-West route from the Missouri River to the Pacific.

The Central Pacific was built simultaneously with Union Pacific in the sixties, but under different financial auspices. It was the junction of the two roads at Ogden—then a mere village in a wilderness—which first linked by rail the two coasts of the United States, and the belief was long entertained by the country that the logical outcome was a common management for both lines. Instead of this, the Southern Pacific, after 1885, got possession of the Central Pacific, first through a ninety-year lease and then through exchange of Central Pacific stock for Southern Pacific bonds.

This was the situation when Harriman bought the Southern Pacific system as a whole for his Union Pacific company. The details are important, because they explain the paragraph of Saturday's decision to the effect that "while the Union Pacific was entirely dependent upon the Southern Pacific for its connection westward, the Southern Pacific was not at all dependent upon the Union Pacific for its connection eastward," and that, therefore, "all facts of this case, considered in their natural, reasonable, and practical aspect and given their appropriate relative significance, do not make the Union Pacific, a substantial competitor for trans-continental business with the Southern Pacific in or prior to the year 1901." In other words, there were considerations peculiar to this case, and not entirely in line with other operations of that day, which arose from the Central Pacific's ownership and geographical position.

Nevertheless, the fact that this case, like that against Northern Securities, presented the general question of two trans-continental railways brought under a single control, makes necessary further examination. The Northern Securities decision of this Circuit Court was based explicitly on the facts that an overwhelming majority of the two stocks was acquired, that the merger of Northern Pacific and Great Northern "destroyed every motive for competition between two roads which were natural competitors for business"—both of them running between Minneapolis on the East and Puget Sound on the West—and that such a result was intended by the authors of the merger, "according to the familiar rule that every one is presumed to intend what is the necessary consequence of his own acts, if done wilfully and deliberately." In the present case, however, having presumably in mind the considerations regarding Central Pacific which we have just set forth, the court finds that destruction of every motive for competition was not the necessary intent of the Southern Pacific purchase. It also concludes, from the evidence submitted, that competition has not been restrained since 1901. The fact that two of the justices who sat in the Northern Securities case are still on that circuit and concurred in Saturday's decision lends additional interest to the court's view of the two cases.

Judge Hook, in his dissenting opinion of Saturday, holds that the Southern Pacific merger was restraint of trade; he states, in a rather interesting *obiter dictum*, that "with the growth and development of government regulation of common carriers in interstate commerce, there is decreasing reason for holding them subject to the Sherman Anti-Trust Act," but asserts that this is a question, not for the courts, but for Congress. It is doubtful if his conclusion will meet very wide acceptance at this time—at least until the working of the Interstate Commission's regulation is better defined than it is to-day.

The Southern Pacific case will doubtless go to the Supreme Court. Meantime, it may be suggested that some hurried reasoners, who are inferring that all of Harriman's experiments in buying up other railways on Union Pacific's credit are approved and endorsed by this decision, would be wiser to go slowly. There was no question of a Central Pacific main line connection in those exploits. The reckless performances in 1906, especially, were no doubt in most cases clearly out of the scope of the law of 1890, because the lines acquired were neither parallel nor competing. But they were gross offences against the law of sound finance, and they possibly contravened portions of the statute law as well. If they did not, and if there were any prospect of the thing being repeated, the safety both of the community at large, and of the investment community in particular, would call for legislation which should stop it, once for all.
